Syllabus for Bachelor of Technology
Department of Automobile Engineering

Marwadi
University

Faculty of Technology

Course having focus on

Employability

Entrepreneurship

Skill development

during last five years

(2017-2022)

B.Tech. in Automobile Engineering

Subject Code: 01MA1101

Subject Name: Differential and Integral Calculus

B. Tech. Year – I (Semester I)

Objective: This paper aims to provide an essential background of differential and integral calculus to students of science and engineering courses at graduate level. A good science or engineering graduate is expected to have a sound knowledge of these two areas of mathematics as Differential and integral calculus are essential tools for learning Technology, Engineering and Sciences.

Credits Earned: 05 Credits

Course Outcomes:

After completion of this course, student will be able to:

1. Appreciate and apply the concepts of convergence and divergence of infinite series in problem of science, technology and engineering.
2. Evaluate Maclaurin's and Taylor's expansion for variety of functions and use them to solve further advanced problems.
3. Solve first order differential equations and will be able apply them to solve real life problems.
4. Explain the Euler's theorem and Modified Euler's theorem and will be able to verify it for given function of several variables.
5. Apply the notion of partial differentiation to evaluate equations of tangent plane and normal line for given surface.
6. Apply the method of Lagrange's multiplier to solve the problems of constrained optimization.
7. Understand the role of multiple integral in finding volume of three-dimensional objects, finding area between to two curves, finding moment of inertia etc

Teaching and Examination Scheme:

Teaching Scheme (Hours)			Credits	Theory Marks			Tutorial / Practical Marks		Total Marks
Theory	Tutorial	Practical		E	I		V	T	
				ESE	IA	CSE	Viva	Term Work	
4	2	0	5	50	30	20	25	25	150

Unit	Topics	Contact Hours
1	Infinite Series Concept of sequence, nature of infinite series, Properties for convergence, geometric series, Tests for convergence of positive term series.	10
2	Expansion of functions Concept of Expansion of functions, Taylor's series expansion, Maclaurin's series expansion	7
3	Ordinary Differential Equations Reorientation, order and degree, Variable separable method, Linear differential	10

	equations, Bernoulli's and Exact differential equations.	
4	Partial differentiation: Partial derivatives, Euler's theorem, Modified Euler's theorem and their applications, Implicit functions, Chain rule, Total differentials.	7
5	Applications of Partial differentiation: Errors and approximations, Tangent plane and normal line to a surface, Constrained optimization using Lagrange's multiplier, Jacobian.	7
6	Multiple Integrals: Calculation of double and triple integrals, reverse the order of integration, Change into polar, spherical and cylindrical coordinates.	10
Total Hours		51

Suggested Theory distribution:

The suggested theory distribution as per Bloom's taxonomy is as per follows. This distribution serves as guidelines for teachers and students to achieve effective teaching-learning process.

Distribution of Theory for course delivery and evaluation					
Remember	Understand	Apply	Analyze	Evaluate	Create
20%	20%	30%	15%	10%	5%

Suggested Text books / Reference books:

1. M. D. Weir *et al*: Thomas' Calculus, 11th Ed., Pearson Education, 2008.
2. Stewart James: Calculus Early Transcendental, 5th Ed., Thomson India, 2007
3. Wylie & Barrett: Advanced Engineering Mathematics, Mc graw Hill pub.
4. Greenberg M D: Advanced Engineering Mathematics, 2nd ed., Pearson
5. B.S.Grewal: Higher Engineering Mathematics, 43rd ed., Khanna publishers
6. Erwin Kreyszig , Advanced Engineering Mathematics, 9/e, JOHN WILEY & SONS, INC
7. H. K. Dass, Advanced Engineering Mathematics, S Chand Publishing

Instructional Method:

1. The course delivery method will depend upon the requirement of content and need of students. The teacher in addition to conventional teaching method by black board, may also use any of tools such as demonstration, role play, Quiz, brainstorming, MOOCs etc.
2. The internal evaluation will be done on the basis of continuous evaluation of students in the laboratory and class-room.
3. Practical examination will be directed toward the completion of semester for assessment of performance of understudies in laboratory.
4. Students will use supplementary resources such as online videos, NPTEL videos, e-courses, Virtual Laboratory

Supplementary Resources:

1. <http://mathworld.wolfram.com>
2. <http://en.wikipedia.org/wiki/Math>

Subject Code: 01CI0101

Subject Name: Elements of Civil Engineering

B.Tech. Ist Year Semester: I

Type of course: Under Graduate

Prerequisite: NA

Rationale: Students will gain Basic Civil Engineering knowledge

Course Outcome:

After completion of this course, student will be able to

1. Recognize importance of Civil engineering and its day to day applications.
2. Interpret the plan/maps, locate the objects on ground from map and from site to on paper plan/map.
3. Describe qualitative comparison between different materials and its selection.
4. Understand the water cycle its importance, water resources its consumptive use.
5. Able to create & interpret building planning and will be able to draw plan, section and elevation.
6. Acquaint with the various modes of transportation.

Teaching and Examination Scheme:

Teaching Scheme (Hours)			Credits	Theory Marks			Tutorial/ Practical Marks		Total Marks
Theory	Tutorial	Practical		ESE (E)	Mid Sem (M)	Internal (I)	Viva (V)	Term work (TW)	
3	0	2	4	50	30	20	25	25	150

Sr. No.	Content	Total Hrs
1	Introduction to civil Engineering: Scope of civil Engineering & Role of civil Engineer, Unit conversion, common units used in practice of civil engineering	3

2	<p>Elements of Surveying: Introduction: applications, fundamental principles and classification of surveying, classification of plans & maps Linear measurement: methods, Instruments used in chain surveying, Selection of stations, Chaining, Ranging, Offsetting. Angular Measurement: Instruments used, Types of compass, Types of meridians and bearings, Measurement of bearings, computation of angles. Compass traversing and correction of bearings for local attraction. Levelling: Aims and applications, Definition of various terms, Instruments for levelling, Methods of levelling, recording observations in level-book, computing reduced levels by HI and rise & fall method, Definition of contour, Characteristics of contours of different terrains and application of contour maps. Modern Surveying: Measurement by Electronic devices, Introduction to GIS, GPS & RS</p>	17
3	<p>Building Materials: Introduction, properties & classifications of materials: Bricks/blocks, cement, lime, sand, aggregates, stone, ceramic, glass, concrete, Ferrous metals & Non-ferrous metals, glass, timber and modern materials</p>	5
4	<p>Building planning and its components: Classification of buildings, Principles of planning, Conceptual planning of Residential & Public building, Building components & their functions, types of load on building</p>	6
5	<p>Transportation Engineering: Role of transportation in national development, Modes of transportation, types of roadways, intro to traffic engg, intro to Urban Transportation system</p>	5
6	<p>Water resources & Management: Hydrological cycle, types of water resources, water demand & water scarcity, Water use and its conservation techniques, Storage structures, water conveyance</p>	4
7	<p>Next Generation Civil Engineering: Building automation, Green building, advanced materials, sky scrapers, civil engineering wonders in the world</p>	2

Suggested Theory Distribution

0	2	0	1	0	0	20	50	30	100

Sr. No.	Content	Total Hrs
1	Experiencing worth of important personality attributes i.e Taking Initiatives, Thinking on the feet etc through Games	2
2	Values of Honesty and Integrity as corner stone in one's career and Life. Experiencing incidence and case studies related to Honesty, Integrity and Human Values in work set up.	2
3	Value of Creativity in one's career and Life Building an attitude of creativity, thinking out of the box and inculcate virtue of exploration and innovation in various aspects of life.	2
4	Values to self-sustenance in difficult times and failures To Understand failure as stepping stone towards success, its inevitability and earning life lessons which makes an individual well equipped to deal with uncertainties of life.	2
5	Role of emotions in one's professional life Importance of building sound EQ with IQ, Understanding the causes and effects of emotions in life.	2
6	Workplace values 1 – Manners Understanding workplace as a second home and source of livelihood, inculcate spirit of belongingness towards work and exhibit sound manners that projects work place with dignity	2

7	Workplace values 2 – People, Policy and organization Understanding the importance of policies and people, ideal code of conduct at Workplace, building rapport with colleagues, sound behaviours with various stakeholders within the organization	2
8	Value for students’ life 1 - Power of Positivity Importance of optimism in life, developing right kind of attitude towards self career and others. Power of generating right kind of thoughts that translates in right actions and behaviours.	2
9	Value for students’ life 2 - Healthy Lifestyle Importance of fitness in life and career. Importance of regular exercising and taking up a sport. Focusing upon eating and sleeping habits that result in physical performance as body is considered to be the temple of soul.	2
10	Value for students’ life 3 – Create First Impression Understanding the importance of making right impressions while in public, how to speak/introduce self, basic understanding of dress code, voice tone and body language	2
11	Understanding hazards of Social Networking sites Developing sound habits, breaking bad habits, understanding hazards of bad habits and excess of social media in life.	2
12	Creating Value through Social Networking sites (Linked-In and Quora) To ensure that technology is used to build bridges and not the barriers, focusing upon the career and importance of associating with right content in the virtual world. (LinkedIn, Quora, GD communities, India Bix, Bodhi Booster)	2
13	Performance Values 1- How to avoid Procrastination Value and Importance of Time, Cause and effect of procrastination, how to maximize the day, Importance of setting up to –do lists and task lists	2
14	Performance Values 2- How to manage Pressure Situations (Exams and Evaluations) Handling anxiety, Value of planning and smart work, ensuring right state of mind and tips for a successful show.	2

19%	33%	63%	25%	10%	0%

Subject Code: 01ME0101

Subject Name: Elements of Mechanical Engineering

B. Tech. Ist Year Semester: I

Type of course: Engineering Science

Prerequisite: Zeal to learn the subject.

Rationale: Understanding of basic principles of Mechanical Engineering is required in various field of engineering.

Course Outcome:

After learning the course, the students will be competent

1. To understand basic terminologies and fundamentals of mechanical system by correlating science concept.
2. To apply the governing laws of mechanical engineering to find solution of different systems.
3. To identify the broad context of Mechanical engineering problems and identifying possible contributing factors.
4. To identify functional characteristics of various mechanisms.
5. To Analyse the various energy conversion cycles and systems.

Teaching and Examination Scheme:

Teaching Scheme (Hours)			Credits	Theory Marks			Tutorial/ Practical Marks		Total Marks
Theory	Tutorial	Practical		ESE (E)	Mid Sem (M)	Internal (I)	Viva (V)	Term work (TW)	
3	0	2	4	50	30	20	25	25	150

Sr. No.	Content	Total Hrs
1	Introduction: Prime movers and its types, Concept of Force, Pressure, Energy, Work, Power, System, Heat, Temperature, Specific heat capacity, Change of state, Path, Process, Cycle, Internal energy, Enthalpy, Statements of Zeroth Law and First law.	04
2	Properties of gases: Gas laws, Boyle's law, Charle's law, Combined gas law, Gas constant, Relation between Cp and Cv, Various non-flow processes like constant volume process, constant pressure process, Isothermal process, Adiabatic process, polytropic process	06
3	Properties of steam: Steam formation, Types of Steam, Enthalpy, Specific volume, Internal energy and dryness fraction of steam, use of Steam tables, steam calorimeters	06

4	Heat Engines: Heat Engine cycle and Heat Engine, working substances, Classification of heat engines, Description and thermal efficiency of Carnot; Rankine; Otto and Diesel cycles.	06
5	Steam Boilers: Introduction, Classification, Cochran, Lancashire and Babcock and Wilcox boiler, Functioning of different mountings and accessories	04
6	Internal Combustion Engines: Introduction, Classification, Engine details, four-stroke/ two-stroke cycle Petrol/Diesel engines, Indicated power, Brake Power, Efficiencies	04
7	Turbo machines: Types and operation of Reciprocating, Rotary and Centrifugal pumps, Priming and air compressors	04
8	Refrigeration & Air Conditioning: Refrigerant, Vapor compression refrigeration system, vapor absorption refrigeration system, Domestic Refrigerator, Window and split air conditioner	04
9	Couplings, Clutches and Brakes: Construction and applications of Couplings (Box; Flange; Pin type flexible; Universal and Oldham), Clutches (Disc and Centrifugal), and Brakes (Block; Shoe; Band and Disc)	04
10	Transmission of Motion and Power: Shaft and axle, Belt drive, Chain drive, Friction drive, Gear drive	04

Suggested Theory Distribution

The suggested theory distribution as per Bloom's taxonomy is as per follows. This distribution serves as guidelines for teachers and students to achieve effective teaching-learning process

Distribution of Theory for course delivery and evaluation					
Remember	Understand	Apply	Analyze	Evaluate	Create
35%	35%	20%	10%	0%	0%

Reference books:

1. Basic Mechanical Engineering by Pravin Kumar, Pearson.
2. Thermal Science and Engineering by Dr. D.S. Kumar, S.K. Kataria & sons, Publication New Delhi.
3. Fundamental of Mechanical Engineering by G.S. Sawhney, PHI Publication New Delhi.
4. Elements of Mechanical Engineering by Sadhu Singh S. Chand Publication.

List of Experiments:

1. To understand and appreciate significance of mechanical engineering in different fields of engineering.
2. To understand construction and working of different boilers, Boiler mountings and accessories.

3. To understand construction and working of Petrol engines & Diesel Engine (Two Stroke & Four Stroke both).
4. To understand construction and working of different types of Turbo Machines (Pump & Compressors).
5. To demonstrate vapour compression refrigeration cycle of domestic refrigerator OR window air conditioner OR split air conditioner.
6. To understand construction, working and application of clutches, coupling and brakes.
7. To determine brake thermal efficiency of an I. C. Engine.
8. To solve numerical of Properties of gases and properties of steam.
9. To understand different arrangement and application of various power transmission drives.
10. To solve numerical of heat engines.

List of Assignment:

1. Theory and Example on Properties of gases.
2. Theory and Example on Properties of steam.
3. Theory and Example on Heat engine.
4. Theory on pump.

List of Open Base Software/learning website:

2. <http://vlab.co.in/>

Subject Code: 01EN0101
Subject Name: Basics of Environmental Studies
B.Tech. Ist Year Semester: II

Type of course: Engineering Science

Prerequisite: Interest in natural systems sustaining the life on the earth.

Rationale: To inculcate the environmental values translating into pro-conservation actions. Honourable Supreme Court of India has made it 'mandatory' to introduce a basic course on environment at the undergraduate level.

Course Outcome:

After completion of this course, student will be able to

1. Understand and realize the multidisciplinary nature of Environment & its components.
2. Know the importance of natural resources for the sustainable development of life.
3. Understand the effect of growing population on the Environment.
4. Classify the different types of pollution and measure to control pollution.
5. Learn about the Environmental issues faced globally and various steps taken globally to solve such Environmental issues.

Teaching and Examination Scheme:

Teaching Scheme (Hours)			Credits	Theory Marks			Tutorial/ Practical Marks		Total Marks

6. <http://www.constructionworld.in/>

Subject Code: 01GS0101
Subject Name: Physics
B.Tech. Ist Year Semester: I

Type of course: Basic Science

Prerequisite: Basic understanding of Math's, Physics and chemistry

Rationale: The basic science physics program is to prepare students for careers in engineering where physics principles can be applied to the advancement of technology. This education at the intersection of engineering and physics will enable students to seek employment in engineering upon graduation while, at the same time, provide a firm foundation for the pursuit of graduate studies in engineering.

Course Outcome:

After completion of this course, student will be able to

1. Recognize importance of physical concepts and its day to day applications.
2. Interpret the role of dielectric, magnetic and advanced engineering materials and their behaviors under various system conditions.
3. Describe qualitative comparison between various diodes.
4. Explain the need of NDT and its methodologies.

Teaching and Examination Scheme:

NA

Instructional Method:

1. Discussions
2. Group Work
3. Individual Presentations
4. Brainstorming
5. Role Play

*** Teaching and Examination Scheme**

1. **IA will consist of the following components: (30 Marks)**
Assignments (20 Marks): Students will write three assignments.
(Two assignments of 5 marks each and one assignment of 10 marks)
In-Class Participation (10 Marks)
2. **CSE: (20 Marks)**
(Term Paper-20 Marks): An article on the topics given.

3. Viva (25 Marks):

Viva will be conducted at the end of the semester. It will be based on the CSE, Term Work, Assignments and topics covered in the syllabus.

4. Term Work (25 Marks)

(Term-End Presentation): Students will make a presentation based on their term paper at the end of the semester.

Supplementary Resources:

2. Cox, Kathy, and David Hill. *Eap Now!: English for Academic Purposes*. Pearson Australia, 2011.

Subject Code: 01MA1151

Subject Name: Matrix Algebra and Vector Calculus
B.Tech. Year - I

Objective: This subject aims to provide fundamentals of matrix algebra and vector calculus. The topics delivered in the paper are essential for almost all science and engineering disciplines.

Credits Earned: 5 Credits

Course Outcomes:

After completion of this course, understudy will have the capacity to

1. Explain the linear dependence of vectors of different vector space.
2. Apply Gauss elimination to solve linear system of equations.
3. Apply the concept of Eigen values and vectors in various field of engineering like control theory, vibration analysis, quantum mechanics etc.
4. Understand role of mathematical modeling in taking care of different issues related to heat transfer, mechanics, momentum, etc.
5. Understand the key role of vector integral calculus in finding flux in vector field, finding potential function, etc.
6. Determine convergence of improper integrals and explain special functions like Beta, Gama and error functions.
7. Gain the fundamental knowledge about special function like Beta and Gamma and its applications.

Teaching and Examination Scheme:

Teaching Scheme (Hours)			Credits	Theory Marks			Tutorial/ Practical Marks		Total Marks
Theory	Tutorial	Practical		ESE (E)	Mid Sem (M)	Internal (I)	Viva (V)	Term work (TW)	
4	2	0	5	50	30	20	25	25	150

Unit	Topics	Contact Hours
1	Vector space: Vector space, Linear independence of vectors, Basis and dimension of vector space, Inner product spaces and their properties.	8
2	Matrix Algebra - I: Rank and nullity of a matrix, Determination of rank by row operation, Triangularization of matrices by Gauss -elimination process, Computing inverse of a matrix by Row operations, Consistency of system of linear equations.	8

3	Matrix Algebra -II: Determinant and their properties, Cofactors of $n \times n$ determinant, Eigen values and eigen vector of matrix, Cayley - Hamilton theorem, Quadratic and Canonical forms, special matrices and their properties.	8
4	Vector differential calculus: Recall the concept of vector algebra, Scalar and vector functions, gradient of a scalar point functions, Divergence and Curl of a vector point function, Physical meaning of gradient, divergence and curl, directional derivatives, Conservative vector fields, Irrotational and Solenoidal function.	10
5	Vector Integral calculus: Line integrals, Path Independence of Line Integrals, Concept of surface integrals, Green's theorem, Stoke's theorem and Divergence theorem.	10
6	Improper integrals Improper integrals of type I and type – II, Convergence of Improper integrals, Beta, Gamma and error functions with properties.	10
Total Hours		54

Suggested Theory Distribution

The suggested theory distribution as per Bloom's taxonomy is as per follows. This distribution serves as guidelines for teachers and students to achieve effective teaching-learning process

Distribution of Theory for course delivery and evaluation					
Remember	Understand	Apply	Analyze	Evaluate	Create
20%	20%	30%	15%	10%	5%

Recommended Textbooks:

1. M. D. Weir *et al*: Thomas' Calculus, 11th Ed., Pearson Education, 2008.
2. Stewart James: Calculus Early Transcendental, 5th Ed., Thomson India, 2007
3. Wylie & Barrett: Advanced Engineering Mathematics, McGraw-Hill pub.
4. Greenberg M D: Advanced Engineering Mathematics, 2nd ed., Pearson
5. Erwin Kreyszig, Advanced Engineering Mathematics, 9th e, John Wiley, INC
6. H. K. Dass, Advanced Engineering Mathematics, S Chand Publishing.

Instructional Method:

- a. The course delivery method will depend upon the requirement of content and need of students. The teacher in addition to conventional teaching method by black board, may also use any of tools such as demonstration, role play, Quiz, brainstorming, MOOCs etc .
- b. The internal evaluation will be done based on continuous evaluation of students in the laboratory and class -room.
- c. Practical examination will be directed toward the completion of semester for assessment of performance of understudies in laboratory.
- d. Students will use supplementary resources such as online videos, NPTEL videos, e-courses, Virtual Laboratory
- e. videos, e-courses, Virtual Laboratory

Supplementary Resources:

1. <http://mathworld.wolfram.com/>
2. <http://en.wikipedia.org/wiki/Math>

Subject Code: 01CE0101
Subject Name: Computer Programming
B.Tech.Ist Year Semester: I

Type of course: Engineering Science

Prerequisite: Zeal to learn the subject

Rationale: Understanding of basic principles of Computer programming and coding for Engineering is required in various field to solve real life problem in digitalization era.

Course Outcome:

After completion of this course, student will be able to

1. Recognize importance of C language and its day to day applications.
2. Analyse the various control structures that requires to use in real time applications
3. How to convert real time applications into algorithms and device the programusing C language notations
4. Identify various basic programming principles using C language.
5. Illustrate various programming syntax.
6. Express and distinguish various loops in C language.
7. Express programming problems logically through flow charts and algorithms.
8. Prepare effective team-oriented problem solver as well as communicator with non-technical stakeholders in computer and software systems development.
9. Apply fundamental principles of problem solving in software engineering.

Teaching and Examination Scheme:

Teaching Scheme (Hours)			Credits	Theory Marks			Tutorial/ Practical Marks		Total Marks
Theory	Tutorial	Practical		ESE (E)	Mid Sem (M)	Internal (I)	Viva (V)	Term work (TW)	
3	2	0	4	50	30	20	25	25	150

Sr. No.	Content	Total Hrs
1	Introduction: Basic organization of a Computer, Languages Low level – high level, Number System – Binary – Decimal conversion problems, Flowchart, Algorithm, problem solving using flowchart and algorithm	6
2	C Programming Basics: Introduction to C Programming, Structure of ‘C’ program, compilation and linking processes, Constants, Variables, Data Types, C Tokens, Expression using operators in ‘C’, Type Conversion and Type Casting	7

3	Control Structure and Looping: Decision Making statements, Switch statement, Conditional operator, Looping – Entry and Exit control loops, concept of jump, break and continue.	6
4	Array and String: Declaration and initialization of array, Types of array, sorting and matrix operation using array, String – string operations, string array, string function	5
5	Functions and Pointers: Functions – Definition of function, Declaration of function, Call by value, Call by references, Recursion. Pointers – Definition, Initialization, pointer arithmetic, pointer and array, Chain of	8
6	Structure and Union: Need of structure data type, structure definition, structure declaration, structure within structure, difference between structure and union.	2
7	Dynamic Memory Allocation: DMA concepts, DMA functions – Malloc(), Calloc(), Realloc(), Free().	2
8	File Management: Introduction to file management and its functions.	3
9	Introduction to Data Structure using C: Introduction, Types - Linear and Non-Linear Data structure Linear – Basics of Stack, Queue and Linked List	3
Total Hours		42

Suggested Theory Distribution

The suggested theory distribution as per Bloom’s taxonomy is as per follows. This distribution serves as guidelines for teachers and students to achieve effective teaching-learning process

Distribution of Theory for course delivery and evaluation					
Remember	Understand	Apply	Analyze	Evaluate	Create
20%	20%	30%	15%	10%	5%

List of Experiments:

1. Write a program to print student detail.
2. Write a program to calculate simple interest.
3. Write a program that accepts centigrade and convert it into Fahrenheit.
4. Write a program that accepts two numbers in A and B interchange value of A and B variable.
5. Write a program to demonstrate the use of the basic data types int, char and float.
6. Write a program to demonstrate the use of Arithmetic operators by getting two numbers from the user
7. Write a program that accepts a number from keyboard and find weather the number is ODD or EVEN using Conditional operators.
8. Write a program to demonstrate the use of increment and decrement operator.
9. Write a program to demonstrate the use of shorthand operators.

10. Write a program to demonstrate the use of sizeof() of operator.
11. Write a program to demonstrate the use of bitwise operators.
12. Write a program that accepts three numbers from the user and print maximum of them.
13. Demonstrate the use of GOTO statement.
14. Write a program to input the Name and the Salary of an Employee. Calculate and print the Name, Salary and Bonus of the Employee, where bonus= 5.3% if salary is at least Rs. 10,000 and 6.5% otherwise.
15. Admission to professional course is subject to the following conditions.
Marks in Mathematics ≥ 60
Marks in Physics ≥ 50
Marks in Chemistry ≥ 40
Total in all three subjects ≥ 200 or total in mathematics and physics ≥ 150
Given the marks in the three subjects, write a program to process the application to list the eligible candidates.
16. Write a program that accepts two numbers and one code (1,2,3,4) from the user. According to the code, the operations to be performed, using switch case statements as follows: (Code: 1 \rightarrow Addition, 2 \rightarrow Subtraction, 3 \rightarrow Multiplication, 4 \rightarrow Division).
17. Write a program that reads the marks for five subjects of a student. Calculate and print the grade for the student [i.e. Grade A, B, C, D and F] using Else-If ladder.
18. Write a program that do sum=1+3+5+..... N terms Print value of Sum.
19. Write a program to print the Fibonacci Series [i.e 1,1,2,3,5,8,13...N terms].
20. Write a program to accept one number from the user. i) Display reverse of that number. ii) Find if it is Armstrong or not.
21. Write a program that accepts a number from the user and print prime numbers from 0 to that number.
22. Write a C program to display following different Patterns.

1	1
1 2	1 0
1 2 3	1 0 1
1 2 3 4	1 0 1 0
1 2 3 4 5	1 0 1 0 1
1	a
2 1	b c
1 2 3 2 1	d e f
2 3 4 3 2 1	g h i j
1 2 3 4 5 4 3	k l m n o
2 1	
1	1
A B	A B
1 2 3	2 3 4
A B C D	C D E F
1 2 3 4 5	5 6 7 8 9
23. Write a program to accept 5 numbers in an array and display it.
24. Write a program to accept 9 numbers in form of matrix and display in matrix form.

25. Write a program to accept 5 numbers in array and find maximum and minimum value of it.
26. Write a program to accept 5 numbers in array and find maximum and minimum value of it.
27. Write a program to sort all elements of 1-D array in ascending and descending order.
28. Write a program to calculate and display addition of two matrix.
29. Write a program to count number of vowels in a given string.
30. Write a program to check whether entered string is palindrome or not.
31. Write a program for string concatenation without using library function.
32. Write a program to demonstrate the Library function for string.
33. Write a function which receives number as argument and return sum of digit.
34. Write a program for calculating Fibonacci series using UDF and call by value
35. Write a program to calculate Factorial using recursion in UDF.
36. Write a program to find Average, maximum and minimum of Array elements using UDF.
37. Write a program to calculate total number of positive, negative and zero value in array using UDF.
38. Write a program to swap two numbers using UDF and pointer.
39. Write a program using pointer to read in an array of integers and print its elements in reverse order.
40. Write a C program to create a structure of employees with Full Name, Last Name, City and Salary. Display it for n employees.
41. Write a program to demonstrate nested structure.(make structures for circle and rectangle)
42. Write a program to create array of structure. Make a structure for student having student no, student name, student marks.
43. Write a program to create union cricketer having player name, batting avg, player_age. P for swapping of two values with help of UDF and call byreference.
44. Write a program to Display contents of a file on screen. Use functions(fopen, fclose, getc, putch are of)
45. Write a program to count number of characters in a file.

Subject Code: 01ME0102
Subject Name: Engineering Graphics
B.Tech. Sem -II

Type of course: Under Graduate

Pre-requisite of course: Zeal to learn the subject.

Objective: Engineering Graphics is the language of engineering. It is the fundamental core skill enhances problem solving ability which improves the engineering knowledge. Moreover, it is creating link between imagination and realization.

Course Outcomes:

After completion of this course, student will be able to

1. Know, understand and able to define the methods of engineering drawing.
2. Learn basic sketching methods.
3. Understand engineering drawings using fundamental mathematics.
4. Construct Engineered Drawing.
5. Develop visualization skills so that they can create new product design.
6. Understand the theory of projection, Learn technical communication skill.

Teaching and Examination Scheme:

Teaching Scheme (Hours)			Credits	Theory Marks			Tutorial/ Practical Marks		Total Marks
Theory	Tutorial	Practical		ESE (E)	Mid Sem (M)	Internal (I)	Viva (V)	Term work (TW)	
4	0	4	6	50	30	20	25	25	150

Unit	Topics	Teaching Hours
1	Introduction: Module 1: Drawing instruments and accessories, Standards of Engineering Drawings. Module 2: Plain scales, Diagonal Scales.	6
2	Engineering Curves: Module 1: Introduction to engineering curves with classification and application. Module 2: Construction of Ellipse, Parabola and Hyperbola with normal and tangent to the curve. Module 3: Construction of Involute, Spirals and Cycloidal curve with normal and tangent to the curve.	10
3	Projection of Points and straight Lines: Module 1: Introduction to principal planes Module 2: Point projection located in same and different quadrants.	10

	Module 3: Line projection with inclination to one RP and two RP, True length of Line.	
4	Projections of Plane Surfaces: Module 1: Projection of Polygons, circle and ellipse with inclination to one RP and two RP. Module 2: Auxiliary Plane method. Module 3: Method for projection of plane surfaces.	10
5	Projections of Solids and Section of Solids: Module 1: Projection of Cylinder, Cone, Pyramid and Prism along with frustum with its inclination to one RP and with two RP. Module 2: Section of solids and the true shape.	12
6	Orthographic Projections: (To be cover in Laboratory) Module 1: Introduction to Orthographic Projection, Plane of Projection. Module 2: Projection of the object on the principal planes. Module 3: Front view, Top view and Sides view using First and Third angle Projection methods. Module 4: Sectional Orthographic.	-
7	Isometric Projections: (To be cover in Laboratory) Module 1: Isometric View, Conversion of Orthographic view to isometric view. Module 2: Isometric Scale, Difference between Isometric View and Projection.	-
	Total Hours	48

Suggested Theory Distribution

The suggested theory distribution as per Bloom's taxonomy is as per follows. This distribution serves as guidelines for teachers and students to achieve effective teaching-learning process

Distribution of Theory for course delivery and evaluation					
Remember	Understand	Apply	Analyze	Evaluate	Create
14%	22%	22%	14%	14%	14%

Suggested List of Drawing Sheet:

1. Practice sheet (Dimensioning methods, types of line, Methods to draw different polygons, Equal division of line and angle)
2. Scale (Plane and Diagonal Scale)
3. Curves
4. Projection of Straight line and Projection of plane surfaces.
5. Projection of solid and section of solid
6. Orthographic projection and Sectional Orthographic projection
7. Isometric projection and Isometric View.

Instructional Method:

- a. The course delivery method will depend upon the requirement of content and need of students. The teacher in addition to conventional teaching method by black board, may

also use any of tools such as demonstration, role play, Quiz, brainstorming

- b. The internal evaluation will be done on the basis of continuous evaluation of students in the laboratory and class-room.
- c. Practical examination will be conducted at the end of semester for evaluation of performance of students in laboratory.
- d. Students will use supplementary resources such as online videos, NPTEL videos, e-courses

Subject Code: 01EE0103

Subject Name: Basic Electrical and Electronics

B.Tech.Ist Year Semester: II

Type of course: Engineering Science

Prerequisite: None

Rationale: Electronics is playing a key role in all engineering applications. All engineers should have basic knowledge of electronics. Purpose of this subject is making students familiar with basic electronics concepts. Students will be able to operate electronic test and measurement equipment like multi-meter, CRO, DC power supply and function generator.

Course Outcomes:

After completion of this course, student will be able to

1. Recognize importance of electrical energy and its day to day applications.
2. Interpret the role of resistor, capacitor and inductor and their behavior under various system conditions.
3. Describe qualitative comparison between AC and DC system.
4. Analyze and solve DC Circuits and AC Single phase
5. Analyze and solve magnetic circuits.
6. Explain the need of batteries, its characteristics and charging methods.
7. Perceive the detail understanding of construction, operation and applications of various components like Diode, BJT and Op-Amp.

Teaching and Examination Scheme:

Teaching Scheme (Hours)			Credits	Theory Marks			Tutorial/ Practical Marks		Total Marks
Theory	Tutorial	Practical		ESE (E)	Mid Sem (M)	Internal (I)	Viva (V)	Term work (TW)	
3	0	2	4	50	30	20	25	25	150

Sr. No.	Content	Total Hrs
1	Fundamental of DC circuits: Definition of Current, Voltage, e.m.f., Power Energy, Resistance, Ohm's Law, Effect of variation in temperature on resistance, Series, Parallel and series-parallel connection of resistances, Comparison between series and parallel circuits, Open circuit and Short circuit, Kirchoff's Laws, Nodal Analysis, Mesh Analysis of Electrical Networks	5

2	Magnetic Circuits and Electromagnetics: Definition of magnetic quantities, Magnetic circuits, Comparison of electric and magnetic circuits, Calculation of Ampere turns, Leakage flux, Magnetization Curve Electromagnetic induction, Faraday's Laws, induced emf and direction of induced emf, self-inductance, mutual inductance, energy stored in magnetic field, Charging and discharging of inductor, magnetic hysteresis, eddy current losses.	5
3	Fundamental of AC Circuit: Generation of Alternating voltage and current, sinusoidal function- Terminology, Form Factor and Peak Factor, Phase and Phase Difference, Phasor representation of alternating quantities, Phasor addition and subtraction Behaviour of purely resistive, inductive and capacitive circuits, Phase relation between voltage and current Active, Reactive and Apparent Power, Power Factor and its significance in series RL circuit, series RC circuits, series RLC circuit Parallel and series-parallel AC circuits, phasor method, admittance method Resonance n series and parallel circuit.	8
4	Batteries: Electric cell, types of cells, Equivalent circuits, grouping of cells, batteries, capacity of battery, efficiency of battery, charging method, Life of battery, Application of battery, Battery maintenance procedure.	2
5	Safety and Protection Electric Shock, First aid for electric shock, importance of grounding, Fuse, MCB, ELCB.	2
6	Fundamentals of Semiconductor Material: Energy Band Diagram of conductor, semiconductor and insulator; Bohr Atomic Model for Atom, Crystal Structure of Semiconductor Materials, Intrinsic and Extrinsic Semiconductor Materials.	3
7	Semiconductor Diodes: Symbol and Construction, Operating Characteristics in Forward and Reverse Bias, Applications of Diode as Switch, Clipper, Clamper and Rectifier; Special Purpose Diodes: Zener Diode; Optical Diodes like LED, Photo Diode, Laser Diode, Seven Segment Display; Other Diodes like Varactor Diode, Schottky Diode, PIN Diode, Tunnel Diode, Step Recovery Diode.	5
8	Bipolar Junction Transistor (BJT): History of BJT invention; Types, Symbol and Construction of BJT; Basic Operation of BJT; BJT Configurations: Common Base, Common Emitter, Common Collector with Operation, Input / Output Characteristics; Applications of Transistors as Switch and Amplifier.	5
9	Operational Amplifiers: Introduction to OpAmp, Differential and Common Mode Operation, OpAmp Basics, Practical OpAmp Circuits, OpAmp Applications as Summer, Integrator and Differentiator	5
	Total Hours	45

Suggested Theory Distribution

The suggested theory distribution as per Bloom's taxonomy is as per follows. This distribution serves as guidelines for teachers and students to achieve effective teaching-learning process

Distribution of Theory for course delivery and evaluation					
Remember	Understand	Apply	Analyze	Evaluate	Create
20%	30%	25%	15%	10%	0%

List of Experiments :(suggested)

1. To verify ohm's law in an electric circuit
2. To observe the variation of temperature on resistance
3. Determination of B-H curve of magnetic material
4. To determine power in a single-phase circuit using wattmeter
5. Determination of parameters in series RLC circuit
6. Study series resonance in RLC circuit
7. To study and perform the V-I characteristic of Silicon Diode and Zener Diode.
8. To use silicon Diode as a Clipper and Clamper.
9. To analyze the Half Wave, Full Wave and Bridge Rectifiers.
10. To use Transistor as a Switch.
11. To study and perform the Input and Output characteristic of BJT.
12. To use OpAmp as summer, Integrator and Differentiator.

Subject Code: 01ME0104
Subject Name: Mechanical Workshop
B.Tech. Ist Year Semester: II

Type of course: Under Graduate

Prerequisite: Zeal to learn subject

Rationale: Mechanical Workshop is the very important subject which is very useful for students to prepare for industrial needs and also help to get various technical skill. Practice of engineering workshop makes students to compete practical work in industrial environment as well as day-to-day life work.

Course Outcome:

After learning the course, the students will be competent to

1. Learn about Application of hand tools and power tools.
2. Learn about various operations of machine tools.
3. Selection of process and steps for specific operation.
4. Knowledge and awareness about various safety related operation.

Teaching and Examination Scheme:

Teaching Scheme (Hours)			Credits	Theory Marks			Tutorial/ Practical Marks		Total Marks
Theory	Tutorial	Practical		ESE (E)	Mid Sem (M)	Internal (I)	Viva (V)	Term work (TW)	
0	0	2	1	0	0	0	0	50	50

Sr. No.	Content	Total Hrs.
1	Introduction: Introduction to mechanical workshop its plan and layout. Learn about various safety related rules and regulation. Demonstration of various tools which are used in workshop like hand tools, power tools, various measurement equipment, study of different types of materials, various processes like Finishing, Marking, Cutting, Smoothing, Bending etc.	04
2	Fitting Shop Demonstration of fitting job and make job physically	06
3	Carpentry Shop Demonstration of carpentry job and make job physically	06
4	Tin Smithy Shop Demonstration of tin smithy job and make job physically	04

5	Welding Shop Demonstration of welding job and make job physically	04
6	Plumbing & Black smithy Shop Demonstration of Plumbing and black smithy job	04

Suggested Theory Distribution

Major Equipment:

1. Workshop Hand Tools
2. Arc Welding Machine

Open Ended Project:

1. Design and manufacturing of small mechanical component in workshop

List of Open Base Software/learning website:

1. nptel.ac.in

Subject Code: 01PE0101

Subject Name: PHYSICAL EDUCATION/SPORTS/YOGA

B.Tech. Ist Year Semester: II

Type of course:

Prerequisite:

Rationale:

Course Outcomes:

After successful completion of this course, student will be able to

1. To evoke social consciousness among students through various activities.
2. To develop youth leadership in the students
3. To create awareness of the students in Attention, saluting, March shooting etc.
4. To create the awareness of all kinds of discipline to the students
5. To develop skill of the students regarding Hockey, Khokho, track events, field events and various asanas as well as physical Fitness and Health Education.

Teaching and Examination Scheme:

Teaching Scheme (Hours)			Credits	Theory Marks			Tutorial/ Practical Marks		Total Marks
Theory	Tutorial	Practical		ESE (E)	Mid Sem (M)	Internal (I)	Viva (V)	Term work (TW)

Content:

1. **Teaching of skills of Hockey** – demonstration practice of the skills and correction.
2. Teaching of skills of Hockey – demonstration practice of the skills and correction. And involvement of skills in games situation
3. Teaching of advance skills of Hockey – demonstration practice of the skills and correction. Involvement of all the skills in games situation with teaching of rules of the game
4. **Teaching of skills of Kho-Kho** – demonstration practice of the skills and correction.
5. Teaching of skills of Kho-Kho – demonstration practice of the skills and correction. Involvement of the skills in games situation
6. Teaching of advance skills of Kho-Kho – demonstration practice of the skills and correction. Involvement of all the skills in games situation with teaching of rules of the game
7. Teaching of different track events – demonstration practice of the skills and correction.
8. Teaching of different track events – demonstration practice of the skills and correction.
9. Teaching of different track events – demonstration practice of the skills and correction with competition among them.

10. **Teaching of different field events** – demonstration practice of the skills and correction.
11. Teaching of different field events – demonstration practice of the skills and correction.
12. Teaching of different field events – demonstration practice of the skills and correction.
13. Teaching of different field events – demonstration practice of the skills and correction with competition among them.
14. Teaching of different asanas – demonstration practice and correction.
15. Teaching of different asanas – demonstration practice and correction.
16. Teaching of different asanas – demonstration practice and correction.
17. Teaching of different asanas – demonstration practice and correction.
18. Teaching of weight training – demonstration practice and correction.
19. Teaching of circuit training – demonstration practice and correction.
20. Teaching of calisthenics – demonstration practice and correction.

Subject Code: 01SL0101

Subject Name: Communication Skills

B.Tech.Ist Year Semester: II

Type of course: Communication skills

Prerequisite: Zeal to learn the subject

Rationale: The rationale of Technical Communication Skills in English is to help students understand the process of communication in link with Non –verbal Communication. The curriculum also targets the understanding of different barriers that creep into communication process. Moreover Units covered on LSRW skills development will help students acquire competence over linguistic skills. This would be developed through balanced and integrated tasks.

Course Outcomes:

After completion of this course, student will be able to

1. Comprehend texts based on science and technology
2. Develop the ability to interpret informative and analytical texts
3. Evolve an understanding of components of academic writing
4. Explain technical concepts in written form
5. Compose written texts for the purposes of academic writing

Prerequisite: NA

Rationale:

1. To study about identification of different types of forces, systematic evaluation of effect of these forces, behaviour of rigid bodies subjected to various types of forces, at the state of rest or motion of the particles, as Universe exist due to force only.
2. To understand the fundamental principles, concepts and techniques, both theoretical and experimental, with emphasis on the application of these to the solution of mechanics based suitable problems in all engineering.
3. To provide a firm foundation and formwork for more advanced study at every higher semester as the subject of Mechanics of Rigid bodies cuts broadly across all branches of engineering profession.

Course Outcome:

After studying this subject:

1. Students will be able to understand the laws of mechanics and their application to engineering problem.
2. Student will be able to understand the fundamentals of stress/strain analysis and be able to apply them with confidence to simple structure.
3. Fundamental related to subject will facilitate students to design structures, predict failure and understand the physical properties of materials in higher semester.

Teaching and Examination Scheme:

Teaching Scheme (Hours)			Credits	Theory Marks			Tutorial/ Practical Marks		Total Marks
Theory	Tutorial	Practical		ESE (E)	Mid Sem (M)	Internal (I)	Viva (V)	Term work (TW)	
3	1	2	5	60	30	10	25	25	150

Sr. No.	Topic Name	Teaching Hours
1	Introduction	2
	1.1 Terminologies: space, time, particle, rigid body, deformable body. Force: Definition, categorization of forces, Characteristics of a force, System of forces and resolution of forces.	

	1.2 Principles of mechanics: Principles of Transmissibility, superposition, Gravitational Law and Parallelogram Law of Forces.	
2	Fundamentals of Statics	8
	2.1 Force and Force system: System of Forces its definition and application in Engineering.	
	2.2 Coplanar concurrent force system: Derivation of resultant force and equilibrant force using analytical and graphical methods. Triangle law of forces and Polygon law of forces.	
	2.3 Equilibrium of rigid bodies: Conditions of equilibrium, Lami's theorem and its derivation. Concept of Free body diagram in engineering. Application of Lami's theorem in various problems.	
	2.4 Coplanar non-concurrent forces: Definition of moment, couple and its effect on rigid bodies. Properties of couple, equivalent force couple system with examples, Varignon's theorem and its derivation.	
	2.5 Resultant of Coplanar non-concurrent Force system: Calculation of resultant force in coplanar non-concurrent force system by analytical and graphical methods.	
3	Analysis of Determinate Beams	8
	3.1 Classification of loads, supports and beams	
	3.2 Support Reactions: Calculation of support reactions for determinate beams subjected different loads viz. (i) Concentrated loads and moment, (ii) Uniformly distributed load, and (iii) Uniformly Varying loads.	
	3.3 Internal forces in beams: Definition of shear force and bending moment. Correlation between loading, shear force & bending moment in beams.	
	3.4 Shear Force and Bending Moment Diagrams: Bending moment and shear force diagrams for beams subjected to; i) Concentrated loads and moment, (ii) Uniformly distributed load, and (iii) Uniformly Varying loads. Point of Contra flexure and maximum bending moment in a beam.	
4	Concepts and Application of Static Friction	6
	4.1 Introduction: Theory, Classification and laws of Static and Dynamic friction.	
	4.2 Glossary of Terms: Angle of friction, Coefficient of friction, Angle of repose and Cone of friction.	
	4.3 Application of Static Friction -	
	(a) Block friction: Solutions of problems involving block friction in horizontal and inclined planes.	
	(b) Ladder Friction: Solution of various problems	
	(c) Wedge, Belt and Rope Friction: Solution of various problems.	
5	Centroid and Moment of Inertia	9
	5.1 Centroid: Definition, concept, and evaluation of centroid for one-dimensional standard geometry viz. horizontal, vertical, inclined and circular curved lines.	
	5.2 Centroid of Standard Geometrical shapes: Determination of centroid for standard two-dimensional and three-dimensional shapes viz.	

	<p>rectangular, triangular, circular, semi-circular, quarter circular, circular segments, cylindrical, conical, spherical and cubical shapes.</p> <p>5.3 Calculation of Centroid: Calculation of centroid for composite lines, areas and volumes.</p> <p>5.4 Pappus-Guldinas Theorem: Pappus Guldinus theorem and its application in calculating surface area and volume.</p> <p>5.5 Introduction to Moment of Inertia: Definition and concept of Moment of Inertia. Perpendicular axis, Parallel axis theorem, Polar Moment of inertia, and radius of gyration.</p> <p>5.6 Moment of Inertia for Planar cross-sections: Determination of Moment of Inertia for planar sections using parallel axis theorem for standard lamina.</p> <p>5.7 Moment of Inertia for composite planar elements: Determination of moment of Inertia for composite lamina.</p>	
6	<p>Simple Stresses & Strains</p> <p>6.1 Introduction: Definition and types of simple stresses (direct and indirect) and strains (linear and lateral) in an element and its importance in engineering.</p> <p>6.2 Relation between stress and strain: Hooke's law, Poisson's ratio, Modulus of Elasticity, Rigidity, and Bulk modulus.</p> <p>6.3 Stresses and strains Members: Evaluation of stresses and strains in members subjected to axial and shear loading for homogenous, composite, prismatic and tapered sections.</p> <p>6.4 Thermal Stresses: Evaluation of stresses in elements subjected to temperature effects in homogeneous and composite members</p> <p>6.5 Inter-relationship between various Moduli: Relationship between modulus of elasticity, rigidity, bulk modulus and Poisson's ratio with problems.</p> <p>6.6 Multidirectional Stresses: Volumetric strains, effect of multi-directional stresses on homogeneous members.</p>	10
7	<p>Stresses in Beams</p> <p>7.1 Theory of Pure Bending – Assumption, theory and derivation of equation for pure bending. Determination of bending stresses at various sections.</p> <p>7.2 Flexural stresses – Section modulus and determination of flexural stress distribution in beams of various cross sections.</p> <p>7.3 Equation of Shearing stress – Derivation of equation for shear stress across the cross section in a beam.</p> <p>7.4 Shear stresses – Qualitative and Quantitative determination of shear stress distribution in beams having various cross sections.</p>	10
8	<p>Torsion</p> <p>8.1 Equation of Pure Torsion: Definition of Torsion, Assumption and derivation of equation for pure torsion in circular shafts, Torsional rigidity and its application.</p>	3

	8.2 Stresses due to Torsion: Torque generated due to Power transmitted in shaft. Stresses generated in members subjected to circulatory motion in circular and hollow circular shafts.	
9	Principle Stresses	4
	9.1 Introduction: Two-dimensional stress system. Evaluation of stresses in an inclined plane for members subjected to orthogonal stresses. Definition of principal plane, principal stresses, angle of obliquity, and resultant stress.	
	9.2 Principal Stress and Strain: Evaluation of Principal plane and principal stresses using analytical method.	
	9.3 Analysis of Principal stresses and principal planes for two-dimensional stress system.	
	9.4 Application of Mohr's circle and ellipse of stress.	

Suggested Theory Distribution

The suggested theory distribution as per Bloom's taxonomy is as per follows. This distribution serves as guidelines for teachers and students to achieve effective teaching-learning process

Distribution of Theory for course delivery and evaluation					
Remember	Understand	Apply	Analyze	Evaluate	Create
5%	30%	40%	15%	10%	0%

Reference books:

1. Applied Mechanics S. B. Junarkar & H. J. Shah-Charotar Publication
2. Engineering Mechanics by G. S. Sawhney; PHI New Delhi
3. Mechanics of Materials: Beer and Johnston, TMH
4. Mechanics of Materials: Gere & Timoshenko; CBS Publishers & Distributors, Delhi
5. Mechanics of Materials: Hibbler R C; Pearson Education
6. Strength of materials; Ramamutthram
7. Engineering Mechanics of Solids: Popov E.P; Prentice Hall of India, New Delhi

List of Experiments:

1. Find out resultant of concurrent forces.
2. Find out resultant of non-concurrent forces.
3. Demonstrate and prove lami's theorem.
4. Find out beam reactions.
5. Find out mechanical properties of material.
6. Design a stable object.
7. Using Popsicle sticks or straw prepare model of tower to carryout highest load for given dimensions.

Instructional Method and Pedagogy

1. Prerequisite of the course and its pattern shall be discussed on the commencement of the course.
2. Lectures shall be conducted in class room using various teaching aids.

3. Presence in all academic sessions is mandatory which shall carry 5% marks of the total internal evaluation.
4. At the end of each unit/topic an assignment based on the course content shall be given to the students which shall carry 5% weightage for timely completion and submission of the assigned work.
5. The laboratory experiments are planned in such a way that it covers the practical aspects of the course contents. The performance of these experiments shall bring the clarity of the theoretical concepts which the students have studied during the academic sessions.

List of Open Base Software/learning website:

1. <http://nptel.ac.in/course.php>

Subject Code: 01SL0102

Subject Name: Reading and Writing for Technology

B.Tech.1st Year Semester: I

Objectives:

1. To introduce students to the basics of reading and writing skills
2. To enable them to comprehend texts of technical and analytical nature
3. To enable them to carryout different writing tasks in the context of Technology

Credits Earned: 2 Credits

Course Outcomes: After completion of this course, student will be able to

1. comprehend diverse texts related to technology;
2. organise ideas and arguments in the written form;
3. write assignments, reports, letters etc. in the technical contexts.

Teaching and Examination Scheme:

Teaching Scheme (Hours)			Credits	Theory Marks			Tutorial/ Practical Marks		Total Marks
Theory	Tutorial	Practical		ESE (E)	Mid Sem (M)	Internal (I)	Viva (V)	Term work (TW)	
2	0	0	2	00	30	20	25	25	100

Sr. No.	Content	Total Hrs
1	1. History/ Story of Technical Writing 2. English in Technical Communication 7. Group discussions	4
2	1. Know your textbook: Exploring the textbook, its parts and purposes 2. Approaching reading: Reading Strategies 3. Reading for Various Purposes: reference books, stories, articles, technical surveys, reports, blog posts, & reviews	9
3	1. Understanding the writing process: Thinking about writing processes, key Attributes of academic and technical texts 2. Writing process - Visualizing your text 3. Approaching Writing: Writing Strategies 4. Understanding various forms of writing: essay, case study, research paper, term paper, maths/physics problems, lab report, book report/review, surveys, blog posts, & dissertation 5. Writing for various purposes: essays, writing answers in exam, lab reports, process and instructions, reviews, blog post, & assignments	17

Subject Code: 01SL0103

Subject Name: Speaking & Presentation Skills

B.Tech.1st Year Semester: I

Objectives:

1. To introduce students to the basics of speaking and presentation skills
2. To impart training regarding the form and manner of speaking for academic purposes
3. To impart training regarding preparing for and making an effective presentation

Credits Earned: 2 Credits

Course Outcomes: After completion of this course, student will be able to

1. carry out diverse speaking tasks for various academic purposes;
2. handle the form, vocabulary and characteristic expression of English
3. Language in different context; deliver an effective presentation on a given topic.

GROOMING TOMORROW'S LEADERS

OFFERING NCC A GENERAL GENERIC ELECTIVE CREDIT COURSE IN UNIVERSITIES UNDER CHOICE BASED CREDIT SYSTEM TO ALIGN WITH NEW EDUCATION POLICY 2020

SECTION I: NCC CREDIT COURSE DESIGN DOCUMENT UNDER CHOICE BASED CREDIT SYSTEM AS GENERAL ELECTIVE FOR SENIOR DIVISION / SENIOR WING

1. Preamble. The National Cadet Corps (NCC) is governed by NCC Act 1948 and attendant NCC Rules. It functions under the Ministry of Defence and is headed by DGNCC. It is organised into 17 State Directorates each headed by an Additional/Deputy Director General.

The aims of NCC are:-

- a) To develop character, camaraderie, discipline, secular outlook, the spirit of adventure, sportsman spirit and ideals of selfless service amongst cadets by working in teams, honing qualities such as self-discipline, self-confidence, self-reliance and dignity of labour in the cadets.
- b) To create a pool of organized, trained and motivated youth with leadership qualities in all walks of life, who will serve the Nation regard less of which career they choose.
- c) To provide a conducive environment to motivate young Indians to choose the Armed Forces as a career.

2. Purpose. Currently NCC training is imparted as extra-curricular activity to volunteer students from recognized schools and colleges who enrol as cadets. NCC as a Credit Course is designed with an intent to transform NCC training into a curricular activity from an extra-curricular thereby providing academic credits to students undergoing NCC training along with other attended advantages to the cadets in the college/ university.
3. Introduction to NCC Credit Course Design. Institutional Training is the mainstay of NCC training and it is conducted at colleges and universities by Associate NCC Officers and Armed Forces personnel. The application of knowledge gained through institutional training is further honed or developed to a higher degree in NCC Camps. The Institutional Training syllabus comprises Common Subjects and Specialised Subjects (military component). NCC Credit Course is designed to offer Institutional Training of Senior Wing /Division is over six semesters (three years), comprising 330 periods (excluding Camp), of which 150 periods are meant for theory with 10 credits and 180 periods for practical with 6 credits. Each period is counted as hour. The ratio between theory and practical in terms of number of hours of training is 5:6, but in terms of credits is 5:3, since as per CBCS two hours of practical is counted towards one period of training as against one hour for theory. In addition two separate courses have been designed for two Camps normally referred to as Annual Training Camps (ATC).

SEMESTER I COURSE MODULE : NATIONAL CADET CORPS I

National Cadet Corps : Course Details			
Course Title: National Cadet Corps I			
Course Code	BNCC01GE03	Credits	1(Thr)+ 1(Pr) = 03
L /T + P	15+30	Course Duration	1 Semester
Semester	I (Odd)	Contact Hours	15(Thr)+30(Pr)=45Hours
Methods of Content Interaction	Lecture, Tutorials, Group discussion, Collaborative work, self-study, Seminar presentations by students, individual and group drills, group and individual field-based assignments, Educational Excursion		
Assessment and Evaluation	As per the University norms i.e, 25% internal assessment and 75% end term exams , or 30% internal assessment and 70% end of term exams etc.		

Course Content Part (I) Theory

2. **Course Objectives:** Cadets will be able to: -
 - a) Know about the history of NCC, its organization, and incentives of NCC for their career prospects.
 - b) Acquire knowledge of duties and conduct of ncc cadets.
 - c) Understand about different NCC camps and their conducts.
 - d) Understand the concept of national integration and its importance.
 - e) Understand the concept of self-awareness and emotional intelligence.
 - f) Understand the concept of critical & creative thinking.
 - g) Understand the process of decision making & problem solving.
 - h) Understand the concept of team and its functioning.
 - i) Understand the concept and importance of Social service.

3. **Expected Learning Outcomes.** After completing this course, the cadets will be able to: -
 - a) Imbibe the conduct of NCC cadets.
 - b) Respect the diversity of different Indian culture.
 - c) Practice togetherness and empathy in all walks of their life.
 - d) Do their own self analysis and will workout to overcome their weakness for better performance in all aspects of life.
 - e) Understand creative thinking & its components.
 - f) Think divergently and will try to break functional fixedness.
 - g) Make a team and will work together for achieving the common goals.
 - h) Do the social services on different occasions.

4. **Course Content Part (I) Theory**
 - a) **Unit 1- NCC General (N) (Contact Hrs. 06).** Introduction of NCC, History, Aims, Objective of NCC & NCC as Organization, Incentives of NCC, Duties of NCC Cadet. NCC Camps: Types & Conduct.
 - b) **Unit 2- National Integration & Awareness (NI) (Contact Hrs. 04)** . National Integration: Importance & Necessity, Factors Affecting National Integration, Unity in Diversity & Role of NCC in Nation Building, Threats to National Security.
 - c) **Unit 3- Personality Development (Contact Hrs. 3).** Intra & Interpersonal skills - Self-Awareness- &Analysis, Empathy, Critical & creative thinking, Decision making and problem solving.
 - d) **Unit 4- Social Service and Community Development(Contact Hrs. 02).** Basics of social service and its need, Types of social service activities, Objectives of rural development programs and its importance, NGO's and their contribution in social welfare, contribution of youth and NCC in Social welfare.

Course Content Part (II) Practical

5. **Course Objectives:** Cadets will be able to: -
 - a) Understand that drill as the foundation for discipline and to command a group for common goal.
 - b) Appreciate grace and dignity in the performance of foot drill.

- c) Understand the importance of a weapon its detailed safety precautions necessary for prevention of accidents.
 - d) Develop awareness about different types of terrain and how it is used in battle craft.
 - e) Develop the concept of various markings on the map and how they are co-related to the ground features.
 - f) Understand the various social issues and their impact on social life.
 - g) Develop the sense of self-less social service for better social & community life.
6. **Expected Learning Outcomes:** After completing this course, the cadets will be able to: -
- a) Perform foot drill and follow the different word of command.
 - b) Fire a weapon effectively with fair degree of marksmanship.
 - c) Undertake point to point navigation and take part in route marches by day and night.
 - d) Perform the social services on various occasions for better community & social life.
7. **Course Content Part (II) Practical**
- a) **Unit 1. Drill (Contact Hrs. 12).** Foot Drill- Drill ki Aam Hidayaten, Word ki Command, Savdhan, Vishram, Aram Se, Murdna, Kadvar Sizing, Teen Line Banana, Khuli Line, Nikat Line, Khade Khade Salute Karna Parade Par, Visarjan, Line Tod, Tej Chal, Tham aur Dhire Chal, Tham.
 - b) **Unit 2. Weapon Training (WT) (Contact Hrs. 05).** Introduction & Characteristics of .22 rifle, Handling of .22 rifle.
 - c) **Unit 3. Map Reading (MR) (Contact Hrs. 03).** Definition of Map, Conventional signs, Scale and Grid System, Topographical forms and technical terms, Relief, Contours and gradients, Cardinal points and types of North, Magnetic Variation and Grid Convergence.
 - d) **Unit 4. Field Craft & Battle Craft (FC & BC) (Contact Hrs. 03).** Introduction of Field Craft & Battle craft, Judging Distance, Method of Judging Distance.
 - e) **Unit 5. Social Service and Community Development (SSCD)(Contact Hrs.07).** Cadets will participate in various activities throughout the semester e.g., Blood donation Camp, Swachhata Abhiyan, Constitution Day, Jan Jeevan Hariyali Abhiyan, Beti Bachao Beti Padhao etc.

Subject Code: 01ME0305

Subject Name: Fundamental of Machine Design

B. Tech. IInd Year Semester: III

Type of course: Under Graduate

Prerequisite: Engineering Graphics and Physics

Rationale: Understanding the fundamental principles, concepts and techniques, both theoretical and experimental, with emphasis on the application of these to the solution of mechanics based suitable problems in all engineering.

Course Outcome:

After learning the course, the students will be competent

1. To understand the laws of mechanics and their application to engineering problem.
2. Apply resultant force to move or equilibrant force to keep body in equilibrium.
3. To apply the fundamentals of stress/strain analysis with confidence to simple structure.
4. Apply shear force and bending moment diagrams to analyze the resistance offered by the beam and evaluate the stresses induced in beam.
5. To Analyze the Deflection of Beams, Torsion of Circular Shafts.

Teaching and Examination Scheme:

	Moment of Inertia for composite planar elements: Determination of moment of Inertia for composite lamina.	
6	<p>Simple Stresses & Strains Introduction: Definition and types of simple stresses (direct and indirect) and strains (linear and lateral) in an element and its importance in engineering. Relation between stress and strain: Hooke's law, Poisson's ratio, Modulus of Elasticity, Rigidity, and Bulk modulus. Stresses and strains Members: Evaluation of stresses and strains in members subjected to axial and shear loading for homogenous, composite, prismatic and tapered sections. Thermal Stresses: Evaluation of stresses in elements subjected to temperature effects in homogeneous and composite members Inter-relationship between various Moduli: Relationship between modulus of elasticity, rigidity, bulk modulus and Poisson's ratio with problems. Multidirectional Stresses: Volumetric strains, effect of multi-directional stresses on homogeneous members.</p>	10
7	<p>Stresses in Beams Theory of Pure Bending – Assumption, theory and derivation of equation for pure bending. Determination of bending stresses at various sections. Flexural stresses – Section modulus and determination of flexural stress distribution in beams of various cross sections. Equation of Shearing stress – Derivation of equation for shear stress across the cross section in a beam. Shear stresses – Qualitative and Quantitative determination of shear stress distribution in beams having various cross sections.</p>	6
8	<p>Torsion: Equation of Pure Torsion: Definition of Torsion, Assumption and derivation of equation for pure torsion in circular shafts, Torsional rigidity and its application. Stresses due to Torsion: Torque generated due to Power transmitted in shaft. Stresses generated in members subjected to circulatory motion in circular and hollow circular shafts</p>	7

Suggested Theory Distribution

The suggested theory distribution as per Bloom's taxonomy is as per follows. This distribution serves as guidelines for teachers and students to achieve effective teaching-learning process

Distribution of Theory for course delivery and evaluation					
Remember	Understand	Apply	Analyze	Evaluate	Create
10%	30%	40%	10%	10%	0%

List of Experiments:

1. Law of Parallelogram of Forces

2. Coplanar Non-Concurrent Forces
3. Co-efficient of Static Friction
4. Compressive Strength
5. Tensile Strength
6. Hardness Number
7. Izod Impact Test
8. Shear forces and bending moment Diagrams.

List of Assignment:

Assignment should be designed to include chapter no 2, 3, 4 & 6

1. Theory and Examples on Coplanar Concurrent & Non-concurrent Forces
2. Theory and Examples on Support reaction and Shear Force and Bending moment diagram
3. Theory and Examples on Centre of Gravity & Moment of Inertia
4. Theory and Examples on Simple Stresses and Strain

Major Equipment:

1. Universal Testing Machine
2. Impact Tester machine
3. Hardness Tester Machine

Design based Examples (DE)/Open Ended Example:

1. Design a stable object
2. Centroid, centre of gravity and moment of inertia

Text Books:

1. Applied Mechanics S. B. Junarkar & H. J. Shah-Charotar Publication

Reference Books:

1. Engineering Mechanics by G. S. Sawhney; PHI New Delhi
2. Mechanics of Materials: Beer and Johnston, TMH
3. Mechanics of Materials: Gere & Timoshenko; CBS Publishers & Distributors, Delhi
4. Mechanics of Materials: Hibbler R C; Pearson Education
5. Strength of materials; Ramamutthram
6. Engineering Mechanics of Solids: Popov E.P; Prentice Hall of India, New Delhi

List of Open Base Software/learning website:

1. <https://nptel.ac.in/courses/112/102/112102284/>
2. <https://web.mit.edu/emech/dontindex-build/>

Subject Code: 01MA0301

Subject Name: Applied Differential Equation

B.Tech. IInd Year Semester: III

Type of course: Under Graduate

Prerequisite: Engineering Mathematics I, Engineering Mathematics II

Rationale: After learning this subject student will be able to apply Fourier series, Laplace transform and differential equation methods for solution of engineering problems

Course Outcome:

After completion of this course, student will be able to

1. Expand various functions in terms of sine and cosine functions.
2. Classify and apply the standard methods to solve ordinary and partial differential equations.
3. Apply Laplace transform and Fourier series to solve differential equations.
4. Apply the knowledge of differential equations and its solutions to evaluate engineering problems.

Teaching and Examination Scheme:

Teaching Scheme			Credits	Examination Marks					Total Marks
L	T	P		Theory Marks			Practical Marks		
				ESE(E)	IA	CSE	Viva (V)	Term Work	
4	2	-	5	50	30	20	25	25	150

Content:

Sr.	Content	Total
1	Fourier series: Periodic functions, Fourier series of functions of any period, Fourier series of Even and odd functions, Half range Expansions, Fourier integrals.	14
2	Laplace Transforms: Laplace transforms definition, Laplace transforms of some elementary functions, Inverse transforms, Linearity and shifting properties, Laplace transforms of derivatives and integrals, Differentiation and integrations of Transforms, Convolution theorem and its application to obtain inverse Laplace transform, Laplace transform of periodic functions, Unit step function, Unit impulse function (Dirac delta function), second shifting property, Applications of Laplace transforms to solve ODE and system of ODE.	16

3	Linear Differential Equations: Solution of homogeneous linear differential equations with constant coefficients, Non-homogeneous linear differential equations, particular integrals by Inverse Operators and Variation of Parameters, Euler-Cauchy's differential equations with variable coefficients, Power Series solution of ODE.	10
4	Partial Differential Equations: Formation of PDE, Methods of solutions, Lagrange's linear partial differential equation, Special types of Nonlinear PDE of the first order, method of separation of variables.	10
5	Applications of differential equations: Application of ODE: Mechanical vibration system, Electrical circuit system, Application of PDE: Heat, wave, Laplace equations and their solution by method of separation of variables and Fourier series.	10

Distribution of Theory Marks

R Level	U Level	A Level	N Level	E Level	C Level
20	20	30	15	10	5

Legends: R: Remembrance; **U:** Understanding; **A:** Application, **N:** Analyze, **E:** Evaluate **and C:** Create

List of Assignment:

Assignment should be designed to include chapter no 1, 2 & 3. Machine Design Portion.

1. Theory and Example on Fourier series.
2. Theory and Example on Laplace transe form
3. Theory and Example on linear differential Equations.
4. Theory and Example on partial differential Equations.
5. Theory and Example on application of differential equations.

Reference books:

1. M. D. Weir et al: Thomas' Calculus, 11th Ed., Pearson Education, 2008.
2. Stewart James: Calculus Early Transcendental, 5th Ed., Thomson India, 2007
3. Wylie & Barrett: Advanced Engineering Mathematics, Mc Graw Hill pub.
4. Greenberg M D: Advanced Engineering Mathematics, 2nd ed., Pearson.

List of Open Base Software/learning website:

1. Web site: <http://mathworld.wolfram.com/>
2. <http://en.wikipedia.org/wiki/Math>

Subject Code: 01ME2301
Subject Name: Fluid Mechanics
B.Tech. IInd Year Semester: III

Type of course: Science

Prerequisite: NIL

Rationale: Understanding the fluid flow phenomena and different types of flow.

Course Outcome:

After learning the course, the students will be competent

1. Identify and understand the fundamentals of Fluid mechanics.
2. Compute force of buoyancy on a partially or fully submerged body and analyze the stability of a floating body.
3. Understand the basic concept of fluid kinematics and dynamics.
4. Distinguish between types of the fluid flow.
5. Understand velocity distribution and pressure drop in pipe flow for viscous and turbulent flow.
6. Understand the basics of compressible flow.

Teaching and Examination Scheme:

Teaching Scheme (Hours)			Credits	Theory Marks			Tutorial/ Practical Marks		Total Marks
Theory	Tutorial	Practical		ESE (E)	Mid Sem (M)	Internal (I)	Viva (V)	Term work (TW)	
3	0	2	4	50	30	20	25	25	150

Sr. No.	Content	Total Hrs
1	Properties Of Fluid And Pressure And Head: Introduction of fluid, fluid classifications, Shear stress in a moving fluid, density, viscosity, surface tension, capillary effect, vapor pressure, cavitation, compressibility and the bulk modulus. Pascal's Law and Hydrostatic law, Pressure measurement- manometers and piezometers.	06
2	Static Forces on Surfaces and Bouyancy: Fluid static, action of fluid pressure on surface, resultant force and center of pressure - plane surface, plane surface immersed in a liquid, forces on a curved surface due to hydrostatic pressure, buoyancy, equilibrium of floating bodies, stability of a submerged body, stability of floating bodies, determination of the metacentric height.	08

3	Fluid Kinematics and Fluid Dynamics: Fluid kinematics: Fluid flow and different types of flow, Lagrangian and Eulerian description of fluid flow - Velocity and acceleration of fluid particles - Stream, streak and path lines, Continuity equation (one-, two- and three-dimensional forms). Fluid dynamics: Euler's equation of motion along a stream line - Bernoulli's equation. Practical applications of Bernoulli's equation in flow measurement devices like venturi meter, orifice meter and pitot tube.	11
4	Two-Dimensional Ideal Fluid Flow: Rotational and irrotational flow, circulation and vorticity, streamlines and the stream functions, velocity potential and potential flow, relation between stream function and velocity potential; flow nets, stream function and velocity potential for uniform flow.	05
5	Viscous Flow And Turbulent Flow: Reynolds number, flow of viscous fluid through circular pipe- Hagen Poiseuille formula, Flow of viscous fluid between two parallel fixed plates, power absorbed in viscous flow through - journal, foot step and collar bearing, movement of piston in dash pot, methods of measurement of viscosity, Moody diagram resistance of smooth and rough pipes shear stress and velocity distribution in turbulent flow through pipes.	10
6	Flow Through Pipes: Darcy-Weisbach equation, major and minor losses in pipes, pipe friction, parallel, series and branched pipes.	06
7	Compressible Flow: Basic equations for one dimensional, compression, Pressure wave propagation, sound velocity in fluid, Mach number, Stagnation properties.	06

Suggested Theory Distribution

The suggested theory distribution as per Bloom's taxonomy is as per follows. This distribution serves as guidelines for teachers and students to achieve effective teaching-learning process

Distribution of Theory for course delivery and evaluation					
Remember	Understand	Apply	Analyze	Evaluate	Create
15%	20%	25%	25%	25%	0%

Reference Books:

1. Fluid Mechanics and Fluid Power Engineering by D.S. Kumar, S.K.Kataria & Sons
2. Fluid Mechanics and Hydraulic Machines by R.K. Bansal, Laxmi Publications
3. Fluid Mechanics and Hydraulic Machines by R.K. Rajput, S.Chand & Co.
4. Fluid Mechanics by Frank .M. White, McGraw Hill Publishing Company Ltd.
5. Fundamentals of Fluid Mechanics by Munson, Wiley India Pvt. Ltd
6. Fluid Mechanics by A. K. Mohanty, PHI Learning Pvt. Ltd.
7. Laboratory Manual Hydraulics and Hydraulic Machines by R V Raikar

List of Experiments:

1. Verification of Bernoulli's theorem.
2. To determine the Friction factor for the different pipes.
3. To determine the loss coefficients for different pipe fittings.
4. To determine the Coefficient of discharge through different flow meters. (Any two out of Orifice meter, Venturi meter and Nozzle meter.)
5. To measure the velocity of flow using Pitot tube.
6. To determine the Coefficient of discharge through open channel flow over a Notch. (Rectangular or V notch)
7. To determine the different types of flow Patterns by Reynolds's experiment
8. To determine the viscosity of fluid by viscometer (Redwood or Saybolt).
9. To determine metacentric height of floating body.
10. To understand pressure measurement procedure and related instruments/devices.

List of Open Base Software/learning website:

1. <http://nptel.iitm.ac.in>
2. <http://media.efluids.com/galleries/all>

Subject Code: 01ME0302

Subject Name: Kinematics of Machines

B.Tech. II Year (Sem-III) Mechanical & Automobile Engineering.

Type of course: Under Graduate

Prerequisite: Nil

Rationale: Kinematics of machines is intended to impart the fundamental knowledge of mechanism and machines so as to understand their functional aspects and perform the kinematic analysis of machine elements like linkages, gears and cams.

Course Outcome:

After learning the course, the students will be competent to

1. Identify the functional characteristics of various machine elements.
2. Construct specified motion profiles for cam and follower.
3. Analyze and synthesize planar mechanisms for the motion parameters.
4. Evaluate gear tooth geometry and analyze the motion of gear trains.

Teaching and Examination Scheme:

Teaching Scheme (Hours)			Credits	Theory Marks			Tutorial/ Practical Marks		Total Marks
Theory	Tutorial	Practical		ESE (E)	Mid Sem (M)	Internal (I)	Viva (V)	Term work (TW)	
4	2	0	4	50	30	20	25	25	150

Sr. No.	Content	Total Hrs.
1	Mechanisms & Machines Introduction: Various mechanisms & machines, Various types of links, kinematic pairs & kinematic chain, Types of motion, mobility of a mechanism - Kutzbach and Grubler's criterion Classification: Classification of Mechanisms Inversion: Concept of inversion, Kinematic inversion of four bar, single slider, & double slider crank chain	06
2	Synthesis & Analysis of mechanisms Introduction: Concept of synthesis & its classification, Various types of synthesis problems Graphical synthesis & analysis: Accuracy points for function generation, Analysis of four bar mechanism using Freudenstein's equation, synthesis of four bar & slider crank chain mechanism using graphical techniques	08

3	Kinematic Analysis Velocity analysis: Analysis of Velocity diagrams, Relative velocity method, Instantaneous centre method, rubbing velocity Acceleration analysis: Analysis of acceleration diagram, Klien's construction, Coriolis component of acceleration.	08
4	Special Mechanisms: Functional aspects: Various types of lower pair mechanisms such as Straight-line mechanism, Indicator diagrams, universal Joint, Steering gear Mechanism	06
5	Gears: Introduction: Introduction & various types of toothed wheels, Terminology of gear, fundamental condition for constant velocity ratio, sliding velocity Forms of gears teeth: Cycloidal profile teeth, Involute profile teeth, Relative benefits and drawbacks of cycloidal and involute tooth forms Interference: Contact ratio, Interference & undercutting in involute gears, Minimum number of teeth to avoid interference Functional aspects: Basic concepts of Worm, Bevel, helical & spiral gears	09
6	Gear Trains: Introduction: Basic concepts of Simple, compound & reverted gear trains Analysis: Motion Analysis of Epicyclic gear trains by different methods	06
7	Cam & Follower: Introduction: Introduction to various classification of cam & follower, terminology of cam, various types of displacement, velocity & acceleration diagrams for various follower motions Cam profile construction: Determination of basic dimensions of profile of cam and its construction using Graphical techniques	10

Suggested Theory Distribution

Subject Code: 01ME1303
Subject Name: Manufacturing Process I
B.Tech. IInd Year Semester: III

Type of course: Under Graduate

Prerequisite: Workshop.

Rationale: Understanding of basic application of machine tools for metal removing processes.

Course Outcome:

After learning the course, the students should be able to:

1. Understand the characteristics of different machine tools.
2. Ability to compare among the different machine tools.
3. Selection of machine tools according to requirements.
4. Analyze any conventional machining operations.
5. Develop the sequence of machining operation to produce the end product.

Teaching and Examination Scheme:

5. Workshop Technology Vol. II by Raghuvanshi, Dhanpat Rai Publication

List of Experiments:

1. Prepare a component using Lathe Machine.
2. Prepare a component using Shaper Machine.
3. Prepare a component using Milling Machine.
4. Prepare a component using Grinding Machine.
5. Prepare a component using Drilling Machine.

List of Assignment:

1. Prepare a detailed report on industrial visit.
2. Prepare a Report on an allotted machine.
3. Dismantle and mantle the machine subassemblies & write about it.

Major Equipment/Machine:

1. Lathe
2. Milling
3. haper
4. Grinding
5. Drilling
6. Measuring Instruments

List of Open Base Software/learning website:

1. <http://nptel.ac.in/course.php>

Subject Code: 01CR0302
Subject Name: Professional Ethics
(Semester III, 2nd Year, Level 2)
Branch: CHEM, IT, ICT, CE, ME

Objective: This course will enable the budding engineers and managers to effectively resolve the ethical issues they will face in their professional lives.

Credits Earned: 1 Credit

Course Outcomes:

1. After completion of this course, student will be able to:
2. Understand the basics of human values
3. Inculcate human values to grow as responsible human beings with proper personality
4. Maintain ethical conduct and discharge their professional duties
5. Resolve ethical confusions and contradictions and bring harmony at thought, behaviour and action level

Teaching and Examination Scheme:

Teaching Scheme (Hours)			Credits	Theory Marks			Tutorial/ Practical Marks		Total Marks

Suggested Theory Distribution

The suggested theory distribution as per Bloom's taxonomy is as per follows. This distribution serves as guidelines for teachers and students to achieve effective teaching-learning process

Distribution of Theory for course delivery and evaluation					
Remember	Understand	Apply	Analyze	Evaluate	Create
20%	20%	35%	10%	10%	5%

References:

1. Text book: Professional Ethics by- R. Subramanian
2. Reference Book/other reading material: Engineering Ethics & Human Values by: M.Govindarajan, S. Natarajan & V.S.Senthilkumar PHI Learning Pvt. Ltd.

Instructional Method:

- a. The course delivery method will depend upon the requirement of content and need of students. The teacher in addition to conventional teaching method by black board, may also use any of tools such as demonstration, role play, Quiz, brainstorming, case studies etc.
- b. The internal evaluation will be done on the basis of continuous evaluation of students in the class-room.
- c. Practical examination will be conducted at the end of semester for evaluation of performance of students in classroom.
- d. Students will use supplementary resources such as online videos

Subject Code: 01MA0201
Subject Name: Numerical Analysis
B.Tech. IInd Year Semester: IV

Type of course: Under Graduate

Pre-requisite: Adequate knowledge of Differentiation and Integration

Rationale: Application of various Numerical Analysis methods for solution of Engineering problems

Course Outcome:

After learning the course, the students will be competent

1. Recognize the error in the number generated by the solution
2. Compute solution of algebraic and transcendental equation by numerical methods like Bisection method and Newton Raphson method
3. Apply method of interpolation and extrapolation for prediction
4. Use numerical methods and tools in the engineering problem solving process.
5. Student able to apply numerical integration in engineering problems
6. Student able to apply ordinary differential equation in engineering problems

Teaching and Examination Scheme:

Teaching Scheme (Hours)			Credits	Theory Marks			Tutorial/ Practical Marks		Total Marks

Subject Code:01ME0304

Subject Name: Design Thinking and Problem-Solving Skills
B.Tech. Year - II

Objective: The main objective of this course is to inculcate interdisciplinary engineering skills in students for taking real time engineering problem available in our society/industry and to come-up with the grass root innovation, can be helpful to all level of human beings.

Credits Earned: 1 Credits

Course Outcomes: After completion of this course, student will be able to

1. Understand the importance of Design Thinking.
2. Evaluate the quality of your information and your emotions; keep thinking straight.
3. Identify skills and personality traits of successful problem solving.
4. Apply standard problem-solving heuristics to aid in problem solving.
5. Apply problem-solving techniques to programming activities.
6. Formulate and successfully communicate the solutions to problems.

Pre-requisite of course: Not Required.

Teaching and Examination Scheme:

Teaching Scheme (Hours)			Credits	Theory Marks			Tutorial/ Practical Marks		Total Marks
Theory	Tutorial	Practical		ESE (E)	Mid Sem (M)	Internal (I)	Viva (V)	Term work (TW)	
0	0	2	1	00	00	00	25	25	50

Contents:

Sr. No.	Content	Total Hrs.
Module-1 Design Thinking Introduction, Team Formation, Documentation and Canvas, Exercise	Introduction, Need of Design Thinking, Traditional Problem Solving versus Design Thinking, phases of Design Thinking, Tools for Design Thinking, Relevance of Design and Design Thinking in Engineering	3
	Team Building Domain Selection (Society/Industry project), Log Books-need, types of log book, preparation of log book, Importance of Documentation, Strategy Design	3
	Formation of Team and aspects for the selection, Domain selection, Observation exercise, Design activities through Canvas, Brainstorming for the problem , Users Interview conduction, generation of records via logbooks	6

Module-2 Problem Solving Skills Introduction, Techniques, Exercise	Developing logical thinking. Introduction to Problem Solving in Computer Science domain, Errors in reasoning; verbal reasoning; analogy problems lateral thinking	4
	Deductive and hypothetical reasoning; computational problem solving; generating, implementing, and evaluating solutions; interpersonal problem solving.	4
	Group Activities based assignments related to problem solving skills will be given for better understanding and development of problem-solving skills	4
7	Mini project exercise based on understanding of modules contents	6

Note: Mentors are advised to take suitable project/activity to explore the above topics and make students understand the various concepts.

Subject Code: 01ME1401

Subject Name: Machine Design & Industrial Drafting

B.Tech. IInd Year Semester: IV Mechanical & Automobile Engineering

Type of course: Under Graduate

Prerequisite: Engineering Graphics, Fundamental of Machine Design

Rationale: Understanding the Geometrical Dimension and Tolerance for Production Drawing & Design the Machine Component.

Course Outcome:

After learning the course, the students will be competent

1. To Recognize the Important of GD & T.
2. To generate and interpret assembly and production drawings in 2D Drafting Computer software Packages.
3. To analyze components subjected to various mechanical loads.
4. To analyze beams and columns for stresses and deflection.
5. To design and analyze shafts, keys and couplings.
6. To select fasteners and design welded / riveted joints.

Definition of principal plane, principal stresses, angle of obliquity, and resultant stress. Principal Stress and Strain: Evaluation of Principal plane and Principal stresses using analytical method. Analysis of Principal stresses and principal planes for two-dimensional stress system. Application of Mohr's circle and ellipse of stress.</p>	6
2	<p>Design concepts of Mechanical Components: Concepts of stresses, Strain, strain and its relation, Shear loading and Torsion as well as Bending loads; Different theories of Failures and its limitation and application for Different theories i.e. Distortion energy, Maximum Shear stress, Maximum Principal stress, Coulomb-Mohr Theory, Factor of safety and its different parameters for</p>	6

	selection, Selection of theories of failures and Use of theories of failures; Contact stresses, Crushing and Bearing pressure.	
3	<p>Design of Mechanical Joints: Temporary Joint</p> <p>Cotter and Knuckle Joints: Design of Cotter and Knuckle Joints</p> <p>Screw and nut: Different types of thread for Single as well as Multiple threaded screw, screw fastening and its types, Cap and Set screw, concept of uniform strength in bolt, locking devices, Different Terms of Screw thread, Simple and Eccentric loading. Calculation of torque for bolt tightening.</p> <p>Design of Power screw: Different terms used to describe power screw, Calculation of torque required for lifting and lowering of Load, Efficiency of threads, Self-locking phenomenon, Co-efficient of friction.</p> <p>Permanent Joint: Welded Joints: different types of welded joints and stress relieving methods in weld joints, Strength of butt and fillet joint eccentric loading in the plane of weld, welded joint subjected to bending and torsion.</p> <p>Riveted Joints: material selection and criteria for rivet joints and type of its failure, riveted joints efficiency and strength calculation, strengthen method for riveted joints like Caulking and Fullering, Longitudinal lap joint and circumferential lap joint, Eccentric loading condition in riveted joint.</p>	20
4	<p>Design of Machine Component: Shafts, Keys and Couplings</p> <p>Design of solid and hollow circular shaft subjected to torque as well combined loading; Design of shaft based on rigidity and stiffness; Design of Keys: Saddle, Sunk, Woodruff, Square, and Flat. Design and Concept of Couplings, Rigid coupling Flexible coupling.</p>	16
5	<p>Design and analysis of levers: Cranked, Bell crank, Foot, Rocker arm.</p>	6
6	<p>Columns: Type of loading compressive axial loading of columns and struts, Slenderness ratio, Compressive stress and buckling of components, Effect of end forms. Euler's equation with applications and validate with limitations, Rankine and Johnson's equation, Eccentric loading for long columns.</p>	6
7	<p>Geometric Dimensioning and Tolerance (GD&T):</p> <p>Basic terminology of GD & T, major advantages of geometric dimensioning and tolerance GD&T Concepts and its application, Size Tolerance Machining flowchart, Requirement of dimensional tolerance, Tolerance dimensioning, Methods of conveying tolerance in industrial drawing, Identifying the tolerance for the assembly drawing, Tolerance for Manufacturing process.</p>	6
8	<p>Limits, Fit, And Tolerances & Surface Roughness:</p> <p>Deviation , Hole and shaft basic system , Indian Tolerance grades, Different types of Fits with application , Allowance , Clearance, Maximum Material Condition of a feature of size , Minimum Material Condition of a feature of Modifiers and Symbols , Types of geometric characteristic symbols , Fourteen geometric characteristic symbols , Common modifying symbols used in geometric tolerance , Detecting the parts of a feature control frame , Detecting the additional symbols used in geometric tolerance Parameters of surface texture and qualifications, Relation of surface roughness and various manufacturing processes, Surface Lay Indication.</p>	8

Suggested Theory Distribution

The suggested theory distribution as per Bloom's taxonomy is as per follows. This distribution serves as guidelines for teachers and students to achieve effective teaching-learning process

Distribution of Theory for course delivery and evaluation					
Remember	Understand	Apply	Analyze	Evaluate	Create
15%	30%	30%	15%	0%	0%

List of Experiments:

Practical should be designed to include chapter no 4 & 5. Industrial Drafting Portion.

1. Problems related to Limits, fits and tolerances & Indian Tolerance Grade.
2. Introduction to computer aided drafting tools and 2D software Packages, using drafting software, generate Assembly and Production drawings after completion of basic Drawing.
3. Understanding of Reverse Engineering and Draw at least two Assembly drawing and Detailed Drawing of Actual Machines per industrial Standard.
4. Case study on Drafting and Designing problem Any Real case of Industrial problem and Solution.

List of Assignment:

Assignment should be designed to include chapter no 1, 2 & 3. Machine Design Portion.

1. Theory and Example on Beam & Column.
2. Theory and Example on Lever & Rocker Arm.
3. Theory and Example on Shaft, Key and Coupling.
4. Theory and Example on Power Screw.
5. Theory and Example on All Temporary Joint.
6. Theory and Example on All Permanent joint.

Major Equipment:

1. Computational facility.
2. CAD Software.
3. Workshop hand tool and Machinery.

Design based Examples (DE)/Open Ended Example:

Design / Analyze a mechanical structure which may involve different components included in Syllabus from Machine Design Portion. Prepare assembly and production drawings in 2D computer Graphics.

Reference books:

1. Design of Machine Elements, V B Bhandari, 3/e, McGraw Hill.
2. Machine Design: Fundamentals and Applications, P C Gope, 1/e PHI.
3. Fundamentals of Machine Component Design, R C Juvinall, 4/e, Wiley.
4. Machine Design: An Integrated Approach, R L Norton, Pearson

5. Machine Drawing, B Bhattacharyya, 1/e, Oxford Press.
6. Engineering Metrology and Measurements, N.V. Raghavendra & L. Krishnamurthy, Oxford Press.
7. Machine Drawing, K C John, PHI.

List of Open Base Software/learning website:

1. <http://nptel.ac.in/course.php>

Subject Code: 01ME1402

Subject Name: Manufacturing Processes-II

B.Tech. II Year (Sem-IV) Mechanical & Automobile Engineering.

Type of course: Engineering Science

Prerequisite: Knowledge of Manufacturing Process-I

Rationale: Understanding of basic principles of manufacturing techniques and proper selection of manufacturing processes is required in various field of engineering.

Course Outcome:

After learning the course, the students will be competent to

1. Application of manufacturing process for making metallic and nonmetallic components.
2. Identify and optimize parameters for manufacturing process.
3. Design gating system for casting components.
4. Application of simulation software for manufacturing processes.

Teaching and Examination Scheme:

Teaching Scheme (Hours)			Credits	Theory Marks			Tutorial/ Practical Marks		Total Marks
Theory	Tutorial	Practical		ESE (E)	Mid Sem (M)	Internal (I)	Viva (V)	Term work (TW)	
3	0	2	4	50	30	20	25	25	150

Sr. No.	Content	Total Hrs.
1	Metal Casting Pattern Making: Identification, Design with allowances, Making a wooden pattern, Composition, Methodology Mould Making: No-back mould making, Sodium silicate mould making, Specimen preparation Sand Testing: Permeability testing, Clay Content testing, Sieve analysis, melting metal for ready to pour Metal Poring: Gating system design & preparation, sand mould casting Investment Casting: Industry visit and summery report Study of other/remaining casting techniques: Working principle and methodology Metal casting defects: List of defects with causes and remedies	24

2	<p>Metal Joining Introduction: Types of joint and edge preparation SMAW(Shielded Metal Arc Welding): Working Principle and set-up, Parameters of Performance MIG (Metal Inert Gas Welding): Working Principle and set-up, Parameters of Performance TIG (Tungsten Inert Gas Welding): Working Principle and set-up, Parameters of Performance Spot Welding: Working Principle and set-up, Parameters of Performance Oxy-Acetylene Gas Welding/Cutting: Working Principle and set-up, Parameters of Performance Friction Stir Welding: Working Principle and set-up, Parameters of Performance Study of other/remaining casting techniques: Working principle and methodology Metal casting defects: List of defects with causes and remedies</p>	18
3	<p>Metal Forming (from Virtual lab) (To be performed in lab duration) Rolling: Working Principle and set-up Parameters Forging: Working Principle and set-up Parameters Extrusion: Working Principle and set-up Parameters Drawing & Deep drawing: Working Principle and set-up Parameters Metal forming defects: List of defects with causes and remedies</p>	-

Suggested Theory Distribution

The suggested theory distribution as per Bloom’s taxonomy is as per follows. This distribution serves as guidelines for teachers and students to achieve effective teaching-learning process

Distribution of Theory for course delivery and evaluation					
Remember	Understand	Apply	Analyze	Evaluate	Create
15%	30%	30%	15%	10%	0%

Final Exam of MP-II		
Making a component which require minimum two machine		
Detail	Marks	Hours
Pattern making for the given drawing	15	6
Sand casting for the given component	15	
To prepare a weld joint by arc welding	10	
To Prepare a joint by spot welding	10	
Total	50	6

Reference books:

1. Manufacturing Engineering and Technology By S. Kalpakjian, Pearson.
2. Manufacturing Processes Vol-I, By P.N.Rao, Mac-grawhill publication.
3. Manufacturing technology –I, by P.C.Sharma, S.Chand Publication.
4. Manufacturing Processes and Systems, 9th Ed. Phillip F., Ostwald, Jairo Munoz, Wiley India
5. Casting Practice by John Campbell, Elsevier/Butterworth-Heinemann publication.
6. Welding Engineering and Technology, by R.S.Parmar, 2nd edition, khanna publication.

7. Welding Technology, by O. P. Khanna, Dhanpat Rai publishers.
8. Welding process technology by Houldcroft P.T., Cambridge University Press, 1977.

List of Experiments:

1. Study and selection of a component for pattern making
2. Design for allowance and prepare a pattern
3. Prepare a mould and casting component
4. Analyze defects, causes and remedies of casting components
5. To understand and perform various types welding joints by using MIG and TIG welding processes.
6. To understand and demonstrate Oxy-acetylene process
7. To understand and perform metal forming for a given component
8. To study resistance welding and perform spot welding for a given component
9. Virtual lab experiment for E-foundry
10. Virtual lab experiment for metal forming

List of Assignments:

1. Welding processes
2. Casting processes

Major Equipment:

1. Different patterns for Demonstration
2. Small Foundry
3. Arc welding Machine (SMAW, TIG, MIG etc.)
4. Resistant Spot-welding m/c.
5. Oxy- Acetylene welding machine.

4. <http://efoundry.iitb.ac.in/Academy/index.jsp>

Subject Code: 01ME1403

Subject Name: Material science and Engineering

B.Tech. II Year Semester: IV

Type of course: Engineering Science

Prerequisite: Basic knowledge of Physics, Chemistry.

Rationale: Basic principles of science are used to study the structure-properties relationships of various materials for their proper applications in this subject. Especially study of different types of ferrous and non-ferrous metals and alloys, in terms of their composition, structure, properties and applications; non-destructive testing are included in this course to understand the basic concept of selection and processing of metals and materials for their applications.

Course Outcome:

After learning the course, the students will be able to

1. Enhance the technical knowledge on Engineering materials & its applications.
2. Establish important relationships between internal structure, properties and performance of materials during processing and use.
3. Design the alloy system based on their knowledge of phase diagrams and metal characteristics.
4. Understand different non-destructive testing methods
5. Know the various heat treatment processes for steels.
6. Apply the knowledge of Heat treatment process for emphasizing relation between microstructure and mechanical properties.

Teaching and Examination Scheme:

Teaching Scheme (Hours)			Credits	Theory Marks			Tutorial/ Practical Marks		Total Marks
Theory	Tutorial	Practical		ESE (E)	Mid Sem (M)	Internal (I)	Viva (V)	Term work (TW)	
4	0	2	5	50	30	20	25	25	150

Sr. No.	Content	Total Hrs
1.	Introduction of Material science and Metallurgy: Introduction to properties of materials, Engineering Requirements of materials, Classification of Engineering Materials, Criterion for selection of materials.	03
2.	Metallography: Macro-examination and Micro examinations, Procedure for preparing the specimen for macro and micro examination.	*

3.	Crystal Geometry, Structure and Defects: Crystal Structure for Metallic Elements, Types of crystal systems, Crystal lattice, Lattice parameter, co-ordination number, Atomic radius, atomic packing factors for various cubic systems, crystal Directions, Lattice Planes and Miller Indices.	04
4.	Solidification of Metals and Phase Diagrams: Solid Solutions: Types Solid Solutions, Hume-Rothery's Rules. Concept of solidification of metals, Solidification of pure metals, Nucleation, Growth, Growth of the new phase, Solidification of alloys, Progressive, Directional solidification & control of solidification to obtain sound casting. Phase Diagrams: Objectives & classification of System, phases & structural constituent of phase diagram, Gibb's solid phase rule, Cooling Curves (Time-Temperature Curves), Eutectic, Peritectic & Eutectoid system, Equilibrium diagrams for non-ferrous alloys, Lever rule.	07
5.	Iron-Carbon Diagram: Allotropic forms of Iron, Iron- Iron carbide equilibrium Diagram, Development of microstructure in iron-carbon alloys.	04
6.	Heat Treatment Processes: Definition, Purpose & classification of heat treatment processes for various types of special steels, Introduction applications of various case hardening & surface hardening treatments. TTT & CCT curves.	06
7.	Ferrous Materials Pig Iron, Wrought Iron Cast Iron: Classification of Cast irons Gray cast irons, nodular cast irons, white cast irons, malleable cast irons, chilled. Effect of various parameters on structure and properties of cast irons Steel: Classification and application of steels, Effect of alloying elements, Specification of some commonly used steels for Engineering applications (e.g. En. AISI, ASTM, IS etc.) with examples. Classification and application of plain carbon steels.	08
8.	Non-ferrous alloys: Introduction, Aluminium Alloys, Magnesium and Beryllium Alloys, Copper Alloys, Nickel and Cobalt Alloys, Titanium Alloys, Refractory and Precious Metals.	03
9.	Non-Destructive Testing's (NDT): Radiography Testing, Dye, Penetration Testing, Magnetic Particle Testing, Ultrasonic Testing. Eddy current testing with their Principle of non-destructive testing, the test methods, relative merits, demerits and applications.	04
10.	Powder Metallurgy Introduction, Methods of manufacturing powders, mixing of powders, compaction, sintering, secondary operation, advantages and limitation of powder metallurgy.	03

Suggested Theory Distribution

The suggested theory distribution as per Bloom's taxonomy is as per follows. This distribution serves as guidelines for teachers and students to achieve effective teaching-learning process

Distribution of Theory for course delivery and evaluation					
Remember	Understand	Apply	Analyze	Evaluate	Create
15%	25%	20%	20%	10%	0%

Reference books:

1. Physical Metallurgy, Sydney H. Avner, Tata McGraw-Hill.
2. Material science & Engineering of materials, Donald Askeland & Pradeep Phule, Thomson Learning.
3. Materials Science and Engineering, W.D. Callister, John Wiley & Sons.
4. Material Science, O.P. Khanna, Dhanpatrai Publication.
5. Metallurgy for engineers, V. Raghvan, PHI Learning.
6. Material Science and Metallurgy, U.C. Jindal, Pearson Education.

List of Experiments:

1. To understand the construction and working of a Metallurgical Microscope.
2. To study of microstructures for various ferrous and nonferrous materials.
3. To prepare the specimen for microscopic observation.
4. To determine the strength and hardness of ferrous and non-ferrous specimen.
5. To study the effect of Heat treatment process on the Hardness and Tensile Strength of Mild Steel.
6. To show the effect of different quenching media (Oil, Water and Brine) on the hardness of Mild steel.
7. To determine the harden ability of a specimen by Jominy end quench test.
8. To study of powder metallurgy.
9. To determine the surface defect by liquid penetrant test and magnetic particle test.
10. To determine the internal defect by Ultrasonic Test

List of Assignment:

Assignment should be designed to include the following modules

1. Introduction, Crystal geometry and Crystal Imperfections, Plastic Deformation.
2. Solidification of Metals & alloys, Phase & Phase Equilibrium
3. Non-ferrous, Powder Metallurgy, and NDT
4. Alloy steel, Cast Iron
5. Iron Carbon diagram and Heat Treatment

Major Equipment:

1. Metallurgical Microscope.
2. Belt grinder and Polishing Machine.
3. Hardness Tester i.e. Rockwell Hardness test.
4. Muffle Furnace.
5. Jominy end quench tester.
6. NDT equipments.

Design based Examples (DE)/Open Ended Example:

1. Students may be asked for metallography to prepare specimens for microstructure analysis. Moreover, they may be asked to provide design of heat treatment cycles of specific types of steels for their applications, e.g., design heat treatment cycle for tool steel.
2. Students may be asked to choose a material for given application based on structure-property-performance relationship. Also, they should give specification and designation of a chosen material.

List of Open Base Software/learning website:

1. <http://nptel.ac.in/course.php>

Subject Code: 01ME0404

Subject Name: Engineering Thermodynamics

B. Tech. 2nd Year Semester: IV

Type of course: Engineering Science

Prerequisite: Zeal to learn the subject.

Rationale: Thermodynamics is the introductory course on Thermal Science and Engineering. It comprises the understanding of certain natural laws and energy interaction prominently heat and work transfer.

Course Outcome:

After learning the course, the students will be competent

1. To elucidate the basic concepts of thermodynamics.
2. To simplify properties of Ideal and Real gases.
3. To express and utilize first law of thermodynamics for closed and open systems.
4. To determine the feasibility of thermodynamic cycles and processes using second law of thermodynamics.
5. To make the use of concept of entropy and exergy to different thermodynamic processes and cycles.
6. To analyze different gas power, vapor power and refrigeration cycles.

Teaching and Examination Scheme:

Teaching Scheme (Hours)			Credits	Theory Marks			Tutorial/ Practical Marks		Total Marks
Theory	Tutorial	Practical		ESE (E)	Mid Sem (M)	Internal (I)	Viva (V)	Term work (TW)	
4	2	0	5	50	30	20	25	25	150

Sr. No.	Content	Total Hrs
1	Introduction: Concept of Continuum, Macroscopic and Microscopic approach, Control Volume, Thermodynamic System, Types of Systems, Surrounding, Universe, Boundaries, State, Point and Path Function, Thermodynamic Properties, Process, Cycle, Quasi – Static Process, Thermodynamic Equilibrium, Pure Substance, Vapour-Liquid-Solid Phase in a Pure Substance, Heat and Heat Capacity, Energy and Work Transfer, Free Expansion Work, Types of Work Transfer.	04
2	Laws of Thermodynamics: Zeroth law, First law for closed system, Energy, Specific Heat Capacities, Enthalpy, PMM-I, Steady flow energy equation, Application of First Law, First Law Limitations.	12

	Second Law: Thermal Energy Reservoir, Heat Engine, Refrigerator and Heat Pump, Kelvin-Planck and Clausius Statements of Second Law, Equivalence of Kelvin-Planck and Clausius Statements, PMM-II, Reversibility and Irreversibility, Causes & types of Irreversibility, Condition for Reversibility, Carnot Cycle, Reverse Carnot Cycle, Carnot's theorem & its corollary, Kelvin Scale, Third Law of Thermodynamics.	
3	Entropy: Clausius' Theorem, Entropy-A Property of System, Inequality of Clausius, Entropy Change in Irreversible Process, Entropy Change in Various Thermodynamics Process, Entropy Principle and It's Applications, Entropy Generation in Closed and Open System, Entropy and Disorder.	06
4	Availability: Concept of Exergy, Available and Unavailable Energy, Exergy of a Source and Finite Body, Exergy Destruction in Heat Transfer Process, Dead State, Exergy of a Closed System and Steady Flow System, Second Law Efficiency.	06
5	Vapour Power Cycle: Carnot & Rankine Cycle, Comparison of Rankine and Carnot Cycle, Efficiency Calculation of Rankine Cycle, Mean Temperature of Heat Addition, Factors Affecting Efficiency of Rankine Cycle, Reheat, Regenerative, Reheat-Regenerative Cycle, Feed water Heaters. Air standard Efficiency and Comparison of Otto, Diesel and Dual Cycle.	16
6	Ideal and Real Gases: Properties of Ideal and Real Gases, Equation of State, Avogadro's Law, Vander Waal's Equation of State, Reduced Properties, Law of Corresponding States, Compressibility Chart, Gibbs-Dalton law, Internal Energy, Enthalpy and Specific Heat of Gas Mixtures.	08

Suggested Theory Distribution

The suggested theory distribution as per Bloom's taxonomy is as per follows. This distribution serves as guidelines for teachers and students to achieve effective teaching-learning process

Distribution of Theory for course delivery and evaluation					
Remember	Understand	Apply	Analyze	Evaluate	Create
20%	30%	20%	20%	10%	0%

Reference books:

1. P. K. Nag, Engineering Thermodynamics, McGraw Hill Education.
2. R. K. Rajput, Engineering Thermodynamics, EVSS Thermo Laxmi Publications.
3. E. Rathakrishnan Fundamentals of Engineering Thermodynamics, PHI, 2005.
4. Y. A. Cengel and M. A. Boles, Thermodynamics an Engineering Approach, McGraw Hill Education.
5. Jones and Dugan, Engineering Thermodynamics, PHI Learning Pvt. Ltd.
6. Holman J.P, Thermodynamics, McGraw Hill Education.

7. M. Achuthan, Engineering Thermodynamics, PHI Learning Pvt. Ltd.

List of Tutorials:

1. To study about Basics and First law of thermodynamics.
2. To study about Second law of thermodynamics.
3. To study about Entropy.
4. To study about Availability (Exergy).
5. To study about Vapour power and Gas power cycle.
6. To study about Ideal and Real Gases.

List of Open Base Software/learning website:

1. <http://nptel.iitm.ac.in/courses.php>

Subject Code: 01ME0405

Subject Name: Human Centric Design Approach

B.Tech. IInd Year Semester: IV

Type of course: Under Graduate

Prerequisite: No

Rationale: This course focuses to build the empathy for the people for designing to solve the societal problem as Human-Centered design. It is a creative repeatable approach for problem solving by understanding the real need of the users.

Course Outcome:

After learning the course, the students will be competent to

1. Understand the Human Centric approach for design.
2. Understand significance of the empathy and solution based on empathy.
3. Importance of design thinking when addressing social change.
4. Generate the innovative ideas and will convert in new solutions.
5. Build a possible prototype solution.

Teaching and Examination Scheme

Teaching Scheme (Hours)			Credits	Theory Marks			Tutorial/ Practical Marks		Total Marks
Theory	Tutorial	Practical		ESE (E)	Mid Sem (M)	Internal (I)	Viva (V)	Term work (TW)	
0	0	2	1	0	0		25	25	50

Sr. No.	Content	Total Hrs.
1	Introduction to Human Centered Design: Introduction to Human-Centered Design, Design Principles, the Diamond Model, The Human-Centered Design Process, Systems Thinking, Psychology behind Design, History of Design/History of Innovation. Activity: Mini Design Challenge	04
2	Inspiration Phase: Defining and Visualizing Challenges, Team formation, Key Assumptions. Activity: Choose Your Design Problem, Plan Your Research Build Interview Guide + Activity: Conduct activity with canvas for this phase	04

3	<p>Ideation Phase: A business case developed, High-level requirements are elicited; and, A Project Overview Statement (POS), Share Stories and Learning from User Research, Ideation Methods to Select Ideas. Activity: Conduct activity with canvas for this phase</p>	04
4	<p>Prototype Phase: What is Prototype, Types of Prototyping- Low-Fidelity Prototyping, High-Fidelity Prototyping, Guidelines for Prototyping. Discussion: Determine What to Prototype. Activity: Brainstorm, Selecting Best Ideas, checking viability, Creating a Storyboard, Start Prototyping, Test Prototype and get feedback.</p>	08
5	<p>Implementation Phase: Activity: Create an Action Plan Activity: Create a Pitch Activity: Share Your Solution Reflection Discussion: Moving Forward</p>	08

Note: Faculty are advised to take suitable project/activity to explore the above topics and make students understand the various concepts

Subject Code: 01ME0406

Subject Name: Creativity, Problem Solving and Innovation

B. Tech. 2nd Year Semester: IV

Prerequisite: Zeal to learn the subject.

Course Objective: To develop creative thinking skill in the students using cone of learning components leading to understanding of various strategies for creativity, problem solving and innovation.

Course Outcome:

After learning the course, the students will be competent

1. Importance of creativity, problem solving and innovation while addressing science, engineering and social issues.
2. Demonstrate the ability to contextualize knowledge related to professional engineering practices.
3. Demonstrate the functioning effectively as an individual and team member.
4. Ability to engage in life-long learning in the context of technological change.

Teaching and Examination Scheme:

Teaching Scheme			Credits	Examination Marks					Total Marks
L	T	P		Theory Marks			Practical Marks		
			ESE(E)	IA	CSE	Viva (V)	Term Work (TW)		
0	0	2	1	0	30	0	20	0	50

Content:

Sr. No.	Content	Total Hrs
1	Phase 1: To introduce the subject of the course: this course as a needed skill for your future. Psychology of problem solving; Vertical versus Lateral thinking	02
2	Phase 2: Strategy of Questioning; Method of questioning; Importance of asking the right question. Who, what, when, where, why, how?	02

3	Phase 3: Learning and its importance; Sources of learning; Methods of learning. Purpose and value of education in future creativity in real life.	02
4	Phase 4: Strategy of Knowing how to see; Making your thought visible; Visualizing thinking; Mapping of mind, Fishbone diagram.	02
5	Phase 5: Strategy of Thinking Fluency; Generating all possibilities; more the better; Quantity without screening is helpful; SCAMPER technique; Creative or divergent idea generating thinking versus Critical or convergent idea selection thinking.	02
6	Phase 6: Strategy of Fusing of ideas; Making novel combinations; Connecting the unconnected.	02
7	Phase 7: Strategy of Looking at the other side, looking in other world, finding what you are not looking for and following it up.	02
8	Phase 8: Strategy of Play, Importance of play; Diversion; Unstructured activities for sheer joy, Activities for joy, Let subconscious figure it out, Various puzzles as play or fun.	02
9	Phase 9: Strategy of Awakening the collaborative spirit, Collaborative thinking, brain storming, Innovation requires collaboration to make it happen.	02
10	Phase 10: Review Strategies for Creative problem solving methods, Five building blocks as per Fogler & LeBlanc, Stanford D school approach.	02
11	Phase 11: Strategy for critical thinking for Choosing, Creative or divergent thinking needs follow up by Critical thinking or Convergent thinking in order to choose the solution for implementation, Kepner-Tregoe (K.T.) method with an example, Edward De Bono CoRT thinking process including PMI (Plus, Minus and Interesting), Also Edward de Bono method of decision making called Six thinking hats.	02
12	Phase 12: Edward de Bono explaining and teaching his ideas having evolved many years ago consisting as CoRT thinking tool, Lateral thinking and the decision making by Six thinking hats method.	02
13	Phase 13: Strategy for Making; From idea to innovation.	02

14	Phase 14: Individual presentation for 75 minutes by 15 students (5 minutes per student).	04

Subject Code: 01AE0501

Subject Name: Automotive Electrical & Electronics

B.Tech. Year III

Type of course: Engineering

Prerequisite: Element of Electrical Engineering

Rationale: Understanding of application of electrical and electronic system in automobile vehicle

Course Outcome:

After learning the course, the students should be able to:

1. Understand the basic auto electrical systems.
2. Understand the layout of wiring and connections of electrical systems in automobiles.
3. Understand the working of different electrical components used in automobiles.

Teaching and Examination Scheme:

Teaching Scheme (Hours)			Credits	Theory Marks			Tutorial/ Practical Marks		Total Marks
Theory	Tutorial	Practical		ESE (E)	Mid Sem (M)	Internal (I)	Viva (V)	Term work (TW)	
3	0	2	5	50	30	20	25	25	150

Sr	Contents	Teaching hours
1	Batteries and Accessories Principle and construction of lead acid battery, characteristics of battery, rating capacity and efficiency of batteries, various tests on batteries, maintenance and charging. Lighting system: insulated and earth return system, details of head light and side light, LED lighting system, head light dazzling and preventive methods – Horn, wiper system and traffic car.	9
2	Starting System Condition at starting, behavior of starter during starting, series motor and its characteristics, principle and construction of starter motor, working of different starter drive units, Starter motor requirements, care and maintenances of starter motor, Drive mechanisms, starter switches.	7
3	Charging System Generation of direct current, shunt generator characteristics, armature reaction, third brush regulation, cut out. Voltage and current regulators, compensated voltage regulator, alternators principle and constructional aspects and bridge rectifiers, new developments.	4

4	Fundamentals of Automotive Electronics Current trends in automotive electronic engine management system, electromagnetic interference suppression, electromagnetic compatibility, electronic dashboard instruments, on board diagnostic system, security and warning system.	6
5	Sensors and Actuators Types of sensors: sensor for speed, throttle position, exhaust oxygen level, manifold pressure, crankshaft position, coolant temperature, exhaust temperature, air mass flow for engine application. Solenoids, stepper motors, relay.	13
6	Safety and Security Systems Keyless entry system, Antilock braking system, Air bag restraint system, Adaptive cruise control system, Voice warning system, Seat belt system, antitheft system.	5

Suggested Theory Distribution

The suggested theory distribution as per Bloom’s taxonomy is as per follows. This distribution serves as guidelines for teachers and students to achieve effective teaching-learning process

Distribution of Theory for course delivery and evaluation

List of Experiments:

1. Introductory study of automobile electrical systems.
2. Study of automobile battery System.
3. Study of electrical engine starting system.
4. Study of different types of battery charging system.
5. Study of different types of ignition systems.
6. Study of automobile lighting system.
7. Study of different types of gauges, sensors and meters of an automobile.
8. Study of various electrical equipments like Windscreen wipers, power windows, Rear windshield glass heating system, Central Locking system

Subject Code: 01AE0502

Subject Name: Automobile Systems and Transmission

B.Tech. Year III

Type of course: Under Graduate

Prerequisite: Elements of Mechanical Engineering, Internal Combustion Engine, and fundamental of machine design.

Rationale: Subject is designed to provide knowledge on the various parts of the automobile systems. This course provides skill to study transmission and suspension systems and also to calculate the resistances during motion, power required for acceleration and constant velocity motions, braking force and engine characteristics.

Course Outcome

Students will be able to

1. The student will understand the various Systems of an automobile
2. Determine various parts and types of gear box
3. Determine working of steering and suspension systems

Teaching and Examination Scheme

Teaching Scheme (Hours)			Credits	Theory Marks			Tutorial/ Practical Marks		Total Marks
Theory	Tutorial	Practical		ESE (E)	Mid Sem (M)	Internal (I)	Viva (V)	Term work (TW)	
4	0	2	5	50	30	20	25	25	150

Sr.	Contents	Teaching Hours
1	Introduction Need for Transmission system, Tractive Effort and Resistances to Motion of a vehicle, Requirements and Classification of Transmission systems, Single, Two and four wheel drive systems, Multi axle drives, Chain, Shaft and Electric drives, Location of transmission system, Different transmissions in scooter, car, MUVs and transport vehicles of Indian make	05
2	Vehicle Classification and Layouts Study various vehicle layouts as front engine and front wheel drive, front engine & rear wheel drive, rear engine & rear wheel drive, Components of transmission system, Four wheel drives	03

3	Clutch Principle of operation, Constructional details, axial force, Different types of clutches, Operation of single plat, Multi plate clutch, Centrifugal and Automatic Clutch, Dry and Wet type of clutch, Friction lining materials. Over-running clutch. Modes of operating a clutch – mechanical, Hydraulic and electric, clutch maintenance	05
4	Gear box Objective of the Gear Box, Determination of gear ratios for vehicles, Performance characteristics in different speeds, Different types of gear boxes – sliding, constant and synchromesh type, Planetary gear box, need for double declutching and working of synchronizing unit. Power and economy modes in gearbox, Transfer box, Transaxles, Overdrives. Gear shifting mechanisms, mechanical link and wire types, Gear box maintenance	05
5	Drive line and Axles Propellers shaft, Types of drive as torque tube and Hotchkiss drive, Final drive types, Bevel, Hypoid, Worm and worm wheel, Type of drive axles & differential, Fully or semi floating and three-quarter floating, Dead axle	03
6	Hydrodynamic drive Fluid coupling, Principle of operation, Constructional details, Torque capacity, Performance characteristics, Reduction of drag torque, Torque converter-Principle of operation, constructional details, performance characteristics, Converter coupling – Construction - Free wheel –Characteristic performance.	04
7	Hydrostatic drive Principle, types, advantages, limitations of hydrostatic drive - Comparison between hydrostatic drive and hydrodynamic drive	03
8	Brakes Function, Internal expanding brakes, Brake lining material, Properties, Calculation of braking force and shoe geometry, Hydraulic braking system, Brake oil, Bleeding of brakes, Pneumatic braking system, Vacuum brakes, Electrical brakes, Parking brake and braking efficiency	06
9	Wheels and Tyres Types of wheel rims, Tread patterns, Types of tyres, Cross ply, Radial & tubeless tyres, Specifications of tyre	03
10	Steering and Front Axle Steering requirements, Condition for correct steering, Steering system and linkages, Steering gears, Steering geometry, Ackermann linkages, Wheel alignment, Toe-in, Toe out, Caster, Camber, Under steer and over steer conditions, Power steering, Steering wheel shimmy, Types of front axle, Elliot & reverse Elliot type	05

11	Suspension System Purpose, Types of suspension system, Front and rear suspension, Coil spring, Leaf spring, Torsion bars, Shock absorbers, Air and rubber suspension, Plastic suspensions, Hydro-pneumatic suspension, Independent suspension	05
----	---	----

Suggested Theory Distribution

The suggested theory distribution as per Bloom’s taxonomy is as per follows. This distribution serves as guidelines for teachers and students to achieve effective teaching-learning process

Distribution of Theory for course delivery and evaluation					
Remember	Understand	Apply	Analyze	Evaluate	Create
5%	30%	40%	15%	10%	00%

Reference Books:

1. Automotive mechanics by W. Crouse, - TMH.

5. P S Gill, Automobile Engineering Vol-II, S K Kataria & Sons, 2014
6. Judge.A.W., Modern Transmission systems, Chapman and Hall Ltd.

List of the Experiment

- 1 To study about vehicle layouts
- 2 To study about different types of clutch.
- 3 To study about the performance of vehicle.
- 4 To study about the different types of gear boxes.
- 5 To study about rear axle, final drive and differential.
- 6 To study about Automatic Transmission system.
- 7 To study about different types of tyres and wheels
- 8 To study of different types of automobile brakes.
- 9 To study of steering systems
- 10 To study about different types of suspension system

List of Open Source Software/learning website:

1. www.nptel.ac.in
2. www.coursera.org

Subject Code: 01AE0503

Subject Name: Automobile Engines

B.Tech. III Year - (Sem-5)

Type of course: Under Graduate

Prerequisite: Elements of Mechanical Engineering

Rationale: - The course aims to impart basic skills for understanding of construction of automobile engines working principle and performance under various conditions.

Course outcome

After learning the course, the students should be able to

1. Understand the basic working principles of engines, its Construction and Operation
2. Understand phenomena of Combustion and Design of Combustion Chambers.
3. Conduct Engine Testing and Performance and understand Performance characteristics.

Teaching and Examination Scheme

Teaching Scheme (Hours)			Credits	Theory Marks			Tutorial/ Practical Marks		Total Marks
Theory	Tutorial	Practical		ESE (E)	Mid Sem (M)	Internal (I)	Viva (V)	Term work (TW)	
3	0	2	5	50	30	20	25	25	150

SR No	Contents	Teaching Hours
1	Construction and Operation: Constructional and working principal of 2 stroke and 4 stroke - spark ignition (SI) and compression ignition (CI) engines. Comparison of SI and CI engines and four stroke and two stroke engines. Engine classification, firing order. Otto, diesel and dual cycles.	5
2	Fuel Supply Systems for SI Engine: Air fuel ratio requirements of SI engines, Air fuel ratio and emissions. Requirements of an automotive carburetor; Working of a simple fixed venture carburetor, Constant vacuum carburetor, compensation, Maximum power devices. Fuel feed systems, LPG and CNG fuel systems. MPFI systems for petrol.	6
3	Fuel Supply Systems for CI Engine: Diesel fuel injection systems, Air and solid injection, Jerk pumps, distributor pumps, Unit injector, Need for a governor for diesel engines - Mechanical and Pneumatic governors. Fuel injector -pintle and multi-hole nozzles, Spray characteristics, pump calibration. CRDI systems for diesel.	5

4	Combustion and Combustion Chambers: Introduction to combustion in SI and diesel engines and stages of combustion. Knock in SI and CI engines. Effect of engine variables and knock. Combustion chambers for SI and CI engines. Direct and indirect injection combustion chambers for CI engines. Importance of Swirl, squish and turbulence. Factors controlling combustion chamber design.	8
5	Supercharging and Turbocharging: Necessity and limitation, Different methods of turbocharging, Intercooling, Turbocharger controls including, waster gate, variable geometry, variable nozzle types.	4
6	Cooling and Lubrication System: Need for cooling, types of cooling systems- air and liquid cooling systems. Thermosyphon and forced circulation and pressurized cooling systems. Properties of coolants. Requirements of lubrication systems. Types-mist, pressure feed, dry and wet sump systems. Properties of lubricants.	5
7	Engine Testing and Performance Characteristics: Dynamometers, indicated thermal, brake thermal and volumetric efficiencies. Measurement of friction, Cylinder pressure measurement. Engine performance maps, Engine testing standards. Variables affecting engine performance. Methods to improve engine performance. Heat balance.	7

Suggested Theory Distribution

The suggested theory distribution as per Bloom's taxonomy is as per follows. This distribution serves as guidelines for teachers and students to achieve effective teaching-learning process

Distribution of Theory for course delivery and evaluation					
Remember	Understand	Apply	Analyze	Evaluate	Create
5%	30%	40%	15%	10%	00%

Reference Books:

1. A Textbook of Internal Combustion Engines by R.K Rajput, Laxmi Publication, NEW DELHI, 2005
2. Internal Combustion Engines by V. Ganesan, Tata-McGraw Hill Publishing Co., New Delhi, 1994.
3. Automotive Engines by E. H. Ellinger, Prentice Hall Publishers, 1992
4. Diesel Engines by C.B Dicksee, Blackie & Son Ltd., London, 1964.

List of Experiments:

1. To identify the major components of different automobile engines
2. To study two stroke cycle engine.
3. To study four stroke CI and SI engine.
4. To study the fuel supply system of petrol & diesel engines and represent the same in sketches
5. To study the engine lubrication system circuit.

6. To analyze Computerized Exhaust Gas of a petrol engine, & a diesel engine; and, to compare the output value to the prescribed limit set by the Government.
7. To perform the Morse Test on I.C. engine.
8. To perform the Heat Balance Test on petrol / diesel engine.
9. To study the performance characteristics of petrol / diesel engine by using an engine test rig.

List of Open Source Software/learning website:

Subject Code: 01AE0504
Subject Name: Automobile Component Design
B.Tech. III Year

Type of course: Advanced / Application

Prerequisite: Automobile engine, Automobile Transmission and Machine Design and Industrial Drafting.

Rationale: This subject will make students well versed with concept of design of different components like piston, gear, gearbox, piston pin, connecting rod, crank shaft, cylinder liner, flywheel, valve mechanism etc. and how to standardize this design. They will also learn about bearings that are required for the components by considering different design considerations.

Course Outcome

After learning the course, the students should be able to:

1. Demonstrate knowledge and understanding of selection and designing of different automobile components.
2. Use practical and theoretical knowledge to standardize different parts.
3. Student will be able to give reasons of assumptions made while designing the component with reference to manufacturing assembly, thermal and wear considerations point of view.

Teaching and Examination Scheme

Teaching Scheme (Hours)			Credits	Theory Marks			Tutorial/ Practical Marks		Total Marks
Theory	Tutorial	Practical		ESE (E)	Mid Sem (M)	Internal (I)	Viva (V)	Term work (TW)	
4	0	2	5	50	30	20	25	25	150

Sr. No.	Content	Teaching Hours
1	Standardization in automobile system design Preferred numbers –preferred series – derived series- and their applications in design.	3
2	Design Considerations: Manufacturing and assembly considerations, Design of components for casting, welding, forging, hot and cold working, machining etc. assembly considerations in design. Design for Fatigue and Creep – thermal considerations – wear considerations in design – Human considerations in design.	7
3	Design of Bearings: Bearing Identification/Designations. Rolling Contact Bearing: Types of rolling contact bearings, static and dynamic load capacities, Strobeck's	07

	Equation, Equivalent bearing load, load life relationship, Bearing life, Load factor, Selection of bearings from manufacturers catalogue. Lubrication and mountings, dismounting and preloading of bearings, Oil seals and packing. Sliding Contact Bearings: Bearings- types, material, properties, constructional detail, hydrodynamic lubrication- design consideration, Raimondi and Boyd method relating bearing variables.	
4	Design of Gears: Types of gears, Design consideration of gears, material selection, Types of gear failures, Gear lubrication. Spur Gears: Force analysis, Number of teeth, Face width & Beam strength of gear tooth. Dynamic tooth load. Effective load on gear tooth. Estimation of module based on beam strength. Wear strength of gear tooth. Estimation of module based on wears strength. Spur gear design for maximum power transmission. Helical Gears: Virtual number of teeth, Tooth proportions, Force analysis, Beam strength of helical gears, Effective load on gear tooth, Wear strength of helical gears, Design of helical gears Bevel Gears: Terminology of bevel gears, Force analysis, Beam strength of bevel gears, Wear strength of bevel gear, Effective load on gear tooth, Design of bevel gear. Worm Gears: Force analysis, Friction in worm gear, Vector method, Strength rating of worm gears, Wear rating of worm gear.	13
5	Design of Gearbox Design considerations of gearbox, selection of proper gear ratios for an automobile gearbox, design of shafts, splines, and gears for gear box used in automobiles.	6

Suggested Theory Distribution

The suggested theory distribution as per Bloom's taxonomy is as per follows. This distribution serves as guidelines for teachers and students to achieve effective teaching-learning process

Subject Code: 01AE0505

Subject Name: Alternative fuels and power systems

B.Tech. III Year

Type of course: Under Graduate

Prerequisite: Elements of Mechanical Engineering, Internal Combustion Engine

Rationale: Understanding & Analysis Alternative Fuels for Engine

Course Outcome

Students will be able to

1. The student will understand the various alternative fuels available
2. Determine alternative fuels properties, performance characteristics, combustion characteristics, emission characteristics
3. Determine Engine Modification required for alternative fuels
4. Determine Electric, Hybrid and fuel cell technologies

Teaching and Examination Scheme

Teaching Scheme (Hours)			Credits	Theory Marks			Tutorial/ Practical Marks		Total Marks
Theory	Tutorial	Practical		ESE (E)	Mid Sem (M)	Internal (I)	Viva (V)	Term work (TW)	
3	0	2	4	50	30	20	25	25	150

Sr No	Contents	Teaching Hours
1	Alcohols as Fuel Introduction to alternative fuels. – Need for alternative fuels – Availability of different alternative fuels for SI and CI engines. Alcohols as fuels. Production methods of alcohols. Properties of alcohols as fuels. Methods of using alcohols in CI and SI engines. Blending, dual fuel operation, Performance emission and combustion characteristics in CI and SI engines. Emulsification of alcohol and diesel	08
2	Biodiesel as Fuels Raw materials used for production of Bio Diesel (Karanja oil, Neemoil Sunflower oil, Soya been oil, Mustard oil, Palm oil, Jatropha seeds, Algae). Production process of Bio Diesel. Properties Diesel blended with vegetable oil, Difference in performance of Engine blended with biodiesel	07
3	Biogas, Natural gas and LPG as Engine Fuel Production methods and Properties of Biogas, Natural gas and LPG, CO ₂ , and H ₂ S scrubbing in Biogas., Modification required to use in SI and CI Engines- Performance and emission characteristics of Biogas, NG and LPG in SI and CI engines. combustion characteristics, storage, cost and safety of NG and LPG	08

4	Hydrogen as Engine Fuel Production methods of hydrogen. Combustive properties of hydrogen. Problems associated with hydrogen as fuel and solutions. Different methods of using hydrogen in SI and CI engines. Performance, emission and combustion analysis in engines. Hydrogen storage – safety aspects of hydrogen.	05
5	Electric, Hybrid and Fuel cell vehicles Layout of Electric vehicle and Hybrid vehicles – Merits and demerits of electric and hybrid vehicles. System components, Electronic control system – Different configurations of Hybrid vehicles. Power split device. High energy and power density batteries – Fundamentals of Fuel cell vehicles. Fuel cells principle, working, Types	06
6	Other Alternative Fuels Di-Methyl Ether (DME), Pyrolysis gas/oil, Synthetic gas/oil from plastic, rubber, coal, wood etc., Eco Friendly Plastic fuels (EPF).	03

Suggested Theory Distribution

The suggested theory distribution as per Bloom’s taxonomy is as per follows. This distribution serves as guidelines for teachers and students to achieve effective teaching-learning process

Marwadi
University

Syllabus for Bachelor of Technology
Department of Automobile Engineering

1. www.nptel.ac.in
2. www.coursera.org

Subject Code: 01AE0506

Subject Name: Hydraulic and Pneumatic system

B.Tech. III Year

Course Type: Under Graduate

Prerequisite: None

Rationale: The subject gives in-depth knowledge of different system working on fluid power and compressed air with understanding of different valves used in the hydraulic and pneumatic system. This subject also gives useful understanding for designing of circuits for system related to hydraulic and pneumatic system.

Course Outcome

After learning the course, the students should be able to:

1. Identify and analyze operation of industrial fluid power and pneumatics systems, including the design, application, and trouble-shooting.
2. Design an appropriate hydraulic or pneumatic circuit or combination circuit like electro-hydraulics, electro-pneumatics for a given application. Develop a circuit diagram.
3. Identify different symbols of components used in hydraulic and pneumatic system.
4. Demonstrate the needed analytical skills in handling basic hydraulic and pneumatic calculations.
5. Selection and sizing of components of the circuit.

Teaching and Examination Scheme

Teaching Scheme (Hours)			Credits	Theory Marks			Tutorial/ Practical Marks		Total Marks
Theory	Tutorial	Practical		ESE (E)	Mid Sem (M)	Internal (I)	Viva (V)	Term work (TW)	
3	0	2	4	50	30	20	25	25	150

Sr.	Content	Teaching hours
1	Introduction: Fundamentals and basic principal of Hydraulics, advantages and disadvantages of Hydraulics and Pneumatics Systems, hydraulic power principles, Symbols, hydraulic circuit electrical components. Comparison between a hydraulic and a pneumatic system	5
2	Hydraulic System Components, Hydraulic Oils, Fluid Properties and Filter: Hydraulic & Pneumatic system Symbols as per ISO/ANSI, Fluid Classification, governing Principles and Laws.	5

3	Hydraulic Pumps, Motors and Actuators: Construction, working principle and operation of rotary & reciprocating pumps like Gear, Vane, Gerotor, Screw, Axial Piston, Radial Piston, Pump characteristics, Linear and Rotary Actuators, Hydrostatic Transmission Systems. Selection of components for applications. Comparison of different power systems	6
4	Hydraulic Valves and Hydraulic System Accessories: Direction control valves, Pressure control valves, Flow control valves, Non-return valves, Reservoirs, Accumulators, Heating & cooling devices, Hoses. Selection of valves for circuits.	6
5	Design of hydraulic circuits: Basic hydraulic circuits, Industrial hydraulic circuits, Power losses in flow control circuits.	6
6	Introduction to Pneumatic Systems: Fundamentals and basic requirements of pneumatic system with application, Construction and working principle of pneumatic power transmission system. Preparation compressed air. Components like Power source, FRL unit, Actuators and control valves like DCV, FCV, PCV, time delay, quick exhaust valve, Use of Memory Valve (Double Piloted Valve), shuttle Valve.	6
7	Pneumatic circuits: Basic pneumatic circuits, Development of single Actuator Circuits, Development of multiple Actuator Circuits, Cascade method for sequencing.	6
8	Introduction to Automation in hydraulic and Pneumatic Systems.	3

Suggested Theory Distribution

The suggested theory distribution as per Bloom's taxonomy is as per follows. This distribution serves as guidelines for teachers and students to achieve effective teaching-learning process

Distribution of Theory for course delivery and evaluation					
Remember	Understand	Apply	Analyze	Evaluate	Create
5%	30%	40%	15%	10%	00%

Reference Books:

1. Industrial Hydraulics by John Pippenger and Tyler Hicks, McGraw Hill.
2. Oil Hydraulic Systems, Principle and Maintenance by S R Majumdar, McGraw-Hill.
3. Fluid Power with Applications by Anthony Esposito, Pearson.
4. Fluid Power: Generation, Transmission and Control, Jagadeesha T., Thammaiah Gowda, Wiley.
5. The Analysis & Design of Pneumatic Systems by B. W. Anderson, John Wiley.
6. Control of Fluid Power Analysis and Design by Mc Clay Donaldson, Ellis Horwood Ltd.
7. Hydraulic and Pneumatic Controls: Understanding made Easy, K. Shanmuga Sundaram, S.Chand & Co Book publishers, New Delhi, 2006 (Reprint 2009)

8. Basic Pneumatic Systems, Principle and Maintenance by S R Majumdar, McGraw-Hill.
9. Basic fluid power Dudley, A. Pease and John J. Pippenger, , Prentice Hall, 1987

List of Experiments (Any 10)

A. Experiments on Hydraulics Circuits:

1. Extend-Retract and Stop system of a linear actuator.
2. Regenerative circuit.
3. Speed Control circuits: meter-in, meter-out and bleed off Sequencing circuit
4. Use of solenoid operated DCV.
5. Rapid Traverse and Feed circuit.

B. Experiments on Pneumatic Circuits:

1. Study of Compressor, FRL unit and 5/3 DCV.
2. Reciprocating motion of a single and a double acting actuators using 5/3 DCV.
3. Speed control circuits.
4. Automatic to & fro motion of a pneumatic linear actuator.
5. Sequencing circuit.
6. Logical circuits using shuttle valve.
7. Cascading Circuit

C. Students should build up the above circuits on computer using software and simulate the flow of fluid during the operation. Afterwards, they themselves can physically connect the circuit on the hydraulic/pneumatic trainer and run the circuit.

List of Open Source Software/learning website

1. Autosim Premium
2. Hydrosym

Subject Code: 01AE0507
Subject Name: Reverse Engineering
B.Tech. Year – III

Course Type: Under Graduate

Prerequisite: None

Rationale: The objective of the module is to go through the Reverse Engineering process as it is a self-learning tool used to summarize the process of reconstructing/ reformation of an already existing object.

Course Outcomes:

After completion of this course, student will be able to

1. Understand the problem in the existing process.
2. Collect the large number of data/ information for the product
3. Depth analyze of the products and extraction of real time data
4. Understand the principles behind the design of the product, ways to redesign and improve the performance of the system.

3. Practical Reverse Engineering: x86, x64, ARM, Windows® Kernel, Reversing Tools, and Obfuscation, Bruce Dang, Alexandre Gazet, Elias Bachaalany, John Wiley & Sons, Inc, ISBN: 978-1-118-78731-1.

Instructional Method:

1. The course delivery method will depend upon the requirement of content and need of students. The teacher in addition to conventional teaching method by black board, may also use any of tools such as demonstration, role play, Quiz, brainstorming, MOOCs etc.
2. The internal evaluation will be done on the basis of continuous evaluation of students in the laboratory and class-room.
3. Practical examination will be conducted at the end of semester for evaluation of performance of students in laboratory.
4. Students will use supplementary resources such as online videos, NPTEL videos, e-courses, Virtual Laboratory

Supplementary Resources:

1. <https://canvas.instructure.com/courses/838884/pages/unit-3-lesson-6-reverse-engineering>
2. <https://www.cs.drexel.edu/~spiros/teaching/CS675/>
3. <https://eforensicsmag.com/course/software-reverse-engineering-techniques-level-1/>
4. <http://www.npd-solutions.com/remethodology.html>

Subject Code: 01AE0601

Subject Name: Automobile Chassis & Body Engineering
B.Tech. III Year

Type of course: Engineering

Prerequisite: Production Technology

Rationale: Understanding of chassis and body design of Automobile systems

Course Outcomes:

1. The student can identify different areas of automobile chassis and body engineering.
2. Can find the applications of all the areas in day to day life.

Teaching and Examination Scheme

Teaching Scheme (Hours)			Credits	Theory Marks			Tutorial/ Practical Marks		Total Marks
Theory	Tutorial	Practical		ESE (E)	Mid Sem (M)	Internal (I)	Viva (V)	Term work (TW)	
4	0	2	5	50	30	20	25	25	150

Sr No	Contents	Teaching hours
1	Vehicle Aerodynamics Types of Chassis frames & body, aerodynamic consideration in body profiling, ergonomic consideration, defects in frame and body. Vehicle drag and types, various types of forces and moments, effects of forces and moments, side wind, various body optimization techniques and Aerodynamic Aids for Optimization of drag.	10
2	Car Body Details: Types, Regulations, Drivers seat design & dimensions parameters, drivers' visibility, methods for improving visibility and space in cars, design for safety, car safety requirements, car body construction. Crash Test & Roll over test regulations. Heating and ventilation systems. Instrument panel, Dash boards & passenger compartment lighting, Audio- visual systems.	9

3	<p>Bus Body Details: Types: Mini bus, single decker & double decker, two level, split level and articulated bus, bus body layout, floor height, engine location, entrance - exit locations, passenger's seating dimensions, seat layout according to RTO registration, details of constructional, construction of frame, double skin construction, types of metal sections used, integral and conventional coach type construction. Bus body Code Regulations (ARAI). Pneumatic equipment for passenger door opening & closing. Air conditioning equipment selection and mounting.</p>	10
4	<p>Commercial Vehicle Details: Types of body, flat platform, drop side, fixed side, tipper body, tanker body, light commercial vehicle body types. Dimensions of driver's seat in relation to controls, drivers cab design. Tipper body designs, volume/weight considerations, pay load and related regulations.</p>	9
5	<p>Body Loads: Idealized structure, structural surface, shear panel method, symmetric and asymmetric vertical loads in a car, longitudinal load, different loading situations, chassis frame design. Construction of Doors, door apertures, windows. Spare wheel carrier construction and design for different types of vehicle and weight distribution criteria in relation to Spare wheel location. Sources of body noises testing and methods of elimination. Water leakage test.</p>	5
6	<p>Body Materials: Metal sheets (Steel, Aluminium etc.), plastics, timber, GRP, FRP, Insulating materials, adhesives and sealants. Wind screen, Back light & window Glasses and regulations for glasses. Difference between toughened glass, sheet glass & laminated glass. Composite materials, properties of materials, corrosion, anti-corrosion methods, selection of paint and painting process, body trim items, body mechanisms.</p>	5

Suggested Theory Distribution

The suggested theory distribution as per Bloom's taxonomy is as per follows. This distribution serves as guidelines for teachers and students to achieve effective teaching-learning process

Distribution of Theory for course delivery and evaluation					
Remember	Understand	Apply	Analyze	Evaluate	Create
5%	30%	40%	15%	10%	00%

Subject Code: 01AE0602
Subject Name: Automobile System Design
B.Tech. III Year

Type of course: Automobile System and Machine Design and Industrial Drafting

Prerequisite: Automobile engine, Machine Design and Industrial Drafting.

Rationale: To make student get acquainted with to standardize the automobile part after designing the system component like clutch, propeller shaft, axle, steering linkages, braking parts, suspension system etc. within the space limitations and optimize it.

Course Outcome

1. Student will be able to select and design the different automobile system for given situation.
2. Student will be able to standardize the different parts.
3. Student will be able to optimize the parts for given situation

Teaching and Examination Scheme

Teaching Scheme (Hours)			Credits	Theory Marks			Tutorial/ Practical Marks		Total Marks
Theory	Tutorial	Practical		ESE (E)	Mid Sem (M)	Internal (I)	Viva (V)	Term work (TW)	
4	0	2	5	50	30	20	25	25	150

Sr.	Contents	Teaching Hours
1	Design of Propeller Shaft: Design of propeller shaft for bending, torsion, rigidity and critical speed criteria. Design of universal joint and slip joint.	5
2	Design of Clutch System Design of various clutch system components (Single plate, multiple plates, centrifugal clutch, lining material) and Pressure Plate Assembly components. Hydraulic Clutch system components (Master Cylinder, Slave cylinder, reservoir) clutch fluid – its properties, hydraulic pipes. Clutch Pedal & Clutch hand lever design. Clutch cable Design / selection considerations	10
3	Design of Braking System Brake balance, stopping distance, Brake fade, Work done in braking, braking efficiency, braking of vehicle, braking of vehicle moving in a curved path, Design of drum brake, Design of disc brake, Design of hydraulic brake system, Design of hand brake or parking brake.	12

4	Design of Axle: Front Axle beam, Steering Knuckle, King pin. Rear Axle (drive Axle) tube, Design of fully floating, half floating axle and dead axle. Design of Final drive and differential: Design of spiral bevel and hypoid type of final drive/differential.	8
5	Design of Steering System: Condition for true rolling, Turning circle radius, Principle of Ackermann steering, Ackermann-linkage geometry, Steering gear ratio, Steering box torque, Design of various steering gear box.	5
6	Design of Suspension System: Function of suspension, Forces act on suspension, Suspension springs (laminated or leaf, coil, torsion bar, rubber spring, pneumatic spring), Design of laminated or leaf spring, Design of helical or coil spring, Design of torsion bar spring	12
7	Optimum Design: Optimum design for automotive elements like shaft-springs etc, Johnson's method of optimum design	8

19. Bearing Manufacturers Catalogues.

List of Experiments

1. To standardize the any automobile system part for size, torque and power point of view.
2. To design the clutch for given situation of automobile vehicle.
3. To design the propeller shaft for given situation of automobile vehicle
4. To design the Axle for given situation of automobile vehicle
5. To design the steering system for given situation of automobile vehicle.
6. To design the braking system for given situation of automobile vehicle
7. To design the suspension system for given situation of automobile vehicle.
8. To optimize the part from above design given situation of automobile vehicle.

List of Open Source Software/learning website

1. <http://nptel.ac.in/>

Subject Code: 01AE0603
Subject Name: Vehicle Dynamics
B.Tech. III Year

Type of course: Engineering

Prerequisite: Basic knowledge of KOM, DOM & Automobile system

Rationale: Understanding of Dynamic behaviour of different systems in different loading condition in automobile vehicle

Course Outcomes:

1. To present a problem oriented in depth knowledge of Vehicle Dynamics.
2. To address the underlying concepts and methods behind Vehicle Dynamics

Teaching and Examination Scheme

Teaching Scheme (Hours)			Credits	Theory Marks			Tutorial/ Practical Marks		Total Marks
Theory	Tutorial	Practical		ESE (E)	Mid Sem (M)	Internal (I)	Viva (V)	Term work (TW)	
4	0	2	5	50	30	20	25	25	150

Sr No	Contents	Teaching Hours
1	Introduction to Vehicle Dynamics: History, vehicle classifications, fundamental approaches to vehicle dynamics modelling; SAE Vehicle axis system, Forces & moments affecting vehicle, Earth Fixed coordinate system, Dynamic axle loads, Equations of motion, transmission characteristics, vehicle performance , power limited and traction limited acceleration, braking performance, Brake proportioning, braking efficiency.	6
2	Acceleration Performance Power train components; power and traction limited acceleration; transverse weight shift; front wheel drive vs rear wheel drive vs. all-wheel drive vehicles	5
3	Braking Performance Braking force analysis ; brake design and analysis; federal regulation on braking performance; antilock braking system; wheel lock-up; tire/road friction; safety and maintenance issues in braking	5
4	Road Loads Wind drag and car body design, rolling resistance; breakdowns of total road loads; gas mileage analysis and driving styles; Aerodynamics	6
5	Tire and Tire Dynamics	5

	Tire specifications and constructions; tire motion analysis; tire force analysis; tire contact stress analysis; tire vibration analysis; tire models	
6	Ride & Cornering/steering Riding comfort; perception of vibration; vibration sources; vibration transmission to the passengers; lower speed cornering; high speed corner; cornering bicycle model; Quasi-Static Rollover of a Rigid Vehicle, Quasi-Static Rollover of a Suspended Vehicle, Transient Rollover	8
7	Chassis and Suspension Systems Suspension Kinematics, Suspension types, Solid Axles, Independent Suspensions, Anti-Squat and Anti-Pitch Suspension Geometry, Anti-Dive Suspension Geometry, Roll Center Analysis, Suspension Dynamics, Multi-body vibration, Body and Wheel hop modes, Invariant points, Controllable Suspension Elements: Active, Semi-Active. Choice of suspension spring rate, Calculation of effective spring rate, Vehicle suspension in fore and aft directions.	5
8	Motorcycle Dynamics Kinematic structure and geometry of motorcycles, importance of trail, Resistance forces acting on motorcycle (tyre rolling and aerodynamic resistance forces, resistance force caused by slope), Location of motorcycle's centre of gravity (C.G), Moments of inertia on Motorcycle	5

List of Experiments:

1. Experimental study of mechanism for air flow over different geometry of vehicles.
2. Experimental studies of measurements of drag and lift coefficient for different geometry vehicle using wind tunnel apparatus.
3. To study the effect of tyre pressure and temperature on the performance of the tyre.
4. To simulate and study a quarter car models using MBD software.
5. To simulate and understand behaviour of sprung / un-sprung mass & lumped mass system MBD software.
6. Finding the stiffness of tyre with variation of air pressure.
7. To simulate and study the effect of different conditions on vehicle loading.
8. Study of latest technologies available nowadays in vehicles helping to maintain stability of the vehicle on the road.
9. Study geometry of motorcycles as well as various types of forces faced by the motorcycle & its rider
10. Study the location & height of Centre of gravity (C.G) of a motorcycle

Subject Code: 01AE0604

Subject Name: Automobile Refrigeration & Air conditioning
B.Tech. III Year

Type of Course: Engineering

Pre-requisite of course: Engineering Thermodynamics

Rationale: The course is designed to give fundamental knowledge of types of refrigeration, refrigeration cycles, refrigerants and behavior under various conditions, different air conditioning terms and load calculation, designing of components of air distribution system.

Course Outcomes:

After learning the course, the students should be able to:

1. Understand the basic concepts of refrigeration and air conditioning systems
2. Understand and analysis of various refrigeration cycles
3. Make basic calculation of psychometric properties and process
4. Do basic calculations of heating and cooling load requirements of a room.
5. Apply scientific and engineering principles to analyze and design aspects of engineering systems that relate to refrigeration and air conditioning

Teaching and Examination Scheme

Teaching Scheme (Hours)			Credits	Theory Marks			Tutorial/ Practical Marks		Total Marks
Theory	Tutorial	Practical		ESE (E)	Mid Sem (M)	Internal (I)	Viva (V)	Term work (TW)	
4	0	2	5	50	30	20	25	25	150

Sr.	Contents	Teaching Hours
1	Introduction: Brief history, refrigeration and air conditioning needs, refrigeration and air condensing systems – types and applications, cooling methods, ton of refrigeration, coefficient of performance,	2
2	Refrigerants: Classification, terminology, required properties, secondary refrigerants, upcoming industrialized refrigerants	2
3	Air refrigeration: Reversed Carnot cycle. Restrictions of Reverse Carnot cycle, Bell-Coleman cycle, working and examination of air refrigeration systems (Simple; Bootstrap; Regenerative and Reduced ambient, refrigeration inside Aircraft,	4

4	Vapour Compression system: Simple system on P-h and T-s diagrams, simple cycle analysis, elements affecting the performance of the cycle, actual cycle Compound Compression System: Compound compression by means of intercooler (flash gas abstraction and flash intercooler), analysis of two evaporators with flash intercooler and individual expansion valve and multiple expansion valve, multiple evaporators with back pressure valves and with multiple expansion valves without flash inter cooling, , cascade refrigeration system	7
5	Absorption refrigeration system: Desired characteristics of refrigerant, selection of pair, practical H ₂ O -NH ₃ cycle, LiBr – H ₂ O system and its functioning, h-x diagram and simple calculation of several process alike adiabatic mixing and mixing with heat transfer, throttling, Electrolux refrigeration system	3
6	Refrigeration system components: Types; compressors construction; working; comparison and selection, condensers; expansion devices; and evaporators, refrigeration piping accessories*, evacuation and charging of refrigerant*, properties and classification of thermal insulation	5
7	Psychrometry: Dalton's law of partial pressure, Properties of moist air, temperature and humidity measuring instruments, psychrometric chart, psychrometric processes such as sensible heating and cooling, heating and humidification cooling and dehumidification, , adiabatic saturation, chemical dehumidification.	5
8	Human comfort: Assortment of inside design conditions, thermal relaxation, heat balance equation for user (human being), elements affecting thermal comfort, Operative temperature, comfort chart and factors governing effective temperature, selection of outside design conditions	1
9	Load analysis: Site survey, outdoor and indoor design conditions, classification of loads, flywheel effect of building material and its use in design, effect of wall structure on cooling capacity, calculations of cooling capacity, instantaneous heat gain and instantaneous cooling load heat transmission through sunlit and shaded glass using tables, TETD due to sunlit and shaded roof and walls using tables, method of reduction of solar heat gain through glass, ventilation and air infiltration, load due to outside air, heat gain from occupants; electric lights; product; electric motor and appliances, , use of load estimation sheet, introduction of CLTD method ,load calculations for automobiles	6
10	Duct design and air distribution: Purpose; classification and economic factors influencing duct layout, equal friction technique of duct design, usage of friction chart, dynamic losses and its determination, Requirements of air distribution arrangement, air distribution, grills, outlets, application, location	4

11	Air-conditioning systems: Classification, system components, all air; all water; and air-water systems, room mid-air conditioners, packaged air conditioning plant, centralized air conditioning systems, split air conditioning systems	3
----	--	---

Suggested Theory Distribution

The suggested theory distribution as per Bloom's taxonomy is as per follows. This distribution serves as guidelines for teachers and students to achieve effective teaching-learning process

Distribution of Theory for course delivery and evaluation					
Remember	Understand	Apply	Analyze	Evaluate	Create

5. Refrigeration and Air Conditioning by Jordon and Prister, Prentice Hall of India Pvt. Ltd.
6. Refrigeration and Air Conditioning by W.F. Stocker and J. W. Jones, McGraw-Hill
7. Refrigeration and Air Conditioning by Ameen Ahmadul, PHI India
8. Automobile Air conditioning by Crouse and Anglin, McGraw Hill Publications

List of laboratory experiments (Any Ten)

1. To understand different components of VCR system and to determine its COP
2. To understand working of Electrolux refrigerator and to determine its COP.
3. To understand construction and working of reciprocating, rotary and centrifugal compressor used for R&AC.
4. To understand various tools used for refrigeration tubing and to perform various operations like flaring, swaging, bending, brazing etc.
5. To perform different psychrometric processes and analyze the same using psychrometric chart.
6. To understand construction and working of window air-conditioner/ split air-conditioner and to determine its capacity.
7. To determine COP and apparatus dew point of an air conditioning test rig.
8. To calculate cooling load of a confined space using table and compare the same with load estimation sheet.
9. Study of domestic refrigerator and to determine % running time at different thermostat settings.
10. To determine (COP)_C and (COP)_H of heat pump
11. To determine saturation efficiency of air cooler/air washer
12. Study of packaged plant

Subject Code: 01AE0605
Subject Name: Dynamics of Machine
B.Tech. III Year

Type of course: Engineering

Prerequisite: Higher order ODE, PDE, and Kinematics of Mechanism

Rationale: Understanding & Analysis of Vibration in Mechanical System.

Course Outcome:

After learning the course, the students should be able to

1. Understand unbalance force and bearing reaction force in rotating mass.
2. Understand unbalance force in reciprocating engine.
3. Understand natural frequency of Vibrating Mechanical system
4. Understand critical speed of shaft term and cam-follower system.

Teaching and Examination Scheme

Teaching Scheme (Hours)			Credits	Theory Marks			Tutorial/ Practical Marks		Total Marks
Theory	Tutorial	Practical		ESE (E)	Mid Sem (M)	Internal (I)	Viva (V)	Term work (TW)	
4	0	2	5	50	30	20	25	25	150

Sr.No	Contents	Teaching Hours
1	Rotating Mass Balance: Understanding static and dynamic balancing, Investigation of effect of unbalance rotating mass (Single & Multi plane), Methods for measuring unbalance force & mass. Bearing reactions.	04
2	Balancing of Reciprocating Mass: Balancing of slider crank chain mechanisms, Modelling real system for static and dynamic analysis. Inertia force, disturbing force and torque, Balancing of Multi Cylinder Engines: Analysis of Multi Cylinder In-line Engines: Direct and Reverse crank method, optimized configuration of in-line engine. Balancing of Radial Engine: Evaluation of V and radial engine, Analytical & Graphical methods.	12
3	Fundamental of Mechanical Vibrations: Vibration and oscillation, Reason for generation of vibration, Parameters of Vibration- spring, mass, damper, Damper models, Motion –periodic, non-periodic, harmonic, non- harmonic, Degree of freedom, static equilibrium position, Vibration classification.	20

	<p>Free Undamped Single Degree of Freedom Vibration System Longitudinal, transverse, torsional vibration system, Methods for formulation of differential equations by Newton, Energy, and Rayleigh's Method,</p> <p>Free Damped Single Degree of Freedom Vibration System Viscous damping, Under, Critically & Over damped System, Damping Factor, Logarithmic decrement;</p> <p>Free Undamped vibration of Two Degrees of freedom System: Characteristics Equation and basic mode of vibration, torsional vibrations of two and three rotor system, torsionally equivalent shaft, geared system.</p> <p>Forced Vibration: Undamped Forced vibrations, Damped Forced Vibration, Equivalent viscous damping; Externally Applied forces due to unbalanced masses. Vibration Isolation and Transmissibility: Force Transmissibility, Motion Transmissibility Typical isolators & Mounts</p>	
4	<p>Vibration in Rotating System: Whirling of shafts, Critical speed and its practical influence in the design of shafts, Application of Dunkerley's method and Rayleigh's method for determination of critical speed of shafts</p>	04
6	<p>Vibration Measurement: Basic of vibration measurement and analysis Instruments used: Vibrometer, velocity pickup, accelerometer, FFT analyzer.</p>	04
7	<p>Cam Dynamics: Dynamics of force-closed cam follower system: Jump phenomenon: Reason for Jump, response of spring force and static mass on jumping of cam.</p>	03

Suggested Theory Distribution

4. V. P. Singh, Mechanical Vibration
5. R L Norton, Design of Machinery, McGraw-Hill.
6. A. G. Ambekar, Mechanical vibrations and noise engineering
7. G. K. Grover, Mechanical Vibration.

List of the Experiment

1. Balancing of rotating mass in different plane.

2. Analysis of unbalanced reciprocating mass.
3. Experimental analysis of Free Undamped longitudinal Vibration of single degree of freedom system
4. Experimental analysis of Free Undamped torsional vibration of single degree of freedom system
5. Experimental analysis of Free Undamped torsional vibration of two rotor system
6. Experimental analysis of Damped torsional vibration
7. Experimental analysis of forced vibration
8. Experimental analysis of forced damped vibration
9. To verify Dunkerley's theorem for lateral vibration
10. To determine critical speed of the shaft and study effect of shaft diameter and end conditions on the same.
11. To determine jump speed and effect of dead weight and spring force on it.

Subject Code: 01AE0606
Subject Name: Heat and Mass Transfer
B.Tech. III Year

Type of course: Engineering Science

Prerequisite: Thermodynamics, Fluid Mechanics

Rationale: The course is prepared to provide the detailed understating of heat and mass transfer principles.

Course Outcome:

After learning the subjects, Students will be able to

1. Understand the modes and phenomenological origin of laws for the different modes of heat and mass transfer
2. Analysis of heat conduction in a steady and transient state for various geometrics
3. Apply empirical correlation for analyzing free and forced convection problem
4. Evaluate the performance of heat exchangers by using the method of heat exchanger effectiveness
5. To analyze radiation heat exchange between surfaces and in diffuse, gray enclosure

Teaching and Examination Scheme

Subject Code: 01AE0610

Subject Name: Design Engineering and Project Management
B.Tech. Year - III

Type of course: Engineering Science

Prerequisite: Nil.

Rationale: The main objective of this course is to put on the engineering problem solving procedure to solve basic engineering design and analysis problems. using various techniques. This course is also designed with aim to demonstrate planning, execution and testing of various Projects.

Course Outcomes:

After completion of this course, student will be able to

6. Understand the importance of Design Engineering.
7. Identify various Design Engineering approaches.
8. Apply various methodologies to design the product and in testing the product.
9. Understand various Project Management Processes.
10. Demonstrate effective project execution and control techniques that result in successful projects.

1	Design Engineering Introduction: Design and its objectives, Design Constraints, Design functions, Role of Science Engineering and Technology in design Engineering as Business Proposition: How to Initiate Creative design? Initiating the thinking process for designing a product of daily use. Need Identification, problem Statement, Market survey-customer requirement, Design Attributes and objectives: Ideation: Brainstorming approach arriving at solution, closing on to Design Need.	6
2	Design Engineering Methodology: System level Design, Detailed Design, Design for performance, safety and reliability, (2) Design for Ergonomics and Aesthetics, (3) Design for Manufacturing & Assembly (DFMA), (4) Design for cost & Environment, (5) Modelling and Analysis of their design (6) Prototyping (7) Engineering Economics of Design, (8)	6

	Design for Use, Reuse and Sustainability and (9) Test the prototype. And additionally, students will also learn topic like (10) Ethics in Design.	
3	Project Management: PM Foundations, Project management processes, Project execution, Project closing, Global issues in PM, Product-based planning, PM documents	14

Suggested Theory Distribution

The suggested theory distribution as per Bloom’s taxonomy is as per follows. This distribution serves as guidelines for teachers and students to achieve effective teaching-learning process

Distribution of Theory for course delivery and evaluation					
Remember	Understand	Apply	Analyze	Evaluate	Create
5%	30%	40%	15%	10%	00%

References Books:

1. Designing for Growth: a design thinking tool kit for managers, Jeanne Liedtka and Tim Ogilvie, Columbia Business School Publishing
2. Eva Dijksterhuis, Gilbert Silvius, “The Design thinking approach to projects”, PM World Journal Vol. V, Issue VI, June 2016, pp. 1-15
3. Guide to the Project Management Body of Knowledge (PMBOK® Guide), Fifth Edition, Project Management Institute, Inc.

5. Wysocki, Robert K. (2014b). Effective Complex Project Management: An Adaptive Agile Framework for Delivering Business Value, J. Ross Publishing.

Instructional Method:

1. The course delivery method will depend upon the requirement of content and need of students. The teacher in addition to conventional teaching method by black board, may also use any of tools such as demonstration, role play, Quiz, brainstorming, MOOCs etc.
2. The internal evaluation will be done based on continuous evaluation of students in the laboratory and classroom.
3. Practical examination will be conducted at the end of semester for evaluation of performance of students in laboratory.
4. Students will use supplementary resources such as online videos, NPTEL videos, e-courses, Virtual Laboratory

Supplementary Resources

1. <http://nptel.ac.in/syllabus/107106009/>

Subject Code: 01AE0701

Subject Name: Project 1

B.Tech. IV Year (Sem-7)

Type of course: Engineering Science

Prerequisite: None

Rationale: This is a laboratory-oriented subject focusing on enhancing practical, design, presentation and project management skills required for Power Electronics. This is based on the topics/subjects already covered in previous semesters and subjects of current semester.

Teaching and Examination Scheme

Teaching Scheme (Hours)			Credits	Theory Marks			Tutorial/ Practical Marks		Total Marks
Theory	Tutorial	Practical		ESE (E)	Mid Sem (M)	Internal (I)	Viva (V)	Term work (TW)	
0	0	12	6	0	0	50	25	25	100

Subject Code: 01AE0711
Subject Name: Computer Aided Design
B.Tech. IV Year

Type of course: Engineering Science

Prerequisite: None

Rationale: Nowadays computer have become important for there application in various stages of product development. In this course student will understand how the computer stores and represent the design data and use of computer in design viz. geometric modelling and finite element analysis.

Course Outcome:

1. Explain the application of computer in product development.
2. Prepare DDA and Bresenham's algorithms to create line and circle.
3. Explain various methods to generate solids and surface model.
4. Apply different geometric transformation like translate, rotate, scale, etc. to 2-D and 3-D model.
5. Formulate problems to calculate stress-strain, deformation and temperature distribution in 1-D element.

Teaching and Examination Scheme

Teaching Scheme (Hours)			Credits	Theory Marks			Tutorial/ Practical Marks		Total Marks
Theory	Tutorial	Practical		ESE (E)	Mid Sem (M)	Internal (I)	Viva (V)	Term work (TW)	
4	0	2	5	50	30	20	25	25	150

Sr. No.	Content	Teaching Hours
1.	Introduction: Product cycle, CAD in design process of product cycle, evaluation criteria for CAD/CAM system, Coordinate Systems: Screen Coordinate System, Working Coordinate System, Model Coordinate System. Generation algorithm Line and Curve: DDA, Bresenham's algorithms. Graphics exchange standards.	6

2.	Curves, Surfaces and solids: Parametric representation of lines: points on a line, parallel and perpendicular lines, Intersection of lines. Parametric representation of circle, recursive method. Synthetic Curves: Cubic Spline and Bezier Curve: equation, properties and blending, advantages of B-Splines, Concept of continuity. Various types of surfaces and their application. Various types of solids and their application	10
3.	Geometric Transformations: Homogeneous representation; Translation, Scaling, Reflection along different axis, Rotation along different axis, Shearing in 2D and 3D; Orthographic projections. Window to View-port transformation.	8
4.	Finite Element Analysis: Stress-strain relation and generalized Hooke's Law, Plane stress and strain conditions; Total Potential Energy concept; Basic procedure Finite Element Analysis. 1-D Analysis: Concept of natural coordinates and Shape function, strain - displacement matrix, stiffness matrix - derivation for structural problems, properties. 1-D structural problems with penalty approaches and elimination, 1-D thermal and fluid problems. Trusses and Beams: stiffness matrix, truss problems to find displacement, reaction and stresses in truss members. Structural analysis by Euler-Bernoulli beam element. Higher Order Element: CST element stiffness matrix formulation, shape functions and applications of Quad and axisymmetric elements.	25

Suggested Theory Distribution

The suggested theory distribution as per Bloom's taxonomy is as per follows. This distribution serves as guidelines for teachers and students to achieve effective teaching-learning process

Distribution of Theory for course delivery and evaluation					
Remember	Understand	Apply	Analyze	Evaluate	Create
5%	30%	40%	15%	10%	00%

Reference Books:

1. Ibrahim Zied, CAD / CAM: Theory and Practice, McGraw-Hill
2. Hearn E J and Baker M P, Computer Graphics, Pearson.
3. Introduction to Finite Elements in Engineering, Chandrupatla T. R. and Belegunda A. D., PHI.
4. A First Course in the Finite Element Method, D Logan, Thompson Learning
5. An Introduction to Finite Element Method, J N Reddy, McGraw - Hill.
6. Concepts and Applications of Finite Element Analysis, R D Cook, Wiley India.

List of Experiments:

1. Introduction to 3-D modelling software.
2. advanced 3-D modelling.

3. 3-D model editing.
4. Assembly of 3-D modeled parts.
5. Surface modelling.
6. Understanding of GD & T - Create 2D engineering drawings using functional GD&T using manufacturing Surface Roughness symbol
7. Industrial Use of GD & T –Using Form , Profile , Runout orientation and Location Control Feature.
8. FEA of 1-D structural and trusses problems.
9. FEA of 1-D thermal problems.
10. FEA of 1-D fluid problems.
11. FEA of 2-D structural and thermal problems

Subject Code: 01AE0712

Subject Name: Industrial Management and Operation Research
B.Tech. IV Year

Type of course: Engineering Science

Prerequisite: Nil

Rationale: Operations Research now a day widely used in the area of decision making for the real-life problems. Managers and decision makers get idea for optimizing and approximating industrial problems. They not only strive to devise appropriate measures for problem solving but also apply scientific techniques to monitor the organizations ongoing activities such as production mix, transportation, queuing, assignment, dynamic, Integer, goal and game problem.

Course Outcome:

1. Students will be able to describe characteristics and scope of OR.
2. Students will be able to define and formulate mathematical problems.
3. Students will be able to select optimal problems solving techniques for a given problem using LP.
4. Students will be able to demonstrate and solve simple models of Game theory.
5. Students will be able to evaluate optimum solution using dynamic programming for different applications.

Teaching and Examination Scheme

Teaching Scheme (Hours)			Credits	Theory Marks			Tutorial/ Practical Marks		Total Marks
Theory	Tutorial	Practical		ESE (E)	Mid Sem (M)	Internal (I)	Viva (V)	Term work (TW)	
4	2	0	5	50	30	20	25	25	150

Sr. No.	Content	Teaching Hours
1.	Operations Research: Origin of Operation Research, Historical Standpoint, Methodology, Different Phases, Characteristics, Scope and Application of Operations Research.	05
2.	Linear Programming Problem: Introduction, Requirement of LP, Basic Assumptions, Formulation of LP, General Statement of LP, Solution techniques of LP: Graphical Methods, Analytical Methods: Simplex, Big M and Two Phase, Sensitivity Analysis, Primal and Dual Problems, Economic Interpretation.	06

3.	Transportation and Assignment: Transportation Problems definition, Linear form, Solution methods: North west corner method, least cost method, Vogel's approximation method. Degeneracy in transportation, Modified Distribution method, Unbalanced problems and profit maximization problems. Transshipment Problems. Assignment Problems and Travelling sales man Problem.	06
4.	Queuing Theory: Basis of Queuing theory, elements of queuing theory, Kendall's Notation, Operating characteristics of a queuing system, Classification of Queuing models, Preliminary examples of M/M/1:∞/FCFA	06
5.	Inventory Control: Inventory classification, Different cost associated to Inventory, Economic order quantity, Inventory models with deterministic demands, ABC analysis.	06
6.	Replacement theory: Introduction, Replacement of capital equipment which depreciated with time, replacement by alternative equipment, Group and individual replacement policy.	05
7	Game Theory: Introduction, Characteristics of Game Theory, Two Person, Zero sum games, Pure strategy. Dominance theory, Mixed strategies (2x2, mx2), Algebraic and graphical methods.	05
8	Project Management: Introduction to PERT and CPM, critical Path calculation, float calculation and its importance. Cost reduction by Crashing of activity.	05
9	Industrial Management: Introduction, Production Planning and Control, Product design, Value analysis and value engineering, Plant location and layout, Equipment selection, Maintenance planning, Job, batch, and flow production methods, Group technology, Work study, Time and motion study, Incentive schemes, Work/job evaluation, Inventory control, Manufacturing planning: MRP, MRP-II, JIT, CIM, Quality control, Statistical process control, Acceptance sampling, Total quality management, Taguchi's Quality engineering. Forecasting, Scheduling and loading, Line balancing, Break-even analysis.	05

Suggested Theory Distribution

The suggested theory distribution as per Bloom's taxonomy is as per follows. This distribution serves as guidelines for teachers and students to achieve effective teaching-learning process

Distribution of Theory for course delivery and evaluation					
Remember	Understand	Apply	Analyze	Evaluate	Create
5%	30%	40%	15%	10%	00%

Reference Books:

1. Operations Research: An Introduction by Hamdy Taha, Pearson
2. Operations Research by A M Natarajan, P Balasubramani, A Tamilarasi, Pearson Education Inc
3. Operations Research by P Mariappan, Pearson
4. Operations Research by H N wagner, Prentice hall.
5. Optimization in Operations Research by Ronald Rardin, Pearson Education Inc.
6. Operations Research by R. Paneerselvam, Prentice Hall of India Pvt. Ltd.
7. Quantitative Techniques in Management by N D Vohra, Tata McGraw-Hill

List of Experiments:

1. Exercise formulation of linear programming problems.
2. Exercise on Graphical solution of linear programming problems
3. Exercise and case problems on Simplex and Big M Problems
4. Exercise and case problems on Dual and Primal LP Problems
5. Exercise and case problems on Transportation Problems.
6. Exercise and case problems on Assignment and Travelling sales man Problems
7. Exercise and case problems on Queuing theory
9. Exercise on Inventory model
10. Exercise on Replacement theory
11. Exercise and case problems on PERT/CPM

Subject Code: 01AE0721
Subject Name: Automobile Testing
B.Tech. IV Year – (Sem-7)

Type of course: Under Graduate

Prerequisite: Basics of automobile vehicle construction and working.

Rationale: To familiarize the students with different techniques used for automobile performance measurement and testing.

Course Outcome

1. Describe basic of vehicle performance.
2. Explain Testing methods implemented for measurement of different vehicle performance parameter.
3. Discuss about the safety testing of the vehicle.
4. Analyze automobile vehicle electrical circuit.

Teaching and Examination Scheme

Teaching Scheme (Hours)			Credits	Theory Marks			Tutorial/ Practical Marks		Total Marks
Theory	Tutorial	Practical		ESE (E)	Mid Sem (M)	Internal (I)	Viva (V)	Term work (TW)	
4	0	2	5	50	30	20	25	25	150

Sr.	Content	Teaching Hours
1	Introduction: Vehicle testing organizations, Need of vehicle testing, Hierarchy of vehicle testing, System level approval and whole vehicle approval, Type of approval and conformity of production tests.	03
2	Vehicle System Testing: Gradeability test, turning circle diameter test, Steering Impact test, Steering effort test, Maximum speed and acceleration, brake testing on the road, Mechanism of corrosion-three chamber corrosion testing, Wind tunnel testing, Road testing, two wheel & four-wheel dynamometers, Vehicle testing lanes - side slip testers, Wheel alignment testing	14
3	Safety testing: Active and passive safety, Wheel rim testing for cornering and radial fatigue, Fire resistance test, Bumper test, Crash test, Side impact test, Rollover test, Safety belt test, Airbag test, Safety belt anchorages, Seat anchorages & head restraints, Occupant protection Impact test, Side door intrusion test.	08

4	<p>Electrical System Testing: Wiring diagram for 2, 3 and 4-wheeler vehicles, Buses and Commercial vehicles, Charging System Testing, Ignition System Testing, Lighting System Testing, Electrical Equipment and accessories Testing. Battery: Performance tests, Battery Capacity, Efficiency, Gravimetric test.</p>	10
5	<p>Engine, Fuel system and Emission testing: Engine Testing- bhp, ihp, types of dynamometers, Engine Analyzers, Orsat apparatus, Infrared gas analysers and gas meter.</p>	06
6	<p>Automobile testing standards: Overview and study of testing standards-AIS testing standards, Euro Standards, SAE standards. ISO26262 standards for functional safety of electrical and/or electronic systems in automobiles.</p>	3

Suggested Theory Distribution

The suggested theory distribution as per Bloom's taxonomy is as per follows. This distribution serves as guidelines for teachers and students to achieve effective teaching- learning process

Distribution of Theory for course delivery and evaluation					
Remember	Understand	Apply	Analyze	Evaluate	Create
5%	30%	40%	15%	10%	00%

Reference Books:

1. Raymond M. Brach and R. Matthew Brach, "Vehicle Accident Analysis and Reconstruction Methods", SAE International, 2011
2. J. G. Giles – Vehicle operation and performance, Wildlife Publications, London, 1969.
3. W. H. Crouse and L. Anglin – Motor vehicle inspection, McGraw Hill Book Co. 1978.
4. Dr. N.K.Giri- Automotive technology – Khanna publishers, 2009
5. Ulrich Seiffert and Lothar Wech, "Automotive Safety Handbook", SAE International, 2007

List of Experiments (Any 10)

1. To study the performance characteristics of automobile petrol engine
2. To study the performance characteristics of automobile diesel engine
3. To study the performance characteristics of automobile engine operated on alternate fuel (CNG, LPG, Bio Diesel).
4. Testing and Calibration of fuel injection pump.
5. Calibration of Diesel Injectors.
6. Head light beam alignment and testing.
7. Measurement of Brake stopping distance.

8. Vehicle testing on chassis dynamometers.
9. Analyze the emissions of petrol, diesel and CNG vehicles using exhaust gas analyzer.
10. Performance of Gradability test.
11. Measurement of steering effort.
12. Study Pass by noise test.

List of Open Source Software/learning website

1. <http://nptel.ac.in/>
2. <http://ocw.mit.edu/>

Subject Code: 01AE0722

Subject Name: Automotive and Combustion Engine Technology
B.Tech. IV Year – (Sem-7)

Type of course: Advanced / Application

Prerequisite: Automobile engines

Rationale: This course is in persistence to fundamentals of internal combustion engines and its combustion patterns. The course focuses at imparting knowledge and process of combustion regarding automobile engines especially in GDI engines and CAI engines. Students inspect the combustion process and characteristics of different types of internal combustion engines: spark ignition, diesel, stratified-charge, GDI and HCCI engines.

Course Outcome

1. Students will describe basic concepts of combustion process in diesel engine.
2. Students will describe basic concepts of combustion process in spark ignition engine.
3. Students will describe basic concepts of combustion process in HCCI engine.
4. Students will describe basic concepts of combustion process in GDI engine.
5. Students will describe and analysis effect of super charging in petrol engine.
6. Students will describe and analysis effect of stratification in engine.

Teaching and Examination Scheme

Teaching Scheme (Hours)			Credits	Theory Marks			Tutorial/ Practical Marks		Total Marks
Theory	Tutorial	Practical		ESE (E)	Mid Sem (M)	Internal (I)	Viva (V)	Term work (TW)	
4	0	2	5	50	30	20	25	25	150

Sr.	Content	Teaching Hours
1	Combustion in SI and CI engines Stages of combustion in SI and CI engines, Abnormal combustion in SI engines, factor affecting knocking, control of knocking, Turbocharged SI engines	05
2	Overview of gasoline direct injection engines Introduction, outline of direct injection gasoline engines, Differentiation between port fuel injection and direct injection along with carbureted engines, potential and technologies for high efficiency direct injection gasoline engine, high pressure fuel injection system, exhaust emissions and after treatment devices	08
3	Stratified charge combustion in direct injection gasoline engines Introduction, combustion processes in direct injection gasoline engines, Modes of combustion, types of combustion, wall guided, spray guided and air guided, Emission reduction.	08

4	Turbocharged direct injection spark ignition engine Introduction, historical background: turbocharging for high specific output, problems and challenges associated with turbocharging spark ignition engines, advantages of uniting direct injection and turbocharging in spark ignition engines, challenges of applying direct injection to a turbocharged spark ignition engine	08
5	Direct injection gasoline engines with auto ignition combustion Introduction, principle of auto ignition combustion in the gasoline engines, approaches to auto ignition combustion operation in gasoline engines, operation and control of direct injection gasoline engines with auto ignition combustion.	08
6	Homogenous Charge Compression Ignition (HCCI) Engines Introduction, HCCI combustion fundamentals, Gasoline HCCI engine, Diesel HCCI combustion engines, operational limits and emissions.	08

Suggested Theory Distribution

The suggested theory distribution as per Bloom's taxonomy is as per follows. This distribution serves as guidelines for teachers and students to achieve effective teaching-learning process

Distribution of Theory for course delivery and evaluation					
Remember	Understand	Apply	Analyze	Evaluate	Create
5%	30%	40%	15%	10%	00%

Reference Books:

1. Advanced Direct Injection Combustion Engine Technologies and Development. Vol.1
2. Gasoline and gas engines by Hua Zhao
3. HCCI and CAI engines for the automotive industry by Hua Zhao
4. Internal combustion engine by v Ganesan.
5. Internal combustion engine by Heywood.

List of Experiments:

1. Study of combustion process of diesel engine.
2. Study of combustion process of spark ignition engine
3. Study of Stratified charge combustion in direct injection gasoline engines.
4. Study of direct injection gasoline engines with autoignition combustion.
5. Study of Turbocharged direct injection spark ignition engine.
6. Study of Homogenous Charge Compression Ignition (HCCI) Engines.

Subject Code: 01AE0731
Subject Name: Vehicle Testing
B.Tech. IV Year

Type of course: Engineering

Prerequisite: Basics of an Automobile Engine, Automotive system and Transmission

Rationale: The course aims to impart basic understanding of the importance and necessity of vehicle testing.

Course Outcome:

1. To provide students an insight into the concepts of engine, fuel and emission testing.
2. The importance of noise generation and control methods
3. Gain the knowledge of vehicle performance and its testing
4. Gain knowledge about real time vehicle components and system testing

Teaching and Examination Scheme

Teaching Scheme (Hours)			Credits	Theory Marks			Tutorial/ Practical Marks		Total Marks
Theory	Tutorial	Practical		ESE (E)	Mid Sem (M)	Internal (I)	Viva (V)	Term work (TW)	
4	0	2	5	50	30	20	25	25	150

Sr.	Content	Teaching Hours
1	Introduction: Vehicle testing organizations, Need of vehicle testing, Hierarchy of vehicle testing, Individual component approval System level approval and whole vehicle approval, Type of approval and conformity of production tests.	03
2	Engine, Fuel system and Emission testing: Engine Testing- Brake Power Measurement methods, Indicated Power Measurement Methods, Friction Power Measurement Methods, Air and Fuel Supply Measurement, Engine Exhaust gases Measurement methods for CO, HC, NOx, Orsat apparatus	08
3	Noise and Noise Control: Sound wave –properties Automotive noise criteria, Noise inside and outside the vehicle, Human response to sound, Sources of noise-intake, exhaust, combustion, mechanical, auxiliary assemblies, wind, transmission, brake squeal, structural noise, Noise control method, control of in cabin noise Pass by noise testing method.	06
4	Vehicle Performance Testing: Methods for evaluating vehicle performance- energy consumption friction losses, transmission line losses, heat balance, performance engine, gear box, differential,	08

	aerodynamic loss, emission etc., Effect of vehicle condition Tyre and road condition and traffic condition and driving habits on fuel, Gradeability test, Turning circle diameter test, Steering Impact test, Steering effort test.	
5	On Road testing: Initial inspection, PDI, Engine running in and durability, Intensive driving, Maximum speed and acceleration, brake testing on the road, hill climbing, handling and ride characteristics, Safety, Mechanism of corrosion- three chamber corrosion testing, Wind tunnel testing, Road testing, Road Load Data Acquisition for Automotive systems	06
6	Wheels and Brake Testing: Two wheel & four-wheel dynamometers, Vehicle testing lanes - side slip testers, Wheel alignment testing, Wheel balancing, Brake test.	06
7	Vehicle Component and System testing: Wheel rim testing for cornering and radial fatigue, Bumper test, Crash test, Dummies crash test sensor, sensor mounting positions, Side impact test, Rollover test, Safety belt test, Safety belt anchorages, Seat anchorages & head restraints, Side door intrusion test, Head light alignment and light intensity testing.	08

List of Open Source Software/learning website:

1. <http://nptel.ac.in/>

Subject Code: 01AE0732

Subject Name: Automobile Electrical System Testing
B.Tech. IV Year – (Sem-7)

Type of course: Automobile Electrical System Testing

Prerequisite: basic knowledge of Electrical Motor, Generator, Electrical cables, Electrical automobile devices

Rationale: The course aims to impart testing skills and understanding of automotive electrical systems, equipment and find the fault in working of them.

Course Outcomes:

1. Understand the basic auto electrical systems.
2. Understand the layout of wiring and connections of electrical systems in automobiles.
3. Understand the working of different electrical components used in automobiles.

Teaching and Examination Scheme

Teaching Scheme (Hours)			Credits	Theory Marks			Tutorial/ Practical Marks		Total Marks
Theory	Tutorial	Practical		ESE (E)	Mid Sem (M)	Internal (I)	Viva (V)	Term work (TW)	
4	0	2	5	50	30	20	25	25	150

Sr.	Content	Teaching Hours
1	Automobile Electrical system basic: Storage, Distribution systems & Generation of electric energy, Lighting system, 12 Volt & 24 Volt systems. Insulation and earth (negative and positive earthing) system, types of cables used, color codes, cable connectors, wiring, fuse system, circuitbreakers, Relays, Switches. Layout and Wiring diagram for vehicles, Buses and Commercial vehicles.	5
2	Battery System Testing: Various Types of Automotive batteries. Principles, Construction & working of lead acid battery, dry battery & Alkaline battery. Performance tests: Battery Capacity, Efficiency, Gravimetric test and efficiency. Battery failures test. Recharging test: Electronic circuits, battery charging current, charging methodology	07
3	Starting System Testing: Principle, starting torque, engine resistance torque, and power required for starting of engine. Starter motor and its circuit test. Types of drive mechanisms: bendix drive, pinion type, axial sliding armature starter test. Automatic switches for starting, cold starting devices: Glow plug & choke test.	08

4	Charging System Testing: Need. Charging circuit test, Testing of charging system components: D.C. dynamo, AC dynamo, flywheel magneto charging system and Alternator (more emphasis on Alternators). Testing of charging system controlling & regulators: Relay/cut- out, voltage and current regulator, compensated voltage and current regulator, electronic regulator, regulator characteristics.	07
5	Ignition System Testing: Requirements. Testing of ignition system components: Ballast Resistance, Ignition coil characteristics, spark advance mechanism, spark plug, ignition timing, multi-cylinder distributor, Distributor (contact breaker ignition system), electronic ignition systems test. Voltage and current required for Spark test.	05
6	Lighting System Testing: Testing of lighting system of vehicle, head lamp, tail lamp, brake lamp, parking lamp etc, other types of lamps used. Testing of reflector, head lamp angle and position, fog lamp, side indicator lamp, warning lights and flashers, instrument panel lights, body interior lights. Safety indicator lights. Engine compartment & Rear boot lamps.	08
7	Electrical Equipment and accessories Testing: AC & DC horns' test, electronic horn's test, reverse horn's test. Warning Buzzer. Sensors - Instrument Cluster panel, fuel gauges, oil temperature gauge, warning light sensors, coolant temperature gauge, speedometer, Odometer, tachometer, trip meter, oil level indicator, parking brake indicator, direction indicators. Windscreen wipers, windscreen washers, power windows, doors locks, Rear wind shield glass heating system. Rear view mirror Adjusting, Day light regulating system. Central Locking system.	05

Subject Code: 01AE0811

Subject Name: Vehicle Modeling and Analysis

B. Tech. Year IV

Type of course: Engineering Science

Prerequisite: Automobile System and Transmission, Automobile Engine, Vehicle Dynamics.

Rationale: Every modern vehicle development goes through complete modeling and simulation cycle before it is physically tested. Modeling and simulation have become vital part of modern vehicle development. Students must understand how entire vehicle is modeled and simulated in different software.

Course Outcome:

1. Explain how basic 1-D and 3-D modeling works and working of electrical vehicle modeling and simulation.
2. Apply basic modeling and simulation techniques to develop different engine component.
3. Analyze different automobile system for dynamic stability and factor of safety.
4. Simulate working of electrical vehicle with different configuration.

Teaching and Examination Scheme

Theory	Tutorial	Practical		ESE (E)	Mid Sem (M)	Internal (I)	Viva (V)	Term work (TW)	
4	0	2	5	50	30	20	25	25	150

Sr.	Contents	Teaching Hours
1	1D Simulation Engine: Introduction, Concept of 1-D simulation, Available Software for simulation, General user interface, General input data for engine, cylinder, injector, etc. modes of combustion – self-ignition, assisted ignition and HCCI combustion	8
2	Automobile System analysis: Introduction to MDB Software , General user interface, types of constrain to define assembly, applying motion and force. Modelling and simulation: suspension system, steering system, transmission system, braking system, Tyre and road traction, analysis of rear wheel lockup and proper brake proportioning. Stress Analysis: Steering knuckle, King-pin, wheel axle, drive axle. Chasses analysis:	20

	Importance of location of CG, rolling and pitching of vehicle, crash test and crumple zone analysis.	
3	3D Engine simulation: Introduction to thermal and flow analysis in engine cylinder, modelling of cylinder and piston for combustion analysis, valve body and valve lift, valve lift profile, port flow simulation to analyse the air fuel mixing, combustion chamber simulation to analyse the engine performance parameters and emission, case setup for full cycle simulation.	10
4	Electrical Vehicle Simulation: Overview of Hybrid electrical vehicle model, Modelling – Electrical system, mechanical and thermal system, logic and control system at a system level and component level, power quality analysis, optimization and report generation.	10

Suggested Theory Distribution

The suggested theory distribution as per Bloom's taxonomy is as per follows. This distribution serves as guidelines for teachers and students to achieve effective teaching-learning process

Distribution of Theory for course delivery and evaluation					
Remember	Understand	Apply	Analyze	Evaluate	Create
5%	30%	40%	15%	10%	00%

Reference Books:

1. Vehicle Dynamics (Modeling and Simulation) by Dieter Schramm
2. Quasi-Dimensional Simulation of Spark Ignition Engines by Alejandro Medina
3. Engine Modeling and Control by Rolf Isermann
4. Introduction to Modeling and Control of Internal Combustion Engine Systems by LinoGuzzella and Christopher H. Onder
5. Modelling Diesel Combustion by A. Lakshminarayanan, Yogesh V. Aghav

List of Experiments

1. To analyze the single cylinder engine with 1 D simulation.
2. To analyze the multi-cylinder engine with 1 D simulation.
3. To create a model of the Steering system and simulate in MDB software.
4. To create a model of the Suspension system and simulate in MDB software.
5. To create a model of a chassis system and simulate in MDB software.
6. To do stress analysis on steering knuckle.
7. To create a model and simulate engine for port flow analysis.
8. To create a model and simulate engine for combustion analysis.
9. To setup simulation for full engine cycle analysis.
10. To simulate transmission system for an anelectricl vehicle

Subject Code: 01AE0812

Subject Name: Advanced Manufacturing Process

B. Tech. Year IV

Type of course: Engineering Science

Prerequisite: Manufacturing Processes-I, Manufacturing Processes-II

Rationale: Understanding of Advancement in Manufacturing Processes

Course Outcomes:

1. Students will describe basic concepts of Computer Integrated Manufacturing applications and benefits in Automobile Industries.
2. Students will prepare CNC programs for manufacturing of different geometries on milling and lathe machines.
3. Students will form different components using diverse practices of group technology
4. Students will select layouts of FMS for industrial applications
5. Student will design and implement concept of automated assembly line in automobile industry
6. Student will design 3D drawings and able to fabricate the parts with the help of 3D technology.

Teaching and Examination Scheme

Teaching Scheme (Hours)			Credits	Theory Marks			Tutorial/ Practical Marks		Total Marks
Theory	Tutorial	Practical		ESE (E)	Mid Sem (M)	Internal (I)	Viva (V)	Term work (TW)	
4	0	2	5	50	30	20	25	25	150

Contents:

Sr.	Contents	Teaching Hours
1	Introduction to computer integrated manufacturing: Concepts of Computer Aided and Integrated Manufacturing, Objectives, Types of manufacturing system, Conventional manufacturing systems, Evolution of CIM, Advantages of CIM, Role of manufacturing engineers in automobile industry, Application of CIM in Automobile Industry	3
2	NC/CNC machine tools: NC and CNC Technology: Types, Classification, Specification and components, Construction Details, Controllers, Sensors and Actuators, CNC hardware, step/servo motors. Axis designation, NC/CNC tooling. Fundamentals of Part programming, Types of format, Part Programming for lathe and milling machine operations, canned Cycles.	12

3	Non-conventional machining Introduction to advanced machining processes and their classification, Ultrasonic machining, Water jet cutting (WJC) and Abrasive water jet machining (AWJM), Electric discharge machining (EDM), Laser beam machining (LBM) Plasma arc machining (PAM), Electron Beam Machining (EBM), Electro chemical machining (ECM),	5
4	Robot technology: Introduction: Robot Anatomy, Laws of Robot, Human System and Robotics, Coordinate system, Specifications of Robot. Power sources, actuators and Transducers, Robotic Sensors, Grippers, Robot Safety, Robot Applications, Economic Considerations of Robotics system, Concepts of Computer Vision and Machine Intelligence	6
5	Flexible manufacturing system: Introduction & Component of FMS, Needs of FMS, Objectives, Types of flexibility and FMS, FMS lay out and advantages. Automated material handling system: Types and Application, Automated Storage and Retrieval System, Automated Guided Vehicles, Cellular manufacturing, Tool Management, Tool supply system, Tool Monitoring System, Flexible Fixturing, Flexible Assembly Systems.	6
6	Assembly lines: Fundamental of Assembly line and Automated Assembly line, Concept of transfer line, Design and concept of automated assembly line.	6
7	3D Printing & Prototype: Introduction, Types, 3D printing process and its working, Design Process, software programs, Prototyping, Introduction 3D Scanning.	5

Suggested Theory Distribution

The suggested theory distribution as per Bloom's taxonomy is as per follows. This distribution serves as guidelines for teachers and students to achieve effective teaching-learning process

Distribution of Theory for course delivery and evaluation					
Remember	Understand	Apply	Analyze	Evaluate	Create
5%	30%	40%	15%	10%	00%

Reference Books:

1. V. K. Jain, Advanced Machining Processes, Allied Publishers, 2009.
2. Gary F. Benedict, Nontraditional Manufacturing Processes, Taylor & Francis, 1987.
3. J. A. McGeough, Advanced Methods of Machining, Springer, 1988.
4. Hassan El-Hofy, Advanced Machining Processes:
5. Nontraditional and Hybrid Machining Processes, McGraw-Hill Prof Med/Tech, 2005.
6. V. K. Jain, Introduction to Micromachining, Alpha Science International Limited, 2010 Modern Machining Processes, Pandey, P.C., and Shan, H.S. Tata McGraw-Hill Education

List of Experiments:

1. CNC part Programming: Lathe jobs
2. CNC part Programming: Milling jobs
3. Study of robotics technology
4. Study of automated assembly line.
5. 3D Printing of different components.

Subject Code: 01AE0821
Subject Name: Special Purpose Vehicle
B.Tech Year-IV

Type of course: Engineering Science

Prerequisite: Automobile System

Rationale: The course is designed to give knowledge of various special purpose vehicles existing systems and their applications in the present context.

Course Outcome:

1. Students will be able to classify special type of vehicles based on the need and purpose.
2. Students will be able describe the working principles of different system of SPV.
3. Students will be able to explain design considerations and features of special purpose vehicles.

Teaching and Examination Scheme

Teaching Scheme (Hours)			Credits	Theory Marks			Tutorial/ Practical Marks		Total Marks
Theory	Tutorial	Practical		ESE (E)	Mid Sem (M)	Internal (I)	Viva (V)	Term work (TW)	
4	0	2	5	50	30	20	25	25	150

Content:

Sr. No.	Contents	Teaching Hours
1	Introduction and requirements of off road: Classification of Special Purpose Vehicles: based on applications, Wheel type & Track type vehicle, Power Plants, Transmission, Final Drive, Multi-axle vehicles.	7
2	Earth Moving Machines: Constructional & working features: of different types of earth moving machinery such as Tippers, loaders, Excavators, Dumpers, Dozers, Fork Lift truck, Road rollers, Rippers, Scrapers and shovels.	10
3	Tractors and Farm equipment: Classification of tractors: based on lay out of wheeled tractor, power take off unit, Transmission & Drive line, Steering, Braking system, Wheels & Tires, Hydraulic system, Auxiliary Systems, special implements, accessories and attachments. Tractor trolley.	10
4	Mobile Cranes: Basic characteristics of truck cranes, stability & design features, control systems & safety devices.	6

5	Miscellaneous Vehicles: Articulated Vehicles, Special Purpose Electric Vehicles, Solar Vehicles and Hybrid Vehicles, Ambulance, Fire extinguishing vehicle. Semi-trailer, fifth wheel mechanism	6
6	Ergonomic applications: Human factors in special purpose vehicle design with reference to comfort, convenience and safety, effects of noise, vibration and thermal stresses on human performance. Economics of special purpose vehicle utilization.	6

Suggested Theory Distribution

The suggested theory distribution as per Bloom’s taxonomy is as per follows. This distribution serves as guidelines for teachers and students to achieve effective teaching-learning process

Distribution of Theory for course delivery and evaluation					
Remember	Understand	Apply	Analyze	Evaluate	Create
5%	30%	40%	15%	10%	00%

Reference Books:

1. Y. Pokras and M. Tushnyakov, “Construction Equipment Operation & Maintenance”, MIR, Moscow.
2. A. Astskhov, “Truck Cranes”, MIR, Moscow.
3. E.G. Poninson, “Motor Graders”, MIR, Moscow.
4. Hand book of earth moving machinery Central Water & Power Commission (Govt. of India)
5. N. Rudenko, “Material Handling Equipment”, M.R.
6. Sheldon, R.Shacket, “Electric Vehicles”, Domus Books, New York
7. David A. Day, Neal B. H. Benjamin, “Construction Equipment Guide”, Wiley;
8. C.P. Nakra, “Farm Machines and Equipment”, Dhanpat Rai Publications, New Delhi

List of Experiments:

1. Study of tipping mechanism of a dumper
2. Study of forklift truck
3. Study of operation of a truck crane
4. Study of technical & operational features of a tractor
5. Study of technical & operational features of a power scraper
6. Study of technical & operational features of a power hoe and shovel
7. Study of an extinguishing vehicle

List of Open Source Software/learning website:

1. Videos on special purpose vehicles

Subject Code: 01AE0822

Subject Name: Electric Vehicles

B. Tech. Year IV

Type of course: Engineering Science

Prerequisite: Automobile Electricals

Rationale: -The course aims to impart basic understanding of Electrical Vehicles and give the general idea of Indian and international scenario on EV.

Course Outcomes:

1. Understanding the working of electrical vehicles.
2. Understanding of Architecture of electrical vehicles.
3. Understanding of electrical vehicle batteries and battery management system.
4. Working of charging station and EV scenario.

Teaching and Examination Scheme

Teaching Scheme (Hours)			Credits	Theory Marks			Tutorial/ Practical Marks		Total Marks
Theory	Tutorial	Practical		ESE (E)	Mid Sem (M)	Internal (I)	Viva (V)	Term work (TW)	
4	2	0	5	50	30	20	25	25	150

Contents:

Sr.	Topics	Teaching Hours
1	Introduction: Electric Vehicle: History, Components of Electric Vehicle, Comparison with Internal combustion Engine: Technology, Comparison with Internal combustion Engine: Benefits and Challenges, EV classification and their electrification levels. EV Terminology.	6
2	Motor Torque Calculations for Electric Vehicle: Calculating the Rolling Resistance, calculating the grade resistance, Calculating the Acceleration Force, Finding the Total Tractive Effort, Torque Required on The Drive Wheel	6
3	Electric Vehicle Architecture Design: Types of Electric Vehicle and components, Electrical protection and system requirement, Photovoltaic solar based EV design, Battery Electric vehicle (BEV), Hybrid electric vehicle (HEV), Plug-in hybrid vehicle (PHEV), Fuel cell electric	12

	vehicle (FCEV), Electrification Level of EV, Comparison of fuel vs Electric and solar power, Solar Power operated Electric vehicles	
4	Electric Drive and controller: Types of Motors, Selection and sizing of Motor, RPM and Torque calculation of motor, Motor Controllers, Component sizing, Physical locations, Mechanical connection of motor, Electrical connection of motor	7
5	Energy Storage Solutions (ESS): Cell Types (Lead Acid/Li/NiMH), Battery charging and discharging calculation, Cell Selection and sizing, Battery layouting design, Battery Pack Configuration, Battery Pack Construction, Battery selection criteria	7
6	Electric Vehicles charging station: Type of Charging station, Selection and Sizing of charging station, Components of charging station, Single line diagram of charging station, Electric vehicle integration issues-Battery Performance and cost, Driving Range, Charging Infrastructure and Vehicle cost	6
7	Indian and Global Scenario: Technology Scenario, Market Scenario, Policies and Regulations, Payback and commercial model, Payback and commercial model, Polices in India	4

Suggested Theory Distribution

The suggested theory distribution as per Bloom's taxonomy is as per follows. This distribution serves as guidelines for teachers and students to achieve effective teaching-learning process

Distribution of Theory for course delivery and evaluation					
Remember	Understand	Apply	Analyze	Evaluate	Create
5%	30%	40%	15%	10%	00%

Reference Books:

1. Iqbal Hussein, Electric and Hybrid Vehicles: Design Fundamentals, CRC Press, 2003.
2. Mehrdad Ehsani, Yimi Gao, Sebastian E. Gay, Ali Emadi, Modern Electric, Hybrid Electric and Fuel Cell Vehicles: Fundamentals, Theory and Design, CRC Press, 2004.
3. James Larminie, John Lowry, Electric Vehicle Technology Explained, Wiley, 2003.

List of Tutorials

1. To study about different electric vehicle components.
2. To study about electric vehicle architecture design.
3. To study about electric vehicle drive line.
4. To study about Energy storage solution system.
5. To study about electric vehicle charging system.

Open ended problem:

1. To build an electric vehicle using battery and controller to run a single wheel on motor.

List of Open Source Software/learning website:

1. NPTEL- <http://nptel.ac.in/>

Subject Code: 01AE0831

Subject Name: Vehicle Maintenance & Garage Practice

B. Tech. Year IV

Type of course: Engineering. Science

Prerequisite: Automobile system

Rationale: Understanding of general vehicle maintenance

Course Outcomes:

1. Learning of maintenance types/techniques.
2. Learning of different garage equipments and practices.
3. Learning of workshop documents and records.

Teaching and Examination Scheme

Teaching Scheme (Hours)			Credits	Theory Marks			Tutorial/ Practical Marks		Total Marks
Theory	Tutorial	Practical		ESE (E)	Mid Sem (M)	Internal (I)	Viva (V)	Term work (TW)	
4	0	2	5	50	30	20	25	25	150

Contents:

SR.	Topics	Teaching Hours
1	Maintenance Practices: Requirements and importance of service & maintenance, Preventive, Predictive & Breakdown maintenance, daily, weekly and monthly maintenance schedule, Periodic maintenance scheduled chart.	4
2	Measuring and Instruments: Measuring instruments for wear, Fuel consumption, speed, acceleration, vibration, noise. Methods used for measurement of fuel consumption. Gas analyzer	4
3	Service, safety and Reliability: Automotive service procedures – workshop operations – workshop manual - vehicle identification. Safety – Personnel, machines and equipment, vehicles, fire safety - First aid. Basic tools – special service tools – measuring instruments – condition checking of seals, gaskets and sealants. Scheduled maintenance services – service intervals - Towing and recovering.	8
4	Engine and engine subsystem maintenance General Engine service- Dismantling of Engine components- Engine repair-working on the underside, front, top, ancillaries- Service of basic engine parts, cooling and lubricating system, fuel system, Intake and Exhaust system, electrical system - Electronic fuel injection and engine management service - fault diagnosis-servicing emission controls	7

5	Transmission and driveline maintenance Clutch- general checks, adjustment and service- Dismantling, identifying, checking and reassembling transmission, transaxle- road testing- Removing and replacing propeller shaft, servicing of cross and yoke joint and constant velocity joints- Rear axle service points- removing axle shaft and bearings- servicing differential assemblies- fault diagnosis.	7
6	Steering, brake, suspension & wheel maintenance Inspection, Maintenance and Service of Hydraulic brake, Drum brake, Disc brake, Parking brake. Bleeding of brakes. Inspection, Maintenance and Service of Mc person strut, coil spring, leaf spring, shock absorbers. Dismantling and assembly procedures. Wheel alignment and balance, removing and fitting of tyres, tyre wear and tyre rotation. Inspection, Maintenance and Service of steering linkage, steering column, Rack and pinion steering	7
7	Auto electrical and air conditioning maintenance Maintenance of batteries, starting system, charging system and body electrical - Fault diagnosis using Scan tools. Maintenance of air conditioning parts like compressor, condenser, expansion valve, evaporator - Replacement of hoses- Leak detection- AC Charging- Fault diagnosis Vehicle body repair like panel beating, tinkering, soldering, polishing, painting	4
8	Workshop management practices: Study of Workshop documents & records like job cards, parts catalogue, parts price list, vehicle history sheet, warranty card, bill & billing procedure of vehicle, logbook of vehicle, customer satisfaction sheet, service book, etc. Customer complaint Handling & consumer cases in case of any dispute.	4

Suggested Theory Distribution

The suggested theory distribution as per Bloom's taxonomy is as per follows. This distribution serves as guidelines for teachers and students to achieve effective teaching-learning process

Distribution of Theory for course delivery and evaluation					
Remember	Understand	Apply	Analyze	Evaluate	Create
5%	30%	40%	15%	10%	00%

Reference Books:

1. Automotive Mechanics by William H. Crouse & Donald L. Anglin; Tata McGrawHill Publishing Company Ltd.
2. Automobile systems by Anil Chikara, Satya Prakashan.
3. Automobile Engineering by K.K.Ramlingan, SciTech Publication.
4. Auto mechanics by Joseph Heitner, East West Press.
5. Automotive Service Basics by Pattern and Donald, Pearson Publications.
6. Vehicle Service book.
7. Vehicle Workshop Manual.

8. Parts Price List.
9. Parts catalogue of service station.
10. Job cards of modern service station.

List of experiments (any ten):

1. Study of modern workshop layout.
2. Study of different types of job cards & maintenance schedule chart.
3. Study of measuring, gauging & service equipments.
4. Demonstration on tyre inflator and hydraulic hoist.
5. Demonstration on tyre changer and car washer unit.
6. Performance on wheel balancer.
7. Performance on wheel aligner.
8. Cleaning and testing of petrol injector.
9. Cleaning and testing of different types of nozzles.
10. Bleeding of hydraulic brakes.
11. Overhauling of any component or system of a heavy duty vehicle.
12. Study of different workshop documents & records.

Subject Code: 01AE0832

Subject Name: Vehicle System Diagnostics and Advance Technology
B. Tech. Year IV

Type of course: Engineering Science

Prerequisite: Knowledge of basic concepts of electronics, sensors, and Actuators

Rationale: The course aim to impart testing skills and understanding of automotive electronics systems, equipment and find the fault in working of them.

Course Outcomes:

1. Understand the basic concepts of Automobile electronics
2. Testing of sensors in automobile engineering
3. Testing of actuators in automobile engineering
4. Analyse use of computer and ECM in automobile engineering
5. Identify different faults and error codes and solve them

Teaching and Examination Scheme

Teaching Scheme (Hours)			Credits	Theory Marks			Tutorial/ Practical Marks		Total Marks
Theory	Tutorial	Practical		ESE (E)	Mid Sem (M)	Internal (I)	Viva (V)	Term work (TW)	
4	0	2	5	50	30	20	25	25	150

Contents:

Sr.	Topics	Contact Hours
1	Advanced Vehicle Technology: Active and passive safety, airbags, tightening system, forward collision warning systems, child lock, anti-lock braking systems, EBD, traction control system and lane departure warning system, Adaptive cruise control system, Global positioning system, geographical information systems, navigation system, remote keyless entry, smart card system and number plate coding	8
2	Use of Diagnostic tools, equipment and techniques: Diagnostic tools that connect to ECM, Digital Multi-meter, Oscilloscope, Circuit testing, Ignition system tests, Fault and error Codes , OBD II (On board diagnostic II)	10
3	Testing of Different ECM operated System: Engine related systems. Ignition system, computer-controlled petrol fuelling injection systems, Engine management systems, Anti-lock braking systems, Traction control system, Stability Control system, air conditioning, computer-controlled diesel engine system	

4	Testing of Sensors: Testing of speed sensors, Testing of O2 sensors, Testing of MAP sensors, testing of temperature, knock, mass air flow, Ride height	S
5	Testing of Actuator: Testing of petrol Injectors, Testing of Exhaust gas recirculation actuators/valves, testing of motors, Solenoids, ABS actuators, Testing of idle speed control valves.	S

B. Pharm. Semester: I

Subject Name: HUMAN ANATOMY AND PHYSIOLOGY-I

Subject Code: 13PH0101

Scope: This subject is designed to impart fundamental knowledge on the structure and functions of the various systems of the human body. It also helps in understanding both homeostatic mechanisms. The subject provides the basic knowledge required to understand the various disciplines of pharmacy.

Objectives: Upon completion of this course the student should be able to

1. Explain the gross morphology, structure and functions of various organs of the humanbody.
2. Describe the various homeostatic mechanisms and their imbalances.
3. Identify the various tissues and organs of different systems of human body.
4. Perform the various experiments related to special senses and nervous system.
5. Appreciate coordinated working pattern of different organs of each system

Sr No	Course Contents	Total Hrs
1.	<p>Introduction to human body: Definition and scope of anatomy and physiology, levels of structural organization and body systems, basic life processes, homeostasis, basic anatomical terminology</p> <p>Cellular level of organization: Structure and functions of cell, transport across cell membrane, cell division, cell junctions. General principles of cell communication, intracellular signaling pathway activation by extracellular signal molecule, Forms of intracellular signaling: a) Contact-dependent b) Paracrine c) Synaptic d) Endocrine</p> <p>Tissue level of organization: Classification of tissues, structure, location and functions of epithelial, muscular and nervous and connective tissues.</p>	10
2.	<p>Integumentary system: Structure and functions of skin</p> <p>Skeletal system: Divisions of skeletal system, types of bone, salient features and functions of bones of axial and appendicular skeletal system Organization of skeletal muscle, physiology of muscle contraction, neuromuscular junction</p> <p>Joints Structural and functional classification, types of joints movements and its articulation</p>	10
3.	<p>Body fluids and blood: Body fluids, composition and functions of blood, hemopoiesis, formation of hemoglobin, anemia, mechanisms of coagulation, blood grouping, Rh factors, transfusion, its significance and disorders of blood, Reticulo endothelial system</p> <p>Lymphatic system: Lymphatic organs and tissues, lymphatic vessels, lymph circulation and functions of lymphatic system</p>	10
4.	<p>Peripheral nervous system: Classification of peripheral nervous system: Structure and functions of sympathetic and parasympathetic nervous system. Origin and functions of spinal and cranial nerves</p> <p>Special senses: Structure and functions of eye, ear, nose and tongue and their disorders.</p>	8
5.	<p>Cardiovascular system: Heart – anatomy of heart, blood circulation, blood vessels, structure and functions of artery, vein and capillaries, elements of conduction system of heart and heart beat, its regulation by autonomic nervous system, cardiac output, cardiac cycle. Regulation of blood pressure, pulse, electrocardiogram and disorders of heart.</p>	7

Practical

Practical physiology is complimentary to the theoretical discussions in physiology. Practicals allow the verification of physiological processes discussed in theory classes through experiments on living tissue, intact animals or normal human beings. This is helpful for developing an insight on the subject.

1. Study of compound microscope.
2. Microscopic study of epithelial and connective tissue
3. Microscopic study of muscular and nervous tissue
4. Identification of axial bones
5. Identification of appendicular bones
6. Introduction to hemocytometry.
7. Enumeration of white blood cell (WBC) count
8. Enumeration of total red blood corpuscles (RBC) count
9. Determination of bleeding time
10. Determination of clotting time
11. Estimation of hemoglobin content
12. Determination of blood group.
13. Determination of erythrocyte sedimentation rate (ESR).
14. Determination of heart rate and pulse rate.
15. Recording of blood pressure.

Recommended Books:

1. Essentials of Medical Physiology by K. Sembulingam and P. Sembulingam. Jaypeebrothers medical publishers, New Delhi.

Baldania

B. Pharm. Semester: I
Subject Name: PHARMACEUTICAL ANALYSIS
Subject Code: 13PH0102

Scope: This course deals with the fundamentals of analytical chemistry and principles of electrochemical analysis of drugs

Objectives: Upon completion of the course student shall be able to

1. understand the principles of volumetric and electro chemical analysis
2. carryout various volumetric and electrochemical titrations
3. develop analytical skills

Sr No	Course Contents	Total Hrs
1.	(a) Pharmaceutical analysis- Definition and scope i) Different techniques of analysis ii) Methods of expressing concentration iii) Primary and secondary standards. iv) Preparation and standardization of various molar and normal solutions- Oxalic acid, sodium hydroxide, hydrochloric acid, sodium thiosulphate, sulphuric acid, potassium permanganate and ceric ammonium sulphate (b)Errors: Sources of errors, types of errors, methods of minimizing errors, accuracy, precision and significant figures (c)Pharmacopoeia, Sources of impurities in medicinal agents, limit tests	10
2.	Acid base titration: Theories of acid base indicators, classification of acid base titrations and theory involved in titrations of strong, weak, and very weak acids and bases, neutralization curves Non aqueous titration: Solvents, acidimetry and alkalimetry titration and estimation of Sodium benzoate and Ephedrine HCl	10
3.	Precipitation titrations: Mohr's method, Volhard's, Modified Volhard's, Fajans method, estimation of sodium chloride. Complexometric titration: Classification, metal ion indicators, masking and demasking reagents, estimation of Magnesium sulphate, and calcium gluconate. Gravimetry: Principle and steps involved in gravimetric analysis. Purity of the precipitate: co-precipitation and post precipitation, Estimation of barium sulphate. Basic Principles, methods and application of diazotisation titration.	10
4.	Redox titrations: (a) Concepts of oxidation and reduction (b) Types of redox titrations (Principles and applications) Cerimetry, Iodimetry, Iodometry, Bromatometry, Dichrometry, Titration with potassium iodate	8

Baldania

5.	Electrochemical methods of analysis Conductometry - Introduction, Conductivity cell, Conductometric titrations, applications. Potentiometry - Electrochemical cell, construction and working of reference (Standard hydrogen, silver chloride electrode and calomel electrode) and indicator electrodes (metal electrodes and glass electrode), methods to determine end point of potentiometric titration and applications. Polarography - Principle, Ilkovic equation, construction and working of dropping mercury electrode and rotating platinum electrode, applications	7
----	--	---

Practical

Preparation and standardization of

- (1) Sodium hydroxide
- (2) Sulphuric acid
- (3) Sodium thiosulfate
- (4) Potassium permanganate
- (5) Ceric ammonium sulphate

Assay of the following compounds along with Standardization of Titrant

- (1) Ammonium chloride by acid base titration
- (2) Ferrous sulphate by Cerimetry
- (3) Copper sulphate by Iodometry
- (4) Calcium gluconate by complexometry
- (5) Hydrogen peroxide by Permanganometry (6) Sodium benzoate by non-aqueous titration (7) Sodium Chloride by precipitation titration

Determination of Normality by electro-analytical methods

- (1) Conductometric titration of strong acid against strong base
- (2) Conductometric titration of strong acid and weak acid against strong base
- (3) Potentiometric titration of strong acid against strong base

Recommended Books: (Latest Editions):

1. A.H. Beckett & J.B. Stenlake's, Practical Pharmaceutical Chemistry Vol I & II, Stahlone Press of University of London
2. A.I. Vogel, Text Book of Quantitative Inorganic analysis
3. P. Gundu Rao, Inorganic Pharmaceutical Chemistry
4. Bentley and Driver's Textbook of Pharmaceutical Chemistry
5. John H. Kennedy, Analytical chemistry principles
6. Indian Pharmacopoeia

Baldania

B. Pharm. Semester: I
Subject Name: PHARMACEUTICS- I
Subject Code: 13PH0103

Scope: This course is designed to impart a fundamental knowledge on the preparatory pharmacy with arts and science of preparing the different conventional dosage forms.

Objectives: Upon completion of this course the student should be able to:

1. Know the history of profession of pharmacy
2. Understand the basics of different dosage forms, pharmaceutical incompatibilities and pharmaceutical calculations
3. Understand the professional way of handling the prescription
4. Preparation of various conventional dosage forms

Sr No	Course Contents	Total Hrs
1.	<p>Historical background and development of profession of pharmacy: History of profession of Pharmacy in India in relation to pharmacy education, industry and organization, Pharmacy as a career, Pharmacopoeias: Introduction to IP, BP, USP and Extra Pharmacopoeia</p> <p>Dosage forms: Introduction to dosage forms, classification and definitions</p> <p>Prescription: Definition, Parts of prescription, handling of Prescription and Errors in prescription</p> <p>Posology: Definition, Factors affecting posology. Pediatric dose calculations based on age, body weight and body surface area</p>	10
2.	<p>Pharmaceutical calculations: Weights and measures – Imperial & Metric system, Calculations involving percentage solutions, alligation, proof spirit and isotonic solutions based on freezing point and molecular weight</p> <p>Powders: Definition, classification, advantages and disadvantages, Simple & compound powders – official preparations, dusting powders, effervescent, efflorescent and hygroscopic powders, eutectic mixtures. Geometric dilutions</p> <p>Liquid dosage forms: Advantages and disadvantages of liquid dosage forms. Excipients used in formulation of liquid dosage forms. Solubility enhancement Techniques</p>	10
3.	<p>Monophasic liquids: Definitions and preparations of Gargles, Mouthwashes, Throat Paint, Eardrops, Nasal drops, Enemas, Syrups, Elixirs, Liniments and Lotions.</p> <p>Biphasic liquids:</p> <p>Suspensions: Definition, advantages and disadvantages, classifications, Preparation of suspensions; Flocculated and Deflocculated suspension & stability problems and methods to overcome</p> <p>Emulsions: Definition, classification, emulsifying agent, test for the identification of type of Emulsion, Methods of preparation & stability problems and methods to overcome.</p>	8
4.	<p>Suppositories: Definition, types, advantages and disadvantages, types of bases, methods of preparations. Displacement value & its calculations, evaluation of suppositories</p> <p>Pharmaceutical incompatibilities: Definition, classification, physical, chemical and therapeutic incompatibilities with examples</p>	8

5.	Semisolid dosage forms: Definitions, classification, mechanisms and factors influencing dermal penetration of drugs. Preparation of ointments, pastes, creams and gels. Excipients used in semi solid dosage forms. Evaluation of semi solid dosages forms	7
-----------	--	----------

Practical

1. Syrups:

a) Syrup IP'66 b) Compound syrup of Ferrous Phosphate BPC'68

2. Elixirs:

a) Piperazine citrate elixir b) Paracetamol pediatric elixir

3. Linctus

a) Terpin Hydrate Linctus IP'66 b) Iodine Throat Paint (Mandles Paint)

4. Solutions:

a) Strong solution of ammonium acetate b) Cresol with soap solution c) Lugol's solution

5. Suspensions:

a) Calamine lotion b) Magnesium Hydroxide mixture c) Aluminium Hydroxide gel

6. Emulsions:

a) Turpentine Liniment b) Liquid paraffin emulsion

7. Powders and Granules

a) ORS powder (WHO) b) Effervescent granules c) Dusting powder d) Divided powders

8. Suppositories

a) Glycero gelatin suppository b) Cocoa butter suppository c) Zinc Oxide suppository

8. Semisolids

a) Sulphur ointment b) Non staining-iodine ointment with methyl salicylate c) Carbopal gel

9. Gargles and Mouthwashes

a) Iodine gargle b) Chlorhexidine mouthwash

Baldania

B. Pharm. Semester: I
Subject Name: PHARMACEUTICAL INORGANIC CHEMISTRY
Subject Code: 13PH0104
Scope: This subject deals with the monographs of inorganic drugs and pharmaceuticals

Objectives: Upon completion of course student shall be able to

1. know the sources of impurities and methods to determine the impurities in inorganic drugs and pharmaceuticals
2. understand the medicinal and pharmaceutical importance of inorganic compounds

Sr No	Course Contents	Total Hrs
1.	Impurities in pharmaceutical substances: History of Pharmacopoeia, Sources and types of impurities, principle involved in the limit test for Chloride, Sulphate, Iron, Arsenic, Lead and Heavy metals, modified limit test for Chloride and Sulphate General methods of preparation, assay for the compounds superscripted with asterisk (*), properties and medicinal uses of inorganic compounds belonging to the following classes	10
2.	Acids, Bases and Buffers: Buffer equations and buffer capacity in general, buffers in pharmaceutical systems, preparation, stability, buffered isotonic solutions, measurements of tonicity, calculations and methods of adjusting isotonicity. Major extra and intracellular electrolytes: Functions of major physiological ions, Electrolytes used in the replacement therapy: Sodium chloride*, Potassium chloride, Calcium gluconate* and Oral Rehydration Salt (ORS), Physiological acid base balance. Dental products: Dentifrices, role of fluoride in the treatment of dental caries, Desensitizing agents, Calcium carbonate, Sodium fluoride, and Zinc eugenol cement.	10
3.	Gastrointestinal agents Acidifiers: Ammonium chloride* and Dil. HCl Antacid: Ideal properties of antacids, combinations of antacids, Sodium Bicarbonate*, Aluminum hydroxide gel, Magnesium hydroxide mixture Cathartics: Magnesium sulphate, Sodium orthophosphate, Kaolin and Bentonite Antimicrobials: Mechanism, classification, Potassium permanganate, Boric acid, Hydrogen peroxide*, Chlorinated lime*, Iodine and its preparations	10
4.	Miscellaneous compounds Expectorants: Potassium iodide, Ammonium chloride*. Emetics: Copper sulphate*, Sodium potassium tartarate Haematinics: Ferrous sulphate*, Ferrous gluconate Poison and Antidote: Sodium thiosulphate*, Activated charcoal, Sodium nitrite Astringents: Zinc Sulphate, Potash Alum	8
5.	Radiopharmaceuticals: Radioactivity, Measurement of radioactivity, Properties of α , β , γ radiations, Half life, radio isotopes and study of radio isotopes - Sodium iodide I131, Storage conditions, precautions & pharmaceutical application of radioactive substances.	7

Practical

I Limit tests for following ions

Limit test for Chlorides and Sulphates

Modified limit test for Chlorides and Sulphates

Limit test for Iron

Limit test for Heavy metals

Limit test for Lead

Limit test for Arsenic

III Identification test Magnesium hydroxide Ferrous sulphate Sodium bicarbonate Calcium gluconate Copper sulphate

III Test for purity

Swelling power of Bentonite

Neutralizing capacity of aluminum hydroxide gel

Determination of potassium iodate and iodine in potassium Iodide

IV Preparation of inorganic pharmaceuticals

Boric acid Potash alum Ferrous sulphate

Baldania

B. Pharm. SEMESTER: I
Subject Name: COMMUNICATION SKILLS
Subject Code: 13CS0105

Scope: This course will prepare the young pharmacy student to interact effectively with doctors, nurses, dentists, physiotherapists and other health workers. At the end of this course the student will get the soft skills set to work cohesively with the team as a team player and will add value to the pharmaceutical business.

Objectives:

Upon completion of the course the student shall be able to

1. Understand the behavioral needs for a Pharmacist to function effectively in the areas of pharmaceutical operation
2. Communicate effectively (Verbal and Non Verbal)
3. Effectively manage the team as a team player
4. Develop interview skills
5. Develop Leadership qualities and essentials

Sr No	Course Contents	Total Hrs
1.	Communication Skills: Introduction, Definition, The Importance of Communication, The Communication Process – Source, Message, Encoding, Channel, Decoding, Receiver, Feedback, Context Barriers to communication: Physiological Barriers, Physical Barriers, Cultural Barriers, Language Barriers, Gender Barriers, Interpersonal Barriers, Psychological Barriers, Emotional barriers Perspectives in Communication: Introduction, Visual Perception, Language, Other factors affecting our perspective - Past Experiences, Prejudices, Feelings, Environment	7
2.	Elements of Communication: Introduction, Face to Face Communication - Tone of Voice, Body Language (Non-verbal communication), Verbal Communication, Physical Communication Communication Styles: Introduction, The Communication Styles Matrix with example for each -Direct Communication Style, Spirited Communication Style, Systematic Communication Style, Considerate Communication Style	7
3.	Basic Listening Skills: Introduction, Self-Awareness, Active Listening, Becoming an Active Listener, Listening in Difficult Situations Effective Written Communication: Introduction, When and When Not to Use Written Communication - Complexity of the Topic, Amount of Discussion' Required, Shades of Meaning, Formal Communication Writing Effectively: Subject Lines, Put the Main Point First, Know Your Audience, Organization of the Message	7
4.	Interview Skills: Purpose of an interview, Do's and Dont's of an interview Giving Presentations: Dealing with Fears, Planning your Presentation, Structuring Your Presentation, Delivering Your Presentation, Techniques of Delivery	5
5.	Group Discussion: Introduction, Communication skills in group discussion, Do's and Dont's of group discussion	4

Practical

The following learning modules are to be **conducted using Any Software English** language lab software

Basic communication covering the following topics

Meeting People
Asking Questions
Making Friends
What did you do?
Do's and Dont's

Pronunciations covering the following topics

Pronunciation (Consonant Sounds)
Pronunciation and Nouns
Pronunciation (Vowel Sounds)

Advanced Learning

Listening Comprehension / Direct and Indirect Speech
Figures of Speech
Effective Communication
Writing Skills
Effective Writing
Interview Handling Skills
E-Mail etiquette
Presentation Skills

Recommended Books: (Latest Edition)

Baldania

B. Pharm. Semester: I
Subject Name: REMEDIAL MATHEMATICS
Subject Code: 13MA101

Scope: This is an introductory course in mathematics. This subject deals with the introduction to Partial fraction, Logarithm, matrices and Determinant, Analytical geometry, Calculus, differential equation and Laplace transform

Objectives: Upon completion of the course the student shall be able to:-

1. Know the theory and their application in Pharmacy
2. Solve the different types of problems by applying theory
3. Appreciate the important application of mathematics in Pharmacy

Sr No	Course Contents	Total Hrs
1.	<p>Partial fraction Introduction, Polynomial, Rational fractions, Proper and Improper fractions, Partial fraction, Resolving into Partial fraction, Application of Partial Fraction in Chemical Kinetics and Pharmacokinetics</p> <p>Logarithms Introduction, Definition, Theorems/Properties of logarithms, Common logarithms, Characteristic and Mantissa, worked examples, application of logarithm to solve pharmaceutical problems</p> <p>Function: Real Valued function, Classification of real valued functions,</p> <p>Limits and continuity : Introduction, Limit of a function, Definition of limit of a function</p>	6
2.	<p>Matrices and Determinant: Introduction matrices, Types of matrices, Operation on matrices, Transpose of a matrix, Matrix Multiplication, Determinants, Properties of determinants, Product of determinants, Minors and co-Factors, Adjoint or adjugate of a square matrix, Singular and non-singular matrices, Inverse of a matrix, Solution of system of linear of equations using matrix method, Cramer's rule, Characteristic equation and roots of a square matrix, Cayley-Hamilton theorem, Application of Matrices in solving Pharmacokinetic Equations</p>	6
3.	<p>Calculus: Differentiation: Introductions, Derivative of a function, Derivative of a constant, Derivative of a product of a constant and a function, Derivative of the sum or difference of two functions, Derivative of the product of two functions (product formula), Derivative of the quotient of two functions (Quotient formula) – Without Proof, Derivative of x^n w.r.t x, where n is any rational number, Derivative of e^x, Derivative of $\log_e x$, Derivative of a^x, Derivative of trigonometric functions from first principles (without Proof), Successive Differentiation, Conditions for a function to be a maximum or a minimum at a point. Application</p>	6

Baldania

4.	Analytical Geometry Introduction: Signs of the Coordinates, Distance formula, Straight Line : Slope or gradient of a straight line, Conditions for parallelism and perpendicularity of two lines, Slope of a line joining two points, Slope – intercept form of a straight line Integration: Introduction, Definition, Standard formulae, Rules of integration , Method of substitution, Method of Partial fractions, Integration by parts, definite integrals, Application	6
5.	Differential Equations: Some basic definitions, Order and degree, Equations in separable form , Homogeneous equations, Linear Differential equations, Exact equations, Application in solving Pharmacokinetic equations Laplace Transform : Introduction, Definition, Properties of Laplace transform, Laplace Transforms of elementary functions, Inverse Laplace transforms, Laplace transform of derivatives, Application to solve Linear differential equations, Application in solving Chemical kinetics and Pharmacokinetics equations	5

Recommended Books (Latest Edition)

1. Differential Calculus by Shanthinarayan
2. Pharmaceutical Mathematics with application to Pharmacy by Panchaksharappa Gowda D.H.
3. Integral Calculus by Shanthinarayan
4. Higher Engineering Mathematics by Dr.B.S.Grewal

Baldania

B. Pharm. Semester: I
Subject Name: REMEDIAL BIOLOGY Subject Code: 13BI0101
Scope: To learn and understand the components of living world, structure and functional system of plant and animal kingdom

Objectives: Upon completion of the course, the student shall be able to

1. know the classification and salient features of five kingdoms of life
2. understand the basic components of anatomy & physiology of plant
3. know understand the basic components of anatomy & physiology animal with special reference to human

Sr No	Course Contents	Total Hrs
1.	Living world: Definition and characters of living organisms Diversity in the living world Binomial nomenclature Five kingdoms of life and basis of classification. Salient features of Monera, Protista, Fungi, Animalia and Plantae, Virus, Morphology of Flowering plants Morphology of different parts of flowering plants – Root, stem, inflorescence, flower, leaf, fruit, seed. General Anatomy of Root, stem, leaf of monocotyledons & Dicotyledones	7
2.	Body fluids and circulation Composition of blood, blood groups, coagulation of blood Composition and functions of lymph Human circulatory system Structure of human heart and blood vessels Cardiac cycle, cardiac output and ECG Digestion and Absorption Human alimentary canal and digestive glands Role of digestive enzymes Digestion, absorption and assimilation of digested food Breathing and respiration Human respiratory system Mechanism of breathing and its regulation Exchange of gases, transport of gases and regulation of respiration Respiratory volume.	7

Baldania

3.	Excretory products and their elimination Modes of excretion Human excretory system- structure and function Urine formation Rennin angiotensin system Neural control and coordination Definition and classification of nervous system Structure of a neuron Generation and conduction of nerve impulse Structure of brain and spinal cord Functions of cerebrum, cerebellum, hypothalamus and medulla oblongata Chemical coordination and regulation Endocrine glands and their secretions Functions of hormones secreted by endocrine glands Human reproduction Parts of female reproductive system Parts of male reproductive system Spermatogenesis and Oogenesis Menstrual cycle	7
4.	Plants and mineral nutrition: Essential mineral, macro and micronutrients Nitrogen metabolism, Nitrogen cycle, biological nitrogen fixation Photosynthesis Autotrophic nutrition, photosynthesis, Photosynthetic pigments, Factors affecting photosynthesis.	5
5.	Plant respiration: Respiration, glycolysis, fermentation (anaerobic). Plant growth and development Phases and rate of plant growth, Condition of growth, Introduction to plant growth regulators Cell - The unit of life Structure and functions of cell and cell organelles. Cell division Tissues Definition, types of tissues, location and functions.	4

Text Books

- a. Text book of Biology by S. B. Gokhale
- b. A Text book of Biology by Dr. Thulajappa and Dr. Seetaram.
- c. A Text book of Biology by B.V. Sreenivasa Naidu
- d. A Text book of Biology by Naidu and Murthy
- e. Botany for Degree students By A.C.Dutta.
- f. Outlines of Zoology by M. Ekambaranatha ayyer and T. N. Ananthkrishnan.
- g. A manual for pharmaceutical biology practical by S.B. Gokhale and C. K. Kokate

Baldania

Practical

1. Introduction to experiments in biology a) Study of Microscope b) Section cutting techniques c) Mounting and staining d) Permanent slide preparation
2. Study of cell and its inclusions
3. Study of Stem, Root, Leaf, seed, fruit, flower and their modifications
4. Detailed study of frog by using computer models
5. Microscopic study and identification of tissues pertinent to Stem, Root Leaf, seed, fruit and flower
6. Identification of bones
7. Determination of blood group
8. Determination of blood pressure
9. Determination of tidal volume

3. Biology practical manual according to National core curriculum .Biology forum of Karnataka. Prof .M.J.H.Shafi.

Baldania

B. Pharm. Semester: II

Subject Name: Human Anatomy and Physiology II
Subject Code: 13PH0201

Scope: This subject is designed to impart fundamental knowledge on the structure and functions of the various systems of the human body. It also helps in understanding both homeostatic mechanisms. The subject provides the basic knowledge required to understand the various disciplines of pharmacy

Objectives: Upon completion of the course student shall be able to

1. Explain the gross morphology, structure and functions of various organs of the human body.
2. Describe the various homeostatic mechanisms and their imbalances.
3. Identify the various tissues and organs of different systems of human body.
4. Perform the hematological tests like blood cell counts, haemoglobin estimation, bleeding/clotting time etc and also record blood pressure, heart rate, pulse and respiratory volume.
6. Appreciate coordinated working pattern of different organs of each system
7. Appreciate the interlinked mechanisms in the maintenance of normal functioning (homeostasis) of human body.

Sr No	Topics	% weightage
1.	<p>Nervous system: Organization of nervous system, neuron, neuroglia, classification and properties of nerve fibre, electrophysiology, action potential, nerve impulse, receptors, synapse, neurotransmitters Central nervous system: Meninges, ventricles of brain and cerebrospinal fluid. structure and functions of brain (cerebrum, brain stem, cerebellum), spinal cord (gross structure, functions of afferent and efferent nerve tracts, reflex activity)</p>	10
2.	<p>Digestive system Anatomy of GI Tract with special reference to anatomy and functions of stomach, (Acid production in the stomach, regulation of acid production through parasympathetic nervous system, pepsin role in protein digestion) small intestine and large intestine, anatomy and functions of salivary glands, pancreas and liver, movements of GIT, digestion and absorption of nutrients and disorders of GIT Energetics: Formation and role of ATP, Creatinine Phosphate and BMR.</p>	6

Baldania

3.	<p>Respiratory system</p> <p>Anatomy of respiratory system with special reference to anatomy of lungs, mechanism of respiration, regulation of respiration Lung Volumes and capacities transport of respiratory gases, artificial respiration, and resuscitation methods</p> <p>Urinary system</p> <p>Anatomy of urinary tract with special reference to anatomy of kidney and nephrons, functions of kidney and urinary tract, physiology of urine formation, micturition reflux and role of kidneys in acid base balance, role of RAS in kidney and disorders of kidney</p>	10
4.	<p>Endocrine system</p> <p>Classification of hormones, mechanism of hormone action, structure and functions of pituitary gland, thyroid gland, parathyroid gland, adrenal gland, pancreas, pineal gland, thymus and their disorders.</p>	10
5.	<p>Reproductive system</p> <p>Anatomy of male and female reproductive system, Functions of male and female reproductive system, sex hormones, physiology of menstruation, fertilization, spermatogenesis, oogenesis, pregnancy and parturition.</p> <p>Introduction to genetics</p> <p>Chromosomes, genes and DNA, protein synthesis, genetic pattern of Inheritance</p>	9

Practical:

Practical physiology is complimentary to the theoretical discussions in physiology. Practicals allow the verification of physiological processes discussed in theory classes through experiments on living tissue, intact animals or normal human beings. This is helpful for developing an insight on the subject.

1. To study the integumentary and special senses using specimen, models, etc.,
2. To study the nervous system using specimen, models, etc.,
3. To study the endocrine system using specimen, models, etc
4. To demonstrate the general neurological examination
5. To demonstrate the function of olfactory nerve
6. To examine the different types of taste.
7. To demonstrate the visual acuity
8. To demonstrate the reflex activity
9. Recording of body temperature
10. To demonstrate positive and negative feedback mechanism
11. Determination of tidal volume and vital capacity
12. Study of digestive, respiratory, cardiovascular systems, urinary and reproductive systems with the help of models, charts and specimens
13. Recording of basal mass index

Baldania

14. Study of family planning devices and pregnancy diagnosis test
15. Demonstration of total blood count by cell analyser
16. Permanent slides of vital organs and gonads

Baldania

B. Pharm. Semester: II

Subject Name: Pharmaceutical Organic Chemistry I

Subject Code: 13PH0202

Scope: This subject deals with classification and nomenclature of simple organic compounds, structural isomerism, intermediates forming in reactions, important physical properties, reactions and methods of preparation of these compounds. The syllabus also emphasizes on mechanisms and orientation of reactions.

Objectives: Upon completion of the course the student shall be able to

1. write the structure, name and the type of isomerism of the organic compound
2. write the reaction, name the reaction and orientation of reactions
3. account for reactivity/stability of compounds
4. identify/confirm the identification of organic compound

Course Content:

General methods of preparation and reactions of compounds superscripted with asterisk (*) to be explained To emphasize on definition, types, classification, principles/mechanisms, applications, examples and differences

Sr No	Topics	% weightage
1.	Classification, nomenclature and isomerism: Classification of Organic Compounds Common and IUPAC systems of nomenclature of organic compounds (up to 10 Carbons open chain and carbocyclic compounds) Structural isomerisms in organic compounds	7
2.	Alkanes*, Alkenes* and Conjugated dienes*: SP hybridization in alkanes, Halogenation of alkanes, uses of paraffins, Stabilities of alkenes, SP hybridization in alkenes, E ₁ and E ₂ reactions – kinetics, order of reactivity of alkyl halides, rearrangement of carbocations, Saytzeffs orientation and evidences. E ₁ verses E ₂ reactions, Factors affecting E ₁ and E ₂ reactions. Ozonolysis, electrophilic addition reactions of alkenes, Markownikoff's orientation, free radical addition reactions of alkenes, Anti Markownikoff's orientation. Stability of conjugated dienes, Diel-Alder, electrophilic addition, free radical addition reactions of conjugated dienes, allylic rearrangement	10
3.	Alkyl halides*: SN ₁ and SN ₂ reactions - kinetics, order of reactivity of alkyl halides, stereochemistry and rearrangement of carbocations SN ₁ versus SN ₂ reactions, Factors affecting SN ₁ and SN ₂ reactions Structure and uses of ethylchloride, Chloroform, trichloroethylene, tetrachloroethylene, dichloromethane, tetrachloromethane and iodoform Alcohols*: Qualitative tests, Structure and uses of Ethyl alcohol, Methyl alcohol, chlorobutanol, Cetosteryl alcohol, Benzyl alcohol, Glycerol, Propylene glycol	10
4.	Carbonyl compounds* (Aldehydes and ketones): Nucleophilic addition, Electromeric effect, aldol condensation, Crossed Aldol condensation,	10

	Cannizzaro reaction, Crossed Cannizzaro reaction, Benzoin condensation, Perkin condensation, qualitative tests, Structure and uses of Formaldehyde, Paraldehyde, Acetone, Chloral hydrate, Hexamine, Benzaldehyde, Vanilin, Cinnamaldehyde	
5.	Carboxylic acids* : Acidity of carboxylic acids, effect of substituents on acidity, inductive effect and qualitative tests for carboxylic acids ,amide and ester Structure and Uses of Acetic acid, Lactic acid, Tartaric acid, Citric acid, Succinic acid. Oxalic acid, Salicylic acid, Benzoic acid, Benzyl benzoate, Dimethyl phthalate, Methyl salicylate and Acetyl salicylic acid Aliphatic amines* - Basicity, effect of substituent on Basicity. Qualitative test, Structure and uses of Ethanolamine, Ethylenediamine, Amphetamine	8

Practical:

Systematic qualitative analysis of unknown organic compounds like:

1. Preliminary test: Color, odour, aliphatic/aromatic compounds, saturation and unsaturation, etc
2. Detection of elements like Nitrogen, Sulphur and Halogen by Lassaigne's test
3. Solubility test
4. Functional group test like Phenols, Amides/ Urea, Carbohydrates, Amines, Carboxylic acids, Aldehydes and Ketones, Alcohols, Esters, Aromatic and Halogenated Hydrocarbons, Nitro compounds and Anilides
5. Melting point/Boiling point of organic compounds
6. Identification of the unknown compound from the literature using melting point/ boiling point
7. Preparation of the derivatives and confirmation of the unknown compound by melting point/ boiling point
8. Minimum 5 unknown organic compounds to be analysed systematically
9. Preparation of suitable solid derivatives from organic compounds
10. Construction of molecular models

Recommended Books (Latest Editions)

1. Organic Chemistry by Morrison and Boyd
2. Organic Chemistry by I.L. Finar , Volume-I
3. Textbook of Organic Chemistry by B.S. Bahl & Arun Bahl.
4. Organic Chemistry by P.L.Soni
5. Practical Organic Chemistry by Mann and Saunders.
6. Vogel's text book of Practical Organic Chemistry
7. Advanced Practical organic chemistry by N.K.Vishnoi.
8. Introduction to Organic Laboratory techniques by Pavia, Lampman and Kriz.
9. Reaction and reaction mechanism by Ahluwaliah/Chatwal.

Baldania

B. Pharm. Semester: II

Subject Name: Pharmaceutical Engineering

Subject Code: 13PH0203

Scope: This course is designed to impart a fundamental knowledge on the art and science of various unit operations used in pharmaceutical industry.

Objectives: Upon completion of the course the student shall be able to

1. To know various unit operations used in Pharmaceutical industries.
2. To understand the material handling techniques.
3. To perform various processes involved in pharmaceutical manufacturing process.
4. To carry out various test to prevent environmental pollution.
5. To appreciate and comprehend significance of plant lay out design for optimum use of resources.
6. To appreciate the various preventive methods used for corrosion control in Pharmaceutical industries

Sr No	Topics	% weightage
1.	<p>Flow of fluids: Types of manometers, Reynolds number and its significance, Bernoulli's theorem and its applications, Energy losses, Orifice meter, Venturimeter, Pitot tube and Rotometer.</p> <p>Size Reduction: Objectives, Mechanisms & Laws governing size reduction, factors affecting size reduction, principles, construction, working, uses, merits and demerits of Hammer mill, ball mill, fluid energy mill, Edge runner mill & end runner mill.</p> <p>Size Separation: Objectives, applications & mechanism of size separation, official standards of powders, sieves, size separation Principles, construction, working, uses, merits and demerits of Sieve shaker, cyclone separator, Air separator, Bag filter & elutriation tank</p>	10
2.	<p>Heat Transfer: Objectives, applications & Heat transfer mechanisms. Fourier's law, Heat transfer by conduction, convection & radiation. Heat interchangers & heat exchangers.</p> <p>Evaporation: Objectives, applications and factors influencing evaporation, differences between evaporation and other heat process. principles, construction, working, uses, merits and demerits of Steam jacketed kettle, horizontal tube evaporator, climbing film evaporator, forced circulation evaporator, multiple effect evaporator & Economy of multiple effect evaporator</p> <p>Distillation: Basic Principles and methodology of simple distillation, flash distillation, fractional distillation, distillation under reduced pressure, steam distillation & molecular distillation</p>	10
3.	<p>Drying: Objectives, applications & mechanism of drying process, measurements & applications of Equilibrium Moisture content, rate of drying curve. principles, construction, working, uses, merits and demerits of Tray dryer, drum dryer spray dryer, fluidized bed dryer, vacuum dryer,</p>	8

Bardania

	freeze dryer Mixing: Objectives, applications & factors affecting mixing, Difference between solid and liquid mixing, mechanism of solid mixing, liquids mixing and semisolids mixing. Principles, Construction, Working, uses, Merits and Demerits of Double cone blender, twin shell blender, ribbon blender, Sigma blade mixer, planetary mixers, Propellers, Turbines, Paddles & Silverson Emulsifier	
4.	Filtration: Objectives, applications, Theories & Factors influencing filtration, filter aids, filter medias. Principle, Construction, Working, Uses, Merits and demerits of plate & frame filter, filter leaf, rotary drum filter, Meta filter & Cartridge filter, membrane filters and Seidtz filter Centrifugation: Objectives, principle & applications of Centrifugation, principles, construction, working, uses, merits and demerits of Perforated basket centrifuge, Non-perforated basket centrifuge, semi continuous centrifuge & super centrifuge.	8
5.	Materials of pharmaceutical plant construction, Corrosion and its prevention: Factors affecting during materials selected for Pharmaceutical plant construction, Theories of corrosion, types of corrosion and there prevention. Ferrous and nonferrous metals, inorganic and organic non metals, basic of material handling systems.	7

Recommended Books (Latest Editions)

1. Introduction to chemical engineering – Walter L Badger & Julius Banchero, Latest edition.
 2. Solid phase extraction, Principles, techniques and applications by Nigel J.K. Simpson-Latest edition.
 3. Unit operation of chemical engineering – McCabe Smith, Latest edition.
 4. Pharmaceutical engineering principles and practices – C.V.S Subrahmanyam et al., Latest edition.
 5. Remington practice of pharmacy- Martin, Latest edition.
 6. Theory and practice of industrial pharmacy by Lachmann., Latest edition.
 7. Physical pharmaceutics- C.V.S Subrahmanyam et al., Latest edition.
- Cooper and Gunn's Tutorial pharmacy, S.J. Carter, Latest edition

Baldania

Practical:

1. Determination of radiation constant of brass, iron, unpainted and painted glass
2. Steam distillation – To calculate the efficiency of steam distillation.
3. To determine the overall heat transfer coefficient by heat exchanger
4. Construction of drying curves (for calcium carbonate and starch).
5. Determination of moisture content and loss on drying.
6. Determination of humidity of air – i) From wet and dry bulb temperatures –use of Dew point method.
7. Description of Construction working and application of Pharmaceutical Machinery such as rotary tablet machine, fluidized bed coater, fluid energy mill, de humidifier
8. Size analysis by sieving – To evaluate size distribution of tablet granulations – Construction of various size frequency curves including arithmetic and logarithmic probability plots
9. Size reduction: To verify the laws of size reduction using ball mill and determining Kicks, Rittinger's, Bond's coefficients, power requirement and critical speed of Ball Mill
10. Demonstration of colloid mill, planetary mixer, fluidized bed dryer, freeze dryer and such other major equipment
11. Factors affecting Rate of Filtration and Evaporation (Surface area, Concentration and Thickness/viscosity)
12. To study the effect of time on the Rate of Crystallization.
13. To calculate the uniformity Index for given sample by using Double Cone Blender

Batdania

B. Pharm Semester: II

Subject Name: Environmental Sciences

Subject Code: 13EN0201

Scope: Environmental Sciences is the scientific study of the environmental system and the status of its inherent or induced changes on organisms. It includes not only the study of physical and biological characters of the environment but also the social and cultural factors and the impact of man on environment.

Objectives: Upon completion of the course the student shall be able to

1. Create the awareness about environmental problems among learners.
2. Impart basic knowledge about the environment and its allied problems.
3. Develop an attitude of concern for the environment.
4. Motivate learner to participate in environment protection and environment improvement.
5. Acquire skills to help the concerned individuals in identifying and solving environmental problems.
6. Strive to attain harmony with Nature

Sr. No	Topics	% weightage
1.	The Multidisciplinary nature of environmental studies Natural Resources Renewable and non-renewable resources: Natural resources and associated problems Forest resources; b) Water resources; c) Mineral resources; d) Food resources; e) Energy resources; f) Land resources: Role of an individual in conservation of natural resources	10
2.	Ecosystems: Concept of an ecosystem. Structure and function of an ecosystem. Introduction, types, characteristic features, structure and function of the ecosystems: Forest ecosystem; Grassland ecosystem; Desert ecosystem; Aquatic ecosystems (ponds, streams, lakes, rivers, oceans, estuaries)	10
3.	Environmental Pollution: Air pollution; Water pollution; Soil pollution	10

MARWADI UNIVERSITY

B.Pharm
SEMESTER: II

Subject Name: Computer Applications in Pharmacy
Subject Code: 13CE0201

Scope: This subject deals with the introduction Database, Database Management system, computer application in clinical studies and use of databases.

Objectives: Upon completion of the course the student shall be able to

1. know the various types of application of computers in pharmacy
2. know the various types of databases
3. know the various applications of databases in pharmacy

Sr No	Topics	% weightage
1.	Number system: Binary number system, Decimal number system, Octal number system, Hexadecimal number systems, conversion decimal to binary, binary to decimal, octal to binary etc, binary addition, binary subtraction – One's complement, Two's complement method, binary multiplication, binary division Concept of Information Systems and Software : Information gathering, requirement and feasibility analysis, data flow diagrams, process specifications, input/output design, process life cycle, planning and managing the project	6
2.	Web technologies: Introduction to HTML, XML, CSS and Programming languages, introduction to web servers and Server Products. Introduction to databases, MYSQL, MS ACCESS, Pharmacy Drug database	6
3.	Application of computers in Pharmacy – Drug information storage and retrieval, Pharmacokinetics, Mathematical model in Drug design, Hospital and Clinical Pharmacy, Electronic Prescribing and discharge (EP) systems, barcode medicine identification and automated dispensing of drugs, mobile technology and adherence monitoring Diagnostic System, Lab-diagnostic System, Patient Monitoring System, Pharma Information System	6
4.	Bioinformatics: Introduction, Objective of Bioinformatics, Bioinformatics Databases, Concept of Bioinformatics, Impact of Bioinformatics in Vaccine Discovery	6
5.	Computers as data analysis in Preclinical development: Chromatographic data analysis(CDS), Laboratory Information management System (LIMS) and Text Information Management System(TIMs)	6

Practical List:

1. Design a questionnaire using a word processing package to gather information about a particular disease.
2. Create a HTML web page to show personal information.
3. Retrieve the information of a drug and its adverse effects using online tools

Baldania

4. Creating mailing labels Using Label Wizard , generating label in MS WORD
5. Create a database in MS Access to store the patient information with the required fields Using access
6. Design a form in MS Access to view, add, delete and modify the patient record in the database
7. Generating report and printing the report from patient database
8. Creating invoice table using – MS Access
9. Drug information storage and retrieval using MS Access
10. Creating and working with queries in MS Access
11. Exporting Tables, Queries, Forms and Reports to web pages
12. Exporting Tables, Queries, Forms and Reports to XML pages

4. Microsoft office Access - 2003, Application Development Using VBA, SQL Server, DAP and Infopath – Cary N.Prague – Wiley Dreamtech India (P) Ltd., 4435/7, Ansari Road, Daryagani, New Delhi - 110002

Batdania

Subject code: 13PH0301

Subject name: **Pharmaceutical Organic Chemistry-II**

Scope: This subject deals with general methods of preparation and reactions of some organic compounds. Reactivity of organic compounds are also studied here. The syllabus emphasizes on mechanisms and orientation of reactions. Chemistry of fats and oils are also included in the syllabus.

Objective: Upon completion of the course, the student shall be able to:

1. Write the structure, name and the type of isomerism of the organic compound
2. Write the reaction, name the reaction and orientation of reactions
3. Account for reactivity/stability of compounds
4. Prepare organic compounds

Teaching and assessment scheme:

Teaching Scheme (Hours)			Credits	Theory/ Tutorial Marks			Practical Marks		Total Marks
Theory	Tutorial	Practical		CSE	IA (I)	ESE (E)	TW	Viva (V)	
3	1	4	6	10	15	75	15	35	150

Theory syllabus:

Teaching hours: 45 Hours

Unit-1

10 Hours

Benzene and its derivatives:

Analytical, synthetic and other evidences in the derivation of structure of benzene, Orbital picture, resonance in benzene, aromatic characters, Huckel's rule. Reactions of benzene - nitration, sulphonation, halogenation - reactivity, Friedelcrafts alkylation - reactivity, limitations, Friedelcrafts acylation.

Substituents, effect of substituents on reactivity and orientation of mono substituted benzene compounds towards electrophilic substitution reaction.

Structure and uses of DDT, Saccharin, BHC and Chloramine.

Unit-2

10 Hours

Phenols: Acidity of phenols, effect of substituents on acidity, qualitative tests, Structure and uses of phenol, cresols, resorcinol, naphthols.

Aromatic Amines: Basicity of amines, effect of substituents on basicity, and synthetic uses of aryl diazonium salts.

Aromatic Acids: Acidity, effect of substituents on acidity and important reactions of benzoic acid.

Unit-3

10 Hours

Fats and Oils:

Fatty acids - reactions.

Hydrolysis, Hydrogenation, Saponification and Rancidity of oils, Drying oils.

Analytical constants - Acid value, Saponification value, Ester value, Iodine value, Acetyl value, Reichert Meissl (RM) value - significance and principle involved in their determination.

Unit-4

8 Hours

Polynuclear hydrocarbons:

Bardania

Synthesis, reactions.

Structure and medicinal uses of Naphthalene, Phenanthrene, Anthracene, Diphenylmethane, Triphenylmethane and their derivatives.

Unit-5

7 Hours

Cyclo alkanes:

Stabilities - Baeyer's strain theory, limitation of Baeyer's strain theory, Coulson and Moffitt's modification, Sachse Mohr's theory (Theory of strain less rings), reactions of cyclopropane and cyclobutane only.

Tutorials will be based on the above syllabus.

Teaching hours: 15 Hours

Practical syllabus:

Teaching hours: 04 Hours/week

1. Experiments involving laboratory techniques:
 - Recrystallization
 - Steam distillation
2. Determination of following oil values (including standardization of reagents):
 - Acid value
 - Saponification value
 - Iodine value
3. Preparation of compounds:
 - Benzanilide/ Phenyl benzoate/ Acetanilide from Aniline/ Phenol/ Aniline by acylation reaction.
 - 2,4,6-Tribromo aniline/Para bromo acetanilide from Aniline/ Acetanilide by halogenation (Bromination) reaction.
 - 5-Nitro salicylic acid/ Meta di nitro benzene from Salicylic acid/ Nitro benzene by nitration reaction.
 - Benzoic acid from Benzyl chloride by oxidation reaction.
 - Benzoic acid/ Salicylic acid from alkyl benzoate/ alkyl salicylate by hydrolysis reaction.
 - 1-Phenyl azo-2-naphthol from Aniline by diazotization and coupling reactions.
 - Benzil from Benzoin by oxidation reaction.
 - Dibenzal acetone from Benzaldehyde by Claisen Schmidt reaction.
 - Cinnamic acid from Benzaldehyde by Perkin reaction.
 - P-Iodo benzoic acid from P-amino benzoic acid.

Baldania

Subject code: **13PH0302**

Subject name: **Physical Pharmaceutics-I**

Scope: The course deals with the various physical and physicochemical properties, and principles involved in dosage forms/formulations. Theory and practical components of the subject help the student to get a better insight into various areas of formulation research and development, and stability studies of pharmaceutical dosage forms.

Objective: Upon the completion of the course student shall be able to

- Understand various physicochemical properties of drug molecules in the designing the dosage forms
- Know the principles of chemical kinetics & to use them for stability testing and determination of expiry date of formulations
- Demonstrate use of physicochemical properties in the formulation development and evaluation of dosage forms

Teaching and assessment scheme:

Teaching Scheme (Hours)			Credits	Theory/ Tutorial Marks			Practical Marks		Total Marks
Theory	Tutorial	Practical		CSE	IA (I)	ESE (E)	TW	Viva (V)	
3	1	4	6	10	15	75	15	35	150

Theory syllabus:

Teaching hours: 45 Hours

Unit-1

10 Hours

Solubility of drugs: Solubility expressions, mechanisms of solute solvent interactions, ideal solubility parameters, solvation & association, quantitative approach to the factors influencing solubility of drugs, diffusion principles in biological systems. Solubility of gas in liquids, solubility of liquids in liquids, (Binary solutions, ideal solutions) Raoult's law, real solutions. Partially miscible liquids, Critical solution temperature and applications. Distribution law, its limitations and applications

Unit-2

10 Hours

States of Matter and properties of matter: State of matter, changes in the state of matter, latent heats, vapor pressure, sublimation critical point, eutectic mixtures, gases, aerosols– inhalers, relative humidity, liquid complexes, liquid crystals, glassy states, solid-crystalline, amorphous & polymorphism.

Physicochemical properties of drug molecules: Refractive index, optical rotation, dielectric constant, dipole moment, dissociation constant, determinations and applications

Unit-3

10 Hours

Surface and interfacial phenomenon: Liquid interface, surface & interfacial tensions, surface free energy, measurement of surface & interfacial tensions, spreading coefficient, adsorption at liquid interfaces, surface active agents, HLB Scale, Solubilization, detergency, adsorption at solid interface.

Unit-4

8 Hours

Complexation and protein binding: Introduction, Classification of Complexation, Applications,

Batdania

methods of analysis, protein binding, Complexation and drug action, crystalline structures of complexes and thermodynamic treatment of stability constants.

Unit-5

7 Hours

pH, buffers and Isotonic solutions: Sorensen's pH scale, pH determination (electrometric and calorimetric), applications of buffers, buffer equation, buffer capacity, buffers in pharmaceutical and biological systems, buffered isotonic solutions.

Tutorials will be based on the above syllabus.

Teaching hours: 15 Hours

Practical syllabus:

Teaching hours: 04 Hours/week

- Determination of the solubility of drug at room temperature
- Determination of pKa value by Half Neutralization/ Henderson Hassel Balch equation.
- Determination of Partition co- efficient of benzoic acid in benzene and water
- Determination of Partition co- efficient of Iodine in CCl₄ and water
- Determination of % composition of NaCl in a solution using phenol-water system by CST method
- Determination of surface tension of given liquids by drop count and drop weight method
- Determination of HLB number of a surfactant by saponification method
- Determination of Freundlich and Langmuir constants using activated char coal
- Determination of critical micellar concentration of surfactants
- Determination of stability constant and donor acceptor ratio of PABA-Caffeine complex by solubility method
- Determination of stability constant and donor acceptor ratio of Cupric-Glycine complex by pH titration method

Batdania

Subject code: **13PH0303**

Subject name: **Biochemistry**

Scope: Biochemistry deals with complete understanding of the molecular levels of the chemical process associated with living cells. The scope of the subject is providing biochemical facts and the principles to understand metabolism of nutrient molecules in physiological and pathological conditions. It is also emphasizing on genetic organization of mammalian genome and hetero & autocatalytic functions of DNA.

Objective: : Upon completion of course student shell able to

- ☐ Understand the catalytic role of enzymes, importance of enzyme inhibitors in design of new drugs, therapeutic and diagnostic applications of enzymes.
- ☐ Understand the metabolism of nutrient molecules in physiological and pathological conditions.
- ☐ Understand the genetic organization of mammalian genome and functions of DNA in the synthesis of RNAs and proteins.

Teaching and assessment scheme:

Teaching Scheme (Hours)			Credits	Theory/ Tutorial Marks			Practical Marks		Total Marks
Theory	Tutorial	Practical		CSE	IA (I)	ESE (E)	TW	Viva (V)	
3	1	4	6	10	15	75	15	35	150

Theory syllabus:

Teaching hours: 45 Hours

Unit-1

08 Hours

Biomolecules: Introduction, classification, chemical nature and biological role of carbohydrate, lipids, nucleic acids, amino acids and proteins.

Bioenergetics: Concept of free energy, endergonic and exergonic reaction, Relationship between free energy, enthalpy and entropy; Redox potential. Energy rich compounds; classification; biological significances of ATP and cyclic AMP

Unit-2

10 Hours

Carbohydrate metabolism: Glycolysis – Pathway, energetics and significance Citric acid cycle- Pathway, energetics and significance HMP shunt and its significance; Glucose-6- Phosphate dehydrogenase (G6PD) deficiency Glycogen metabolism Pathways and glycogen storage diseases (GSD) Gluconeogenesis- Pathway and its significance Hormonal regulation of blood glucose level and Diabetes mellitus

Biological oxidation: Electron transport chain (ETC) and its mechanism. Oxidative phosphorylation & its mechanism and substrate level phosphorylation Inhibitors ETC and oxidative phosphorylation/Uncouplers

Unit-3

10 Hours

Lipid metabolism: -Oxidation of saturated fatty acid (Palmitic acid) Formation and utilization of ketone bodies; ketoacidosis De novo synthesis of fatty acids (Palmitic acid) Biological significance of cholesterol and conversion of cholesterol into bile acids, steroid hormone and vitamin D, Disorders of lipid metabolism: Hypercholesterolemia, atherosclerosis, fatty liver and obesity

Baldania

Amino acid metabolism: General reactions of amino acid metabolism: Transamination, deamination & decarboxylation, urea cycle and its disorders Catabolism of phenylalanine and tyrosine and their metabolic disorders (Phenylketonuria, Albinism, alpeptonuria, tyrosinemia) Synthesis and significance of biological substances; 5-HT, melatonin, dopamine, noradrenaline, adrenaline Catabolism of heme; hyperbilirubinemia and jaundice

Unit-4

10 Hours

Nucleic acid metabolism and genetic information transfer: Biosynthesis of purine and pyrimidine nucleotides, Catabolism of purine nucleotides and Hyperuricemia and Gout Diseases Organization of mammalian genome Structure of DNA and RNA and their functions DNA replication (semi conservative model) Transcription or RNA synthesis Genetic code, Translation or Protein synthesis and inhibitors

Unit-5

7 Hours

Enzymes: Introduction, properties, nomenclature and IUB classification of enzymes Enzyme kinetics (Michaelis plot, Line Weaver Burke plot) Enzyme inhibitors with examples, Regulation of enzymes: enzyme induction and repression, allosteric enzymes regulation, Therapeutic and diagnostic applications of enzymes and isoenzymes Coenzymes–Structure and biochemical functions

Tutorials will be based on the above syllabus.

Teaching hours: 15 Hours

Practical syllabus:

Teaching hours: 04 Hours/week

- Qualitative analysis of carbohydrates (Glucose, Fructose, Lactose, Maltose, Sucrose and starch)
- Identification tests for Proteins (albumin and Casein)
- Quantitative analysis of reducing sugars (DNSA method) and Proteins (Biuret method)
- Qualitative analysis of urine for abnormal constituents
- Determination of blood creatinine
- Determination of blood sugar
- Determination of serum total cholesterol
- Preparation of buffer solution and measurement of pH
- Study of enzymatic hydrolysis of starch
- Determination of Salivary amylase activity
- Study the effect of Temperature on Salivary amylase activity
- Study the effect of substrate concentration on salivary amylase activity

Baldania

Subject code: **13PH0304**

Subject name: **Pathophysiology**

Scope: : Pathophysiology is the study of causes of diseases and reactions of the body to such disease producing causes. This course is designed to impart a thorough knowledge of the relevant aspects of pathology of various conditions with reference to its pharmacological applications, and understanding of basic pathophysiological mechanisms. Hence it will not only help to study the syllabus of pathology, but also to get baseline knowledge required to practice medicine safely, confidently, rationally and effectively.

Objective: : Upon completion of the course, the student shall be able to:

- Describe the etiology and pathogenesis of the selected disease states;
- Name the signs and symptoms of the diseases; and
- Mention the complications of the diseases.

Teaching and assessment scheme:

Teaching Scheme (Hours)			Credits	Theory/ Tutorial Marks			Practical Marks		Total Marks

3	1	0	4	10	15	75	0	0	100

Theory syllabus:

Teaching hours: 45 Hours

Unit-1

10 Hours

Basic principles of Cell injury and Adaptation: Introduction, definitions, Homeostasis, Components and Types of Feedback systems, Causes of cellular injury, Pathogenesis (Cell membrane damage, Mitochondrial damage, Ribosome damage, Nuclear damage), Morphology of cell injury – Adaptive changes (Atrophy, Hypertrophy, hyperplasia, Metaplasia, Dysplasia), Cell swelling, Intra cellular accumulation, Calcification, Enzyme leakage and Cell Death Acidosis & Alkalosis, Electrolyte imbalance.

Basic mechanism involved in the process of inflammation and repair: Introduction, Clinical signs of inflammation, Different types of Inflammation, Mechanism of Inflammation – Alteration in vascular permeability and blood flow, migration of WBC's, Mediators of inflammation, Basic principles of wound healing in the skin, Pathophysiology of Atherosclerosis.

Unit-2

10 Hours

Cardiovascular System: Hypertension, congestive heart failure, ischemic heart disease (angina, myocardial infarction, atherosclerosis and arteriosclerosis).

Respiratory system: Asthma, Chronic obstructive airways diseases.

Renal system: Acute and chronic renal failure.

Unit-3

10 Hours

Haematological Diseases: Iron deficiency, megaloblastic anaemia (Vit B12 and folic acid), sickle cell anaemia, thalassemia, hereditary acquired anaemia, haemophilia.

Endocrine system: Diabetes, thyroid diseases, disorders of sex hormones.

Nervous system: Epilepsy, Parkinson's disease, stroke, psychiatric disorders: depression, schizophrenia and Alzheimer's disease.

Gastrointestinal system: Peptic Ulcer.

Baldania

Unit-4

08 Hours

Inflammatory bowel diseases, jaundice, hepatitis (A, B, C, D, E, F) alcoholic liver disease:

Disease of bones and joints: Rheumatoid arthritis, osteoporosis and gout.

Principles of cancer: classification, etiology and pathogenesis of cancer.

Unit-5

7 Hours

Infectious diseases: Meningitis, Typhoid, Leprosy, Tuberculosis, Urinary tract infections.

Sexually transmitted diseases: AIDS, Syphilis, Gonorrhoea.

Tutorials will be based on the above syllabus.

Teaching hours: 15 Hours

Subject code: **13PH0305**

Subject name: **Pharmacognosy and Phytochemistry-i**

Scope: The subject involves the fundamentals of Pharmacognosy like scope, classification of crude drugs, their identification and evaluation, phytochemicals present in them and their medicinal properties.

Objective: Upon completion of the course, the student shall be able

- to understand the techniques in the cultivation and production of crude drugs
- to describe the crude drugs, their uses and chemical nature
- to explain the evaluation techniques for the herbal drugs
- to analyse the microscopic and morphological evaluation of crude drugs

Teaching and assessment scheme:

Teaching Scheme (Hours)			Credits	Theory/ Tutorial Marks			Practical Marks		Total Marks
Theory	Tutorial	Practical		CSE	IA (I)	ESE (E)	TW	Viva (V)	
3	1	4	6	10	15	75	15	35	150

Theory syllabus:

Teaching hours: 45 Hours

Unit-1

10 Hours

Introduction to Pharmacognosy: (a) Definition, history, scope and development of Pharmacognosy (b) Sources of Drugs – Plants, Animals, Marine & Tissue culture Organized drugs, unorganized drugs (dried latex, dried juices, dried extracts, gums and mucilage, oleoresins and oleo- gum -resins).

Classification of drugs: Alphabetical, morphological, taxonomical, chemical, pharmacological, chemo and sero taxonomical classification of drugs.

Quality control of Drugs of Natural Origin: Adulteration of drugs of natural origin. Evaluation by organoleptic, microscopic, physical, chemical and biological methods and properties. Quantitative microscopy of crude drugs including lycopodium spore method, leaf constants, camera lucida and diagrams of microscopic objects to scale with camera lucida.

Unit-2

10 Hours

Cultivation, Collection, Processing and Storage of Drugs of Natural Origin: Cultivation and Collection of drugs of natural origin Factors influencing cultivation of medicinal plants. Plant hormones and their applications. Polyploidy, mutation and hybridization with reference to medicinal plants.

Conservation of Medicinal Plants

Unit-3

07 Hours

Plant Tissue Culture: Historical development of plant tissue culture, types of cultures, Nutritional requirements, growth and their maintenance. Applications of plant tissue culture in pharmacognosy. Edible vaccines.

Unit-4

10 Hours

Pharmacognosy in various systems of medicine:

Role of Pharmacognosy in allopathy and traditional systems of medicine namely, Ayurveda, Unani, Siddha, Homeopathy and Chinese systems of medicine. Introduction to secondary

Batdania

metabolites: Definition, classification, properties and test for identification of Alkaloids, Glycosides, Flavonoids, Tannins, Volatile oil and Resins.

Unit-5

08 Hours

Study of biological source, chemical nature and uses of drugs of natural origin containing following drugs: Plant Products: Fibers - Cotton, Jute, Hemp Hallucinogens, Teratogens, Natural allergens

Primary metabolites: General introduction, detailed study with respect to chemistry, sources, preparation, evaluation, preservation, storage, therapeutic used and commercial utility as Pharmaceutical Aids and/or Medicines for the following Primary metabolites:

Carbohydrates: Acacia, Agar, Tragacanth, Honey, Starch, Sodium alginate, Pectin, Guar gum. **Proteins and Enzymes:** Gelatin, casein, proteolytic enzymes (Papain, bromelain, serratiopeptidase, urokinase, streptokinase, pepsin).

Lipids(Waxes, fats, fixed oils): Castor oil, Chaulmoogra oil, Wool Fat, Bees Wax.

Marine Drugs: Novel medicinal agents from marine sources

Tutorials will be based on the above syllabus.

Teaching hours: 15 Hours

Practical syllabus:

Teaching hours: 04 Hours/week

☐ Analysis of crude drugs by chemical tests: (i) Tragacanth (ii) Acacia (iii) Agar (iv) Gelatin (v) starch (vi) Honey (vii) Castor oil

- ☐ Determination of stomatal number and index
- ☐ Determination of vein islet number, vein islet termination and palisade ratio.
- ☐ Determination of size of starch grains, calcium oxalate crystals by eye piece micrometer
- ☐ Determination of Fiber length and width
- ☐ Determination of number of starch grains by Lycopodium spore method

☐ Determination of Ash value

☐ Determination of Extractive values of crude drugs

☐ Determination of moisture content of crude drugs

☐ Determination of swelling index and foaming

Faculty of Pharmacy
B. Pharm. | Semester: 4
Subject Name: Pharmaceutical Organic Chemistry-III

Subject Code: 13PH0401

Scope: This subject imparts knowledge on stereo-chemical aspects of organic compounds and organic reactions, important named reactions, chemistry of important hetero cyclic compounds. It also emphasizes on medicinal and other uses of organic compounds.

Objectives: Upon completion of the course the student shall be able to

1. understand the methods of preparation and properties of organic compounds
2. explain the stereo chemical aspects of organic compounds and stereo chemical reactions
3. know the medicinal uses and other applications of organic compounds

Sr No	Topics	% weightage
1.	Stereo isomerism Optical isomerism – Optical activity, enantiomerism, diastereoisomerism, meso compounds Elements of symmetry, chiral and achiral molecules DL system of nomenclature of optical isomers, sequence rules, RS system of nomenclature of optical isomers, Reactions of chiral molecules, Racemic modification and resolution of racemic mixture. Asymmetric synthesis: partial and absolute	10
2.	Geometrical isomerism Nomenclature of geometrical isomers (Cis Trans, EZ, Syn Anti systems) Methods of determination of configuration of geometrical isomers. Conformational isomerism in Ethane, n-Butane and Cyclohexane. Stereo isomerism in biphenyl compounds (Atropisomerism) and conditions for optical activity. Stereospecific and stereoselective reactions	10
3.	Heterocyclic compounds: Nomenclature and classification, Synthesis, reactions and medicinal uses of following compounds/derivatives Pyrrole, Furan, and Thiophene Relative aromaticity and reactivity of Pyrrole, Furan and Thiophene	10
4.	Synthesis, reactions and medicinal uses of following compounds/derivatives Pyrazole, Imidazole, Oxazole and Thiazole., Pyridine, Quinoline, Isoquinoline, Acridine and Indole. Basicity of pyridine Synthesis and medicinal uses of Pyrimidine, Purine, azepines and their Derivatives	8
5.	Reactions of synthetic importance Metal hydride reduction (NaBH_4 and LiAlH_4), Clemmensen reduction, Birch reduction, Wolff Kishner reduction. Oppenauer-oxidation and Dakin reaction. Beckmanns rearrangement and Schmidt rearrangement. Claisen-Schmidt condensation	7

5. Heterocyclic Chemistry by T.L. Gilchrist

Subject Name: Medicinal Chemistry-I

Subject Code: 13PH0402

Scope: This subject is designed to impart fundamental knowledge on the structure chemistry and therapeutic value of drugs. The subject emphasizes on structure activity relationships of drugs, importance of physicochemical properties and metabolism of drugs. The syllabus also emphasizes on chemical synthesis of important drugs under each class.

Objectives: Upon completion of the course the student shall be able to

1. understand the chemistry of drugs with respect to their pharmacological activity
2. understand the drug metabolic pathways, adverse effect and therapeutic value of drugs
3. know the Structural Activity Relationship (SAR) of different class of drugs
4. write the chemical synthesis of some drugs

Course Content:

Study of the development of the following classes of drugs, Classification, mechanism of action, uses of drugs mentioned in the course, Structure activity relationship of selective class of drugs as specified in the course and synthesis of drugs superscripted (*)

Sr No	Topics	% weightage
1.	<p>Introduction to Medicinal Chemistry, History and development of medicinal chemistry Physicochemical properties in relation to biological action Ionization, Solubility, Partition Coefficient, Hydrogen bonding, Protein binding, Chelation, Bioisosterism, Optical and Geometrical isomerism.</p> <p>Drug metabolism Drug metabolism principles- Phase I and Phase II. Factors affecting drug metabolism including stereo chemical aspects</p>	10
2.	<p>Drugs acting on Autonomic Nervous System Adrenergic Neurotransmitters: Biosynthesis and catabolism of catecholamine. Adrenergic receptors (Alpha & Beta) and their distribution.</p> <p>Sympathomimetic agents: SAR of Sympathomimetic agents Direct acting: Nor-epinephrine, Epinephrine, Phenylephrine*, Dopamine, Methyldopa, Clonidine, Dobutamine, Isoproterenol, Terbutaline, Salbutamol*, Bitolterol, Naphazoline, Oxymetazoline and Xylometazoline. Indirect acting agents: Hydroxyamphetamine, Pseudoephedrine, Propylhexedrine. Agents with mixed mechanism: Ephedrine, Metaraminol.</p> <p>Adrenergic Antagonists: Alpha adrenergic blockers: Tolazoline*, Phentolamine, Phenoxybenzamine, Prazosin, Dihydroergotamine, Methysergide. Beta adrenergic blockers: SAR of beta blockers, Propranolol*, Metibranolol, Atenolol, Betazolol, Bisoprolol, Esmolol, Metoprolol, Labetolol, Carvedilol.</p>	10
3.	<p>Cholinergic neurotransmitters:</p>	10

Batdania

	<p>Biosynthesis and catabolism of acetylcholine. Cholinergic receptors (Muscarinic & Nicotinic) and their distribution.</p> <p>Parasympathomimetic agents: SAR of Parasympathomimetic agents Direct acting agents: Acetylcholine, Carbachol*, Bethanechol, Methacholine, Pilocarpine.</p> <p>Indirect acting/ Cholinesterase inhibitors (Reversible & Irreversible): Physostigmine, Neostigmine*, Pyridostigmine, Edrophonium chloride, Tacrine hydrochloride, Ambenonium chloride, Isoflurophate, Echothiophate iodide, Parathione, Malathion.</p> <p>Cholinesterase reactivator: Pralidoxime chloride.</p> <p>Cholinergic Blocking agents: SAR of cholinolytic agents Solanaceous alkaloids and analogues: Atropine sulphate, Hyoscyamine sulphate, Scopolamine hydrobromide, Homatropine hydrobromide, Ipratropium bromide*.</p> <p>Synthetic cholinergic blocking agents: Tropicamide, Cyclopentolate hydrochloride, Clidinium bromide, Dicyclomine hydrochloride*, Glycopyrrolate, Methantheline bromide, Propantheline bromide, Benztropine mesylate, Orphenadrine citrate, Biperidine hydrochloride, Procyclidine hydrochloride*, Tridihexethyl chloride, Isopropamide iodide, Ethopropazine hydrochloride.</p>	
4.	<p>Drugs acting on Central Nervous System</p> <p>A. Sedatives and Hypnotics:</p> <p>Benzodiazepines: SAR of Benzodiazepines, Chlordiazepoxide, Diazepam*, Oxazepam, Chlorazepate, Lorazepam, Alprazolam, Zolpidem</p> <p>Barbiturtes: SAR of barbiturates, Barbitol*, Phenobarbital, Mephobarbital, Amobarbital, Butobarbital, Pentobarbital, Secobarbital</p> <p>Miscellaneous: Amides & imides: Glutethimide. Alcohol & their carbamate derivatives: Meprobamate, Ethchlorvynol. Aldehyde & their derivatives: Triclofos sodium, Paraldehyde.</p> <p>B. Antipsychotics</p> <p>Phenothiazines: SAR of Phenothiazines - Promazine hydrochloride, Chlorpromazine hydrochloride*, Triflupromazine, Thioridazine hydrochloride, Piperacetazine hydrochloride, Prochlorperazine maleate, Trifluoperazine hydrochloride.</p> <p>Ring Analogues of Phenothiazines: Chlorprothixene, Thiothixene, Loxapine succinate, Clozapine.</p> <p>Fluro buterophenones: Haloperidol, Droperidol, Risperidone.</p> <p>Beta amino ketones: Molindone hydrochloride.</p> <p>Benzamides: Sulpieride.</p> <p>C. Anticonvulsants: SAR of Anticonvulsants, mechanism of anticonvulsant action</p> <p>Barbiturates: Phenobarbitone, Methabarbitol. Hydantoins: Phenytoin*, Mephentyoin, Ethotoin Oxazolidine diones: Trimethadione, Paramethadione</p> <p>Succinimides: Phensuximide, Methsuximide, Ethosuximide*</p> <p>Urea and monoacylureas: Phenacemide, Carbamazepine</p> <p>Benzodiazepines: Clonazepam</p> <p>Miscellaneous: Primidone, Valproic acid, Gabapentin, Felbamate</p>	8
5.	<p>Drugs acting on Central Nervous System General anesthetics:</p> <p>Inhalation anesthetics: Halothane*, Methoxyflurane, Enflurane, Sevoflurane, Isoflurane, Desflurane.</p> <p>Ultra short acting barbiturates: Methohexital sodium*, Thiamylal</p>	7

Baldania

<p>sodium, Thiopental sodium.</p> <p>Dissociative anesthetics: Ketamine hydrochloride.*</p> <p>Narcotic and non-narcotic analgesics</p> <p>Morphine and related drugs: SAR of Morphine analogues, Morphine sulphate, Codeine, Meperidine hydrochloride, Anilerdine hydrochloride, Diphenoxylate hydrochloride, Loperamide hydrochloride, Fentanyl citrate*, Methadone hydrochloride*, Propoxyphene hydrochloride, Pentazocine, Levorphanol tartarate.</p> <p>Narcotic antagonists: Nalorphine hydrochloride, Levallorphan tartarate, Naloxone hydrochloride.</p> <p>Anti-inflammatory agents: Sodium salicylate, Aspirin, Mefenamic acid*, Meclofenamate, Indomethacin, Sulindac, Tolmetin, Zomepriac, Diclofenac, Ketorolac, Ibuprofen*, Naproxen, Piroxicam, Phenacetin, Acetaminophen, Antipyrine, Phenylbutazone.</p>	
--	--

MEDICINAL CHEMISTRY - I (Practical)

I Preparation of drugs/ intermediates

- 1 1,3-pyrazole
- 2 1,3-oxazole
- 3 Benzimidazole
- 4 Benzotriazole
- 5 2,3- diphenyl quinoxaline
- 6 Benzocaine
- 7 Phenytoin
- 8 Phenothiazine
- 9 Barbiturate

II Assay of drugs

- 1 Chlorpromazine
- 2 Phenobarbitone
- 3 Atropine
- 4 Ibuprofen
- 5 Aspirin
- 6 Furosemide

III Determination of Partition coefficient for any two drugs

Recommended Books (Latest Editions)

1. Wilson and Giswold's Organic medicinal and Pharmaceutical Chemistry.
2. Foye's Principles of Medicinal Chemistry.
3. Burger's Medicinal Chemistry, Vol I to IV.
4. Introduction to principles of drug design- Smith and Williams.
5. Remington's Pharmaceutical Sciences.
6. Martindale's extra pharmacopoeia.
7. Organic Chemistry by I.L. Finar, Vol. II.
8. The Organic Chemistry of Drug Synthesis by Lednicer, Vol. 1-5.
9. Indian Pharmacopoeia.
10. Text book of practical organic chemistry- A.I.Vogel.

Baldania

Subject Name: Physical Pharmaceutics-II

Subject Code: 13PH0403

Scope: The course deals with the various physical and physicochemical properties, and principles involved in dosage forms/formulations. Theory and practical components of the subject help the student to get a better insight into various areas of formulation research and development, and stability studies of pharmaceutical dosage forms.

Objectives: Upon completion of the course the student shall be able to

1. Understand various physicochemical properties of drug molecules in the designing the dosage forms
2. Know the principles of chemical kinetics & to use them for stability testing and determination of expiry date of formulations
3. Demonstrate use of physicochemical properties in the formulation development and evaluation of dosage forms

Course Content:

Sr No	Topics	% weightage
1.	Colloidal dispersions: Classification of dispersed systems & their general characteristics, size & shapes of colloidal particles, classification of colloids & comparative account of their general properties. Optical, kinetic & electrical properties. Effect of electrolytes, coacervation, peptization & protective action	7
2.	Rheology: Newtonian systems, law of flow, kinematic viscosity, effect of temperature, non-Newtonian systems, pseudoplastic, dilatant, plastic, thixotropy, thixotropy in formulation, determination of viscosity, capillary, falling Sphere, rotational viscometers Deformation of solids: Plastic and elastic deformation, Heckel equation, Stress, Strain, Elastic Modulus	10
3.	Coarse dispersion: Suspension, interfacial properties of suspended particles, settling in suspensions, formulation of flocculated and deflocculated suspensions. Emulsions and theories of emulsification, microemulsion and multiple emulsions; Stability of emulsions, preservation of emulsions, rheological properties of emulsions and emulsion formulation by HLB method	10
4.	Micromeritics: Particle size and distribution, mean particle size, number and weight distribution, particle number, methods for determining particle size by different methods, counting and separation method, particle shape, specific surface, methods for determining surface area, permeability, adsorption, derived properties of powders, porosity, packing arrangement, densities, bulkiness & flow properties.	10
5.	Drug stability: Reaction kinetics: zero, pseudo-zero, first & second order, units of basic rate constants, determination of reaction order. Physical and chemical factors influencing the chemical degradation of pharmaceutical product: temperature, solvent, ionic strength, dielectric constant, specific & general acid base catalysis, Simple numerical problems. Stabilization of medicinal agents	10

	against common reactions like hydrolysis & oxidation. Accelerated stability testing in expiration dating of pharmaceutical dosage forms. Photolytic degradation and its prevention	
--	--	--

PHYSICAL PHARMACEUTICS- II (Practical)

1. Determination of particle size, particle size distribution using sieving method
2. Determination of particle size, particle size distribution using Microscopic method
3. Determination of bulk density, true density and porosity
4. Determine the angle of repose and influence of lubricant on angle of repose
5. Determination of viscosity of liquid using Ostwald's viscometer
6. Determination sedimentation volume with effect of different suspending agent
7. Determination sedimentation volume with effect of different concentration of single suspending agent
8. Determination of viscosity of semisolid by using Brookfield viscometer
9. Determination of reaction rate constant first order.
10. Determination of reaction rate constant second order
11. Accelerated stability studies

6. Liberman H.A, Lachman C, Pharmaceutical dosage forms. Disperse systems, volume 1,2, 3. Marcel Dekkar Inc.
7. Physical Pharmaceutics by Ramasamy C, and Manavalan R.

Baldania

Subject Name: Pharmacology-I

Subject Code: 13PH0404

Scope: The main purpose of the subject is to understand what drugs do to the living organisms and how their effects can be applied to therapeutics. The subject covers the information about the drugs like, mechanism of action, physiological and biochemical effects (pharmacodynamics) as well as absorption, distribution, metabolism and excretion (pharmacokinetics) along with the adverse effects, clinical uses, interactions, doses, contraindications and routes of administration of different classes of drugs.

Objectives: Upon completion of the course the student shall be able to

1. Understand the pharmacological actions of different categories of drugs
2. Explain the mechanism of drug action at organ system/sub cellular/ macromolecular levels
3. Apply the basic pharmacological knowledge in the prevention and treatment of various diseases.
4. Observe the effect of drugs on animals by simulated experiments
5. Appreciate correlation of pharmacology with other bio medical sciences

Course Content:

Sr No	Topics	% weightage
1.	General Pharmacology a. Introduction to Pharmacology- Definition, historical landmarks and scope of pharmacology, nature and source of drugs, essential drugs concept and routes of drug administration, Agonists, antagonists(competitive and noncompetitive), spare receptors, addiction, tolerance, dependence, tachyphylaxis, idiosyncrasy, allergy. b. Pharmacokinetics- Membrane transport, absorption, distribution, metabolism and excretion of drugs .Enzyme induction, enzyme inhibition, kinetics of elimination	8
2.	General Pharmacology a. Pharmacodynamics- Principles and mechanisms of drug action. Receptor theories and classification of receptors, regulation of receptors. drug receptors interactions signal transduction mechanisms, G-protein– coupled receptors, ion channel receptor, transmembrane enzyme linked receptors, transmembrane JAK-STAT binding receptor and receptors that regulate transcription factors, dose response relationship, therapeutic index, combined effects of drugs and factors modifying drug action. b. Adverse drug reactions. c. Drug interactions (pharmacokinetic and pharmacodynamic) d. Drug discovery and clinical evaluation of new drugs -Drug discovery phase, preclinical evaluation phase, clinical trial phase, phases of clinical trials and pharmacovigilance.	12
3.	Pharmacology of drugs acting on peripheral nervous system a. Organization and function of ANS. b. Neurohumoral transmission, co-transmission and classification of neurotransmitters.	10

	c. Parasympathomimetics, Parasympatholytics, Sympathomimetics, sympatholytics. d. Neuromuscular blocking agents and skeletal muscle relaxants (peripheral). e. Local anesthetic agents. f. Drugs used in myasthenia gravis and glaucoma	
4.	Pharmacology of drugs acting on central nervous system a. Neurohumoral transmission in the C.N.S. special emphasis on importance of various neurotransmitters like with GABA, Glutamate, Glycine, serotonin, dopamine. b. General anesthetics and pre-anesthetics. c. Sedatives, hypnotics and centrally acting muscle relaxants. d. Anti-epileptics e. Alcohols and disulfiram	8
5.	Pharmacology of drugs acting on central nervous system a. Psychopharmacological agents: Antipsychotics, antidepressants, anti-anxiety agents, anti-manics and hallucinogens. b. Drugs used in Parkinsons disease and Alzheimer's disease. c. CNS stimulants and nootropics. d. Opioid analgesics and antagonists e. Drug addiction, drug abuse, tolerance and dependence.	7

PHYSICAL PHARMACEUTICS- II (Practical)

1. Introduction to experimental pharmacology.
2. Commonly used instruments in experimental pharmacology.
3. Study of common laboratory animals.
4. Maintenance of laboratory animals as per CPCSEA guidelines.
5. Common laboratory techniques. Blood withdrawal, serum and plasma separation, anesthetics and euthanasia used for animal studies.
6. Study of different routes of drugs administration in mice/rats.
7. Study of effect of hepatic microsomal enzyme inducers on the phenobarbitone sleeping time in mice.
8. Effect of drugs on ciliary motility of frog oesophagus
9. Effect of drugs on rabbit eye.
10. Effects of skeletal muscle relaxants using rota-rod apparatus.
11. Effect of drugs on locomotor activity using actophotometer.
12. Anticonvulsant effect of drugs by MES and PTZ method.
13. Study of stereotype and anti-catatonic activity of drugs on rats/mice.
14. Study of anxiolytic activity of drugs using rats/mice.
15. Study of local anesthetics by different methods

Note: All laboratory techniques and animal experiments are demonstrated by simulated experiments by softwares and videos

Faculty of Pharmacy
B. Pharm. | Semester: 4
Subject Name: Pharmaceutical Jurisprudence

Subject Code: 13PH0405

Scope: This course is designed to impart basic knowledge on important legislations related to the profession of pharmacy in India

Objectives: Upon completion of the course the student shall be able to

1. The Pharmaceutical legislations and their implications in the development and marketing of pharmaceuticals
2. Various Indian pharmaceutical Acts and Laws
3. The regulatory authorities and agencies governing the manufacture and sale of pharmaceuticals
4. The code of ethics during the pharmaceutical practice

Course Content:

Sr No	Topics	% weightage
1.	Drugs and Cosmetics Act, 1940 and its rules 1945: Objectives, Definitions, Legal definitions of schedules to the Act and Rules Import of drugs – Classes of drugs and cosmetics prohibited from import, Import under license or permit. Offences and penalties. Manufacture of drugs – Prohibition of manufacture and sale of certain drugs, Conditions for grant of license and conditions of license for manufacture of drugs, Manufacture of drugs for test, examination and analysis, manufacture of new drug, loan license and repacking license.	10
2.	Drugs and Cosmetics Act, 1940 and its rules 1945. Detailed study of Schedule G, H, M, N, P,T,U, V, X, Y, Part XII B, Sch F & DMR(OA) Sale of Drugs – Wholesale, Retail sale and Restricted license. Offences and penalties Labeling & Packing of drugs- General labeling requirements and specimen labels for drugs and cosmetics, List of permitted colors. Offences and penalties. Administration of the Act and Rules – Drugs Technical Advisory Board, Central drugs Laboratory, Drugs Consultative Committee, Government drug analysts, Licensing authorities, controlling authorities, Drugs Inspectors	10
3.	Pharmacy Act –1948: Objectives, Definitions, Pharmacy Council of India; its constitution and functions, Education Regulations, State and Joint state pharmacy councils; constitution and functions, Registration of Pharmacists, Offences and Penalties Medicinal and Toilet Preparation Act –1955: Objectives, Definitions, Licensing, Manufacture In bond and Outside bond, Export of alcoholic preparations, Manufacture of Ayurvedic, Homeopathic, Patent & Proprietary Preparations. Offences and Penalties.	10

	Narcotic Drugs and Psychotropic substances Act-1985 and Rules: Objectives, Definitions, Authorities and Officers, Constitution and Functions of narcotic & Psychotropic Consultative Committee, National Fund for Controlling the Drug Abuse, Prohibition, Control and Regulation, opium poppy cultivation and production of poppy straw, manufacture, sale and export of opium, Offences and Penalties	
4.	Study of Salient Features of Drugs and Magic Remedies Act and its rules: Objectives, Definitions, Prohibition of certain advertisements, Classes of Exempted advertisements, Offences and Penalties Prevention of Cruelty to animals Act-1960: Objectives, Definitions, Institutional Animal Ethics Committee, CPCSEA guidelines for Breeding and Stocking of Animals, Performance of Experiments, Transfer and acquisition of animals for experiment, Records, Power to suspend or revoke registration, Offences and Penalties National Pharmaceutical Pricing Authority: Drugs Price Control Order (DPCO)- 2013. Objectives, Definitions, Sale prices of bulk drugs, Retail price of formulations, Retail price and ceiling price of scheduled formulations, National List of Essential Medicines (NLEM)	8
5.	Pharmaceutical Legislations – A brief review, Introduction, Study of drugs enquiry committee, Health survey and development committee, Hathi committee and Mudaliar committee Code of Pharmaceutical ethics Definition, Pharmacist in relation to his job, trade, medical profession and his profession, Pharmacist's oath Medical Termination of Pregnancy Act Right to Information Act Introduction to Intellectual Property Rights (IPR)	7

Syllabus | Semester: 5

Course code with name: 13PH0501 Medicinal Chemistry-II

Scope: This subject is designed to impart fundamental knowledge on the structure, chemistry and therapeutic value of drugs. The subject emphasizes on structure activity relationships of drugs, importance of physicochemical properties and metabolism of drugs. The syllabus also emphasizes on chemical synthesis of important drugs under each class.

Objectives: Upon completion of the course the student shall be able to

- Understand the chemistry of drugs with respect to their pharmacological activity
- Understand the drug metabolic pathways, adverse effect and therapeutic value of drugs
- Know the Structural Activity Relationship of different class of drugs
- Study the chemical synthesis of selected drugs

Teaching and examination scheme:

Teaching scheme (Hours/week)			Total credits	Examination scheme					Total Marks
Theory	Tutorial	Practical		CSE	IA	ESE	Term work	Viva	
3	1	0	4	10	15	75	0	0	100

Theory syllabus:

Teaching hours: 45 Hours

Unit-1

10 Hours

Antihistaminic agents: Histamine, receptors and their distribution in the human body. **H1-**

antagonists: Diphenhydramine hydrochloride*, Dimenhydrinate, Doxylamines succinate, Clemastine fumarate, Diphenylpyraline hydrochloride, Tripelenamine hydrochloride, Chlorcyclizine hydrochloride, Meclizine hydrochloride, Buclizine hydrochloride, Chlorpheniramine maleate, Triprolidine hydrochloride*, Phenidamine tartarate, Promethazine hydrochloride*, Trimeprazine tartrate, Cyproheptadine hydrochloride, Azatidine maleate, Astemizole, Loratadine, Cetirizine, Levocetrazine Cromolyn sodium.

H2-antagonists: Cimetidine*, Famotidine, Ranitidin.

Gastric Proton pump inhibitors: Omeprazole, Lansoprazole, Rabeprazole, Pantoprazole.

Anti-neoplastic agents:

Alkylating agents: Meclorothamine*, Cyclophosphamide, Melphalan Chlorambucil, Busulfan, Thiotepa. **Antimetabolites:** Mercaptopurine*, Thioguanine, Fluorouracil, Floxuridine, Cytarabine, Methotrexate*, Azathioprine. **Antibiotics:** Dactinomycin, Daunorubicin, Doxorubicin, Bleomycin.

Plant products: Etoposide, Vinblastin sulphate, Vincristin sulphate. **Miscellaneous:** Cisplatin, Mitotane.

Unit-2

10 Hours

Anti-anginal:

Vasodilators: Amyl nitrite, Nitroglycerin*, Pentaerythritol tetranitrate, Isosorbide dinitrite*, Dipyridamole. **Calcium channel blockers:** Verapamil, Bepridil hydrochloride, Diltiazem hydrochloride, Nifedipine, Amlodipine, Felodipine, Nicardipine, Nimodipine. **Diuretics:** Carbonic anhydrase inhibitors: Acetazolamide*, Methazolamide, Dichlorphenamide. Thiazides: Chlorthiazide*, Hydrochlorothiazide, Hydroflumethiazide, Cyclothiazide, Loop diuretics: Furosemide*, Bumetanide, Ethacrynic acid. Potassium sparing Diuretics: Spironolactone, Triamterene, Amiloride. Osmotic Diuretics: Mannitol. **Anti-hypertensive**

Baldania

Agents: Timolol, Captopril, Lisinopril, Enalapril, Benazepril hydrochloride, Quinapril hydrochloride, Methyldopate hydrochloride,* Clonidine hydrochloride, Guanethidine monosulphate, Guanabenz acetate, Sodium nitroprusside, Diazoxide, Minoxidil, Reserpine, Hydralazine hydrochloride.

Unit-3

10 Hours

Anti-arrhythmic Drugs: Quinidine sulphate, Procainamide hydrochloride, Disopyramide phosphate*, Phenytoin sodium, Lidocaine hydrochloride, Tocainide hydrochloride, Mexiletine hydrochloride, Lorcaïnide hydrochloride, Amiodarone, Sotalol.

Anti-hyperlipidemic agents: Clofibrate, Lovastatin, Cholesteramine and Cholestipol. **Coagulant & Anticoagulants:** Menadione, Acetomenadione, Warfarin*, Anisindione, clopidogrel.

Drugs used in Congestive Heart Failure: Digoxin, Digitoxin, Nesiritide, Bosentan, Tezosentan.

Unit-4

8 Hours

Drugs acting on Endocrine system: Nomenclature, Stereochemistry and metabolism of steroids.

Sex hormones: Testosterone, Nandralone, Progesterones, Oestriol, Oestradiol, Oestrone, Diethyl stilbestrol. **Drugs for erectile dysfunction:** Sildenafil, Tadalafil. **Oral contraceptives:** Mifepristone, Norgestrel, Levonorgestrol. **Corticosteroids:** Cortisone, Hydrocortisone, Prednisolone, Betamethasone, Dexamethasone. **Thyroid and antithyroid drugs:** L-Thyroxine, L-Thyronine, Propylthiouracil, Methimazole.

Unit-5

7 Hours

Antidiabetic agents: Insulin and its preparations Sulfonyl ureas: Tolbutamide*, Chlorpropamide, Glipizide, Glimpiride. Biguanides: Metformin. Thiazolidinediones: Pioglitazone, Rosiglitazone. Meglitinides: Repaglinide, Nateglinide. Glucosidase inhibitors: Acarbose, Voglibose. **Local Anesthetics:** SAR of Local anesthetics.

Benzoic Acid derivatives: Cocaine, Hexylcaine, Meprylcaine, Cyclomethycaine, Piperocaine. **Amino**

Benzoic acid derivatives: Benzocaine*, Butamben, Procaine*, Butacaine, Propoxycaïne, Tetracaine, Benoxinate. **Lidocaine/Anilide derivatives:** Lignocaine, Mepivacaine, Prilocaine, Etidocaine.

Miscellaneous: Phenacaine, Dipiperodon, Dibucaine.*

Study of the development of the following classes of drugs, Classification, mechanism of action, uses of drugs mentioned in the course, Structure activity relationship of selective class of drugs as specified in the course and synthesis of drugs superscripted ()*

Tutorials will be based on above syllabus.

Teaching hours: 15 Hours

Recommended Books (Latest edition):

- Wilson and Giswold's Organic medicinal and Pharmaceutical Chemistry.
- Foye's Principles of Medicinal Chemistry.
- Burger's Medicinal Chemistry, Vol I to IV.

- Remington's Pharmaceutical Sciences.
- Martindale's extra pharmacopoeia.
- Organic Chemistry by I.L. Finar, Vol. II.
- The Organic Chemistry of Drug Synthesis by Lednicer, Vol. 1 to 5.
- Indian Pharmacopoeia.
- Text book of practical organic chemistry- A.I. Vogel.

Batdania

Syllabus | Semester: 5

Course code with name: **13PH0502 Pharmacology-II**

Scope: This subject is intended to impart the fundamental knowledge on various aspects (classification, mechanism of action, therapeutic effects, clinical uses, side effects and contraindications) of drugs acting on different systems of body and in addition, emphasis on the basic concepts of bioassay.

Objectives: Upon completion of the course the student shall be able to

- Understand the mechanism of drug action and its relevance in the treatment of different diseases.
- Demonstrate isolation of different organs/tissues from the laboratory animals by simulated experiments.
- Demonstrate the various receptor actions using isolated tissue preparation.
- Appreciate correlation of pharmacology with related medical sciences.

Teaching and examination scheme:

Teaching scheme (Hours/week)			Total credits	Examination scheme					Total Marks
Theory	Tutorial	Practical		CSE	IA	ESE	Term work	Viva	
3	1	4	6	10	15	75	15	35	150

Theory syllabus:

Teaching hours: 45 Hours

Unit-1

10 Hours

Pharmacology of drugs acting on cardio vascular system: Introduction to hemodynamic and electrophysiology of heart. Drugs used in congestive heart failure. Anti-hypertensive drugs. Anti-anginal drugs. Anti-arrhythmic drugs. Anti-hyperlipidemic drugs.

Unit-2

10 Hours

Pharmacology of drugs acting on cardio vascular system: Drug used in the therapy of shock. Hematinics, coagulants and anticoagulants. Fibrinolytics and anti-platelet drugs. Plasma volume expanders.

Pharmacology of drugs acting on urinary system: Diuretics, Anti-diuretics.

Unit-3

10 Hours

Autocoids and related drugs: Introduction to autocoids and classification. Histamine, 5-HT and their antagonists. Prostaglandins, Thromboxanes and Leukotrienes. Angiotensin, Bradykinin and Substance P. Non-steroidal anti-inflammatory agents. Anti-gout drugs. Antirheumatic drugs.

Unit-4

8 Hours

Pharmacology of drugs acting on endocrine system: Basic concepts in endocrine pharmacology. Anterior Pituitary hormones- analogues and their inhibitors. Thyroid hormones- analogues and their inhibitors. Hormones regulating plasma calcium level- Parathormone, Calcitonin and Vitamin-D. Insulin, Oral Hypoglycemic agents and glucagon. ACTH and corticosteroids.

Baldania

Unit-5**7 Hours**

Pharmacology of drugs acting on endocrine system: Androgens and Anabolic steroids. Estrogens, progesterone and oral contraceptives. Drugs acting on the uterus.

Bioassay: Principles and applications of bioassay. Types of bioassay. Bioassay of insulin, oxytocin, vasopressin, ACTH, d-tubocurarine, digitalis, histamine and 5-HT

Tutorials will be based on above syllabus.

Teaching hours: 15 Hours

Practical syllabus:

Teaching hours: 04 Hours/week

- Introduction to in-vitro pharmacology and physiological salt solutions.
- Effect of drugs on isolated frog heart.
- Effect of drugs on blood pressure and heart rate of dog.
- Study of diuretic activity of drugs using rats/mice.
- DRC of acetylcholine using frog rectus abdominis muscle.
- Effect of physostigmine and atropine on DRC of acetylcholine using frog rectus abdominis muscle and rat ileum respectively.

Bioassay of histamine using guinea pig ileum by matching method.

Bioassay of oxytocin using rat uterine horn by interpolation method.

Bioassay of serotonin using rat fundus strip by three point bioassay.

Bioassay of acetylcholine using rat ileum/colon by four point bioassay.

Determination of PA₂ value of prazosin using rat anococcygeus muscle (by Schild's plot method).

Determination of PD₂ value using guinea pig ileum.

Effect of spasmogens and spasmolytics using rabbit jejunum.

Anti-inflammatory activity of drugs using carrageenan induced paw-edema model.

Analgesic activity of drug using central and peripheral methods.

Note: All laboratory techniques and animal experiments are demonstrated by simulated experiments by softwares and videos.

Syllabus | Semester: 5

Course code with name: **13PH0503 Pharmacognosy and Phytochemistry-II**

Scope: The main purpose of subject is to impart the students the knowledge of how the secondary metabolites are produced in the crude drugs, how to isolate and identify and produce them industrially. Also this subject involves the study of producing the plants and phytochemicals through plant tissue culture, drug interactions and basic principles of traditional system of medicine.

Objectives: Upon completion of the course the student shall be able to

- ☐ To know the modern extraction techniques, characterization and identification of the herbal drugs and phytoconstituents.
- ☐ To understand the preparation and development of herbal formulation.
- ☐ To understand the herbal drug interactions.
- ☐ To carry out isolation and identification of phytoconstituents.

Teaching and examination scheme:

Teaching scheme (Hours/week)			Total credits	Examination scheme					Total Marks
Theory	Tutorial	Practical		CSE	IA	ESE	Term work	Viva	
3	1	4	6	10	15	75	15	35	150

Theory syllabus:

Teaching hours: 45 Hours

Unit-1

7 Hours

Metabolic pathways in higher plants and their determination: a) Brief study of basic metabolic pathways and formation of different secondary metabolites through these pathways- Shikimic acid pathway, Acetate pathways and Amino acid pathway. b) Study of utilization of radioactive isotopes in the investigation of Biogenetic studies.

Unit-2

14 Hours

General introduction, composition, chemistry & chemical classes, biosources, therapeutic uses and commercial applications of following secondary metabolites: **Alkaloids:** Vinca, Rauwolfia, Belladonna, Opium, **Phenylpropanoids and Flavonoids:** Lignans, Tea, Ruta, **Steroids, Cardiac Glycosides & Triterpenoids:** Liquorice, Dioscorea, Digitalis, **Volatile oils:** Mentha, Clove, Cinnamon, Fennel, Coriander, **Tannins:** Catechu, Pterocarpus, **Resins:** Benzoin, Guggul, Ginger, Asafoetida, Myrrh, Colophony, **Glycosides:** Senna, Aloes, Bitter Almond, **Iridoids, other terpenoids & Naphthaquinones:** Gentian, Artemisia, taxus, carotenoids.

Unit-3

6 Hours

Isolation, Identification and Analysis of Phytoconstituents: a) Terpenoids: Menthol, Citral, Artemisin, b) Glycosides: Glycyrrhetic acid & Rutin, c) Alkaloids: Atropine, Quinine, Reserpine, Caffeine, d) Resins: Podophyllotoxin, Curcumin.

Unit-4

10 Hours

Baldania

Industrial production, estimation and utilization of the following phytoconstituents: Forskolin, Sennoside, Artemisinin, Diosgenin, Digoxin, Atropine, Podophyllotoxin, Caffeine, Taxol, Vincristine and Vinblastine.

Unit-5

8 Hours

Basics of Phytochemistry: Modern methods of extraction, application of latest techniques like Spectroscopy, chromatography and electrophoresis in the isolation, purification and identification of crude drugs.

Tutorials will be based on above syllabus.

Teaching hours: 15 Hours

Practical syllabus:

Teaching hours: 04 Hours/week

- ☐ Morphology, histology and powder characteristics & extraction & detection of: Cinchona, Cinnamon, Senna, Clove, Ephedra, Fennel and Coriander.
- ☐ Exercise involving isolation & detection of active principles:
 - a☐ Caffeine - from tea dust.
 - ☐ Diosgenin from Dioscorea
 - c☐ Atropine from Belladonna
 - d☐ Sennosides from Senna
- ☐ Separation of sugars by Paper chromatography.
- ☐ TLC of herbal extract.
- ☐ **Distillation of volatile oils and detection of phytoconstituents by TLC.**
- ☐ **Analysis of crude drugs by chemical tests: (i) Asafoetida (ii) Benzoin (iii) Colophony (iv) Aloes (v) Myrrh.**

Recommended Books (Latest edition):

- ☐ W.C.Evans, Trease and Evans Pharmacognosy, 16th edition, W.B. Saunders & Co., London,2009.
- ☐ Mohammad Ali. Pharmacognosy and Phytochemistry, CBS Publishers & Distribution, NewDelhi.
- ☐ Text book of Pharmacognosy by C.K. Kokate, Purohit, Gokhlae (2007), 37th Edition, Nirali Prakashan, New Delhi.
- ☐ Herbal drug industry by R.D. Choudhary (1996), Ist Edn, Eastern Publisher, New Delhi.
- ☐ Essentials of Pharmacognosy, Dr.SH.Ansari, IInd edition, Birla publications, New Delhi,2007.
- ☐ Herbal Cosmetics by H.Pande, Asia Pacific Business press, Inc, New Delhi.
- ☐ A.N. Kalia, Textbook of Industrial Pharmacognosy, CBS Publishers, New Delhi, 2005.
- ☐ R Endress, Plant cell Biotechnology, Springer-Verlag, Berlin, 1994.
- ☐ Pharmacognosy & Pharmacobiotechnology. James Bobbers, Marilyn KS, VE Tylor.
- ☐☐ The formulation and preparation of cosmetic, fragrances and flavours.
- ☐☐ Remington's Pharmaceutical sciences.
- ☐☐ Text Book of Biotechnology by Vyas and Dixit.
- ☐☐ Text Book of Biotechnology by R.C. Dubey.

Baldania

Syllabus | Semester: 5

Course code with name: **13PH0504 Pharmaceutical Microbiology**

Scope: Study of all categories of microorganisms especially for the production of alcohol antibiotics, vaccines, vitamins enzymes etc.

Objectives: Upon completion of the course the student shall be able to

- ☐ Understand methods of identification, cultivation and preservation of various microorganisms.
- ☐ To understand the importance and implementation of sterilization in pharmaceutical processing and industry.
- ☐ Learn sterility testing of pharmaceutical products.
- ☐ Carried out microbiological standardization of Pharmaceuticals.
- ☐ Understand the cell culture technology and its applications in pharmaceutical industries.

Teaching and examination scheme:

Teaching scheme (Hours/week)			Total credits	Examination scheme					Total Marks
Theory	Tutorial	Practical		CSE	IA	ESE	Term work	Viva	
3	1	4	6	10	15	75	15	35	150

Theory syllabus:

Teaching hours: 45 Hours

Unit-1

10 Hours

Introduction, history of microbiology, its branches, scope and its importance. Introduction to Prokaryotes and Eukaryotes : Study of ultra-structure and morphological classification of bacteria, nutritional requirements, raw materials used for culture media and physical parameters for growth, growth curve, isolation and preservation methods for pure cultures, cultivation of anaerobes, quantitative measurement of bacterial growth (total & viable count). Study of different types of phase contrast microscopy, dark field microscopy and electron microscopy.

Unit-2

10 Hours

Identification of bacteria using staining techniques (simple, Gram's & Acid fast staining) and biochemical tests (IMViC). Study of principle, procedure, merits, demerits and applications of physical, chemical gaseous, radiation and mechanical method of sterilization. Evaluation of the efficiency of sterilization methods. Equipments employed in large scale sterilization. Sterility indicators.

Unit-3

10 Hours

Study of morphology, classification, reproduction/replication and cultivation of Fungi and Viruses. Classification and mode of action of disinfectants Factors influencing disinfection, antiseptics and their evaluation. For bacteriostatic and bactericidal actions. Evaluation of bactericidal & Bacteriostatic. Sterility testing of products (solids, liquids, ophthalmic and other sterile products) according to IP, BP and USP.

Unit-4

8 Hours

Baldania

Designing of aseptic area, laminar flow equipments; study of different sources of contamination in an aseptic area and methods of prevention, clean area classification. Principles and methods of different microbiological assay. Methods for standardization of antibiotics, vitamins and amino acids. Assessment of a new antibiotic.

Unit-5

7 Hours

Types of spoilage, factors affecting the microbial spoilage of pharmaceutical products, sources and types of microbial contaminants, assessment of microbial contamination and spoilage. Preservation of pharmaceutical products using antimicrobial agents, evaluation of microbial stability of formulations. Growth of animal cells in culture, general procedure for cell culture, Primary, established and transformed cell cultures. Application of cell cultures in pharmaceutical industry and research.

Tutorials will be based on above syllabus.

Teaching hours: 15 Hours

Practical syllabus:

Teaching hours: 04 Hours/week

- Introduction and study of different equipments and processing, e.g., B.O.D. incubator, laminar flow, aseptic hood, autoclave, hot air sterilizer, deep freezer, refrigerator, microscopes used in experimental microbiology.
- Sterilization of glassware, preparation and sterilization of media.
- Sub culturing of bacteria and fungus. Nutrient stabs and slants preparations.
- Staining methods- Simple, Grams staining and acid fast staining (Demonstration with practical).
- Isolation of pure culture of micro-organisms by multiple streak plate technique and other techniques.
- Microbiological assay of antibiotics by cup plate method and other methods.
- Motility determination by Hanging drop method.
- Sterility testing of pharmaceuticals.
- Bacteriological analysis of water.
- 10. Biochemical test.

Recommended Books (Latest edition):

- W.B. Hugo and A.D. Russel: Pharmaceutical Microbiology, Blackwell Scientific publications, Oxford London.
- Prescott and Dunn., Industrial Microbiology, 4th edition, CBS Publishers & Distributors, Delhi.

Baldania

Syllabus | Semester: 5

Course code with name: **13PH0505 Pharmaceutical Biotechnology**

Scope: Biotechnology has a long promise to revolutionize the biological sciences and technology. Scientific application of biotechnology in the field of genetic engineering, medicine and fermentation technology makes the subject interesting. Biotechnology is leading to new biological revolutions in diagnosis, prevention and cure of diseases, new and cheaper pharmaceutical drugs. Biotechnology has already produced transgenic crops and animals and the future promises lot more. It is basically a research-based subject.

Objectives: Upon completion of the course the student shall be able to

- Understanding the importance of Immobilized enzymes in Pharmaceutical Industries.
- Genetic engineering applications in relation to production of pharmaceuticals.
- Importance of Monoclonal antibodies in Industries.
- Appreciate the use of microorganisms in fermentation technology.

Teaching and examination scheme:

Teaching scheme (Hours/week)			Total credits	Examination scheme					Total Marks
Theory	Tutorial	Practical		CSE	IA	ESE	Term work	Viva	
3	1	0	6	10	15	75	0	0	100

Theory syllabus:

Teaching hours: 45 Hours

Unit-1

10 Hours

a) Brief introduction to Biotechnology with reference to Pharmaceutical Sciences. b) Enzyme Biotechnology- Methods of enzyme immobilization and applications. c) Biosensors- Working and applications of biosensors in Pharmaceutical Industries. d) Brief introduction to Protein Engineering. e) **Use of microbes in industry. Production of Enzymes- General consideration - Amylase, Catalase, Peroxidase, Lipase, Protease, Penicillinase.** f) **Basic principles of genetic engineering.**

Unit-2

10 Hours

a) Study of cloning vectors, restriction endonucleases and DNA ligase. b) **Recombinant DNA technology. Application of genetic engineering in medicine. c) Application of rDNA technology and genetic engineering in the production of: i) Interferon, ii) Vaccines: hepatitis- B, iii) Hormones- Insulin. d) Brief introduction to PCR.**

Unit-3

10 Hours

Types of immunity- humoral immunity, cellular immunity: a) Structure of Immunoglobulins. Structure and Function of MHC. c) Hypersensitivity reactions, Immune stimulation and Immune suppressions. d) **General method of the preparation of bacterial vaccines, toxoids, viral vaccine, antitoxins, serum-immune blood derivatives and other products relative to immunity. e) Storage conditions and stability of official vaccines. f) Hybridoma technology- Production, Purification and Applications. g) Blood products and Plasma Substitutes.**

Unit-4

8 Hours

Baldania

a) Immuno blotting techniques- ELISA, Western blotting, Southern blotting. b) Genetic organization of Eukaryotes and Prokaryotes. c) Microbial genetics including transformation, transduction, conjugation, plasmids and transposons. d) Introduction to Microbial biotransformation and applications. e) Mutation: Types of mutation/mutants.

Unit-5

7 Hours

a) Fermentation methods and general requirements, study of media, equipments, sterilization methods, aeration process, stirring. b) Large scale production fermenter design and its various controls. c) Study of the production of - penicillins, citric acid, Vitamin B12, Glutamic acid, Griseofulvin. d) Blood Products: Collection, Processing and Storage of whole human blood, dried human plasma, plasma Substitutes.

Tutorials will be based on above syllabus.

Teaching hours: 15 Hours

Recommended Books (Latest edition):

- B.R. Glick and J.J. Pasternak: Molecular Biotechnology: Principles and Applications of Recombinant DNA: ASM Press Washington D.C.
- RA Goldshy et. al., : Kuby Immunology.
- J.W. Goding: Monoclonal Antibodies.
- J.M. Walker and E.B. Gingold: Molecular Biology and Biotechnology by Royal Society of Chemistry.
- Zaborsky: Immobilized Enzymes, CRC Press, Degraland, Ohio.
- S.B. Primrose: Molecular Biotechnology (Second Edition) Blackwell Scientific Publication.
- Stanbury F., P., Whitakar A., and Hall J., S., Principles of fermentation technology, 2nd edition, Aditya books Ltd., New Delhi.

FACULTY OF PHARMACY | B. Pharmacy

SYLLABUS | Semester-6

Subject code: 13PH0601

Subject name: Medicinal chemistry-III

Scope: This subject is designed to impart fundamental knowledge on the structure, chemistry, and therapeutic value of drugs. The subject emphasis on modern techniques of rational drug design like quantitative structure-activity relationship (QSAR), Prodrug concept, combinatorial chemistry, and Computer-aided drug design (CADD). The subject also emphasizes the chemistry, mechanism of action, metabolism, adverse effects, Structure-Activity Relationships (SAR), therapeutic uses, and synthesis of important drugs.

Objective: Upon completion of the course the student shall be able to:

- Understand the importance of drug design and different techniques of drug design.
- Understand the chemistry of drugs with respect to their biological activity.
- Know the metabolism, adverse effects and therapeutic value of drugs.
- Know the importance of SAR of drugs.

Teaching and assessment scheme:

Teaching Scheme (Hours)			Credits	Theory/ Tutorial Marks			Practical Marks		Total Marks
Theory	Tutorial	Practical		CSE	IA (I)	ESE (E)	TW	Viva (V)	
3	1	4	6	10	15	75	15	35	150

Theory syllabus:

Teaching hours: 45 Hours

Unit-1

10 Hours

Antibiotics: Historical background, Nomenclature, Stereochemistry, Structure-activity relationship, Chemical degradation classification, and important products of the following classes.

w.e.f. academic year (AY) 2020-21 and onwards

Page 2 of 2

Beta-Lactam antibiotics: Penicillin, Cephalosporins, Beta-Lactamase inhibitors, Monobactams. Aminoglycosides: Streptomycin, Neomycin, Kanamycin.

Tetracyclines: Tetracycline, Oxytetracycline, Chlortetracycline, Minocycline, Doxycycline.

Unit-2

10 Hours

Antibiotics: Historical background, Nomenclature, Stereochemistry, Structure-activity relationship, Chemical degradation classification, and important products of the following classes. Macrolide: Erythromycin, Clarithromycin, Azithromycin. Miscellaneous: Chloramphenicol*, Clindamycin. Prodrugs: Basic concepts and application of prodrugs design. Antimalarials: Etiology of malaria. Quinolines: SAR, Quinine sulfate, Chloroquine*, Amodiaquine, Primaquine phosphate, Pamaquine*, Quinacrine hydrochloride, Mefloquine. Biguanides and dihydro triazines: Cycloguanil pamoate, Proguanil. Miscellaneous: Pyrimethamine, Artesunate, Artemether, Atovaquone.

Unit-3

10 Hours

Synthetic anti-tubercular agents: Isoniazid*, Ethionamide, Ethambutol, Pyrazinamide, Para aminosalicylic acid.* Anti-tubercular antibiotics: Rifampicin, Rifabutin, Cycloserine, Streptomycin, Capreomycin sulfate. Urinary tract anti-infective agents: Quinolones: SAR of quinolones, Nalidixic Acid, Norfloxacin, Enoxacin, Ciprofloxacin*, Ofloxacin, Lomefloxacin, Sparfloxacin, Gatifloxacin, Moxifloxacin. Miscellaneous: Furazolidone, Nitrofurantoin*, Methanamine. Antiviral agents: Amantadine hydrochloride, Rimantadine hydrochloride,

Batdania

Idoxuridine trifluoride, Acyclovir*, Gancyclovir, Zidovudine, Didanosine, Zalcitabine, Lamivudine, Loviride, Delavirding, Ribavirin, Saquinavir, Indinavir, Ritonavir.

Unit-4

8 Hours

Antifungal agents: Antifungal antibiotics: Amphotericin-B, Nystatin, Natamycin, Griseofulvin Synthetic Antifungal agents: Clotrimazole, Econazole, Butoconazole, Oxiconazole Tioconazole, Miconazole*, Ketoconazole, Terconazole, Itraconazole, Fluconazole, Naftifine hydrochloride, Tolnaftate*. Anti-protozoal Agents: Metronidazole*, Tinidazole, Ornidazole, Diloxanide, Iodoquinol, Pentamidine Isethionate, Atovaquone, Eflornithine. Anthelmintics: Diethylcarbamazine citrate*, Thiabendazole, Mebendazole*, Albendazole, Niclosamide, Oxamniquine, Praziquantel, Ivermectin. Sulphonamides and Sulfones: Historical development, chemistry, classification, and SAR of Sulfonamides: Sulphamethizole, Sulfisoxazole, Sulphamethizine, Sulfacetamide*, Sulphapyridine, Sulfamethoxazole*, Sulphadiazine, Mefenide acetate, Sulfasalazine Folate reductase inhibitors: Trimethoprim*, Cotrimoxazole Sulfones: Dapsone*.

Unit-5

7 Hours

Introduction to Drug Design: Various approaches used in drug design. Physicochemical parameters used in a quantitative structure-activity relationship (QSAR) such as partition coefficient, Hammett's electronic parameter, Taft's steric parameter, and Hansch analysis Pharmacophore modeling and docking techniques. Combinatorial Chemistry: Concept and applications of Combinatorial chemistry solid phase and solution phase synthesis.

Tutorials will be based on the above syllabus.

Teaching hours: 15 Hours

Practical syllabus:

Teaching hours: 04 Hours/week

- Preparation of Sulphanilamide.
- Preparation of 7-Hydroxy, 4-methyl coumarin.
- Preparation of Chlorobutanol.
- Preparation of Triphenyl imidazole.
- Preparation of Tolbutamide.
- Preparation of Hexamine.
- Assay of Isonicotinic acid hydrazide.
- Assay of Chloroquine.
- Assay of Metronidazole.
- Assay of Dapsone.
- Assay of Chlorpheniramine maleate.
- Assay of Benzylpenicillin.
- Preparation of medicinally important compounds or intermediates by microwave irradiation technique.
- Drawing structures and reactions using chem draw®.
- Determination of physicochemical properties such as logP, clogP, MR, Molecular weight, Hydrogen bond donors and acceptors for a class of drugs course content using drug design software Drug likeliness screening (Lipinski's RO5).

Subject code: **13PH0602**

Subject name: **Pharmacology-III**

Scope: This subject is intended to impart the fundamental knowledge on various aspects (classification, mechanism of action, therapeutic effects, clinical uses, side effects, and contraindications) of drugs acting on the respiratory and gastrointestinal system, infectious diseases, immuno-pharmacology and also, emphasis on the principles of toxicology and chrono-pharmacology.

Objective: Upon completion of this course the student should be able to:

- Understand the mechanism of drug action and its relevance in the treatment of different infectious diseases.
- Comprehend the principles of toxicology and treatment of various poisonings.
- Appreciate the correlation of pharmacology with related medical sciences.

Teaching and assessment scheme:

Teaching Scheme (Hours)			Credits	Theory/ Tutorial Marks			Practical Marks		Total Marks
Theory	Tutorial	Practical		CSE	IA (I)	ESE (E)	TW	Viva (V)	
3	1	4	6	10	15	75	15	35	150

Theory syllabus:

Teaching hours: 45 Hours

Unit-1

10 Hours

Pharmacology of drugs acting on the respiratory system:

- a Anti-asthmatic drugs.
- Drugs used in the management of COPD.
- c Expectorants and antitussives.
- d Nasal decongestants.
- e Respiratory stimulants.

Pharmacology of drugs acting on the Gastrointestinal Tract.

- a Antiulcer agents.
- Drugs for constipation and diarrhoea.
- c Appetite stimulants and suppressants.
- d Digestants and carminatives.
- e Emetics and anti-emetics.

Unit-2

10 Hours

Chemotherapy:

- a General principles of chemotherapy.
- Sulfonamides and cotrimoxazole.
- c Antibiotics: Penicillins, cephalosporins, chloramphenicol, macrolides, quinolones, and fluoroquinolones, tetracycline, and aminoglycosides.

Unit-3

10 Hours

Chemotherapy:

- a Antitubercular agents.
- Antileprotic agents.
- c Antifungal agents.

Baldania

- d □ Antiviral drugs.
- e □ Anthelmintics.
- Antimalarial drugs.
- g □ Antiamoebic agents.

Unit-4

8 Hours

Chemotherapy:

Urinary tract infections and sexually transmitted diseases, Chemotherapy of malignancy.

- a □ Immunopharmacology: Immunostimulants, Immunosuppressant.
- Protein drugs, monoclonal antibodies, target drugs to antigen, biosimilars.

Unit-5

7 Hours

Principles of toxicology

- a □ Definition and basic knowledge of acute, subacute, and chronic toxicity.
- Definition and basic knowledge of genotoxicity, carcinogenicity, teratogenicity, and mutagenicity.
- c □ General principles of treatment of poisoning.
- d □ Clinical symptoms and management of barbiturates, morphine, organo-phosphorus compound and lead, mercury, and arsenic poisoning.
- e □ Chronopharmacology: Definition of rhythm and cycles. Biological clock and their significance leading to chronotherapy.

Tutorials will be based on the above syllabus.

Teaching hours: 15 Hours

Practical syllabus:

Teaching hours: 04 Hours/week

- Dose calculation in pharmacological experiments.
- Antiallergic activity by mast cell stabilization assay.
- Study of anti-ulcer activity of a drug-using pylorus ligand (SHAY) rat model and NSAIDS induced ulcer model.
- Study of the effect of drugs on gastrointestinal motility.
- Effect of agonists and antagonists on guinea-pig ileum.
- Estimation of serum biochemical parameters by using semi-autoanalyzer.
- Effect of saline purgative on frog intestine.
- Insulin hypoglycemic effect in a rabbit.
- Test for pyrogens (Rabbit method).
- Determination of acute oral toxicity (LD50) of a drug from a given data.
- Determination of acute skin irritation/corrosion of a test substance.
- Determination of acute eye irritation/corrosion of a test substance.
- Calculation of pharmacokinetic parameters from a given data.
- Biostatistics methods in experimental pharmacology (student's t-test, ANOVA).
- Biostatistics methods in experimental pharmacology (Chi-square test, Wilcoxon Signed Rank Test).

*Experiments are demonstrated by simulated experiments/videos.

Subject code: **13PH0603**

Subject name: **Herbal Drug Technology**

Scope: This subject gives the student the knowledge of basic understanding of the herbal drug industry, the quality of raw material, guidelines for quality of herbal drugs, herbal cosmetics, natural sweeteners, nutraceutical, etc. The subject also emphasizes Good Manufacturing Practices (GMP), patenting, and regulatory issues of herbal drugs.

Objective: Upon completion of this course the student should be able to:

- Understand raw material as a source of herbal drugs from cultivation to herbal drug product
- Know the WHO and ICH guidelines for the evaluation of herbal drugs.
- Know the herbal cosmetics, natural sweeteners, nutraceuticals.
- Appreciate patenting of herbal drugs, GMP.

Teaching and assessment scheme:

Teaching Scheme (Hours)			Credits	Theory/ Tutorial Marks			Practical Marks		Total Marks
Theory	Tutorial	Practical		CSE	IA (I)	ESE (E)	TW	Viva (V)	
3	1	4	6	10	15	75	15	35	150

Theory syllabus:

Teaching hours: 45 Hours

Unit-1

11 Hours

Herbs as raw materials: Definition of herb, herbal medicine, herbal medicinal product, herbal drug preparation Source of Herbs Selection, identification and authentication of herbal materials Processing of herbal raw material Biodynamic Agriculture Good agricultural practices in the cultivation of medicinal plants including Organic farming. Pest and Pestmanagement in medicinal plants: Biopesticides/Bioinsecticides. Indian Systems of Medicine a) Basic principles involved in Ayurveda, Siddha, Unani, and Homeopathy Preparation and standardization of Ayurvedic formulations viz Aristas and Asavas, Ghutika, Churna, Lehya, andBhasma.

Unit-2

7 Hours

Nutraceuticals: General aspects, Market, growth, scope, and types of products available in the market. Health benefits and role of Nutraceuticals in ailments like Diabetes, CVS diseases, Cancer, Irritable bowel syndrome, and various gastrointestinal diseases. Study of following herbs as a health food: Alfalfa, Chicory, Ginger, Fenugreek, Garlic, Honey, Amla, Ginseng, Ashwagandha, Spirulina Herbal-Drug, and Herb-Food Interactions: General introduction to interaction and classification. Study of following drugs and their possible side effects and interactions: Hypericum, kava-kava, Ginkobiloba, Ginseng, Garlic, Pepper & Ephedra.

Unit-3

10 Hours

Herbal Cosmetics: Sources and description of raw materials of herbal origin used via, fixed oils, waxes, gums colours, perfumes, protective agents, bleaching agents, antioxidants in products such as skin care, hair care, and oral hygiene products. Herbal excipients: Herbal Excipients – Significance of substances of natural origin as excipients –colorants, sweeteners, binders, diluents, viscosity builders, disintegrants, flavors & perfumes. Herbal formulations: Conventional herbal formulations like syrups, mixtures, and tablets and Novel dosage forms like phytosomes.

Baldania

Unit-4

10 Hours

Evaluation of Drugs: WHO & ICH guidelines for the assessment of herbal drugs Stability testing of herbal drugs. Patenting and Regulatory requirements of natural products: Definition of the terms: Patent, IPR, Farmers right, Breeder's right, Bioprospecting, and Biopiracy, Patenting aspects of Traditional Knowledge and Natural Products. Case study of Curcuma & Neem. Regulatory Issues: Regulations in India (ASU DTAB, ASU DCC), Regulation of manufacture of ASU drugs - Schedule Z of Drugs & Cosmetics Act for ASU drugs

Unit-5

7 Hours

General Introduction to Herbal Industry: Herbal drugs industry: Present scope and prospects. A brief account of plant-based industries and institutions involved in work on medicinal and aromatic plants in India. Schedule-T Good Manufacturing Practice of Indian systems of medicine: Components of GMP (Schedule-T) and its objectives Infrastructural requirements, working space, storage area, machinery and equipment, standard operating procedures, health and hygiene, documentation, and records.

Tutorials will be based on the above syllabus.

Teaching hours: 15 Hours

Practical syllabus:

Teaching hours: 04 Hours/week

- ☐ To perform preliminary phytochemical screening of crude drugs.
- ☐ Determination of the alcohol content of Asava and Arista.
- ☐ Evaluation of excipients of natural origin.
- ☐ Incorporation of a prepared and standardized extract in cosmetic formulations like creams, lotions, and shampoos and their evaluation.
- ☐ Incorporation of a prepared and standardized extract in formulations like syrups, mixtures, and tablets and their evaluation as per Pharmacopoeial requirements.
- ☐ Monograph analysis of herbal drugs from recent Pharmacopoeias.
- ☐ Determination of Aldehyde content.
- ☐ Determination of Phenol content.
- ☐ Determination of total alkaloids.

Subject code: **13PH0604**

Subject name: **Biopharmaceutics and Pharmacokinetics**

Scope: This subject is designed to impart knowledge and skills of Biopharmaceutics and pharmacokinetics and their applications in pharmaceutical development, design of dose and dosage regimen, and in solving the problems raised therein.

Objective: Upon completion of the course the student shall be able to:

- Understand the basic concepts in biopharmaceutics and pharmacokinetics and their significance.
- Use of plasma drug concentration-time data to calculate the pharmacokinetic parameters to describe the kinetics of drug absorption, distribution, metabolism, excretion, elimination.
- To understand the concepts of bioavailability and bioequivalence of drug products and their significance.
- Understand various pharmacokinetic parameters, their significance & applications.

Teaching and assessment scheme:

Teaching Scheme (Hours)			Credits	Theory/ Tutorial Marks			Practical Marks		Total Marks
Theory	Tutorial	Practical		CSE	IA (I)	ESE (E)	TW	Viva (V)	
3	1	0	4	10	15	75	00	00	100

Theory syllabus:

Teaching hours: 45 Hours

Unit-1

10 Hours

Introduction biopharmaceutics to absorption: Mechanisms of drug absorption through GIT, factors influencing drug absorption through GIT, absorption of the drug from Non per oral extra-vascular routes Distribution Tissue permeability of drugs, binding of drugs, apparent, the volume of drug distribution, plasma and tissue protein binding of drugs, factors affecting protein-drug binding. Kinetics of protein binding, Clinical significance of protein binding of drugs.

Unit-2

10 Hours

Elimination: Drug metabolism and basic understanding metabolic pathways renal excretion of drugs, factors affecting renal excretion of drugs, renal clearance, Non-renal routes of drug excretion of drugs Bioavailability and Bioequivalence: Definition and Objectives of bioavailability, absolute and relative bioavailability, measurement of bioavailability, *in-vitro* drug dissolution models, *in-vitro-in-vivo* correlations, bioequivalence studies, methods to enhance the dissolution rates and bioavailability of poorly soluble drugs.

Unit-3

10 Hours

Pharmacokinetics: Definition and introduction to Pharmacokinetics, Compartment models, Non-compartment models, physiological models, One compartment open model. (a). Intravenous Injection (Bolus) (b). Intravenous infusion and (c) Extravascular administrations. Pharmacokinetics parameters K_E , $t_{1/2}$, V_d , AUC, K_a , Cl_t , and CLR definitions methods of eliminations, understanding of their significance and Application.

Unit-4

8 Hours

Multicompartment models: Two compartment open model. IV bolus Kinetics of multiple

Baldania

dosing, steady-state drug levels, calculation of loading and maintenance doses and their significance in clinical settings.

Unit-5

7 Hours

Nonlinear Pharmacokinetics: a. Introduction, b. Factors causing Non-linearity. c. Michaelis-menton method of estimating parameters, Explanation with an example of drugs.

Tutorials will be based on the above syllabus.

Teaching hours: 15 Hours

Baldania

Subject code: **13PH0605**

Subject name: **Industrial Pharmacy-I**

Scope: This subject is designed to impart knowledge and skills of Biopharmaceutics and pharmacokinetics and their applications in pharmaceutical development, design of dose and dosage regimen, and in solving the problems raised therein.

Objective: Upon completion of this course the student should be able to:

- ☐ Know the various pharmaceutical dosage forms and their manufacturing Techniques.
- ☐ Know various considerations in the development of pharmaceutical dosage forms.
- ☐ Formulate solid, liquid, and semisolid dosage forms and evaluate them for their quality.

Teaching and assessment scheme:

Teaching Scheme (Hours)			Credits	Theory/ Tutorial Marks			Practical Marks		Total Marks
Theory	Tutorial	Practical		CSE	IA (I)	ESE (E)	TW	Viva (V)	
3	1	4	6	10	15	75	15	35	150

Theory syllabus:

Teaching hours: 45 Hours

Unit-1

7 Hours

Preformulation studies: Introduction to preformulation, goals and objectives, a study of physicochemical characteristics of drug substances. a. Physical properties: Physical form (crystal & amorphous), particle size, shape, flow properties, solubility profile (pK_a , pH, partition coefficient), polymorphism. b. Chemical Properties: Hydrolysis, oxidation, reduction, racemization, polymerization BCS classification of drugs & its significant. Application of preformulation considerations in the development of solid, liquid oral, and parenteral dosage forms and their impact on the stability of dosage forms.

Unit-2

10 Hours

Tablets: a. Introduction, ideal characteristics of tablets, classification of tablets. Excipients, Formulation of tablets, granulation methods, compression, and processing problems. Equipment and tablet tooling. b. Tablet coating: Types of coating, coating materials, formulation of a coating composition, methods of coating, equipment employed, and defects in the coating. c. Quality control tests: In-process and finished product tests
 Liquid orals: Formulation and manufacturing consideration of syrups and elixirs suspensions and emulsions; Filling and packaging; evaluation of liquid orals official in the pharmacopoeia.

Unit-3

8 Hours

Capsules: a. Hard gelatine capsules: Introduction, Production of hard gelatine capsule shells. Size of capsules, filling, finishing, and special techniques of formulation of hard gelatine capsules, manufacturing defects. In-process and final product quality control tests for capsules.
 b. Soft gelatine capsules: Nature of shell and capsule content, size of capsules, the importance of base adsorption and minim/gram factors, production, in-process, and final product quality control tests. Packing, storage, and stability testing of soft gelatine capsules and their applications. Pellets: Introduction, formulation requirements, pelletization process, equipment for the manufacture of pellets.

Baldania

Unit-4

10 Hours

Parenteral Products: a. Definition, types, advantages, and limitations. Preformulation factors and essential requirements, vehicles, additives, the importance of isotonicity b. Production procedure, production facilities, and controls, aseptic processing c. Formulation of injections, sterile powders, large volume parenteral, and lyophilized products. d. Containers and closures selection, filling, and sealing of ampoules, vials, and infusion fluids. Quality control tests of parenteral products. Ophthalmic Preparations: Introduction, formulation considerations; formulation of eye drops, eye ointments, and eye lotions; methods of preparation; labelling, containers; evaluation of ophthalmic preparations.

Unit-5

10 Hours

Cosmetics: Formulation and preparation of the following cosmetic preparations: lipsticks, shampoos, cold cream, and vanishing cream, toothpaste, hair dyes, and sunscreens. Pharmaceutical Aerosols: Definition, propellants, containers, valves, types of aerosol systems; formulation and manufacture of aerosols; Evaluation of aerosols; Quality control and stability studies. Packaging Materials Science: Materials used for packaging of pharmaceutical products, factors influencing the choice of containers, legal and official requirements for containers, stability aspects of packaging materials, quality control tests.

Tutorials will be based on the above syllabus.

Teaching hours: 15 Hours

Practical syllabus:

Teaching hours: 04 Hours/week

- Preformulation studies on paracetamol/aspirin/or any other drug.
- Preparation and evaluation of Paracetamol tablets.
- Preparation and evaluation of Aspirin tablets.
- Coating of tablets- film coating of tables/granules.
- Preparation and evaluation of Tetracycline capsules.
- Preparation of Calcium Gluconate injection.
- Preparation of Ascorbic Acid injection.
- Quality control test of (as per IP) marketed tablets and capsules.
- Preparation of Eye drops/ and Eye ointments.
- Preparation of Creams (cold / vanishing cream).
- Evaluation of Glass containers (as per IP).

Baldania

Subject code: **13PH0701**

Subject name: **Instrumental Methods of Analysis**

Scope: This subject deals with the application of instrumental methods in qualitative and quantitative analysis of drugs. This subject is designed to impart fundamental knowledge on the principles and instrumentation of spectroscopic and chromatographic technique. This also emphasizes theoretical and practical knowledge of modern analytical instruments that are used for drug testing.

Objective: Upon completion of the course the student shall be able to

- ☐ To understand the interaction of matter with electromagnetic radiations and its applications in drug analysis
- ☐ To understand the chromatographic separation and analysis of drugs
- ☐ Perform quantitative & qualitative analysis of drugs using various analytical instruments.

Teaching and assessment scheme:

Teaching Scheme (Hours)			Credits	Theory/ Tutorial Marks			Practical Marks		Total Marks
Theory	Tutorial	Practical		CSE	IA (I)	ESE (E)	TW	Viva (V)	
3	1	4	6	10	15	75	15	35	150

Theory syllabus:

Teaching hours: 45 Hours

Unit-1

10 Hours

UV Visible spectroscopy: Electronic transitions, chromophores, auxochromes, spectral shifts, solvent effect on absorption spectra, Beer and Lambert's law, Derivation and deviations. Instrumentation: Sources of radiation, wavelength selectors, sample cells, detectors: Photo tube, Photomultiplier tube, Photovoltaic cell, Silicon Photodiode. Applications: Spectrophotometric titrations, Single-component and multi-component analysis. Fluorimetry Theory, Concepts of singlet, doublet and triplet electronic states, internal and external conversions, factors affecting fluorescence, quenching, instrumentation and applications.

Unit-2

10 Hours

IR spectroscopy Introduction: Fundamental modes of vibrations in polyatomic molecules, sample handling, factors affecting vibrations Instrumentation - Sources of radiation, wavelength selectors, detectors - Golay cell, Bolometer, Thermocouple, Thermistor, Pyroelectric detector and applications. Flame Photometry-Principle, interferences, instrumentation and applications. Atomic absorption spectroscopy- Principle, interferences, instrumentation and Applications. Nepheloturbidometry- Principle, instrumentation and applications.

Unit-3

10 Hours

Introduction to chromatography: Adsorption and partition column chromatography - Methodology, advantages, disadvantages and applications. Thin-layer chromatography - Introduction, Principle, Methodology, Rf values, advantages, disadvantages and applications. Paper chromatography-Introduction, methodology, development techniques, advantages, disadvantages and applications. Electrophoresis – Introduction, factors affecting electrophoretic mobility, Techniques of paper, gel, capillary electrophoresis, applications.

Baldania

Unit-4

8 Hours

Gas chromatography: Introduction, theory, instrumentation, derivatization, temperature programming, advantages, disadvantages and applications. High-performance liquid chromatography (HPLC)-Introduction, theory, instrumentation, advantages and applications.

Unit-5

7 Hours

Ion-exchange chromatography: Introduction, classification, ion exchange resins, properties, mechanism of the ion exchange process, factors affecting ion exchange, methodology and applications. **Gel chromatography:** Introduction, theory, instrumentation and applications. Affinity chromatography - Introduction, theory, instrumentation and applications.

Tutorials will be based on the above syllabus.

Teaching hours: 15 Hours

Practical syllabus:

Teaching hours: 04 Hours/week

- Determination of absorption maxima and effect of solvents on absorption maxima of organic compounds.
- Estimation of dextrose by colourimetry.
- Estimation of sulphanilamide by colourimetry.
- Simultaneous estimation of ibuprofen and paracetamol by UV spectroscopy.
- Assay of paracetamol by UV- Spectrophotometry.
- Estimation of quinine sulphate by fluorimetry.
- Study of quenching of fluorescence.
- Determination of sodium by flame photometry.
- Determination of potassium by flame photometry.
- Determination of chlorides and sulphates by nephelo turbidometry.
- Separation of amino acids by paper chromatography.
- Separation of sugars by thin-layer chromatography.
- Separation of plant pigments by column chromatography.
- Demonstration experiment on HPLC.
- Demonstration experiment on Gas Chromatography.

Baldania

Subject code: **13PH0702**

Subject name: **Industrial Pharmacy-II**

Scope: This course is designed to impart fundamental knowledge on pharmaceutical product development and translation from laboratory to market.

Objective: Upon completion of the course the student shall be able to

- ☐ Know the process of pilot plant and scale-up of pharmaceutical dosage forms.
- ☐ Understand the process of technology transfer from lab scale to commercial batch.
- ☐ Know different Laws and Acts that regulate the pharmaceutical industry.
- ☐ Understand the approval process and regulatory requirements for drug products.

Teaching and assessment scheme:

Teaching Scheme (Hours)			Credits	Theory/ Tutorial Marks			Practical Marks		Total Marks
Theory	Tutorial	Practical		CSE	IA (I)	ESE (E)	TW	Viva (V)	
3	1	0	4	10	15	75	00	00	100

Theory syllabus:

Teaching hours: 45 Hours

Unit-1

10 Hours

Pilot plant scales up techniques: General considerations – including the significance of personnel requirements, space requirements, raw materials, Pilot plant scale-up considerations for solids, liquid orals, semi-solids and relevant documentation, SUPAC guidelines, Introduction to platform technology.

Unit-2

10 Hours

Technology development and transfer: WHO guidelines for Technology Transfer (TT): Terminology, Technology transfer protocol, Quality risk management, Transfer from R & D to production (Process, packaging and cleaning), Granularity of TT Process (API, excipients, finished products, packaging materials) Documentation, Premises and equipment, qualification and validation, quality control, analytical method transfer, Approved regulatory bodies and agencies, Commercialization - practical aspects and problems (case studies), TT agencies in India - APCTD, NRDC, TIFAC, BCIL, TBSE / SIDBI; TT related documentation - confidentiality agreement, licensing, MoUs, legal issues.

Unit-3

10 Hours

Regulatory affairs: Introduction, Historical overview of Regulatory Affairs, Regulatory authorities, Role of Regulatory affairs department, Responsibility of Regulatory Affairs Professionals. Regulatory requirements for drug approval: Drug Development Teams, Non-Clinical Drug Development, Pharmacology, Drug Metabolism and Toxicology, General considerations of Investigational New Drug (IND) Application, Investigator's Brochure (IB) and New Drug Application (NDA), Clinical research / BE studies, Clinical Research Protocols, Biostatistics in Pharmaceutical Product Development, Data Presentation for FDA Submissions, Management of Clinical Studies.

Unit-4

8 Hours

Quality management systems: Quality management & Certifications: Concept of Quality, Total Quality Management, Quality by Design (QbD), Six Sigma concept, Out of Specifications (OOS),

Baldania

Change control, Introduction to ISO 9000 series of quality systems standards, ISO 14000, NABL, GLP

Unit-5

7 Hours

Indian Regulatory Requirements: Central Drug Standard Control Organization (CDSCO) and State Licensing Authority: Organization, Responsibilities, Certificate of Pharmaceutical Product (COPP), Regulatory requirements and approval procedures for New Drugs.

Tutorials will be based on the above syllabus.

Teaching hours: 15 Hours

Baldania

Subject code: **13PH0703**

Subject name: **Pharmacy Practice**

Scope: In the changing scenario of pharmacy practice in India, for the successful practice of Hospital Pharmacy, the students are required to learn various skills like drug distribution, drug information, and therapeutic drug monitoring for improved patient care. In community pharmacy, students will be learning various skills such as dispensing of drugs, responding to minor ailments by providing suitable safe medication, patient counselling for improved patient care in the community set up.

Objective: Upon completion of the course the student shall be able to

- Know various drug distribution methods in a hospital.
- Appreciate the pharmacy stores management and inventory control.
- Monitor drug therapy of patient through medication chart review and clinical review.
- Obtain medication history interview and counsel the patients.
- Identify drug-related problems.
- Detect and assess adverse drug reactions.
- Interpret selected laboratory results (as monitoring parameters in therapeutics) of specific disease states.
- Know pharmaceutical care services.
- Do patient counselling in community pharmacy.
- Appreciate the concept of Rational drug therapy.

Teaching and assessment scheme:

Teaching Scheme (Hours)			Credits	Theory/ Tutorial Marks			Practical Marks		Total Marks
Theory	Tutorial	Practical		CSE	IA (I)	ESE (E)	TW	Viva (V)	
3	1	0	4	10	15	75	0	0	100

Theory syllabus:

Teaching hours: 45 Hours

Unit-1

10 Hours

a) Hospital and its organization: Definition, Classification of a hospital- Primary, Secondary and Tertiary hospitals, Classification based on a clinical and non-clinical basis, Organization Structure of a Hospital, and medical staffs involved in the hospital and their functions. b) Hospital pharmacy and its organization Definition, functions of hospital pharmacy, Organization structure, Location, Layout and staff requirements, and Responsibilities and functions of hospital pharmacists. c) Adverse drug reaction Classifications - Excessive pharmacological effects, secondary pharmacological effects, idiosyncrasy, allergic drug reactions, genetically determined toxicity, toxicity following the sudden withdrawal of drugs, Drug interaction- beneficial interactions, adverse interactions, and pharmacokinetic drug interactions, Methods for detecting drug interactions, spontaneous case reports and record linkage studies, and adverse drug reaction reporting and management. d) Community Pharmacy Organization and structure of retail and wholesale drug store, types and design, Legal requirements for establishment and maintenance of a drug store, Dispensing of proprietary products, maintenance of records of retail and wholesale drug store.

Unit-2

10 Hours

Baldania

a) **Drug distribution system in a hospital**: Dispensing of drugs to inpatients, types of drug distribution systems, charging policy and labelling, dispensing of drugs to ambulatory patients, and dispensing of controlled drugs. b) Hospital formulary Definition, contents of hospital formulary, Differentiation of hospital formulary and Drug list, preparation and revision, and addition and deletion of drug from hospital formulary. c) Therapeutic drug monitoring Need for Therapeutic Drug Monitoring, Factors to be considered during the Therapeutic Drug Monitoring and Indian scenario for Therapeutic Drug Monitoring. d) Medication adherence Causes of medication non-adherence, pharmacist role in the medication adherence, and monitoring of patient medication adherence. e) Patient medication history interview Need for the patient medication history interview, medication interview forms. f) Community pharmacy management Financial, materials, staff, and infrastructure requirements.

Unit-3

10 Hours

a) **Pharmacy and therapeutic committee**: Organization, functions, policies of the pharmacy and therapeutic committee in including drugs into formulary, inpatient and outpatient prescription, automatic stop order, and emergency drug list preparation. b) Drug information services Drug and Poison information centre, Sources of drug information, Computerised services, and storage and retrieval of information. c) Patient counselling Definition of patient counselling; steps involved inpatient counselling, and Special cases that require the pharmacist
d) Education and training program in the hospital Role of pharmacist in the education and training program, Internal and external training program, Services to the nursing homes/clinics, Code of ethics for community pharmacy, and Role of pharmacist in the interdepartmental communication and community health education. e) Prescribed medication order and communication skills Prescribed medication order - interpretation and legal requirements, and Communication skills- communication with prescribers and patients.

Unit-4

8 Hours

a) **Budget preparation and implementation**: Budget preparation and implementation b) Clinical Pharmacy Introduction to Clinical Pharmacy, Concept of clinical pharmacy, functions and responsibilities of a clinical pharmacist, Drug therapy monitoring - medication chart review, clinical review, pharmacist intervention, Ward round participation, Medication history and pharmaceutical care. Dosing pattern and drug therapy based on Pharmacokinetic & disease pattern. c) Over the counter (OTC) sales Introduction and sale of over the counter, and Rational use of common over the counter medications.

Unit-5

7 Hours

a) **Drug store management and inventory control**: Organisation of a drug store, types of materials stocked and storage conditions, Purchase and inventory control: principles, purchase procedure, purchase order, procurement and stocking, Economic order quantity, Reorder quantity level, and Methods used for the analysis of the drug expenditure b) Investigational use of drugs Description, principles involved, classification, control, identification, the role of a hospital pharmacist, advisory committee. c) Interpretation of Clinical Laboratory Tests Blood chemistry, haematology, and urinalysis

Tutorials will be based on the above syllabus.

Subject code: **13PH0704**

Subject name: **Novel Drug Delivery Systems**

Scope: This subject is designed to impart basic knowledge in the area of novel drug delivery systems.

Objective: Upon completion of the course the student shall be able to

- ☐ To understand various approaches for the development of novel drug delivery systems.
- ☐ To understand the criteria for the selection of drugs and polymers for the development of novel drug delivery systems, their formulation and evaluation.

Teaching and assessment scheme:

Teaching Scheme (Hours)			Credits	Theory/ Tutorial Marks			Practical Marks		Total Marks
Theory	Tutorial	Practical		CSE	IA (I)	ESE (E)	TW	Viva (V)	
3	1	0	4	10	15	75	0	0	100

Theory syllabus:

Teaching hours: 45 Hours

Unit-1

10 Hours

Controlled drug delivery systems: Introduction, terminology/definitions and rationale, advantages, disadvantages, selection of drug candidates. Approaches to design controlled release formulations based on diffusion, dissolution and ion exchange principles. Physicochemical and biological properties of drugs relevant to controlled release formulations. Polymers: Introduction, classification, properties, advantages and application of polymers in the formulation of controlled release drug delivery systems.

Unit-2

10 Hours

Microencapsulation: Definition, advantages and disadvantages, microspheres/ microcapsules, microparticles, methods of microencapsulation, applications. Mucosal Drug Delivery system: Introduction, Principles of bioadhesion/ mucoadhesion, concepts, advantages and disadvantages, transmucosal permeability and formulation considerations of buccal delivery systems. Implantable Drug Delivery Systems: Introduction, advantages and disadvantages, the concept of implants and osmotic pump.

Unit-3

10 Hours

Transdermal Drug Delivery Systems: Introduction, Permeation through the skin, factors affecting permeation, permeation enhancers, basic components of TDDS, formulation approaches. Gastro retentive drug delivery systems: Introduction, advantages, disadvantages, approaches for GRDDS – Floating, high-density systems, inflatable and gastroadhesive systems and their applications. Nasopulmonary drug delivery system: Introduction to Nasal and Pulmonary routes of drug delivery, Formulation of Inhalers (dry powder and metered dose), nasal sprays, nebulizers.

Unit-4

8 Hours

Targeted drug Delivery: Concepts and approaches advantages and disadvantages, introduction to liposomes, niosomes, nanoparticles, monoclonal antibodies and their applications.

Unit-5

7 Hours

Baldania

Ocular Drug Delivery Systems: Introduction, intraocular barriers and methods to overcome –Preliminary study, ocular formulations and ocuserts Intrauterine Drug Delivery Systems: Introduction, advantages and disadvantages, development of intrauterine devices (IUDs) and applications.

Tutorials will be based on the above syllabus.

Subject code: **13PH0705**

Subject name: **Quality Assurance**

Scope: This course deals with the various aspects of quality control and quality assurance aspects of pharmaceutical industries. It deals with important aspects like cGMP, QC tests, documentation, quality certifications and regulatory affairs.

Objective: Upon completion of the course the student shall be able to

- Understand the cGMP aspects in the pharmaceutical industry.
- Appreciate the importance of documentation.
- Understand the scope of quality certifications applicable to pharmaceutical industries.
- Understand the responsibilities of QA & QC departments.

Teaching and assessment scheme:

Teaching Scheme (Hours)			Credits	Theory/ Tutorial Marks			Practical Marks		Total Marks
Theory	Tutorial	Practical		CSE	IA (I)	ESE (E)	TW	Viva (V)	
3	1	0	4	10	15	75	0	0	100

Theory syllabus:

Teaching hours: 45 Hours

Unit-1

10 Hours

Quality Assurance and Quality Management concepts: Definition and concept of Quality control, Quality assurance and GMP. Total Quality Management (TQM): Definition, elements, philosophies. ICH Guidelines: purpose, participants, the process of harmonization, Brief overview of QSEM, with special emphasis on Q-series guidelines, ICH stability testing guidelines. Quality by design (QbD): Definition, overview, elements of QbD program, tools ISO 9000 & ISO14000: Overview, Benefits, Elements, steps for registration. NABL accreditation: Principles and procedures.

Unit-2

10 Hours

Organization and personnel: Personnel responsibilities, training, hygiene and personal records. Premises: Design, construction and plant layout, maintenance, sanitation, environmental control, utilities and maintenance of sterile areas, control of contamination. Equipment and raw materials: Equipment selection, purchase specifications, maintenance, purchase specifications and maintenance of stores for raw materials.

Unit-3

10 Hours

Quality Control: Quality control test for containers, rubber closures and secondary packing materials. Good Laboratory Practices: General Provisions, Organization and Personnel, Facilities, Equipment, Testing Facilities Operation, Test and Control Articles, Protocol for Conduct of a Nonclinical Laboratory Study, Records and Reports, Disqualification of Testing Facilities.

Unit-4

8 Hours

Complaints: Complaints and evaluation of complaints, Handling of return goods, recalling and waste disposal. Document maintenance in the pharmaceutical industry: Batch Formula Record, Master Formula Record, SOP, Quality audit, Quality Review and Quality documentation, Reports and documents, distribution records.

Baldania

Unit-5

7 Hours

Calibration and Validation: Introduction, definition and general principles of calibration, qualification and validation, importance and scope of validation, types of validation, validation master plan. Calibration of pH meter, Qualification of UV-Visible spectrophotometer, General principles of Analytical method Validation. Warehousing: Good warehousing practice, materials management

Tutorials will be based on the above syllabus.

and assessment scheme:

Teaching Scheme (Hours)			Credits	Theory/ Tutorial Marks			Practical Marks		Total Marks
Theory	Tutorial	Practical		CSE	IA (I)	ESE (E)	TW	Viva (V)	
0	0	12	6	0	0	0	50	100	150

Guidelines:

In semester VII, every candidate shall undergo practice school for 150 hours during these semester. The student shall opt for any one of the following activity for practice school:

- Hospital training (Hospital having minimum 10-bed facilities)*
- Training in a Drug store/ CHC/ PHC*
- Training in a R & D organization/ CRO/ Manufacturing organization/ QA & QC Laboratory/ Public testing laboratory/ Drug regulatory body*
- Successfully pass MOOCs course equivalent to 6 credits through SWAYAM Platform*
- Detailed literature review on any technical topic (At least 50 references should be included in the report to be submitted)

At the end of the practice school, every student shall submit a printed report (in triplicate) on the practice school he/she attended (about 25 pages). Along with the exams of semester VII, the report submitted by the student, knowledge and skills acquired by the student through practice school shall be evaluated by the subject experts at the college level and grade point shall be awarded.

*Certificate of training should be incorporated in the report.

Bardania

Course Objective

To understand the applications of Biostatics in Pharmacy. This subject deals with descriptive statistics, Graphics, Correlation, Regression, logistic regression Probability theory, Sampling technique, Parametric tests, non-Parametric tests, ANOVA, Introduction to Design of Experiments, Phases of Clinical trials and Observational and Experimental studies, SPSS, R and MINITAB statistical software's, analyzing the statistical data using Excel.

Course Outcomes

Upon completion of the course, the student shall be able to

1. Know the operation of M.S. Excel, SPSS, R and MINITAB®, DoE (Design of Experiment).
2. Know the various statistical techniques to solve statistical problems.
3. Appreciate statistical techniques in solving the problems.

Theory syllabus

Teaching hours: **45 Hours**

Unit-1

10 Hours

Introduction: Statistics, Biostatistics, Frequency distribution. Measures of central tendency: Mean, Median, Mode Pharmaceutical examples. Measures of dispersion: Dispersion, Range, standard deviation, Pharmaceutical Problems. Correlation: Definition, Karl Pearson's coefficient of correlation, Multiple correlations - Pharmaceuticals examples.

Unit-2

10 Hours

Regression: Curve fitting by the method of least squares, fitting the lines $y = a + bx$ and $x = a + by$, Multiple regression, standard error of regression - Pharmaceutical Examples. Probability: Definition of probability, Binomial distribution, Normal distribution Poisson's distribution, properties - problems Sample, Population, large sample, small sample, Null hypothesis, alternative hypothesis, sampling, the essence of sampling, types of sampling, Error-I type, Error-II type, Standard error of the mean (SEM) - Pharmaceutical examples. Parametric test: t-test (Sample, Pooled or Unpaired and Paired), ANOVA, (One way and Two way), Least Significance difference.

Unit-3

10 Hours

Non-parametric tests: Wilcoxon Rank Sum Test, Mann-Whitney U test, Kruskal-Wallis test, Friedman Test. Introduction to Research: Need for research, Need for the design of Experiments, Experiential Design Technique, plagiarism. Graphs: Histogram, Pie Chart, Cubic Graph, response surface plot, Counter Plotgraph. Designing the methodology: Sample size determination and power of a study, Report writing and presentation of data, Protocol, Cohorts studies, Observational studies, Experimental studies, Designing clinical trial, various phases.

Unit-4

8 Hours

Blocking and confounding system: for two-level factorials. Regression modelling: Hypothesis testing in Simple and Multiple regression models. Introduction to Practical components of Industrial and Clinical Trials Problems: Statistical Analysis Using Excel, SPSS, MINITAB®, DESIGN OF EXPERIMENTS, R - Online Statistical Software to Industrial and Clinical trial approach.

Unit-5

7 Hours

Design and analysis of experiments: Factorial Design: Definition, 2^2 , 2^3 design. Advantage of factorial design. Response Surface methodology: Central composite design, Historical design, Optimization Techniques.

Tutorials will be based on the above syllabus.

Teaching hours: 15

B. PHARMACY

Syllabus ♦ Semester-8

Subject name with code: **13PH0802 Social and Preventive Pharmacy**

Course Objective

The purpose of this course is to introduce to students several health issues and their challenges. This course also introduced several national health programmes. The roles of the pharmacist in these contexts are also discussed.

Course Outcomes

Upon completion of the course, the student shall be able to

1. Acquire high consciousness/realization of current issues related to health and pharmaceutical problems within the country and worldwide.
2. Have a critical way of thinking based on current healthcare development.
3. Evaluate alternative ways of solving problems related to health and pharmaceutical issues.

Teaching and assessment scheme

Teaching Scheme (Hours)			Credits	Theory/ Tutorial Marks			Practical Marks		Total Marks
Theory	Tutorial	Practical		CSE	IA (I)	ESE (E)	TW	Viva (V)	
3	1	0	4	10	15	75	0	0	100

Theory syllabus

Teaching hours: **45 Hours**

Unit-1

10 Hours

Concept of health and disease: Definition, concepts and evaluation of public health. Understanding the concept of prevention and control of disease, social causes of diseases and social problems of the sick. Social and health education: Food concerning nutrition and health, Balanced diet, Nutritional deficiencies, Vitamin deficiencies, Malnutrition and its prevention. Sociology and health: Socio-cultural factors related to health and disease, Impact of urbanization on health and disease, Poverty and health. Hygiene and health: personal hygiene and health care; avoidable habits.

Unit-2

10 Hours

Preventive medicine: General principles of prevention and control of diseases such as cholera, SARS, Ebola virus, influenza, acute respiratory infections, malaria, chicken guinea, dengue, lymphatic filariasis, pneumonia, hypertension, diabetes mellitus, cancer, drug addiction-drug substance abuse.

Unit-3

10 Hours

National health programs, its objectives, functioning and outcome of the following: HIV and AIDS control programme, TB, Integrated disease surveillance program (IDSP), National leprosy control programme, National mental health program, National programme for prevention and control of deafness, Universal immunization programme, National programme for control of blindness, Pulse polio programme.

Unit-4

8 Hours

National health intervention programme: for mother and child, National family welfare programme, National tobacco control programme, National Malaria Prevention Program, National programme for the health care for the elderly, social health programme; the role of WHO in Indian national program.

Unit-5

7 Hours

Community services: in rural, urban and school health: Functions of PHC, Improvement in rural sanitation, national urban health mission, Health promotion and education in school.

Tutorials will be based on the above syllabus.

Teaching hours: 15

Hours Recommended references (Latest edition)

B. PHARMACY

Syllabus ♦ Semester-8

Elective subject-1 name with code: **13PH0803 Pharma Marketing Management Course**

Objective

The pharmaceutical industry not only needs highly qualified researchers, chemists and, technical people but also requires skilled managers who can take the industry forward by managing and taking the complex decisions which are imperative for the growth of the industry. The Knowledge and Know-how of marketing management groom the people for taking a challenging role in Sales and Product management.

Course Outcomes

The course aims to provide an understanding of marketing concepts and techniques and their applications in the pharmaceutical industry.

Teaching and assessment scheme

Teaching Scheme (Hours)			Credits	Theory/ Tutorial Marks			Practical Marks		Total Marks
Theory	Tutorial	Practical		CSE	IA (I)	ESE (E)	TW	Viva (V)	
3	1	0	4	10	15	75	0	0	100

Theory syllabus

Teaching hours: **45 Hours**

Unit-1

10 Hours

Marketing: Definition, general concepts and scope of marketing; Distinction between marketing & selling; Marketing environment; Industry and competitive analysis; Analysing consumer buying behaviour; industrial buying behaviour. Pharmaceutical market: Quantitative and qualitative aspects; size and composition of the market; demographic descriptions and socio-psychological characteristics of the consumer; market segmentation & targeting. Consumer profile; Motivation and prescribing habits of the physician; patients' choice of physician and retail pharmacist. Analysing the Market; Role of market research.

Unit-2

10 Hours

Product decision: Classification, product line and product mix decisions, product life cycle, product portfolio analysis; product positioning; New product decisions; Product branding, packaging and labelling decisions, Product management in the pharmaceutical industry.

Unit-3

10 Hours

Promotion: Methods, determinants of the promotional mix, promotional budget; An overview of personal selling, advertising, direct mail, journals, sampling, retailing, medical exhibition, public relations, online promotional techniques for OTC products.

Unit-4

8 Hours

Pharmaceutical marketing channels: Designing channel, channel members, selecting the appropriate channel, conflict in channels, physical distribution management: Strategic importance, tasks in physical distribution management. Professional sales representative (PSR): Duties of PSR, the purpose of detailing, selection and training, supervising, norms for customer calls, motivating, evaluating, compensation and prospects of the PSR.

Unit-5

7 Hours

Pricing: Meaning, importance, objectives, determinants of price; pricing methods and strategies, issues in price management in the pharmaceutical industry. An overview of DPCO (Drug Price Control Order) and NPPA (National Pharmaceutical Pricing Authority). Emerging concepts in marketing: Vertical & Horizontal Marketing; Rural Marketing; Consumerism; Industrial Marketing; Global Marketing.

Tutorials will be based on the above syllabus.

Teaching hours: 15

Hours Recommended references (Latest edition)

1. Philip Kotler and Kevin Lane Keller: Marketing Management, Prentice-Hall of India, New Delhi.
2. Walker, Boyd and Larreche: Marketing Strategy- Planning and Implementation, Tata McGraw-Hill, New Delhi.
3. Dhruv Grewal and Michael Levy: Marketing, Tata McGraw-Hill.

B. PHARMACY

Syllabus ♦ Semester-8

Elective subject-2 name with code: **13PH0804 Pharmaceutical Regulatory Science**

Course Objective

This course is designed to impart fundamental knowledge on the regulatory requirements for approval of new drugs, and drug products in regulated markets of India & other countries like the US, EU, Japan, Australia, UK etc. It prepares the students to learn in detail the regulatory requirements, documentation requirements, and registration procedures for marketing the drug products.

Course Outcomes

Upon completion of the course, the student shall be able to

1. Know about the process of drug discovery and development.
2. Know the regulatory authorities and agencies governing the manufacture and sale of pharmaceuticals.
3. Know the regulatory approval process and their registration in Indian and international markets.

Teaching and assessment scheme

Teaching Scheme (Hours)			Credits	Theory/ Tutorial Marks			Practical Marks		Total Marks

3	1	0	4	10	15	75	0	0	100

Theory syllabus

Teaching hours: **45 Hours**

Unit-1

10 Hours

New drug discovery and development: Stages of drug discovery, drug development process, pre-clinical studies, nonclinical activities, clinical studies, Innovator and generics, Concept of generics, Generic drug product development.

Unit-2

10 Hours

Regulatory approval process: Approval processes and timelines involved in Investigational New Drug (IND), New Drug Application (NDA), Abbreviated New Drug Application (ANDA). Changes to an Approved NDA/ ANDA. Regulatory authorities and agencies: Overview of regulatory authorities of India, United States, European Union, Australia, Japan, Canada (Organization structure and types of applications).

Unit-3

10 Hours

Registration of Indian drug products in the overseas market: Procedure for export of pharmaceutical products, technical documentation, Drug Master Files (DMF), Common Technical Document (CTD), electronic Common Technical Document (eCTD), ASEAN Common Technical Document (ACTD) research.

Unit-4

8 Hours

Clinical trials: Developing clinical trial protocols, Institutional Review Board/ Independent Ethics committee - formation and working procedures, Informed consent process and procedures, GCP obligations of Investigators, sponsors & Monitors, Managing and Monitoring clinical trials, Pharmacovigilance - safety monitoring in clinical trials.

Unit-5

7 Hours

Regulatory concepts: Basic terminology, guidance, guidelines, regulations, Laws and Acts, Orange book, Federal Register, Code of Federal Regulatory, Purple book.

Tutorials will be based on the above syllabus.

Teaching hours: 15

9. Drugs: From Discovery to Approval, Second Edition by Rick Ng.

B. PHARMACY

Syllabus ♦ Semester-8

Elective subject-3 name with code: **13PH0805 Pharmacovigilance Course**

Objective

This paper will provide an opportunity for the student to learn about the development of pharmacovigilance as a science, basic terminologies used in pharmacovigilance, a global scenario of Pharmacovigilance, train students on establishing pharmacovigilance programme in an organization, various methods that can be used to generate safety data and signal detection. This paper also develops the skills of classifying drugs, diseases and adverse drug reactions.

Course Outcomes

At the completion of this paper, it is expected that students will be able to (know, do, and appreciate):

1. Why drug safety monitoring is important?
2. History and development of pharmacovigilance.
3. A national and international scenario of pharmacovigilance.
4. Dictionaries, coding and terminologies used in pharmacovigilance.
5. Detection of new adverse drug reactions and their assessment.
6. International standards for the classification of diseases and drugs.
7. Adverse drug reaction reporting systems and communication in pharmacovigilance.
8. Methods to generate safety data during pre-clinical, clinical and post-approval phases of drugs' life cycle.
9. Drug safety evaluation in paediatrics, geriatrics, pregnancy and lactation.
10. Pharmacovigilance Program of India (PvPI) requirement for ADR reporting in India.
11. ICH guidelines for ICSR, PSUR, expedited reporting, pharmacovigilance planning.
12. CIOMS requirements for ADR reporting.
13. Writing case narratives of adverse events and their quality.

Teaching and assessment scheme

Teaching Scheme (Hours)			Credits	Theory/ Tutorial Marks			Practical Marks		Total Marks
Theory	Tutorial	Practical		CSE	IA (I)	ESE (E)	TW	Viva (V)	
3	1	0	4	10	15	75	0	0	100

Theory syllabus

Teaching hours: **45 Hours**

Unit-1

10 Hours

Introduction to pharmacovigilance: History and development of Pharmacovigilance. Importance of safety monitoring of medicine. WHO international drug monitoring programme. Pharmacovigilance program of India (PvPI). Introduction to adverse drug reactions: Definitions and classification of ADRs. Detection and reporting. Methods in causality assessment. Severity and seriousness assessment. Predictability and preventability assessment. Management of adverse drug reactions. Basic terminologies used in pharmacovigilance: terminologies of adverse medication-related events. Regulatory terminologies.

Unit-2

10 Hours

Drug and disease classification: Anatomical, therapeutic and chemical classification of drugs. International classification of diseases. Daily defined doses. International non-proprietary names for drugs. Drug dictionaries and coding in pharmacovigilance: WHO adverse reaction terminologies. MedDRA and standardised MedDRA queries. WHO drug dictionary. Eudravigilance medicinal product dictionary. Information resources in pharmacovigilance: Basic drug information resources. Specialised resources for ADRs. Establishing pharmacovigilance programme: Establishing in a hospital. Establishment & operation of drug safety department in the industry. Contract research organisations (CROs). Establishing a national programme.

Unit-3

10 Hours

Vaccine safety surveillance: Vaccine pharmacovigilance. Vaccine failure. Adverse events following immunization. Pharmacovigilance methods: passive surveillance-Spontaneous reports and case series. Stimulated reporting. Active surveillance-sentinel sites, drug event monitoring and registries. The comparative observational studies-Cross sectional study, case-control study and cohort study. Targeted clinical investigations. Communication in pharmacovigilance: Effective communication in pharmacovigilance. Communication in drug safety crisis management. Communication with regulatory agencies, business partners, healthcare facilities and media.

Unit-4

8 Hours

B. PHARMACY
Syllabus ♦ Semester-8

Safety data generation: Preclinical phase. Clinical phase. Post-approval phase (PMS). ICH guidelines for pharmacovigilance: organization and objectives of ICH. Expedited reporting. individual case safety reports. Periodic safety update planning. Good clinical practice in pharmacovigilance studies.

Baldania

B. PHARMACY
Syllabus ♦ Semester-8**Unit-5****7 Hours**

Pharmacogenomics of adverse drug reactions: Genetics related ADR with example focusing PK parameters. Drug safety evaluation in special population: paediatrics. Pregnancy and lactation. Geriatrics. CIOMS: CIOMS working groups. CIOMS form. CDSCO (India) and pharmacovigilance: D&C Act and Schedule Y. Differences in Indian and global pharmacovigilance requirements.

Tutorials will be based on the above syllabus.**Teaching hours: 15****Hours Recommended references (Latest edition)**

B. PHARMACY

Syllabus ♦ Semester-8

Elective subject-4 name with code: **13PH0806 Quality Control and Standardization of Herbals Course**

Objective

In this subject, the student learns about the various methods and guidelines for the evaluation and standardization of herbs and herbal drugs. The subject also provides an opportunity for the student to learn cGMP, GAP and GLP in the traditional system of medicines.

Course Outcomes

Upon completion of the course, the student shall be able to

1. Know WHO guidelines for quality control of herbal drugs.
2. Know Quality assurance in the herbal drug industry.
3. Know the regulatory approval process and their registration in Indian and international markets.
4. Appreciate EU and ICH guidelines for quality control of herbal drugs.

Teaching and assessment scheme

Teaching Scheme (Hours)			Credits	Theory/ Tutorial Marks			Practical Marks		Total Marks

3	1	0	4	10	15	75	0	0	100

Theory syllabus

Teaching hours: **45 Hours**

Unit-1

10 Hours

Basic tests for drugs: Pharmaceutical substances, Medicinal plants materials and dosage forms. WHO guidelines for quality control of herbal drugs. Evaluation of commercial crude drugs intended for use.

Unit-2

10 Hours

Quality assurance in the herbal drug industry: cGMP, GAP, GMP and GLP in traditional system of medicine. WHO Guidelines on current Good Manufacturing Practices (cGMP) for Herbal Medicines. WHO Guidelines on GACP for Medicinal Plants.

Unit-3

10 Hours

EU and ICH guidelines: for quality control of herbal drugs. Research Guidelines for Evaluating the Safety and Efficacy of Herbal Medicines

Unit-4

8 Hours

Stability testing of herbal medicines. Application of various chromatographic techniques in the standardization of herbal products. Preparation of documents for new drug application and export registration. GMP requirements and Drugs & Cosmetics Act provisions.

Unit-5

7 Hours

Regulatory requirements for herbal medicines: WHO guidelines on safety monitoring of herbal medicines in pharmacovigilance systems Comparison of various Herbal Pharmacopoeias. Role of chemical and biological markers in standardization of herbal products.

Tutorials will be based on the above syllabus.

Syllabus ♦ Semester-8

Elective subject-5 name with code: **13PH0807 Computer-Aided Drug Design Course**

Objective

This subject is designed to provide detailed knowledge of the rational drug design process and various techniques used in the rational drug design process.

Course Outcomes

Upon completion of the course, the student shall be able to

1. Design and discovery of lead molecules.
2. The role of drug design in the drug discovery process.
3. The concept of QSAR and docking.
4. Various strategies to develop a new drug-like molecule.
5. The design of new drug molecules using molecular modelling software.

Teaching hours: **45 Hours**

Unit-1

10 Hours

Introduction to drug discovery and development: Stages of drug discovery and development. Lead discovery and Analog Based Drug Design Rational approaches to lead discovery based on traditional medicine, Random screening, Non-random screening, serendipitous drug discovery, lead discovery based on drug metabolism, lead discovery based on clinical observation. Analog Based Drug Design: Bioisosterism, Classification, Bio isosteric replacement. Any three case studies

Unit-2

10 Hours

Quantitative Structure-Activity Relationship (QSAR): SAR versus QSAR, History and development of QSAR, Types of physicochemical parameters, experimental and theoretical approaches for the determination of physicochemical parameters such as Partition coefficient, Hammett's substituent constant and Tafts steric constant. Hansch analysis, Free Wilson analysis, 3D-QSAR approaches like COMFA and COMSIA.

Unit-3

10 Hours

Molecular modelling and virtual screening techniques: Drug likeness screening, Concept of pharmacophore mapping and pharmacophore-based screening. Molecular docking: Rigid docking, flexible docking, manual docking, Docking based screening. De novo drug design.

Unit-4

8 Hours

Informatics & methods in drug design: Introduction to Bioinformatics, chemoinformatic. ADME databases, chemical, biochemical and pharmaceutical databases.

Unit-5

7 Hours

Molecular modelling: Introduction to molecular mechanics and quantum mechanics. Energy Minimization methods and Conformational Analysis, global conformational minima determination.

Tutorials will be based on the above syllabus.

Elective subject-6 name with code: **13PH0808 Cell and Molecular Biology**

Course Objective

Cell biology is a branch of biology that studies cell-their physiological properties, their structure, the organelles they contain, interactions with their environment, their life cycle, division, death and cell function. This is done both on a microscopic and molecular level. Cell biology research encompasses both the great diversity of single-celled organisms like bacteria and protozoa, as well as the many specialized cells in multi-cellular organisms such as humans, plants, and sponges.

Course Outcomes

Upon completion of the course, the student shall be able to

1. Summarize cell and molecular biology history.
2. Summarize cellular functioning and composition.
3. Describe the chemical foundations of cell biology.
4. Summarize the DNA properties of cell biology.
5. Describe protein structure and function.
6. Describe cellular membrane structure and function.
7. Describe basic molecular genetic mechanisms.
8. Summarize the cell cycle.

Syllabus ♦ Semester-8

Elective subject-7 name with code: **13PH0809 Cosmetic Science Course**

Objective

This subject deals with cosmetic products, cosmetic excipients, skincare products and their methods of preparation and evaluations.

Course Outcomes

Upon completion of the course, the student shall be able to

1. Know the regulations about cosmetics and cosmetic excipients.
2. They will be knowing the preparations of various skincare products like creams, antiperspirants, deodorants, hair care products etc.
3. They also know about the role of herbs in sunscreens.

Teaching and assessment scheme:

Teaching Scheme (Hours)			Credits	Theory/ Tutorial Marks			Practical Marks		Total Marks

3	1	0	4	10	15	75	0	0	100

Theory syllabus

Teaching hours: **45 Hours**

Unit-1

10 Hours

Classification of cosmetic and cosmeceutical products: Definition of cosmetics as per Indian and EU regulations, Evolution of cosmeceuticals from cosmetics, cosmetics as quasi and OTC drugs. Cosmetic excipients: Surfactants, rheology modifiers, humectants, emollients, preservatives. Classification and application. Skin: Basic structure and function of the skin. Hair: Basic structure of the hair. Hair growth cycle. Oral cavity: Common problem associated with teeth and gums.

Unit-2

10 Hours

Principles of formulation and building blocks of skincare products: Face wash, Moisturizing cream, Cold Cream, Vanishing cream and their advantages and disadvantages. Application of these products in the formulation of cosmeceuticals. Antiperspirants & deodorants: Actives & mechanism of action. Principles of formulation and building blocks of Haircare products: Conditioning shampoo, Hair conditioner, anti-dandruff shampoo. Hair oils. Chemistry and formulation of Para-phenylene diamine based hair dye. Principles of formulation and building blocks of oral care products: Toothpaste for bleeding gums, sensitive teeth. Teeth whitening, Mouthwash.

Unit-3

10 Hours

Sun protection, classification of sunscreens and SPF: Role of herbs in cosmetics: Skin Care: Aloe and turmeric Haircare: Henna and amla. Oral care: Neem and clove. Analytical cosmetics: BIS specification and analytical methods for shampoo, skin cream and toothpaste.

Unit-4

8 Hours

Principles of cosmetic evaluation: Principles of sebumeter, corneometer. Measurement of TEWL, SkinColor, Hair tensile strength, Hair combing properties Soaps, and syndet bars. Evolution and skin benefits.

Unit-5

7 Hours

Oily and dry skin: causes lead to dry skin, skin moisturisation. Basic understanding of the terms Comedogenic, dermatitis. Cosmetic problems associated with hair and scalp: Dandruff, Hair fall causes. Cosmetic problems associated with skin: blemishes, wrinkles, acne, prickly heat and body odour. Antiperspirants and Deodorants- Actives and mechanism of action.

Tutorials will be based on the above syllabus.

Elective subject-8 name with code: **13PH0810 Experimental Pharmacology Course**

Objective

This subject is designed to impart the basic knowledge of preclinical studies in experimental animals including design, conduct and interpretations of results.

Course Outcomes

Upon completion of the course, the student shall be able to

1. Appreciate the applications of various commonly used laboratory animals.
2. Appreciate and demonstrate the various screening methods used in preclinical research.
3. Appreciate and demonstrate the importance of biostatistics and research methodology.
4. Design and execute a research hypothesis independently.

Teaching and assessment scheme

Unit-1

7 Hours

Laboratory animals: Study of CPCSEA and OECD guidelines for maintenance, breeding and conduct of experiments on laboratory animals Common lab animals: Description and applications of different species and strains of animals. Popular transgenic and mutant animals. Techniques for collection of blood and common routes of drug administration in laboratory animals, Techniques of blood collection and euthanasia.

Unit-2

3 Hours

Introduction to preclinical studies: Dose selection, calculation and conversions, preparation of drug solution/suspensions, a grouping of animals and importance of sham negative and positive control groups. The rationale for the selection of animal species and sex for the study.

Unit-3

12 Hours

Preclinical screening models for drugs acting on CNS: Analgesic, antipyretic, anti-inflammatory, general anaesthetics, sedative and hypnotics, antipsychotic, antidepressant, antiepileptic, nootropics anti Parkinsonism drugs, anti-Alzheimer drug Preclinical screening models for drugs acting on the eye and local anesthetics.

Unit-4

5 Hours

Preclinical screening models for drugs acting on ANS: Sympathomimetics, sympatholytics, parasympathomimetics, parasympatholytics, skeletal muscle relaxants.

Unit-5

13 Hours

Preclinical screening models for drugs acting on CVS: Antihypertensives, diuretics, antiarrhythmic, anti-dyslipidemic, antiaggregatory, coagulants, and anticoagulants Preclinical screening models for antiulcer, antidiabetic, anticancer and antiasthmatic activities.

Unit-6

5 Hours

Research methodology and bio-statistics: Selection of research topic, review of literature, research hypothesis and study design Pre-clinical data analysis and interpretation using Students't' test and One-way ANOVA. Graphical representation of data.

Tutorials will be based on the above syllabus.

Teaching hours: 15

Hours Recommended references (Latest edition)

1. Fundamentals of Experimental Pharmacology by M. N. Ghosh.
2. Handbook of Experimental Pharmacology by S. K. Kulkarni.
3. CPCSEA guidelines for laboratory animal facility.
4. Drug discovery and Evaluation by Vogel H.G.
5. Drug Screening Methods by Suresh Kumar Gupta and S. K. Gupta.
6. Introduction to biostatistics and research methods by PSS Sundar Rao and J Richard.

B. PHARMACY

Syllabus ♦ Semester-8

Elective subject-9 name with code: **13PH0811 Advanced Instrumentation Techniques**

Course Objective

This subject deals with the application of instrumental methods in qualitative and quantitative analysis of drugs. This subject is designed to impart advanced knowledge on the principles and instrumentation of spectroscopic and chromatographic hyphenated techniques. This also emphasizes theoretical and practical knowledge of modern analytical instruments that are used for drug testing.

Course Outcomes

Upon completion of the course, the student shall be able to

1. Understand the advanced instrument used and its applications in drug analysis.
2. Understand the chromatographic separation and analysis of the drug.
3. Understand the calibration of various analytical instruments.
4. Know analysis of drugs using various analytical instruments.

Teaching and assessment scheme

Teaching Scheme (Hours)			Credits	Theory/ Tutorial Marks			Practical Marks		Total Marks
Theory	Tutorial	Practical		CSE	IA (I)	ESE (E)	TW	Viva (V)	
3	1	0	4	10	15	75	0	0	100

Theory syllabus

Teaching hours: **45 Hours**

Unit-1

10 Hours

Nuclear magnetic resonance spectroscopy: Principles of H-NMR and C-NMR, chemical shift, factors affecting chemical shift, coupling constant, Spin - spin coupling, relaxation, instrumentation and applications
Mass Spectrometry- Principles, Fragmentation, Ionization techniques — Electron impact, chemical ionization, MALDI, FAB, Analyzers-Time of flight and Quadrupole, instrumentation, applications.

Unit-2

10 Hours

Thermal methods of analysis: Principles, instrumentation and applications of thermogravimetric analysis (TGA), Differential Thermal Analysis (DTA), Differential Scanning Calorimetry (DSC) X-Ray Diffraction Methods: Origin of X-rays, basic aspects of crystals, Xray Crystallography, rotating crystal technique, single-crystal diffraction, powder diffraction, structural elucidation and applications.

Unit-3

10 Hours

Calibration and validation: as per ICH and USFDA guidelines Calibration of the following Instruments
 Electronic balance, UV-Visible spectrophotometer, IR spectrophotometer, Fluorimeter, Flame Photometer, HPLC and GC.

Unit-4

8 Hours

Radio immune assay: Importance, various components, Principle, different methods, Limitation and Applications of Radioimmunoassay
Extraction techniques: General principle and procedure involved in the solid-phase extraction and liquid-liquid extraction.

Unit-5

7 Hours

Hyphenated techniques: LC-MS/MS, GC-MS/MS, HPTLC-MS.

Tutorials will be based on the above syllabus.

Teaching hours: 15

Syllabus ♦ Semester-8

Elective subject-10 name with code: **13PH0812 Dietary Supplements and Nutraceuticals**

Course Objective

This subject covers a foundational topic that is important for understanding the need and requirements of dietary supplements among different groups in the population.

Course Outcomes

This module aims to provide an understanding of the concepts behind the theoretical applications of dietary supplements. By the end of the course, students should be able to:

1. Understand the need for supplements by the different groups of people to maintain a healthy life.
2. Understand the outcome of deficiencies in dietary supplements.
3. Appreciate the components in dietary supplements and their application.
4. Appreciate the regulatory and commercial aspects of dietary supplements including health claims.

Theory syllabus

Teaching hours: **45 Hours**

Unit-1

7 Hours

Nutraceuticals: Definitions of Functional Foods, Nutraceuticals and Dietary supplements. Classification of Nutraceuticals, Health problems and diseases that can be prevented or cured by Nutraceuticals i.e., weight control, diabetes, cancer, heart disease, stress, osteoarthritis, hypertension etc. Public health nutrition, maternal and child nutrition, nutrition and ageing, nutrition education in the community. Source, Name of marker compounds and their chemical nature, Medicinal uses and health benefits of following used as nutraceuticals/functional foods: Spirulina, Soyabean, Ginseng, Garlic, Broccoli, Gingko, Flaxseeds.

Unit-2

15 Hours

Phytochemicals as nutraceuticals: Occurrence and characteristic features (chemical nature medicinal benefits) of following a) Carotenoids- α and β -Carotene, Lycopene, Xanthophylls, leutin b) Sulfides: Diallylsulfides, Allyl trisulfide. c) Polyphenolics: Resveratrol d) Flavonoids- Rutin, Naringin, Quercetin, Anthocyanidins, catechins, Flavones e) Prebiotics / Probiotics: Fructo-oligosaccharides, Lactobacillus f) Phytoestrogens: Isoflavones, daidzein, Geobustin, lignans g) Tocopherols h) Proteins, vitamins, minerals, cereal, vegetables and beverages as functional foods: oats, wheat bran, rice bran, seafood, coffee, tea and the like.

Unit-3

7 Hours

Introduction to free radicals: Free radicals, reactive oxygen species, production of free radicals in cells, damaging reactions of free radicals on lipids, proteins, carbohydrates, nucleic acids. b) Dietary fibres and complex carbohydrates as functional food ingredients.

Unit-4

10 Hours

Diseases: a) Free radicals in Diabetes mellitus, Inflammation, Ischemic reperfusion injury, Cancer, Atherosclerosis, Free radicals in brain metabolism and pathology, kidney damage, muscle damage. Free radicals' involvement in other disorders. Free radicals' theory of ageing. b) Antioxidants: Endogenous antioxidants - enzymatic and nonenzymatic antioxidant defence, Superoxide dismutase, Catalase, Glutathione peroxidase, Glutathione Vitamin C, Vitamin E, α - Lipoic acid, melatonin Synthetic antioxidants: Butylated hydroxy Toluene, Butylated hydroxy Anisole. c) Functional foods for chronic disease prevention.

Unit-5

6 Hours

Environmental factors: Effect of processing, storage and interactions of various environmental factors on the potential of nutraceuticals. b) Regulatory Aspects; FSSAI, FDA, FPO, MPO, AGMARK. HACCP and

B. PHARMACY
Syllabus ♦ Semester-8

GMPs on Food Safety. Adulteration of foods. c) Pharmacopeial Specifications for dietary supplements and nutraceuticals.

Tutorials will be based on the above syllabus.

Guidelines

All the students shall undertake a project under the supervision of a teacher and submit a report. The area of the project shall directly relate any one of the elective subjects opted by the student in semester VIII or Minor research project at R. & D organization/ CRO/ Manufacturing organization/ QA & QC Laboratory/ Public testing laboratory/ Drug regulatory body/ Hospital/ Community Pharmacy/ Help Centre or Institute. The project shall be carried out in a group not exceeding 5 in number. The project report shall be submitted in triplicate (typed & bound copy not less than 25 pages).

The students can perform the activities for project work after completion of Semester VI onwards (during the vacation/ official Holidays) but the credit of project work will be transferred in Semester VIII. Those who are doing project work during this period must complete the prescribed days or hours for project work as per the guidelines. Institute should maintain documentation regarding project work for each student with requisite evidence.

B.Tech Computer
Engineering
(2017-2022)

- **Courses having focus on employability/ entrepreneurship/ skill development during last five years (2017-22)**

Subject Code: 01CE0101

Subject Name: Computer Programming

B.Tech. Year - I

Objective: Students are expected to learn basics of Computer Programming which will help them to apply these concepts in day to day life. The course discusses various notations that required for developing algorithm and for C language, which is used in many commercial, industrial as well as industrial applications. Keeping in view wide applications of files, a special unit of files is introduced.

Credits Earned: 4 Credits

Course Outcomes: After completion of this course, student will be able to

- Recognize importance of C language and its day to day applications.
- Analyze the various control structures that requires to use in real time applications
- How to convert real time applications into algorithms and device the program using C language notations
- Identify various basic programming principles using C language.
- Illustrate various programming syntax.
- Express and distinguish various loops in C language.
- Express programming problems logically through flow charts and algorithms.
- Prepare effective team-oriented problem solver as well as communicator with non-technical stakeholders in computer and software systems development.
- Apply fundamental principles of problem solving in software engineering.

Pre-requisite of course: NA.

Contents:

Unit	Topics	Contact Hours
1	Introduction : Basic organization of a Computer, Languages Low level - high Number level, System - Binary - Decimal conversion problems, Flowchart, Algorithm, problem solving using flowchart and algorithm	6
2	C Programming Basics : Introduction to C Programming, Structure of 'C' program, compilation and linking processes, Constants, Variables, Data Types, C Tokens, Expression using operators in 'C', Type Conversion and Type Casting	7
3	Control Structure and Looping : Decision Making statements, Switch statement, Conditional operator, Looping - Entry and Exit control loops, concept of jump, break and continue.	6
4	Array and String : Declaration and initialization of array, Types of array, sorting and matrix operation using array, String - string operations, string array, string function	5
5	Functions and Pointers : Functions - Definition of function, Declaration of function, Call by value, Call by references, Recursion. Pointers - Definition, Initialization, pointer arithmetic, pointer and array, Chain of pointer.	8
6	Structure and Union : Need of structure data type, structure definition, structure declaration, structure within structure, difference between structure and union.	2
7	Dynamic Memory Allocation : DMA concepts, DMA functions - Malloc(), Calloc(), Realloc(), Free().	2
8	File Management : Introduction to file management and its functions.	3
9	Introduction to Data Structure using C : Introduction, Types - Linear and Non Linear Data structure	3

A. Q.

Linear – Basics of Stack, Queue and Linked List

4. Programming with C, Gottfried, McGraw-Hill.

Suggested Theory distribution:

The suggested theory distribution as per Bloom's taxonomy is as per follows. This distribution serves as guidelines for teachers and students to achieve effective teaching-learning process

Distribution of Theory for course delivery and evaluation					
Remember	Understand	Apply	Analyze	Evaluate	Create
20%	20%	30%	15%	10%	5%

Suggested List of Experiments:

1. Write a program to print student detail.
2. Write a program to calculate simple interest.
3. Write a program that accepts centigrade and convert it into Fahrenheit.
4. Write a program that accepts two numbers in A and B interchange value of A and B variable.
5. Write a program to demonstrate the use of the basic data types int, char and float.
6. Write a program to demonstrate the use of Arithmetic operators by getting two numbers from the user

(Handwritten signature)

7. Write a program that accepts a number from keyboard and find whether the number is ODD or EVEN using Conditional operators.
8. Write a program to demonstrate the use of increment and decrement operator.
9. Write a program to demonstrate the use of shorthand operators.
10. Write a program to demonstrate the use of sizeof() of operator.
11. Write a program to demonstrate the use of bitwise operators.
12. Write a program that accepts three numbers from the user and print maximum of them.
13. Demonstrate the use of GOTO statement.
14. Write a program to input the Name and the Salary of an Employee. Calculate and print the Name, Salary and Bonus of the Employee, where bonus= 5.3% if salary is at least Rs. 10,000 and 6.5% otherwise.
15. Admission to professional course is subject to the following conditions. Marks in Mathematics ≥ 60
Marks in
Physics ≥ 50 Marks
in Chemistry ≥ 40
Total in all three subjects ≥ 200 or total in mathematics and physics ≥ 150 Given the marks in the three subjects, Write a program to process the application to list the eligible candidates.
16. Write a program that accepts two numbers and one code (1,2,3,4) from the user. According to the code, the operations to be performed, using switch case statements as follows: (Code : 1 \rightarrow Addition, 2 \rightarrow Subtraction, 3 \rightarrow Multiplication, 4 \rightarrow Division).
17. Write a program that reads the marks for five subjects of a student. Calculate and print the grade for the student [i.e. Grade A,B,C,D and F]

f. (W)

using Else-If ladder.

18. Write a program that do sum=1+3+5+.....N terms Print value of Sum.
19. Write a program to print the Fibonacci Series[i.e 1,1,2,3,5,8,13...N terms].
20. Write a program to accept one number from the user. i) Display reverse of that number. ii) Find if it is Armstrong or not.
21. Write a program that accepts a number from the user and print prime numbers from 0 to that number.
22. Write a C program to display following different Patterns.

1	1
1 2	1 0
1 2 3	1 0 1
1 2 3 4	1 0 1 0
1 2 3 4 5	1 0 1 0 1

1	a
2 1	bc
1 2 3 2 1	def
2 3 4 3 2 1	ghij
1 2 3 4 5 4 3 2 1	klmno
1	1
AB	AB
1 2 3	2 3 4
ABCD	CDEF
1 2 3 4 5	5 6 7 8 9

23. Write a program to accept 5 numbers in an array and display it.
24. Write a program to accept 9 numbers in form of matrix and display in matrix form.

f. (N)w

25. Write a program to accept 5 numbers in array and find maximum and minimum value of it.
26. Write a program to accept 5 numbers in array and find maximum and minimum value of it.
27. Write a program to sort all elements of 1-D array in ascending and descending order.
28. Write a program to calculate and display addition of two matrix.
29. Write a program to count number of vowels in a given string.
30. Write a program to check whether entered string is palindrome or not.
31. Write a program for string concatenation without using library function.
32. Write a program to demonstrate the Library function for string.
33. Write a function which receives number as argument and return sum of digit.
34. Write a program for calculating Fibonacci series using UDF and call by value
35. Write a program to calculate Factorial using recursion in UDF.
36. Write a program to find Average, maximum and minimum of Array elements using UDF.
37. Write a program to calculate total number of positive, negative and zero value in array using UDF.
38. Write a program to swap two numbers using UDF and pointer.
39. Write a program using pointer to read in an array of integers and print its elements in reverse order.
40. Write a C program to create a structure of employees with Full Name, Last Name, City and Salary. Display it for n employees.
41. Write a program to demonstrate nested structure. (make structures for circle and rectangle)

42. Write a program to create array of structure. Make a structure for student having student_no, student_name, student_marks.
43. Write a program to create union cricketer having player_name, batting_avg, player_age. P for swapping of two values with help of UDF and call by reference.
44. Write a program to Display contents of a file on screen. Use functions (fopen, fclose, getc, putchar, eof)
45. Write a program to count number of characters in a file.

Instructional Method:

- a. The course delivery method will depend upon the requirement of content and need of students. The teacher in addition to conventional teaching method by black board, may also use any of tools such as demonstration, role play, Quiz, brainstorming, MOOCs etc.
- b. The internal evaluation will be done on the basis of continuous evaluation of students in the laboratory and class-room.
- c. Practical examination will be conducted at the end of semester for evaluation of performance of students in laboratory.
- d. Students will use supplementary resources such as online videos, NPTEL videos, e-courses, Virtual Laboratory

Subject Code: 01CE0102

Subject Name: Computer Workshop

B.Tech. Year -I

Objective: Students of Computer Engineering have to work with various hardware and software not only during academia but also in company. Thus, students should get familiar with various hardware, software, operating systems and networking.

This course will provide student a much needed knowledge of computer hardware and networking, enabling them to identify and rectify the onboard computer hardware, software and network related problems. With the help of this course the student will be able to understand the hardware specifications that are required to run operating system and various application programs.

Credits Earned: 1 Credits

Course Outcomes: After completion of this course, student will be able to

- Understand the basic concept and structure of computer hardware and networking.
- Identify the existing configuration of the computers and peripherals.
- Upgrading the system as and when required.
- Apply their knowledge about computer peripherals to identify / rectify problems onboard.
- Integrate the PCs into local area network and re-install operating system and various application programs.
- Manage data backup and restore operations on computer and update application software.

Pre-requisite of course: NA

6. Modern Computer Hardware Course by M Lotia, P Nair, P Lotia

List of Experiments:

The practical/exercises should be properly designed and implemented with an attempt to develop different types of skills so that students are able to acquire the competency. Following is the list of experiments for guidance.

As it is laboratory course list is as per content given above

Suggested List of Student Activities:

1. Collect various types of computer hardware and prepare summary report
2. Collect various types of computer software and prepare requirement report
3. Collect specifications of similar types of hardware and software and prepare report comparing them.
4. Assemble one computer and install operating system and several software (mini - project given by faculty member)

Open Ended Problems: Apart from above experiments a group of students has to

undertake open ended problem/design problem. Few examples of the same are given below.

1. Identify the hardware and software list of the given system.
2. Install and uninstall given software step-by-step.
3. Explain step-by-step installation process for given operating system.
4. Prepare the report of need of programming language in 21st century.

Major Equipment:**Components:**

Various types of hardware including RAM, motherboards, Processor, hard disk, etc. along with various operating system like linux and windows based with software like open office, players etc.

Tools:

Screw driver, crimping, soldering iron, multi-meter, cable tester, UTP cable, Connecters, keyboard, mouse, and other USB devices.

f, (W)

Subject Code: 01EC0102
Subject Name: Digital Electronics
B.Tech. Year - I
Objective: The subject aims to prepare the students,

To understand the basic of Digital Electronic concepts required in analysis and design of digital electronic circuits and systems.

To understand the number system, logic gates, Boolean algebra, etc.

To understand Construction and operation of various digital circuits such as Adder, Subtractor, Multiplexer, Demultiplexer, Decoder, Encoder, Flip-flops, Counters, Registers and memory devices.

To devolve the capability to Simplify, Analyze and Design the Various Digital Electronic Circuits.

Credits Earned: 4 Credits
Course Outcomes: After completion of this course, student will be able to

- Perform conversion between various number systems.
- Apply knowledge of Boolean algebra and other minimization techniques for digital circuit design.
- Identify, formulate and solve a problem based on combinational and sequential circuits
- Select the appropriate hardware and software tools for combinational and sequential circuit design.
- Design various counters.
- Verify the functions of various digital integrated circuits.
- Evaluate the specifications of logic families.
- Create a course project using digital integrated circuits.

Pre-requisite of the course: Elementary knowledge of science and mathematics

Suggested Theory Distribution:

The suggested theory distribution as per Bloom's Taxonomy is as per follows. This distribution serves as guidelines to teachers and students for effective teaching-learning process.

Distribution of Theory for course delivery and evaluation					
Remember	Understand	Apply	Analyze	Evaluate	Create
15%	20%	30%	20%	10%	5%

Suggested List of Experiments:

1. Study data sheet of various digital logic circuits and see how to test these circuits using Digital IC Tester.
2. Study of Digital IC Testers, Logic State Analyzer and Digital Pattern Generators.
3. Verify the truth tables of various Digital Logic Gates.
4. Verify the application of NAND and NOR logic gates as universal gates.
5. Implementation of Boolean Logic Functions using logic gate ICs.
6. Design and implement digital logic for given case study.
7. Measure digital logic gate specifications such as propagation delay, noise margin, fan in and fan out.
8. Implement various combinational logic circuits such as adder, subtractor, decoder, encoder, multiplexers, demultiplexer, etc.
9. Design any one code converter and implement using discrete ICs on the bread board.
10. Verify operation of various flip-flops, registers and counters using digital ICs.

Open ended problems:

1. Design and Implementation of combinational lock circuit with varying number of bits (For example 4, 8)
2. Design and Implementation of visitor counter for Shopping Mall.
3. Design and Implementation of 4 bit Arithmetic and Logic Unit with minimum 4 functions using digital integrated circuits.

f. (W)

4. Design and Implementation of a scrolling display.
5. Design and Implement a digital dice which will generate any random number from 1 to 6.

Note: A student and faculty may choose any other such problem which includes the concept used in the course.

Instructional Methods:

1. The course delivery method will depend upon the requirement of content and need of the students. The teacher in addition to conventional teaching method (Chalk and Talk) may use any of the tools such as demonstration, role play, Quiz, brainstorming, MOOCs etc. for effective teaching.
2. The internal evaluation will be done on the basis of continuous evaluation of students in the laboratory and class-room.
3. Practical examination will be conducted at the end of the semester for evaluation of performance of students in laboratory.
4. Students may use supplementary resources such as online videos, NPTEL videos, e-courses, Virtual Laboratory, etc.

Supplementary Learning Resources / Open Source Software:

1. PSpices and NGSpice
2. Xcircuit
3. NPTEL website and IITs virtual laboratory

Major equipment:

1. Pattern Generators
2. Logic State Analyzers
3. Digital Storage Oscilloscopes
4. Digital Integrated Circuits Tester.

Special skill development (Self-study / Communication):

Each student group (2-3 members) has to prepare any one of the syllabus topic allotted by the faculty using PPT/functional model and submit the video of presentation as part of the laboratory term work submission.

f. (NLS)

Subject Code: 01CE0301

Subject Name: Data Structure

B.Tech. Year - II

Objective: To implement efficient algorithms and programs it is necessary to organize or structure the data. Understanding of data structures and their related applications are highly needed to build sustainable program.

Credits Earned: 5 Credits

Course Outcomes: After completion of this course, students will be able to

- Recognize the need of data structures in real time applications. (Knowledge)
- Analyse various data structures and their applications. (Analysis)
- Design and implement various techniques for searching and sorting algorithms to the small and large data sets. (Create)
- Identify appropriate data structures for the requested requirement for a given application. (Knowledge)

Pre-requisite of course: Computer Programming in C

Teaching and Examination Scheme

Teaching Scheme (Hours)			Credits	Theory Marks			Tutorial/ Practical Marks		Total Marks
Theory	Tutorial	Practical		ESE (E)	Mid Sem (M)	Internal (I)	Viva (V)	Term work (TW)	
4	0	2	5	50	30	20	25	25	150

Contents:

Unit	Topics	Contact Hours
1	Introduction to Data Structures: Data Management concepts, Data types - primitive and non-primitive, Types of Data Structures, Linear & non-linear Data Structures	6

f. (M)

2	Linear Data Structures & their representation: Representation of arrays, sparse matrix and its representation, Storage Structures for arrays, Applications of arrays. Stack definitions and concepts, operations on stacks (push, pop, peep, change), Polish Expressions and their compilation and Tower of Hanoi. Representation of queue, operations on queue (insert, delete), Simple Queue, Circular Queue, Double Ended Queue, Priority queues, Applications of Queue. Linked list Understanding and their Operations, Singly Linked List, Doubly Linked List, Circular Linked List, Circular Doubly Linked, Applications of Linked List.	16
3	Nonlinear Data Structure: Tree definitions and their concepts, Representation of binary tree, Binary tree traversal methods and their examples (Inorder, postorder, preorder), Binary search trees. Method to Convert a general trees to binary tree, Threaded binary tree, Applications of Trees, Balanced tree and its mechanism, AVL tree, Weight Balanced Trees, B Tree and B+ Tree. Graphs and their understanding, Matrix representations of a given graph. Depth First Search (DFS), Breadth First Search (BFS), Minimum Spanning Trees Algorithms (Prims, Kruskal, Dijkstra), Path Matrix, Warshall's Algorithm.	16
4	Sorting & Searching techniques : Sorting Concepts and methods <ul style="list-style-type: none">• Bubble Sort,• Selection Sort• Insertion Sort• Quick Sort• Merge Sort Searching Concepts and Methods <ul style="list-style-type: none">• Sequential Search• Binary Search	8
5	Hashing and Collusion Hashing Concepts and methods. Hash Table Methods-Introduction, Hashing Functions. Collusion and its understanding. Discuss different Collision-Resolution Techniques with examples.	8
Total Hours		54

Suggested Theory distribution:

The suggested theory distribution as per Bloom's taxonomy is as per follows. This distribution serves as guidelines for teachers and students to achieve effective teaching-learning process

Distribution of Theory for course delivery and evaluation					
Remember	Understand	Apply	Analyse	Evaluate	Create
20%	20%	20%	15%	10%	15%

Suggested List of Experiments:

1. Introduction to pointers. Call by Value and Call by reference.
2. Introduction to Dynamic Memory Allocation. DMA functions malloc(), calloc(), free() etc.
3. Implement a program using array for stack that performs operations (a) PUSH (b) POP (c) PEEP (d) CHANGE (e) DISPLAY
4. Implement a program to convert infix notation to postfix notation using stack.
5. Write a program to implement QUEUE using arrays that performs following operations (a) INSERT (b) DELETE (c) DISPLAY
6. Write a program to implement Circular Queue using arrays that performs following operations. (a) INSERT (b) DELETE (c) DISPLAY
7. Write a menu driven program to implement following operations on the singly linked list.
 - (a) Insert a node at the front of the linked list.
 - (b) Insert a node at the end of the linked list.
 - (c) Insert a node such that linked list is in ascending order.(according to info. Field)
 - (d) Delete a first node of the linked list.
 - (e) Delete a node before specified position.
 - (f) Delete a node after specified position.
8. Write a program to implement stack using linked list.
9. Write a program to implement queue using linked list.
10. Write a program to implement following operations on the doubly linked list.
 - (a) Insert a node at the front of the linked list.
 - (b) Insert a node at the end of the linked list.
 - (c) Delete a last node of the linked list.
 - (d) Delete a node before specified position.

A. N. S.

11. Write a program which create binary search tree and traversal methods.
12. Write a program to implement Quick Sort.
13. Write a program to implement Merge Sort.
14. Write a program to implement Bubble Sort.
15. Write a program to implement Linear and Binary Search.

Instructional Method:

- a. The course delivery method will depend upon the requirement of content and need of students. The teacher in addition to conventional teaching method by black board, may also use any of tools such as demonstration, role play, Quiz, brainstorming, MOOCs etc.
- b. The internal evaluation will be done on the basis of continuous evaluation of students in the laboratory and class-room.
- c. Practical examination will be conducted at the end of semester for evaluation of performance of students in laboratory.

Supplementary Resources:

- a. Students will use supplementary resources such as online videos, NPTEL videos, e-courses, Virtual Laboratory.
- b. <https://visualgo.net/en>
- c. <https://www.cs.usfca.edu/~galles/visualization/Algorithms.html>
- d. <https://quizlet.com>

f. (Signature)

Subject Code: 01CE0302

Subject Name: Database Management System

B.Tech. Year - II

Objective:

A major purpose of a database system is to provide users with an abstract view of the data. That is, the system hides certain details of how the data are stored and maintained. Thereby, data can be stored in complex data structures that permit efficient retrieval, yet users see a simplified and easy-to-use view of the data. The lowest level of abstraction, the physical level, describes how the data are actually stored and details the data structures. The next-higher level of abstraction, the logical level, describes what data are stored, and what relationships exist among those data. The highest level of abstraction, the view level, describes parts of the database that are relevant to each user; application programs used to access a database form part of the view level

Credits Earned: 5 Credits

Course Outcomes:

After learning the course the students should be able:

1. Evaluate business information problem and find the requirements of a problem in terms of data.
2. Understand the uses the database schema and need for normalization.
3. Design the database schema with the use of appropriate data types for storage of data in database.
4. Use different types of physical implementation of database
5. Use database for concurrent use.
6. Backup data from database.

Pre-requisite of course: NA.

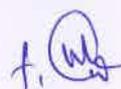

J, (W)

Teaching and Examination Scheme

Teaching Scheme (Hours)			Credits	Theory Marks			Tutorial/ Marks	Practical	Total Marks
Theory	Tutorial	Practical		ESE (E)	Mid Sem (M)	Internal (I)	Viva (V)	Term work (TW)	
4	0	2	5	50	30	20	25	25	150

Contents:

Unit	Topics	Contact Hours
1	Introductory concepts of DBMS : Introduction and applications of DBMS, Purpose of data base, Data, Independence, Database System architecture- levels, Mappings, Database, users and DBA	3
2	Relational Model : Structure of relational databases, Domains, Relations, Relational algebra – fundamental operators and syntax, relational algebra queries, tuple relational calculus	4
3	Entity-Relationship model : Basic concepts, Design process, constraints, Keys, Design issues, E-R diagrams, weak entity sets, extended E-R features – generalization, specialization, aggregation, reduction to E-R database schema	5
4	Relational Database design : Functional Dependency – definition, trivial and non-trivial FD, closure of FD set, closure of attributes, irreducible set of FD, Normalization – 1NF, 2NF, 3NF, Decomposition using FD-dependency preservation, BCNF, Multi- valued dependency, 4NF, Join dependency and 5NF	5
5	Query Processing & Query Optimization : Overview, measures of query cost, selection operation, sorting, join, evaluation of expressions, transformation of relational expressions, estimating statistics of expression results, evaluation plans, materialized views	5
6	Transaction Management : Transaction concepts, properties of transactions, serializability of transactions, testing for serializability, System recovery, Two- Phase Commit protocol, Recovery and Atomicity, Log-based recovery,	10

	concurrent executions of transactions and related problems, Locking mechanism, solution to concurrency related problems, deadlock, , two-phase locking protocol, Isolation, Intent locking	
7	Security: Introduction, Discretionary access control, Mandatory Access Control, Data Encryption	2
8	SQL Concepts Working with DDL, Creating and Managing Constraints --- Defining NOT NULL and UNIQUE constraints, PRIMARY KEY, FOREIGN KEY, and CHECK constraints, Managing constraints, Constructing DML Statements, SELECT Statements and Relational Database Technology, Using the WHERE Clause, Restricting Rows --- Logical comparisons and precedence rules, Sorting rows ,Introduction to functions – single row functions, Using Character, Number, and Date Functions, Conversion functions, NULL functions, Conditional expressions, Executing Database Joins--- Cross joins and natural joins, Join clauses, Inner versus outer joins, Self joins and hierarchical queries, Working with Group Functions, Using Complex SQL with Aggregated Data, Creating Subqueries, Creating and Managing Views-- Creating views, DML operations and views, Managing views, Working with Sequences--- Working with sequences, Indexes and synonyms, Fundamentals of Database Security--- Controlling user access, Creating and revoking object privileges, Regular expressions, Oracle Proprietary Join Syntax-- Cartesian product and the JOIN operations, NONEQUIJOINS, OUTER joins	13
9	PL/SQL Concepts : Cursors, Stored Procedures, Stored Function, Database Triggers	3
	Total Hours	50

References:

1. An introduction to Database Systems, C J Date, Addition-Wesley.
2. Database System Concepts, Abraham Silberschatz, Henry F. Korth & S. Sudarshan, McGraw Hill.
3. Understanding SQL by Martin Gruber, BPB
4. SQL- PL/SQL by Ivan bayross
5. Oracle – The complete reference – TMH /oracle press

Suggested List of Experiments:

Practical -1

Create a table ACCOUNT

Column name	Data Type	Size
acc_no	varchar2	5
Name	varchar2	30
City	varchar2	20
Balance	Number	10,2
loan_taken	varchar2	5

Insert the following records.

acc_no	Name	City	Balance	loan_taken
A001	Patel Jigar	Mehsana	50000	YES
A002	Patel Ramesh	Mehsana	50000	YES
A003	Dave Hardik	Ahmedabad	75000	NO
A004	Soni Hetal	Ahmedabad	100000	NO
A005	Sony Atul	Vadodara	100000	YES

Create a Table LOAN

Column Name	Data Type	Size
loan_no	varchar2	5
acc_no	varchar2	5
loan_amt	number	10,2
interest_rate	number	5,2
loan_date	date	
remaining_loan	number	10,2

Insert the following Records.

f. (Handwritten Signature)

Loan_no	Acc_no	Loan_amt	Interest_rate	Loan_date	Remaining_loan
L001	A001	100000	7	1-jan-04	75000
L002	A002	300000	9	18-may-04	150000
L003	A005	500000	11	15-june-04	300000

Create a table INSTALLMENT

Column Name	Data Type	Size
loan_no	vchar2	5
inst_no	vchar2	5
inst_Date	Date	
Amount	Number	10,2

Insert following Records

Loan_no	Inst_no	Date	Amount
L001	I001	2-Feb-04	15000
L002	I002	18-June-04	20000
L003	I003	15-July-04	20000

Create a Table TRANSACTION

Column Name	Data Type	Size
acc_no	Vchar2	5
tr_Date	Date	
Amt	Number	10,2
type_of_tr	Char	1
mode_of_pay	Vchar2	10

Insert a Following Records

Acc_no	Date	Amt	Type_of_tr	Mode_of_pay
A001	3-may-04	10000	D	Cash
A002	5-july-04	5000	W	Cheque
A003	12-Aug-04	25000	D	Cheque
A004	15-may-04	30000	D	Cheque

A. No

A005	22-oct-04	15000	W	Cash
------	-----------	-------	---	------

List of queries

1. Display all rows and all columns of table Transaction.
2. Display all rows and selected columns of table Installment.
3. Display selected rows and selected columns of table Account.
4. Display selected rows and all columns of table loan.
5. Show the structure of the table loan, account and transaction.

PRACTICAL-2

Table: **ACCOUNT**.

1. Insert the following records if you have not inserted in PRACTIAL - 1

Acc_no	Name	City	Balance	Loan_taken
A001	Patel Jigar	Mehsana	50000	YES
A002	Patel Ramesh	Mehsana	50000	Yes
A003	Dave Hardik	Ahmedabad	75000	NO
A004	Soni Hetal	Ahmedabad	100000	NO
A005	Soni Atul	Vadodara	100000	YES

2. Change the name 'patel jigar' to 'patel hiren'.
3. Change the name and city where account number is A005. (new name = 'kothari nehal' and new city = 'patan').
4. Display only those records where loan taken status is 'YES'.
5. Add the new column (address varchar2 (20)) into table ACCOUNT.
6. Create another table ACCOUNT_TEMP (acc_no, name, balance) from table ACCOUNT.
7. Rename the table ACCOUNT to ACCOUNT_MASTER.
8. Update the column balance for all the account holders.
(Multiply the balance by 2 for each account holders)
9. Describe the structure of table ACCOUNT.
10. Delete the records whose account no is A004.

Table: **LOAN**.

1. Insert the following Records if you have not inserted in PRACTICAL-1

Loan_n o	Acc_n o	Loan_a mt	Interest_ra te	Loan_da te	Remaining_lo an
L001	A001	100000	7	1-jan-04	75000

f. N. G.

L002	A002	300000	9	18-may-04	150000
L003	A005	500000	11	15-june-04	300000

- for each loan holders Add 100000 Rs. Amount into the column loan_amt.
- for each loan holders Increase the interest rate 2%.
- Create another table LOAN_TEMP (loan_no, Acc_no, loan_amt, loan_date) from The table LOAN.
- Display only those records where loan holder taken a loan in month of January.
- Modify the structure of table LOAN by adding one column credit_no varchar2 (4).
- Display the Loan amount*2 of table LOAN.
- Display the records of table LOAN by date wise in ascending order.
- Display the records of table LOAN by account number wise in descending Order.
- Increase the size 5 to 7 of column acc_no.

Table: INSTALLMENT.

- Insert following Records if you have not inserted in PRACTICAL-1.

Loan_no	Inst_no	Inst_Date	Amount
L001	I001	2-Feb-04	15000
L002	I002	18-June-04	20000
L003	I003	15-July-04	20000

- Change the Inst_Date '2-Feb-04' to '3-Mar-04'.
- Reduce 5000 amount from all Installment holders.
- Add the amount 5000 where loan no is 'L003' and 'L002'.
- Change the column size of 5 to 7 where column name is Loan_no.
- Decrease the column size 5 to 4 where column name Inst_no.
- Show the structure of the Table.
- Change the amount 15000 to 5000 where loan number is L001
- Perform delete operation. (Delete only particular one record)
- Only create a structure of table installment1 from table installment.

Table: TRANSACTION.

- Insert a Following Records if you have not inserted in PRACTICAL-1.

Acc_no	Trans_Date	Amt	Type_of_tr	Mode_of_pay
--------	------------	-----	------------	-------------

A001	3-may-04	10000	D	Cash
A002	5-july-04	5000	W	Check
A003	12-Aug-04	25000	D	Check
A004	15-may-04	30000	D	Check
A005	22-oct-04	15000	W	Cash

2. Insert any duplicate value and display all the records without any duplicate rows.
3. Select all the records in descending order(account number wise).
4. Display amt, date, and type of transaction by date wise.
5. Create another table TRANSACTION_TEMP from this table.
6. Create a another table TRANS_TEMP by change the column name acc_no to account_no.
7. Delete a table TRANSACTION_TEMP.
8. Rename the table TRANSACTION to TRANS.
9. Only create a structure of table transaction1 from table transaction.
10. Display account number where type of transaction is 'D'.

PRACTICAL-3

Note: Bold and Underline column name indicates a primary key

Create a table **ACCOUNT**.

Column name	Data Type	Size	Attributes
<u>Acc no</u>	Varchar2	5	Primary key/first letter must start with 'A'
Name	Varchar2	30	NOT NULL
City	Varchar2	20	NOT NULL
Balance	Number	10,2	Balance >=500
Loan_taken	Varchar2	3	Values('NO','YES')

1. Insert the records using Practical list-1.

Create a Table **LOAN**.

Column Name	Data Type	Size	Attributes
<u>Loan no</u>	Varchar2	5	Primary Key / first letter must start with 'L'

Acc_no	Varchar2	5	Foreign key References Acc_no of account table
Loan_amt	Number	10,2	NOT NULL
Interest_rate	Number	5,2	NOT NULL
Loan_date	Date		
Remaining_loan	Number	10,2	Remaining loan < loan amount

1. Insert the records using Practical list-1.

Create a table **INSTALLMENT**.

Column Name	Data Type	Size	Attributes
<u>Loan_no</u>	Varchar2	5	Foreign key References Loan_no of Loan table
Inst_no	Varchar2	5	first letter must start with 'I'
IDate	Date		NOT NULL
Amount	Number	10,2	NOT NULL

1. Insert the records using Practical list-1.

Create a Table **TRANSACTION**.

Column Name	Data Type	Size	Attributes
<u>Acc_no</u>	Varchar2	5	Foreign key References Acc_no of account table
Trans_Date	Date		NOT NULL
Amt	Number	10,2	NOT NULL
Type_of_tr	Char	1	Values in ('D','W')
Mode_of_pay	Varchar2	10	Values in ('cash','check')

1. Insert the records using Practical list-1.

Using Operator: NOT,BETWEEN,NOT BETWEEN,IN,NOT IN

1. Retrieve specified information for the account holder who are not in 'Ahmedabad'.
2. Retrieve specified information for the account holder who are not in 'Ahmedabad' or 'Vadodara'.

f. 

3. Retrieve those records of Account holder whose balance between is 50000 and 100000.
4. Retrieve those records of Account holder whose balance not between is 50000 and 100000.
5. Display only those records whose amount is 5000, 25000, 30000.
6. Display only those records whose amount not in 5000, 25000, 30000.
7. Display System date.
8. Find the date, 15 days after today's date.
9. Perform following operation using DUAL table.
5*5, 34+34, 1000/300, length of 'uvpce', display only month of systemdate
10. Find the date, 20 days before today's date.

Function Based Queries.

1. Find the total transaction amount of account holder from transaction table.
2. Find minimum amount of transaction.
3. Find maximum amount of transaction.
4. Count the total account holders.
5. Count only those records whose made of payment is 'cash'.
6. Count only those records whose transaction made in the month of 'MAY'.
7. Find the average value of transaction.
8. Display the result of 4 rest to 4.
9. Find the square root of 25.
10. Write the query for the following Function.
LOWER, INITCAP, UPPER, SUBSTR, LENGTH, LTRIM, RTRIM, LPAD, RPAD

CONSTRAINTS Based queries.

Create a table: **STUDENT**

Name of column	Type and Size
Rollno	Varchar2(6)
Name	Varchar2(20)

A. W. S.

Branch	Varchar2(6)
Address	Varchar2(20)

1. Add PRIMARY KEY (roll no) and provide constraint name PRIM_rollno.
2. Add NOT NULL constraint to name,branch for student table.
3. Add check constraint and check name is in capital letter.
4. Drop the primary key.
5. Drop the constraint.

Create a Table **REGISTER**.

Name of column	Type and Size
Rollno	Varchar2(6)
Name	Varchar2(20)

1. Provide foreign key references rollno of student table.
2. Add check constraint to check name's first letter is always capital.
3. Add NOT NULL constraint to name of register table.
4. Drop foreign key of REGISTER table.
5. Drop NOT NULL constraint.

PRACTICAL-4

NOTE: for following queries use TABLES of PRACTICAL-1

1. Display the sum of balance of account holders who's live in same city 'Mehsana' using group by clause.
2. Display the information about account where balance is less than total balance of all account holders.
3. Displays the information of account holders whose loan amount and balance both are same.
4. Display the name of city, remaining loan amount, account, date of loan and loan number of account holders.
5. Display name of account holder, installment number and installment amount Whose loan number is 'L001'.
6. Display name of account holder, city, loan amount and installment amount.

f. N. W.

7. Display the balance of account holders whose balance and remaining loan both are same.
8. List of all account holders' information whose balance is same as loan amount.
9. Display the amount of transaction, name of account holders, account number and mode of payment whose mode of payment is
10. Display account no, loan amount, amount of transaction.
11. List of installment information whose amount is less than average amount of transaction.
12. Display the sum of installment amount and transaction amount.
13. Display the balance and amount of transaction group by amount and balance.
14. List of installment number and account number of account holders.
15. Display loan amount, transaction amount and mode of payment where transaction date and loan taken date both are done in month of
16. Display all the information of installment and transaction where installment date and transaction date both are done in month of
17. Display the last three row of account table.
18. Display the balance, mode of payment, loan taken status whose mode of payment is 'CHEQUE' and loan taken is 'YES'.
19. Retrieve only rows 2 to 5 from account table.

PRACTICAL-5
TABLE: SALESMEN

Column Name	Data Type	Size	Attributes
SNUM	Varchar2	6	Primary key/first letter must start with 'S'
SNAME	Varchar2	20	Not null
CITY	Varchar2	15	

A. [Signature]

COMM	Number	5,2	
------	--------	-----	--

Insert the following records:

SNUM	SNAME	CITY	COMM
S1001	Piyush	London	0.12
S1002	Niraj	San jose	0.13
S1003	Miti	London	0.11
S1004	Rajesh	Barcelona	0.15
S1005	Haresh	New york	0.10
S1006	Ram	Bombay	0.10
S1007	Nehal	Delhi	0.09

TABLE: CUSTOMER

Column Name	Data Type	Size	Attributes
CNUM	Varchar2	6	Primary key/first letter must start with 'C'
CNAME	Varchar2	20	Not null
CITY	Varchar2	15	
RATING	Number	5	
SNUM	Varchar2	6	

Insert the following records

CNUM	CNAME	CITY	RATING	SNUM
C2001	Hardik	London	100	S1001
C2002	Geeta	Rome	200	S1003
C2003	Kavish	San jose	200	S1002
C2004	Dhruv	Berlin	300	S1002
C2005	Pratham	London	100	S1001
C2006	Vyomesh	San jose	300	S1007
C2007	Kirit	Rome	100	S1004

A. [Signature]

TABLE: ORDER

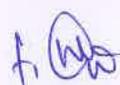

Column Name	Data Type	Size	Attributes
ONUM	Varchar2	6	Primary key/first letter must start with 'O'
AMT	Number	10,2	Not null
ODATE	Date		
CNUM	Varchar2	6	
SNUM	Varchar2	6	

Insert the following records

ONUM	AMT	ODATE	CNUM	SNUM
O3001	18.69	10-Mar-90	C2008	S1007
O3003	767.19	10-Mar-90	C2001	S1001
O3002	1900.10	03-Oct-90	C2007	S1004
O3005	5160.45	04-Oct-90	C2003	S1002
O3006	1098.16	10-Mar_90	C2008	S1007
O3009	1713.23	10-April-90	C2002	S1003
O3007	75.75	10-April-90	C2004	S1002
O3008	4723.00	10-May-90	C2006	S1001
O3010	1309.95	10-May-90	C2004	S1002
O3011	9891.88	10-June-90	C2006	S1001

Perform following queries.
SELECT

1. Display all the information of salesmen.
2. Display snum,sname,city from salesmen table.
3. Display odate,snum,onum and amt from orders.
4. Display the information of orders without duplication.

5. List of sname, city from salesmen where city is 'LONDON'.
6. List all records of customers where rating is equal to 100.
7. Write a select command that produces the order number, amount and date for all rows in the order table.
8. Produces all rows from the customer table for which the salesperson's number is S1001.
9. Display the salesperson table with the column in the following order: city, sname, snum, comm.
10. Write a select command that produces the rating followed by the name of each customer in SAN JOSE.
11. Display SNUM values of all salesmen without any repeat.

OPERATORS

12. List all customers with a rating above 200.
13. List all customers in SAN JOSE who have a rating above 200.
14. List all customers who were either located in SAN JOSE or had a rating above 200.
15. List of all customers who were either located in SAN JOSE or not rating above 200.
16. List of all customers who were not located in SAN JOSE or rating is not above 200.
17. Write a query that will give you all orders for more than \$1000.
18. Write a query that will give you the names and cities of all salesmen in LONDON with a commission above 0.10.
19. Write a query on the customers table whose output will exclude all customers with a rating ≤ 100 and they are located in ROME.

SPECIAL OPERATORS

20. Display all salesmen that were located in either BARCELONA or LONDON (use IN keyword).
21. Find all customers matched with salesmen S1001, S1007 and S1004.
22. Display all salesmen with commission between 0.10 and 0.12.

23. Select all customers whose names fall in a 'A' and 'G' alphabetical.

LIKE OPERATORS.

24. List all the customers whose names begin with 'G'.
25. List all salesmen whose sname start with letter 'P' and end letter is 'H'.

NULL OPERATORS.

26. Find all records in customer table with NULL values in the city column.
27. Write a two queries that will produce all orders taken on October 3rd or 4th, 1990
(use IN operator and Use BETWEEN operator)
28. Write a query that selects all of the customers matched with S1001 and S1002.
29. Write a query that will produce all of the customers whose names begin with a letter from A to H.
30. Write a query that selects all customers whose names begin with 'C'.
31. Write a query that selects all orders without ZEROS or NULLS in amt field..

FUNCTIONS

32. Display sum of amt, average of orders.
33. To count the numbers of salesmen without duplication in the orders tables.
34. Count the rating of customers (with NULL and without NULL).
35. Find the largest order taken by each salesperson.(hint: use group by)
36. Find the largest order taken by each salesperson on each date.
37. Find out which day had the higher total amount ordered.
38. Write a query that counts all orders for October 3rd.
39. Write a query that counts the number of different non-NULL city in the customer table.
40. Write a query that selects the first customer in alphabetical order whose name begin with 'G'.
41. write a query that selects each customers smallest order.
42. Write a query that selects the highest rating in each city.
43. Write a query that counts the number of salesmen registering orders for each day(if a salesperson has more than one order on a given day , he or she should

be counted only once)

44. Display all the information in descending orders(use column CNUM).
45. Display all the information in descending orders(use column CNUM,AMT).
46. Display sname and comm. From salesmen in descending order(in place of column name use column number).
47. Assume each salesperson has a 0.12 commission. Write a query on the orders table that will produce the order number,the salesperson number and the amount of the salesperson's commission for that order.
48. Write a query on the customers table that will find the highest rating in each city. Put the output in this form.

For the city (city) , the highest rating is: (rating).

49. Write a query that lists customers in descending order of rating. Output the rating field first, followed by the customer's name and number.
50. Write a query that totals the orders for each day and places the results in descending order.

JOIN

51. Show the names of all customers matched with the salesmen serving them.
52. Write a query that lists each order number followed by the name of the customer who made the order.
53. Write a query that gives the names of both the salesperson and the customer for each order after the order number.
54. Write a query that produces all customers serviced by salesmen with a commission above 0.12. Output the customer's name, the salesperson's name and the salesperson's rate of commission.
55. Write a query that calculates the amount of the salesperson's commission on each order by a customer with a rating above 100.

OTHERS

56. List all customer located in cities where salesperson 'PIYUSH' has customer.
57. List all salesmen who are living in same city without duplicate rows.
58. Extract all orders of 'PIYUSH'.

J. M. S.

59. Extract all orders of LONDON'S salesmen.
60. Find all customers whose cnum is 1000 above than the snum of 'PIYUSH'.
61. Count the no. of customers with the rating above than average Rating of 'LONDON'.
62. Produce the name and rating of all customers who have above average Rating.
63. List all salesmen with customers located in their cities.
64. Select all customers whose rating doesn't match with any rating customer of 'SAN JOSE'.
65. Create a union of two queries that shows the names, cities and ratings of all customers. Those with rating of ≥ 200 should display 'HIGH RATING' and those with < 200 should display 'LOW RATING'.
66. Find all customers with orders on 3rd october 1990 using correlate sub query.
67. Find all customers having rating greater than any customer in 'ROME'.
68. Insert a row into salesmen table with the values snum is s1008, salesmen name is 'RAKESH', city is unknown and commission is 14%.
69. Create another table London_staff having same structure as salesmen table.
70. Delete all orders from customer 'PIYUSH' from the order table.
71. Set the ratings of all the customers of PIYUSH to 400.
72. Increase the rating of all the customers in ROME by 100.
73. Double the commission of all salesmen of LONDON.
74. Set ratings for all customers in LONDON to NULL.
75. Delete all salesmen who have at least one customer with a rating of 100 from salesmen table.

Instructional Method:

- a. The course delivery method will depend upon the requirement of content and need of students. The teacher in addition to conventional teaching method by black board, may also use any of tools such as demonstration, role play, Quiz, brainstorming, MOOCs etc.

f. N. S.

- b. The internal evaluation will be done on the basis of continuous evaluation of students in the laboratory and class-room.
- c. Practical examination will be conducted at the end of semester for evaluation of performance of students in laboratory.
- d. Students will use supplementary resources such as online videos, NPTEL videos, e-courses, Virtual Laboratory

Supplementary Resources:

2. <https://ilearning.oracle.com/>
3. <https://lagunita.stanford.edu/courses/DB/2014/SelfPaced/about>

f. (W)

Subject Code: 01CE0303

Subject Name: Object Oriented Design and Programming

B.Tech. Year - II

Objective: The objectives of the course are to have students identify and practice the object-oriented programming concepts and techniques, practice the use of C++ classes and class libraries, modify existing C++ classes, develop C++ classes for simple applications.

Credits Earned: 5 Credits

Course Outcomes: After completion of this course, student will be capable to

- Identify potential benefits of object oriented programming features and compare structure oriented programming and object oriented programming features. (knowledge, comprehension)
- Able to make use of classes and objects for designing programs and concept of reusability.(application)
- Able to apply various object oriented features to solve various computing problems using C++ language. (application)
- Able to analyze programs based on exception handling and using advanced features like STL for faster development. (application, analysis)
- Develop real world applications using concepts of object oriented programming. (synthesis)

Pre-requisite of course: Programming Fundamentals

Teaching and Examination Scheme

Contents:

Unit	Topics	Contact Hours
1	Introduction : Introduction to Object Oriented Programming, Procedural Vs. Object Oriented Programming, Principles of OOP, Access Modifiers, Basics of a Typical C++ Environment, Pre-processors Directives, C++ Program structure. Header Files and Namespaces, library files.	8
2	Programming Basics : Output using cout. Directives. Input with cin. Type bool. The setw manipulator. Type conversions.	7
3	Functions : Call and Return by reference. Overloaded function. Macro Vs. Inline functions. Default arguments, friend functions.	6
4	Object and Classes : Introduction, Structure Definitions, Accessing Members of Structures, Class Scope and Accessing Class Members. Initializing Class Objects: constructors and their types, destructors.	8
5	Operator overloading : Overloading unary operations. Overloading binary operators, data conversion, pitfalls of operators overloading and Type conversion.	8
6	Inheritance : Concept of inheritance. Derived class and based class. Derived class constructors, member function, class hierarchies, public and private inheritance.	4
7	Polymorphism : Pointers in C++, Objects and Pointers, virtual and pure virtual functions, this pointer, Implementing run time polymorphism.	5
9	Streams and Files : Concept of streams, C++ stream classes, formatted and Unformatted I/O , File stream, manipulators, C++ File stream classes, File modes, File management functions, Binary Files, random Files.	3
10	Templates & Exception Handling : What is template? Function templates and class templates, Overloading Template Functions, Inheritance and Templates, Templates and Friend Function, Overview and use of Standard Template Library, try-catch-throw, multiple catch, catch all, Re-throwing Exception.	5
	Total Hours	54

Suggested Theory distribution:

The suggested theory distribution as per Bloom's taxonomy is as per follows. This distribution serves as guidelines for teachers and students to achieve effective teaching-learning process

Distribution of Theory for course delivery and evaluation					
Remember	Understand	Apply	Analyze	Evaluate	Create
20%	20%	30%	15%	10%	5%

Suggested List of Experiments:

Experiment # 1 (Basic OOPC)

1. Write a Program to display WELCOME TO MEFGI and elaborate all the Statements.
2. Write a program to perform the following:
 - Accept three numbers
 - Calculate average
 - Find smallest and largest numbers
 - Display the results such as average, maximum, and minimum.
3. Write a program to make a calculator which performs following operations:
 - a. Addition
 - b. Subtraction
 - c. Multiplication
 - d. Division
 - e. Modulo
4. Write a Write program in C ++ that tells the form of Water whether it is Ice, Water or Steam. Display the menu also as under

Temperature Less than 0 = ICE

Temperature Greater than 0 & Less than 100 = Water

A. Ch

Temperature Greater than 100 = STEAM

5. Write a program to reverse a string.

Experiment # 2 (Basic OOPC)

6. Write a program to perform matrix addition.
7. Write a program which takes string as an input and counts numbers of occurrences of each vowel and total vowels.
8. Write a program to find area of circle, rectangle and triangle using enum datatype.

Experiment # 3 (Function)

9. Write a CPP Program to swap two values (using call by value and call by reference).
10. Write a Function called zeroSmaller() that is passed two int argument by reference and then set the smaller of the two numbers to 0. Write a main () to call this function.
11. Write a program to evaluate following investment equation
$$V = P(1+r)^n$$

and print the tables which would give the value of V for various combination of the following values of P, r, and n:
P: 1000, 2000, 3000,, 10000
r: 0.10, 0.12, 0.13,, 0.20
n: 1, 2, 3,, 10
12. Write a function power () to raise a number m to a power n without using Math.h header file for following scenario.
 - a. The Function takes double value for m and int value for n, and returns the result correctly.
 - b. Use a default value of 2 for n to make function to calculate squares when this argument is omitted.
 - c. Take an int value for m.

In above all cases function name must be same. Write a main() that calls above 3 cases.
13. Write a program to obtain the largest of three numbers using inline function.

A. (M)

Experiment # 4 (Class)

14. Create a class that imitates part of the functionality of the base data type int. Call the class Int. The only data in this class is an int variable. Include member functions to initialize an int to 0, to initialize it to an int value, to display it, and to add two Int values. Write a program that exercises this class by creating two initialized Int values, adding these two initialized values, adding these two initialized value and placing the respond in the un-initialized value, and then display this result.
15. Define a Class "bank_account" having following data members and member functions:
- **Data members :**
 1. Name of the depositor
 2. Account number
 3. Type of account
 4. Balance amount in the account
 - **Member functions :**
 1. To assign the initial values
 2. To deposit an amount
 3. To withdraw an amount after checking the balance
 4. To display name and balance
- Write a main program to test the program for 10 customers.
16. Create two classes **DM** and **DB** which store the value of distances. DM stores distance in meters and centimeters and DB in feet and inches. Write a program that can read values for the class objects and add one object of DM with another object of DB by keeping following in mind.
- a. Use friendly function to carry out the addition.
 - b. The object that stores the results may be a DM or DB object, Depending on the unit in which the results are required.
17. Write a program to calculate number of object created for particular class.

Experiment # 5 (Class)

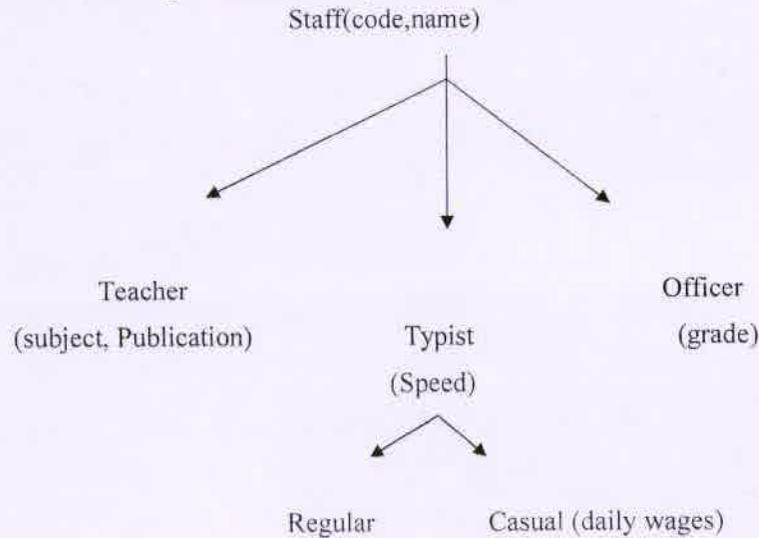

18. Define a Class "complex" having data members as **real** and **imag** and member functions as **add_comp()** & **show_comp()**. Write a C++ program to get information of 2 complex numbers and add these 2 complex numbers and display this result using **Overloaded Constructor** Concept.

A. (M) Co

19. Create a class **FLOAT** that contains one float data member. Overload all the four arithmetic operators(+, -, *, /) so that they operate on the objects of **FLOAT**.
20. Define a class **String**. Use overloaded '==' operator to compare two strings.
21. Write a program which overload cin and cout of iostream.
22. Define a circle class with radius as data member, necessary constructors and member function to compute area of circle. Class should overload the == operator to compare two circle objects whether they are equal in radius. Demonstrate its use in main().

Experiment # 6 (Inheritance)

23. Implement following class relationship and test with main class.

24. Add education details for above classes except for typist. This class will include two information namely, highest education in general studies and highest professional qualification.
25. Implement the following class using abstract class.
 - a. Shape
 - i. TwoDimensional
 1. Triangle
 2. Rectangle
 3. Circle
 - ii. ThreeDimensional
 1. Box
 2. Cone
 3. Cylinder
 4. Sphere

Experiment # 7 (Polymorphism)

26. Define two Classes "Time-12" and "Time-24" to represent time format. Write a C++ program to convert one time format to another time format using **Type Conversion** Concept.
27. Demonstrate Runtime Polymorphism by defining media class as Base class and Book and Tape as Sub Class. Keep display () function such that, It provides run time polymorphism.

Experiment # 8 (File)

28. Write a program that reads a text file and create another file that is identical except that every sequence of consecutive blank spaces is replaced by a single space.
29. Write a program that reads data from one file and copy it to other file.
30. Write a Program which stores name and mobile number in phonebook and performs following tasks:
 - a) Determine the mobile number of the specified person.
 - b) Determine the name of if a mobile number is known.
 - c) Update the mobile number, whenever there is a change.

Experiment # 9 (Standard Template Library)

31. Write a function templates for finding the minimum value contained in an array.
32. Write a class template to represent a generic vector. Include the member functions to perform the following tasks:
 - a. To create a vector
 - b. To modify the value of given element
 - c. To multiply by a scalar value.
33. A table gives a list of car models and the number of units sold in each type in a specified period. Write a program to store this table in suitable container and to display interactively the total value of a particular model sold, given the unit-cost of that model.

J. (M)

34. Write a program that accepts a shopping list of five items from the keyboard and stores them in a vector. Extend the program to accomplish the following tasks:
- To delete a specified item in the list.
 - To add an item at a specified location.
 - To add an item at the end.
 - To print the contents of the vector.
35. Write a program with the following:
- A function to read two double type numbers from keyboard
 - A function to calculate the division of these two numbers
 - A try block to throw an exception when wrong type of data is keyed in
 - A try block to detect and throw an exception if the condition "divide-by-zero" occurs
 - Appropriate catch block to handle the exception thrown.

Instructional Method:

- The course delivery method will depend upon the requirement of content and need of students. The teacher in addition to conventional teaching method by black board, may also use any of tools such as demonstration, role play, Quiz, brainstorming, MOOCs etc.
- The internal evaluation will be done on the basis of continuous evaluation of students in the laboratory and class-room.
- Practical examination will be conducted at the end of semester for evaluation of performance of students in laboratory.
- Students will use supplementary resources such as online videos, NPTEL videos, e-courses, Virtual Laboratory

Supplementary Resources:

- Open source software dev C++

- www.learncpp.com

f, [Signature]

Subject Code: 01CE0401
Subject Name: Operating System
B.Tech. Year - II

Objective: Student will understand Modern Operating System and their principles. The course will cover theory as well as practice aspects of a subject through scheduled lectures and labs, course will cover details of processes, CPU scheduling, memory management, file system, storage subsystem, and input/output management.

Credits Earned: 5 Credits

Course Outcomes: After completion of this course, student will be able to

- Understanding the role of operating system with its function and services. (Understanding)
- Compare Various Algorithm used for CPU Scheduling, Memory management and Disk Scheduling Algorithm. (Evaluate)
- Apply various concepts related with Deadlock to solve Problems. (Apply)
- Analyse Protection and Security Mechanism in Operating System. (Analyse)

Pre-requisite: Data structures like stack, queue, linked list, tree, graph, hashing, file structures, any structured programming language (like C or python).

Suggested List of Experiments:

1. Study of Different OS Installation and its working.
2. Study of Basic commands to understand the system and working of Linux.
3. Write a script to reverse a number and string given by user.
4. Write a script to find the smallest of three numbers as well as largest among three numbers.
5. Write script that prints names of all sub directories present in the current directory.
6. Write a script to reverse the contents of a file.
7. Write a script to check entered string or a number is palindrome or not
8. Write a menu driven shell script for Copy a file, remove a file, Move a file in Linux.
9. Shell Script to make a menu driven calculator using case in UNIX / Linux / Ubuntu.
10. Write a script to display the digits which are in odd position in a given 6 digit number in Linux
11. Write a script to translate the string from capital letters to small and small letters to capital using awk command.
12. Write a script to do the sorting of given numbers (use command line argument).
13. Write a program for process creation using C. (Use of gcc compiler).

Instructional Method:

Subject Code: 01CE0402

Subject Name: Computer Organization and Architecture

B.Tech. Year - II

Objective: To conceptualize the basics of organizational and architectural issues of a digital computer. Further, analyse performance issues in processor and memory design of a digital computer. Also, understanding various data transfer techniques in digital computer and to analyse processor performance improvement using instruction level parallelism.

Credits Earned: 4 Credits

Course Outcomes: After completion of this course, student will be able to

- Understand and describe the basics of various architectural units of the Computer System [Knowledge]
- Apply the knowledge of combinational and sequential logical circuits to mimic a simple computer architecture [Application]
- Apply logic to create assembly language programs for different micro-operations. [Application]
- Demonstrate ALU operations and instruction level parallelism. [Application].
- Identify and differentiate various methods for I/O mechanisms [Analyze].

Pre-requisite of course: Fundamentals of Computer, Digital Logic Circuits.

Contents:

Unit	Topics	Contact Hours
1	Computer Data Representation & Register Transfer and Micro-operations: Basic computer data types, Complements, Fixed point representation, Floating point representation, Register Transfer language, Register Transfer, Bus and Memory Transfers (Tree-State Bus Buffers, Memory Transfer), Arithmetic Micro-Operations, Logic Micro-Operations, Shift Micro-Operations, Arithmetic logical shift unit	6
2	Basic Computer Organization and Design: Instruction codes, Computer registers, Computer instructions, Timing and Control, Instruction cycle, Memory-Reference Instructions, Input-output and interrupt, Complete computer description.	6
3	Micro programmed Control: Control Memory, Address sequencing, Micro program Example, design of control Unit	4
4	Central Processing Unit: Introduction, General Register Organization, Stack Organization, Instruction format, Addressing Modes, data transfer and manipulation, Program Control, Reduced Instruction Set Computer (RISC)	8
5	Pipeline: Flynn's taxonomy, Parallel Processing, Pipelining, Arithmetic Pipeline, Instruction, Pipeline, RISC Pipeline,	4
6	Computer Arithmetic: Introduction, Addition and subtraction, Multiplication Algorithms (Booth Multiplication Algorithm), Division Algorithms, Floating Point Arithmetic operations, Decimal Arithmetic Unit.	6
7	Input-Output Organization: Input-Output Interface, Asynchronous Data Transfer, Modes Of Transfer, Priority Interrupt, DMA, Input-Output Processor (IOP), CPU IOP Communication, Serial communication.	4
8	Memory Organization: Memory Hierarchy, Main Memory, Auxiliary Memory, Associative Memory, Cache Memory, Virtual Memory.	4
	Total Hours	42

A. M. D.

4. Design a 4-bit combinational circuit decremter using four full-adder circuits.
5. Design a digital circuit that performs the four logic operations of exclusive-OR, exclusive-NOR, NOR, and NAND. Use two selection variables. Show the logic diagram of one typical stage.
6. Register A holds the 8-bit binary 11011001. Determine the B operand and the logic microoperation to be performed in order to change the value in A to:
 - I. 01101101
 - II. 11111101
7. The 8bit registers AR, BR, CR and DR initially have the following values :
AR = 11110010 BR = 11111111
CR = 10111001 DR = 11101010

Determine the 8bit values in each register after the execution of the following sequence of micro-operations.

AR \leftarrow AR + BR
CR \leftarrow CR \wedge DR, BR \leftarrow BR + 1
AR \leftarrow AR - CR

8. An output program resides in memory starting from address 2300. It is executed after the computer recognizes an interrupt when FGO becomes a 1 (while IEN = 1).
 - I. What instruction must be placed at address 1 ?
 - II. What must be the last two instruction of the output program?
9. Explain the difference between hardwired control and microprogrammed control. Is it possible to have a hardwired control associated with a control memory?
10. Define the following: (a) microoperation; (b) microinstruction; (c) micro-program; (d) microcode.
11. Explain how the mapping from an instruction code to a microinstruction address can be done by means of a read-only memory. What is the advantage of this method?
12. Show how a 9-bit microoperation field in a microinstruction can be divided into subfields to specify 46 microoperations. How many microoperations can be specified in one microinstruction?
13. A computer has 16 registers, an ALU (Arithmetic Logic Unit) with 32 operations, and a shifter with eight operations, all connected to a common bus system.

[Handwritten signature]

- a. Formulate a control word for a microoperation.
- b. Specify the number of bits in each field of the control word and give a general encoding scheme.
- c. Show the bits of the control word that specify the microoperation: $R4 \rightarrow R5 + R6$.

14. Convert the following arithmetic expressions from infix to reverse Polish notation.

- a. $A * B + C * D + E * F$
- b. $A * B + A * (B * D + C * E)$
- c. $A + B * [C * D + E * (F + G)]$
- d. $A * [B + C * (D + E)]$

$F * (G + H)$

15. Formulate a six-segment instruction pipeline for a computer. Specify the operations to be performed in each segment.
16. Explain four possible hardware schemes that can be used in an instruction pipeline in order to minimize the performance degradation caused by instruction branching.
17. Perform the arithmetic operations below with binary numbers and with negative numbers in signed-2's complement representation. Use seven bits to accommodate each number together with its sign. In each case, determine if there is an overflow by checking the carries into and out of the sign bit position.
(a) $(+35) + (+40)$ (b) $(-35) + (-40)$ (c) $(-35) - (+40)$
18. Prove that the multiplication of two n-digit numbers in base r gives a product no more than $2n$ digits in length. Show that this statement implies that no overflow can occur in the multiplication operations.
19. Design an array multiplier that multiplies two 4-bit numbers. Use AND gates and binary adders.
20. Show the hardware to be used for the addition and subtraction of two decimal numbers with negative numbers in signed-10's complement representation. Indicate how an overflow is detected. Derive the flowchart algorithm and try a few numbers to convince yourself that the algorithm produces correct results.

1. (1/10)

Instructional Method:

- a. The course delivery method will depend upon the requirement of content and need of students. The teacher in addition to conventional teaching method by black board, may also use any of tools such as demonstration, role play, Quiz, brainstorming, MOOCs etc.
- b. The internal evaluation will be done on the basis of continuous evaluation of students in the laboratory and class-room.
- c. Students will use supplementary resources such as online videos, NPTEL videos, e-courses, Virtual Laboratory

Supplementary Resources:

1. NPTEL Lecture Series
2. <http://www.intel.com/pressroom/kits/quickreffam.htm>
3. web.stanford.edu/class/ee282/

f. No

Subject Name: Object Oriented Programming with Java

B.Tech. Year - II

Objective: Java is a computer programming language having feature like object-oriented, polymorphism, inheritance and multithreading. It comprises of large third-party library using which we can develop software.

Credits Earned: 5 Credits

Course Outcomes: After completion of this course, student will be able to

- To understand object-oriented programming concepts and implement in java. (Understand)
- To comprehend building blocks of OOPs language, inheritance, package and interfaces. (Understand)
- To identify exception handling methods. (Apply)
- To implement multithreading in object-oriented programs. (Apply)
- To develop GUI based desktop application in project-based learning. (Create)

Pre-requisite of course: NA.

Teaching and Examination Scheme

Teaching Scheme (Hours)			Credits	Theory Marks			Tutorial/ Practical Marks		Total Marks
Theory	Tutorial	Practical		ESE (E)	Mid Sem (M)	Internal (I)	Viva (V)	Term work (TW)	
4	0	2	5	50	30	20	25	25	150

Contents:

Unit	Topics	Contact Hours
1	Java Overview: Java Introduction, Platform Independence, JVM & JDK, Data types, Operators, If, else statement, Switch condition, while, do-while, for loop, break and continue statement.	4

A. M. W.

2	Array and String: Single Array & Multidimensional Array, Library Classes-String, String Buffer & Wrapper Class, Command line arguments and Various String Operations.	6
3	Classes, Objects and Methods: Class and Object, Object reference, Constructor: Constructor Overloading, Method: Method Overloading, Recursion, Passing and Returning object form Method, new operator, this and static keyword, finalize() method, Import statement, Static import, Access control, Nested class, Inner class, Anonymous inner class.	8
4	Inheritance and Interfaces in Java: Overview of Inheritance, inheritance in constructor, Inheriting Data members and Methods, Multilevel Inheritance – method overriding Handle multilevel constructors Explain super keyword, Stop Inheritance ,Explain Final keywords, Creation and Implementation of an interface, Interface reference, instance of operator, Interface inheritance, Dynamic method dispatch, Abstract class, Comparison between Abstract Class and interface, inside of System.out.println – statements.	8
5	Exception Handling in Java: Exception and Error, Use of try, catch, throw, throws and finally, Built in Exception, Custom exception, Throwable Class.	4
6	Multithreaded in Java: Introduction of Multithread programming, Thread classes and Runnable interface, Thread priority and synchronization, Thread communication and Deadlock.	6
7	JAVA File Handling: Overview of Different Stream (Byte Stream, Character stream), Readers and Writers class, File Class, File Input Stream, File Output Stream, Input Stream Reader and Output Stream Writer class, File reader and writer class, File Writer, Buffered Reader class.	6
8	Collection Classes: List Class (Abstract List), Array List class, LinkedList class, Enumeration Iterative Statement, Vector class.	4
9	Applet, AWT and Swing: MVC Architecture, Applet: Applet Fundamental, Applet Architecture, Applet Skeleton, Requesting Repainting, , Event Handling: various event handling mechanisms, Delegation Event Model, Events, Event Sources, Event Listeners, various classes related to event sources and event listeners, AWT: window fundamentals, creating frames, Adding removing various controls, Layout managers, Introduction To Swing,	10

H. N. S.

	Applications and Pluggable look and feel, Basic swing components : Text Fields, Buttons, Toggle Buttons, Checkboxes, and Radio Buttons.	
	Total Hours	56

Suggested Theory distribution:

The suggested theory distribution as per Bloom's taxonomy is as per follows. This distribution serves as guidelines for teachers and students to achieve effective teaching-learning process

Distribution of Theory for course delivery and evaluation					
Remember	Understand	Apply	Analyse	Evaluate	Create
10%	20%	40%	10%	10%	10%

Suggested List of Experiments:

1. Demonstrate HelloWorld Application with Single and Multiple Main in a java program.
2. Write a console program to define and initialize a variable of type byte to 1, and then successively multiply it by 2 and display its value 8 times. Explain the reason for the last result.
3. Write a program that defines a floating-point variable initialized with a dollar value for your income and a second floating-point variable initialized with a value corresponding to a tax rate of 35 percent. Calculate and output the amount of tax you must pay with the Rs. and paisa stored as separate integer values (use two variables of type int to hold the tax, perhaps taxRs and taxPaisa).

A. N. S.

4. Write a program that calculate percentage marks of the student if marks of 6 subjects are given.
5. Write a program to display a random choice from a set of six choices for breakfast (you could use any set; for example, scrambled eggs, waffles, fruit, cereal, toast, or yogurt).
6. When testing whether an integer is a prime, it is sufficient to try to divide by integers up to the square root of the number being tested. Write a program to use this approach.
7. A lottery requires that you select six different numbers from the integers 1 to 49. Write a program to do this for you and generate five sets of entries.
8. Write a program to generate a random sequence of capital letters that does not include vowels.
9. Write an interactive program to print a string entered in a pyramid form. For instance, the string "stream" has to be displayed as follows:

```
S  
St  
S t r  
S t r e  
S t r e a  
S t r e a m
```

10. Write an interactive program to print a diamond shape. For example, if user enters the number 3, the diamond will be as follows:

```
*  
**  
***  
**  
*
```

11. Create an array of String variables and initialize the array with the names of the months from January to December. Create an array containing 12 random decimal values between 0.0 and 100.0. Display the names of each month along with the corresponding decimal value. Calculate and display the average of the 12 decimal values.
12. Write a program to accept a line and check how many consonants and vowels are there in line.
13. Write a program to find length of string and print second half of the string.
14. Write a program to find that given number or string is palindrome or not.
15. Write a program that sets up a String variable containing a paragraph of text of your choice. Extract the words from the text and sort them into alphabetical order. Display the sorted list of words. Also count the number of words that start with capital letters. You could use a simple sorting method called the bubble sort. To sort an array into ascending order the process is as follows:

f. (10)

- a. Starting with the first element in the array, compare successive elements (0 and 1, 1 and 2, 2 and 3, and so on).
 - b. If the first element of any pair is greater than the second, interchange the two elements.
 - c. Repeat the process for the whole array until no interchanges are necessary. The array elements will now be in ascending order.
16. Create a class which asks the user to enter a sentence, and it should display count of each vowel type in the sentence. The program should continue till user enters a word "quit". Display the total count of each vowel for all sentences
 17. Define a class, `mcmLength`, to represent a length measured in meters, centimeters, and millimeters, each stored as integers. Include methods to add and subtract objects, to multiply and divide an object by an integer value, to calculate an area resulting from the product of two objects, and to compare objects. Include constructors that accept three arguments—meters, centimeters, and millimeters; one integer argument in millimeters; one double argument in centimeters; and no arguments, which creates an object with the length set to zero. Check the class by creating some objects and testing the class operations.
 18. Define a class, `tkgWeight`, to represent a weight in tons, kilograms, and grams, and include a similar range of methods and constructors as the previous example. Demonstrate this class by creating and combining some class objects.
 19. Put both the previous classes in a package called `Measures`. Import this package into a program that will calculate and display the total weight of the following: 200 carpets—size: 4 meters by 2 meters 9 centimeters, that weigh 1.25 kilograms per square meter; and 60 carpets—size: 3 meters 57 centimeters by 5 meters, that weigh 1.05 kilograms per square meter.
 20. Define an abstract base class `Shape` that includes protected data members for the (x, y) position of a shape, a public method to move a shape, and a public abstract method `show()` to output a shape. Derive subclasses for lines, circles, and rectangles. You can represent a line as two points, a circle as a center and a radius, and a rectangle as two points on diagonally opposite corners. Implement the `toString()` method for each class. Test the classes by selecting ten random objects of the derived classes, and then invoking the `show()` method for each. Use the `toString()` methods in the derived classes.
 21. Define a class, `ShapeList`, which can store an arbitrary collection of any objects of subclasses of the `Shape` class.
 22. Implement the classes for shapes using an interface for the common methods, rather than inheritance from the superclass, while still keeping `Shape` as a base class.

f. (Signature)

23. Write a program that will generate exceptions of type `NullPointerException`, `NegativeArraySizeException`, and `IndexOutOfBoundsException`. Record the catching of each exception by displaying the message stored in the exception object and the stack trace record.
24. Add an exception class to the last example that will differentiate between the index-out-of-bounds error possibilities, rethrow an appropriate object of this exception class in `divide()`, and handle the exception in `main()`.
25. Write a program that calls a method that throws an exception of type `ArithmeticException` at a random iteration in a for loop. Catch the exception in the method and pass the iteration count when the exception occurred to the calling method by using an object of an exception class you define.
26. Add a finally block to the method in the previous example to output the iteration count when the method exits.
27. Write a Main method that takes the name of a text file as a command line argument and prints every line in lower case.
28. Write a `main()` method that counts the number of words in a text file whose name is accepted from standard input. Also print the size of a file.
29. Write a program using `BufferedInputStream`, `FileInputStream`, `BufferedOutputStream`, `FileOutputStream` to copy Content of one file `File1.txt` into another file `File2.txt`.
30. Create a class called `Student`. Write a student manager program to manipulate the student information from files by using `FileInputStream` and `FileOutputStream`.
31. Refine the student manager program to manipulate the student information from files by using the `BufferedReader` and `BufferedWriter`
32. Refine the student manager program to manipulate the student information from files by using the `DataInputStream` and `DataOutputStream`. Assume suitable data
33. Write a complete multi-threaded program to meet following requirements:
 - a. Two threads of same type are to be instantiated in the method `main`.
 - b. Each thread acts as a producer as well as a consumer.
 - c. A shared buffer can store only one integer information along with the source & destination of the information at a time.
 - d. The information produced is to be consumed by appropriate consumer.
 - e. Both producers produce information for both consumers.
 - f. Each thread produces 5 information.
 - g. Demonstrate kill and suspended scenario for Thread.
34. Develop an applet that draws a circle. The dimension of the applet should be 500 x 300 pixels. The circle should be centered in the applet and have a

J. N. S.

- radius of 100 pixels. Display your name centered in a circle. (using drawOval() method)
35. Draw ten red circles in a vertical column in the center of the applet.
 36. Built an applet that displays a horizontal rectangle in its center. Let the rectangle fill with color from left to right.
 37. Develop an applet that display the position of the mouse at the upper left corner of the applet when it is dragged or moved. Draw a 10x10 pixel rectangle filed with black at the current mouse position.
 38. Develop an applet that contains one button. Initialize the label on the button to "start", when the user presses the button, which changes the label between these two values each time the button is pressed.
 39. Develop an applet that uses the mouse listener, which overrides only two methods which are mousePressed and mouseReleased.
 40. Develop a Demo swing application with different component
 - a. Using JLabel and Icon - using JApplet
 - b. Using JTextField and JTextArea - using JApplet
 - c. Using JButton - using JApplet
 - d. Using JToggleButton - Application (JFrame)
 - e. Using JRadioButton and JCheckBox - Application (JFrame)
 41. Write a java application to create a Calculator using JButton and JTextField. Use Grid layout manager.

Instructional Method:

- a) The course delivery method will depend upon the requirement of content and need of students. The teacher in addition to conventional teaching method by black board, may also use any of tools such as demonstration, role play, Quiz, brainstorming, MOOCs etc.
- b) The internal evaluation will be done on the basis of continuous evaluation of students in the laboratory and class-room.
- c) Practical examination will be conducted at the end of semester for evaluation of performance of students in laboratory.
- d) Students will use supplementary resources such as online videos, NPTEL videos, e-courses, Virtual Laboratory

Subject Code: 01GS0301

Subject Name: Engineering Management

B.Tech. Year - II

Objective:

A major purpose of Engineering Management is to enhance the knowledge of individual for management and finance and overall to understand market movement and factors influencing them.

Credits Earned: 2 Credits

Course Outcomes:

After learning the course the students should be able:

1. To understand the globe trade and market
2. Importance of Quality
3. People management
4. Support of Technology for Industries development
5. Review the financial market
6. Understanding the marketing and concepts

Pre-requisite of course: NA.

Layout-types and relative merits and demerits, Material : Functions, objectives, planning and control including inventory models with or without storage costs, price break. Different classes of inventory. Material Requirement Planning (MRP). Project : Project Planning – Risk identification, Assessment & Response Planning	04	15%
6.	Management of Technology: Information technology and management. Role of information, management information system and decision support system, introduction to e-business, ecommerce and integration tools like enterprise resource planning (ERP).	04	12%
7.	Financial management: Introduction to standard forms of financial statements, ie., balance-sheet, profit and loss, and income statement. Fixed and current asset items. Fixed and current liability items. Funds flow statement. Financial ratios and their implications.	04	13%
8.	Quality management: Quality definition, quality planning, quality control and quality management, Total quality	03	10%

A. N. S.

Objective: Students are expected to learn basics of Computer Network which will help them to build LAN, MAN and WAN. The course is designed to let students demonstrate an understanding of the protocols, network metrics and applications of the Internet. Additionally, to demonstrate a basic understanding of various internetworking devices.

Credits Earned: 5 Credits

Course Outcomes: After completion of this course, student will be able to

- Describe the Importance of computer networks and analyze various performance metrics. (Analyze)
- Distinguish and relate various protocols in layered architecture of computer networks. (Analyze)
- Implement various topological and routing strategies for IP based networks. (Apply)
- Design & implement client server application using socket programming. (Create)
- Compare various devices and protocols that builds computer network. (Apply)

Pre-requisite of course: NA.

Subject Code: 01MA0231

Subject Name: Discrete Mathematics & Graph Theory

B.Tech. Year - II

Objective: Engineering Mathematics is one of the essential tools for learning Technology, Engineering and Sciences. In this course students will come across several theorems and proofs. This course is aimed to cover a variety of different problems in Graph Theory. Theorems will be stated and proved formally using various techniques. Various graphs algorithms will also be taught along with its analysis.

Credits Earned: 5 Credits

Course Outcomes: After completion of this course, students will be able to

- Apply concept of Predicate Calculus in computer science like design of computing machines, artificial intelligence, definition of data structures for programming languages etc. (Application)
- Understand the concepts of graph theory, Lattices, and Boolean Algebra analysis of various computer science applications. (Knowledge, Comprehension)
- Apply the knowledge of Boolean algebra in computer science for its wide applicability in switching theory, building basic electronic circuits and design of digital computers. (Knowledge, Application)
- Understand the application of various type of graphs in real life problem. (Knowledge, Comprehension)
- Apply abstract concepts of graph theory in modeling and solving non-trivial problems in different field of study. (Application, Analysis)

Syllabus for Bachelor of Technology
Computer Engineering/Information Technology

Subject Code: 01MA0281

Subject Name: Statistical and Numerical Methods (CE/IT/ES/CHEMICAL)

B.Tech. Year – II

Objective:

A good Engineer has to have an excellent background of Mathematics. Numerical and statistical methods are one of the essential tools for learning Technology, Engineering and Sciences. This course lays the foundation for Numerical and statistical methods in subsequent semesters, so that students get a sound knowledge and important aspects of the course.

Credits Earned: 5 Credits

Course Outcomes: After completion of this course, student will be able to

- Understand the basic concepts of probability and distribution.
- Apply the knowledge of Numerical methods in C++, solving linear equations problems in various branch of engineering.
- Apply the concept of and Data representation and analysis in various field of engineering like image processing etc.
- Apply concept of Correlation and Regression in result analysis and Business forecasting using EXCEL.
- Understand the importance of Interpolation and curve fitting and its application to solve problems.

Subject Code: 01CE0304
Subject Name: Design Thinking and Problem Solving Skills
B.Tech. Year - II

Objective: The main objective of this course is to inculcate interdisciplinary engineering skills in students for taking real time engineering problem available in our society/industry and to come-up with the grass root innovation, can be helpful to all level of human beings.

Credits Earned: 1 Credit

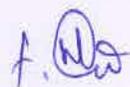

Course Outcomes: After completion of this course, student will be able to

- Understand the importance of Design Thinking. (Understand)
- Evaluate the quality of your information and your emotions; keep thinking straight. (Evaluate)
- Identify skills and personality traits of successful problem solving. (Understand)
- Apply standard problem-solving heuristics to aid in problem solving. (Apply)
- Apply problem-solving techniques to programming activities. (Apply)
- Formulate and successfully communicate the solutions to problems. (Create)

Pre-requisite of course: Not Required.

0	0	2	1	0	0	0	25	25	50

Contents:

Units	Topics	Contact Hours
Module-1 Design Thinking Introduction	Introduction, Need of Design Thinking, Traditional Problem Solving versus Design Thinking, phases of Design Thinking, Tools for Design Thinking, Relevance of Design and Design Thinking in Engineering	3
Module-1 Team Formation, Documentation and Canvas	Team Building Domain Selection (Society/Industry project), Log Books-need, types of log book, preparation of log book, Importance of Documentation, Strategy Design	3
Module-1 Design Thinking Exercise	Formation of Team and aspects for the selection, Domain selection, Observation exercise, Design activities through Canvas, Brainstorming for the problem, Users Interview conduction, generation of records via logbooks	6
Module-2 Problem Solving Skills Introduction	Developing logical thinking. Introduction to Problem Solving in Computer Science domain, Errors in reasoning; verbal reasoning; analogy problems lateral thinking	4
Module-2 Problem Solving Techniques	Deductive and hypothetical reasoning; computational problem solving; generating, implementing, and evaluating solutions; interpersonal problem solving	4
Module-2 Problem Solving Exercise	Group Activities based assignments related to problem solving skills will be given for better understanding and development of problem solving skills	4

J. M. S.

Module-3	Mini project exercise based on understanding of	6
Capstone Project	modules contents	
Total Hours		30

Note: Mentors are advised to take suitable project/activity to explore the above topics and make students understand the various concepts.

f, (M)

Subject Code: 01CE0405
Subject Name: Human Centric Design Approach
B.Tech. Year - II

Objective: This course focuses to build the empathy for the people for designing to solve the societal problem as Human-centered design. It is a creative repeatable approach for problem solving by understanding the real need of the users.

Credits Earned: 1 Credit

Course Outcomes: After completion of this course, student will be able to

- Understand the Human Centric approach for design. (Understand)
- Understand significance of the empathy and solution based on empathy. (Understand)
- Understand importance of design thinking when addressing social change. (Understand)
- Generate the innovative ideas and will convert in new solutions. (Create)
- Build a possible prototype solutions. (Create)

Teaching and Examination Scheme

Teaching Scheme (Hours)			Credits	Theory Marks			Tutorial/ Practical Marks		Total Marks
Theory	Tutorial	Practical		ESE (E)	Mid Sem (M)	Internal (I)	Viva (V)	Term work (TW)

A, (NS)

Subject Code: 01CE0501

Subject Name: Microprocessor Fundamentals & Programming

B.Tech. Year - V

Objective: The objective of the course is to expose to the students to the architecture and instruction set of typical 8-bit microprocessor. It also deals with Assembly Language Programming using a macro-assembler. Input-output techniques and important programmable support chips used in microprocessor-based systems are discussed in detail.

Credits Earned: 4 Credits

Course Outcomes: After completion of this course, students will be able to

- To relate the architecture of 8085 8-bit Microprocessor with the processor they are already using in their laptop. (Understand)
- To classify and understand the function of each pin 8085 Microprocessor. (Understand)
- To Write, Debug & Simulate assembly language program of 8085 microprocessors. (Apply)
- To design and implement Memory interfacing in 8085 Microprocessor. (Apply)
- To apply the concept of Assembly language, time delay into 8085 microprocessors and its peripheral. (Apply)
- To relate knowledge, gain in this course to understand the structure and operation of advanced processor. (Understand)

Pre-requisite of course: Digital Electronics

Contents:

Unit	Topics	Contact Hours
1	Introduction: Introduction to Microprocessors, microcomputer and single chip microcomputer, Components of Microprocessor: Registers, ALU and control & timing, CPU, I/O devices, clock, memory, bussed architecture, tri-state logic, address bus, data bus and control bus.	4
2	Architecture of 8085 Microprocessor: Microprocessor Architecture, Pin Functions, De-multiplexing of Buses Memory and I/O operation, Generation of Control Signals, Instruction Cycle, Machine Cycles, T-States.	6
3	Instruction Set: Assembly Language Programming Basics, Classification of Instructions, 8085 Instruction Set, Instruction and data Formats, Addressing Modes.	7
4	Assembly Language Programming: Looping, counting and indexing using data transfer, arithmetic, logical and branch instructions. Stack & Subroutines, Time Delay routines, Code Conversion, BCD Arithmetic and 16-Bit Data operations.	7
5	Interfacing of Memory & I/O with 8085 microprocessors: Memory mapped I/O and I/O mapped I/O. Address decoding, interfacing of memory chips with 8085. Interfacing of I/O devices with 8085.	5
6	Interrupt of 8085up: Concept of Interrupt mechanism, Hardware and Software interrupt of 8085, 8259 Programmable Interrupt Controller - Internal structure, pin diagram and modes of operation.	4
7	Programmable Peripheral devices: 8255 Programmable Peripheral Interface, 8254 Programmable Interval Timer, ADC and DAC chips and their interfacing.	5
8	Advanced Microprocessors: RISC and CISC Architecture, Intel advanced microprocessors, ARM and SUN SPARC,	4

Suggested Theory distribution:

The suggested theory distribution as per Bloom's taxonomy is as per follows. This distribution serves as guidelines for teachers and students to achieve effective teaching-learning process

Distribution of Theory for course delivery and evaluation					
Remember	Understand	Apply	Analyse	Evaluate	Create
20%	20%	30%	15%	10%	5%

List of Experiments:

1.
 - i. Introduction to 8085 microprocessors.
 - ii. Study of DYNA-85 trainer kit.
2. To perform **Data Transfer (Copy) Operations:**
 - i. Write the data 41h into register C and copy it to Accumulator
 - ii. Load Register H with 34h and Register L with ABh.
 - iii. Copy 32h in all the Registers.
 - iv. Load accumulator with the content of memory whose address is 2500h using three different techniques.
 - v. Exchange the content of memory location 2000h and 2500h using direct addressing and indirect addressing.
3. To perform **Arithmetic Operations:**
 - i. Load Register B and C with 55h and 66h. Add Register B, C and store the result in Register D.
 - ii. Add/Subtract two 16 bit numbers.
 - iii. Add the content of memory location 2500h, 2501h and store the result at memory locations 2503h and 2504H.
 - iv. Transfer the array (3 byte) of data starting from 2500h to 2600h by memory pointer without LDA and STA.
4. To perform **Logical Operations:**
 - i. Assume register B holds 93h and the accumulator holds. 15h. illustrate the result of instruction ORA B, XRA B and CMA.

1, (M)

- ii. Load the data byte 8EH in register D and F7H in register E. Mask the higher order bits (D7-D4) from both the data bytes, Exclusive OR the lower order bits (D3-D0) and display the answer at an output port.
 - iii. Write a program to shift an eight bit data four bits right. Assume data is in register C.
 - iv. Program to shift a 16-bit data 1 bit left. Assume data is in the HL register.
5. To perform **Branch Operations**:
- i. WAP to multiply two 8-bit numbers stored in Register A & Register B.
 - ii. WAP to divide two 8-bit numbers.
 - iii. WAP to find out largest/smallest number from given array stored at 5 consecutive memory locations starting from 2000H and store the result to memory location 2500h.
 - iv. WAP to sort given 10 numbers stored from memory location 2200 in ascending/descending order.
 - v. WAP to search the given byte in the list of 50 numbers stored in the consecutive memory locations starting at 2000H and store the result at the memory locations 2200H and 2201H. Assume byte is in the C register. If byte is not found, store 00 at 2200H and 2201H.
 - vi. Find the square of the given numbers from memory location 6100H and store the result to memory location 7000H & 7001H.
6. To perform **Timing and Delay Operations**:
- i. WAP to count continuously in hexadecimal from FFH to 00H with 0.5 us clock period. Use register C to set up a 1ms delay between each count and display number at one of the o/p port.
 - ii. WAP to generate continuous square wave with a period of 400us. Assume the system clock period is 325.5ns and use bit D0 to output for the square wave. (LED blinking)
 - iii. WAP to generate a rectangular wave with on period of 200 us and off period of 400 us. Use bit D0 of Register A to output for the rectangular wave.
 - iv. Design up/down counter to count from 0 to 9 and 9 to 0 continuously with a 1.5 sec delay between each count. Display output at one of the output port.
7. To perform **Stack Operations**:
- i. WAP to meet the following specification.
 - A) Initialize the stack pointer register at 2597H
 - B) Clear the memory location starting from 2592H to 259FH.
 - C) Load register pairs B, D, and H with data 0237H, 1242H and 4087H respectively.
 - D) Push the content of the register pairs B, D, H on the stack.

f, Ma

- E) Execute the program and verify the memory location from 2590H to 259FH.
ii. WAP to alter the content of flag register using stack related instructions.
8. To perform **Subroutine** Operations:
i. WAP to convert given hex number in corresponding ASCII number.
ii. WAP to convert given ASCII number in corresponding HEX number.
iii. WAP to find out square of a number using look up table.
iv. WAP to calculate the factorial of a number between 0 to 8.
v. WAP to convert the binary to BCD equivalent.
9. To Study 8255 Programmable Peripheral Interface.
10. To Study 8259 Programmable Interrupt Controller.

Advance Experiment List

1. Write a program to perform addition of two 16-bit numbers using 8086 Microprocessor.
2. Design a program for Digital Clock with format HH:MM:SS (Address and data field) using inbuilt routines of monitor program of your system.

Instructional Method:

- a) The course delivery method will depend upon the requirement of content and need of students. The teacher in addition to conventional teaching method by black board, may also use any of tools such as demonstration, role play, Quiz, brainstorming, MOOCs etc.
- b) The internal evaluation will be done on the basis of continuous evaluation of students in the laboratory and class-room.
- c) Practical examination will be conducted at the end of semester for evaluation of performance of students in laboratory.
- d) Students will use supplementary resources such as online videos, NPTEL videos, e-courses, Virtual Laboratory

A. Ma

Supplementary Resources:

Students will use supplementary resources such as online videos, NPTEL videos, e-courses, Virtual Laboratory.

- a) Open source simulator for 8085 microprocessors (Jubin's Java 8085 simulator)
- b) www.nptel.ac.in
- c) www.intel.com

f. (WA)

Subject Code: 01CE0502
Subject Name: Advanced Java Programming
B.Tech. Year - III

Objective: This course develops programming ability of students to create dynamic web applications using server side technology with Java Database Connectivity. Students can learn networking and remote method invocation using Java API. Different Java frameworks like Spring, Java Server Faces and Hibernate will increase ability of students in web application development.

Credits Earned: 5 Credits

Course Outcomes: After completion of this course, student will be able to

- Describe the components of J2EE Architecture, MVC Framework and Multi-tier Application and Various Network Protocol. (Understand)
- To make use of Servlet and JSP API in the process of enterprise application deployment. (Apply)
- Implement components such as Session, Filters, JSTL, Beans. (Apply)
- Distinguish Application Server, Web Container, JDBC and ORM tools.(Analyze)
- Design and Development of web application having collaboration of Servlets, JSPs, JSF, Spring and Hibernate base upon the requirement. (Create)

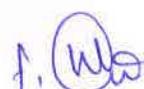

Pre-requisite of course: Core Java

Teaching and Examination Scheme

Suggested Theory distribution:

The suggested theory distribution as per Bloom's taxonomy is as per follows. This distribution serves as guidelines for teachers and students to achieve effective teaching-learning process.

Distribution of Theory for course delivery and evaluation					
Remember	Understand	Apply	Analyze	Evaluate	Create
10%	20%	50%	10%	0%	10%

Suggested List of Experiments:
Experiment# 1 Java Networking

Sr. No.	Practical Name
1	Write an application which will retrieve IP address for given website.
2	Write an application which will retrieve the content of the given URL with different web-page related information.
3	Write a two - way network based chat application. It will use TCP/IP protocol and it will do communication in serial manner.
4	Write an application which will retrieve file from server machine and save that file on client machine. File name will be provided by client.
5	Write a client program to send any string from its standard input to the server

f. (NS)

	program. The server program reads the string, finds number of characters and digits and sends it back to client program. Use connection-oriented communication.
6	Write a client program to send any string from its standard input to the server program. The server program reads the string, finds number of characters and digits and sends it back to client program. Use connection-less communication.

Experiment# 2 JDBC Programming

Sr. No.	Practical Name
1	Write down Five Basic steps to establish JDBC connection from Java Application. Also mention sample code for each step.
2	Write a JDBC application which will interact with Database and perform the following task. 1) Create Student Table with RollNo, Name, and Address field and insert few records. 2) Using Statement Object display the content of Record. 3) Using Statement Object Insert Two Record. 4) Using Statement Object Update One Record. 5) Using Statement Object Delete One Record. 6) Using Statement Object display the content of Record.
3	Write a JDBC application which will interact with Database and perform the following task. 1) Create Student Table with RollNo, Name, and Address field and insert few records. 2) Using PreparedStatement Object display the content of Record. 3) Using PreparedStatement Object Insert Two Record. 4) Using PreparedStatement Object Update One Record. 5) Using PreparedStatement Object Delete One Record. 6) Using PreparedStatement Object display the content of Record.
4	Write a JDBC application which will interact with Database and perform the following task. 1) Create a store procedure which will insert one record into employee table. 2) Create a store procedure which will retrieve salary for given employee id. 3) Write a java application which will call the above procedure and display appropriate information on screen.
5	Design a JDBC application which will demonstrate Scrollable ResultSet functionality.
6	Design a JDBC application which will demonstrate Updatable ResultSet functionality.
7	Design a JDBC application which will demonstrate Transaction management functionality.

A. M. W.

Experiment# 3 Servlet

Sr. No.	Practical Name
1	Write down the Program for testing the Servlet and study deployment descriptor.
2	Write down the program for testing the include action for servlet collaboration.
3	Write down the program for testing the forward action for servlet collaboration.
4	Create login form and perform state management using Cookies, HttpSession and URL Rewriting.
5	Create Servlet file which contains following functions: 1. Connect 2. Create Database 3. Create Table 4. Insert Records into respective table 5. Update records of particular table of database 6. Delete Records from table. 7. Delete table and also database.
6	Write down the Program in which error is handled by the deployment descriptor file (web.xml).
7	Implement Authentication filter using filter API.
8	Write down the Program for testing the servlet context interface.

Experiment# 4 JSP

Sr. No.	Practical Name
1	Write down the Program which displays the simple JSP file.
2	Write down the program in which input the two numbers in an html file and then display the addition in JSP file.
3	Write down the program in which display the error by common file for all general pages.
4	Perform Database Access through JSP.
5	Write down the Program for testing the include action tag in jsp.
6	Write down the Program for testing the forward action tag.
7	Write down a program which demonstrates the core tag of JSTL.
8	Write down a program which demonstrates the Format tag of JSTL.
9	Write down a program which demonstrates the Function tag of JSTL.
10	Write down a program which demonstrates the SQL tag of JSTL.
11	Write down a program which demonstrates the XML tag of JSTL.
12	Write down a program which demonstrates the Tag Handler with appropriate output.
13	Create database of student subject-wise data and retrieve all data using JSP and generate xml structure along with DTD and XML Schema definition.

f. M. S.

Experiment# 5 Hibernate Framework

Sr. No.	Practical Name
1	Study and implement Hibernate.
2	Study and Implement Hibernate Annotations.
3	Use Hibernate Query Language to insert, update and delete records in database.

Experiment# 6 Spring Framework

Sr. No.	Practical Name
1	Study and Implement MVC using Spring Framework
2	Inject Service using Aspect Oriented Programming.
3	Using Spring Template manages Database and Transaction.

Experiment# 7 JSF

Sr. No.	Practical Name
1	Use JSF Standard Components and Facelets Tags.
2	Implement JSF Converter Tag and Validation Tags.

Instructional Method:

- The course delivery method will depend upon the requirement of content and need of students. The teacher in addition to conventional teaching method by black board, may also use any of tools such as demonstration, role play, Quiz, brainstorming, MOOCs etc.
- The internal evaluation will be done on the basis of continuous evaluation of students in the laboratory and class-room.
- Practical examination will be conducted at the end of semester for evaluation of performance of students in laboratory.
- Students will use supplementary resources such as online videos, NPTEL videos, e-courses, Virtual Laboratory

f. (Signature)

Subject Code: 01CE0503

Subject Name: Design and Analysis of Algorithm

B.Tech. Year - III

Objective: Obtaining efficient algorithm is very important in modern computer engineering as the world wants applications to be time and space and energy efficient. This course enables to understand and analyse efficient algorithms for various applications.

Credits Earned: 5 Credits

Course Outcomes:

- Learn and understand asymptotic notations for performance of different algorithms. (Understand)
- Derive and solve recurrences describing the performance of divide-and-conquer algorithms (Evaluate)
- Design optimal solution by applying various methods like Dynamic Programming and Greedy Method. (Application)
- Summarize the certain graph algorithms and their analysis.(Application)
- Apply pattern matching algorithms (Application)
- Differentiate polynomial and non-polynomial problems. (Analysis)

Pre-requisite of course: Data Structure and proficiency in programming language, knowledge of Mathematical functions like logarithms, graphs etc.

Teaching and Examination Scheme

Teaching Scheme (Hours)			Credits	Theory Marks			Tutorial/ Practical Marks		Total Marks

Suggested Theory distribution:

The suggested theory distribution as per Bloom's taxonomy is as per follows. This distribution serves as guidelines for teachers and students to achieve effective teaching-learning process

Distribution of Theory for course delivery and evaluation					
Remember	Understand	Apply	Analyse	Evaluate	Create
0%	20%	40%	20%	20%	0%

Suggested List of Experiments:

1. Implementation and Time analysis of sorting algorithms.
Bubble sort, Selection sort, Insertion sort, Merge sort and Quicksort
2. Implementation and Time analysis of linear and binary search algorithm.
3. Implementation of max-heap sort algorithm
4. Implementation and Time analysis of factorial program using iterative and recursive method
5. Implementation of a knapsack problem using dynamic programming.
6. Implementation of chain matrix multiplication using dynamic programming.
7. Implementation of making a change problem using dynamic programming
8. Implementation of a knapsack problem using greedy algorithm
9. Implementation of Graph and Searching (DFS and BFS).
10. Implement prim's algorithm.
11. Implement Kruskal's algorithm.
12. Implement LCS problem.
13. To implement following string matching algorithms and analyze time complexities: a. Naïve b. Rabin Karp c. Knuth Morris Pratt
14. Write a program for Floyd-Warshal algorithm.
15. Write a program for travelling salesman problem.

16. Write a program for Hamiltonian cycle problem.
17. To implement Huffman coding and analyze its time complexity.
18. Write a program for Strassen's Matrix Multiplication.

Instructional Method:

- a. The course delivery method will depend upon the requirement of content and need of students. The teacher in addition to conventional teaching method by black board, may also use any of tools such as demonstration, role play, Quiz, brainstorming, MOOCs etc.
- b. The internal evaluation will be done on the basis of continuous evaluation of students in the laboratory and class-room.
- c. Practical examination will be conducted at the end of semester for evaluation of performance of students in laboratory.

Supplementary Resources:

Students will use supplementary resources such as online videos, NPTEL videos, e-courses, Virtual Laboratory.

1, (No)

Subject Code: 01CE0504
Subject Name: Theory of Automata and Formal Languages
B.Tech. Year - III

Objective: This subject will introduce students to the algorithms, formal languages and grammars, automata theory, decidability, complexity, and computability. It helps students to understand and conduct mathematical proofs for computation and algorithms.

Credits Earned: 3 Credits
Course Outcomes: After completion of this course, students will be able to

- Gain the knowledge of basic kinds of finite automata and their capabilities. (Knowledge)
- To understanding of regular and context-free languages (Comprehension)
- To understand the time and space complexity for p and np problems. (Comprehension)
- To apply proved results using proof by induction, proof by contradiction, proof by construction, proof by case exhaustion. (Application)
- Gain the knowledge of describe and change language to regular expressions and grammars. (Application)
- Constructing the Turing machine for Recursive languages. (Analysis)

Subject Code: 01CE0507

Subject Name: Image Processing

B. Tech. Year - III

Objective: To study fundamental concepts of digital image processing. To understand and learn image processing operations and algorithms. To expose students to current trends in field of digital image processing.

Credits Earned: 5 Credits

Course Outcomes: After completion of this course, students will be able to

- To Review the formation of digital image and its various formats.[Understand]
- Compare various filtering techniques in spatial domain and frequency domain.[Analyze]
- Implement various algorithms on core image processing on MATLAB software[Apply]
- Correlate color domain image processing technique with gray level.[Analyze]
- Create Matlab program to apply morphological operators and Image Segmentation.[Create]

Pre-requisite of course: Knowledge of Mathematics

Suggested Theory distribution:

The suggested theory distribution as per Bloom's taxonomy is as per follows. This distribution serves as guidelines for teachers and students to achieve effective teaching-learning process

Remember	Understand	Application	Analyse	Evaluation	Create
10 %	25%	30%	25%	0%	10%

List of experiments:

1. Study of matlab image processing toolkit and various commands on matlab.
2. Point processing in spatial domain
 - a. Negation of an image
 - b. Thresholding of an image
 - c. Contrast Stretching of an image
3. Write a program for histogram equalization.
4. Write a program to apply various filtering techniques in matlab.
 - a. Low pass filtering
 - b. High pass filtering
 - c. Median filtering
5. Write a program for image segmentation
 - a. Local thresholding
 - b. Global thresholding
6. Write a program for color image processing
 - a. Color approximation
 - b. Quantization
7. Write a program, for Image restoration
 - a. Facial Images
 - b. Texture Images
8. Write a program for edge detection.
9. Write a program for smoothening and sharpening for 8-bit color image.
10. Write a program to implement morphological operations.

Instructional Method:

- a) The course delivery method will depend upon the requirement of content and need of students. The teacher in addition to conventional teaching method by black board, also need to use ICT tools and facilities.
- b) The internal evaluation will be done on the basis of continuous evaluation of students in the laboratory and class-room.

Subject Code: 01CE0601
Subject Name: Compiler Design
B.Tech. Year - III

Objective: The purposive of this course is intended to teach the students about the basic techniques, theory and tools underlie the practice and act of Compiler Construction.

Prerequisite: Programming fundamentals, Data Structure and Theory of Computation

Credits Earned: 4

Course Outcomes: After completion of this course, students will be able to

- Construct syntax tree, three address code and assembly code. (Create)
- Apply first and follow to generate LL(1) Parser. (Apply)
- Differentiate top-down and bottom-up parsing, validate SLR, CLR, LALR parsers. (Analyze)
- Construct DAG from three address code. (Create)
- Apply Code optimization techniques on three address code. (Apply)

Objective: .Net Technologies are blend of technologies supported by Microsoft .Net Framework, that allows user to create various applications. Students will be able to work with various technologies provided by Microsoft .NET platform.

Credits Earned: 5 Credits

Course Outcomes: After completion of this course, student will be able to

- To Review the components of .Net Framework[Understand]
- To practice Console based C# application. [Apply]
- To practice desktop application using C# Win-form application[Apply]
- To practice basic database application using ADO.net technology[Apply]
- To Design and develop basic applications using WPF.[Create]

Pre-requisite of course: Object oriented concepts, Programming fundamentals

Teaching and Examination Scheme

- <http://www.csharp-help.com/index.html>
- <http://www.codeproject.com>
- <http://telerikacademy.com>
- <https://msdn.microsoft.com>

Tutorial List:

- 1) Write a C# console program to know whether a number is even or odd.
 - 2) Write a C# console program that implements basic calculation functions (Addition, Subtraction, Multiplication, Division) using switch case.
 - 3) Write a C# console program to implement following pattern
- *

A. W. S.

**

- 4) Create a console application based on the assigned definition to implement basic OOP concepts like abstract class, inheritance, interface ,constructors ,properties ,method overloading and method overriding.
- 5) Create a console application to implement advance concept like Reflection,Delegates, Attributes, Indexer.
- 6) Create a console application to demonstrate multithreaded application.
- 7) Create a console application that implements all Collection classes.
- 8) Create a console application that reads a content from user and store it in file using FILEIO.
- 9) Create a console application that list all the files in given folder which are having read only permission.
- 10) Create a windows application to implement fully functional notepad.
- 11) Create a windows application that implements MDI form and dialog boxes.
- 12) Implement the tutorial4 definition in windows form using ADO.net, Grid view control, and Crystal report
- 13) Create a WPF project to implement multiform desktop application.
- 14) Create a WPF project to implement a Calculator

A. M. S.

Objective: Objective of this course that provides students basic knowledge and skills in the fundamental theory and practical of Cyber Security.

Credits Earned: 05 Credits

Course Outcomes

- Understanding the basic technical, social and law suits aspect of Cyber Security (Remember)
- Integrate the ethical hacking process and scripting. (Create)
- The students can use basic security tools to enhance cyber security. (Analyse)
- Understand the security management methods and auditing. (Evaluation)
- Apply the security principles to system design. (Apply)

Pre-requisite of course: NA.

Suggested List of Experiments:

1. Install VM Workstation in Ubuntu and set up windows and kali.
2. Set up nginx and provide password credentials with Secure Socket Layer.
3. Write a program to sniff packet sent over the local network.
4. To perform DNS Pharming attack using any method on computers in a LAN Environment.
5. Implement system hacking using tools.
6. Create virus with python script and implement attack and analyse the effect of various viruses.
7. Sniffing Website Credentials using Social Engineering Toolkit.
8. Study and Audit Marwadi University IT Infrastructure.

A. Ma

Subject Code: 01CE0606
Subject Name: Design Engineering and Project Management
B.Tech. Year - III

Objective: The main objective of this course is to put on the engineering problem solving procedure to solve basic engineering design and analysis problems. using various techniques. This course is also designed with aim to demonstrate planning, execution and testing of various Projects.

Credits Earned: 1 Credit

Course Outcomes: After completion of this course, student will be able to

1. Understand the importance of Design Engineering.
2. Identify various Design Engineering approaches.
3. Apply various methodologies to design the product and in testing the product.
4. Understand various Project Management Processes.
5. Demonstrate effective project execution and control techniques that result in successful projects.

Pre-requisite of course: Not Required.

2	Getting the right job Reading through job satisfaction at Sony Mobile and advice on job applications for how to make web entries and writing a short email. Discussion on format of emails and letters. Language work on past simple regular and irregular verbs. Using comparatives and superlatives	2
3	Making Contact A quiz on telephone with phone answering tips. Short talk on what is important when making a business telephone call. Language work on present passive and modal verbs for obligation. Present simple and continuous: time expressions and state verbs, asking questions, expressing likes and introducing reasons.	1
4	Launching a product Reading through a Drink Me Chai success story. How to launch and promote new products. How to write a marketing report. Language work on Present Continuous for future, will and am going to forms and the differences between them.	2
5	Starting a business Setting up an international franchise. Writing the letter of enquiry. Language work on perfect tense and simple past tense & Past continuous and using prepositions in time phrase.	2
6	Making arrangements and transport How to make travel arrangements. Writing a letter responding to an invitation. Discussion on what factors are important while on a business trip.	1
7	Business Meetings Study on survey of meetings. Writing an email about giving instructions and business trip. Discussion on how meeting should be conducted. Language work on using collocations describing reasons for meetings and referencing. Using modals to showcase responsibility and ability.	1
8	Social media and business Ways of using social media. Writing an email arranging a meeting and introducing a company. Discussion on how to use social media. Making recommendations and using passive to express opinions and ideas.	1
9	Job applications Writing your CV. Writing a letter inviting a candidate for interview and letter giving the result of an application. Headings for CVs and describing application procedure.	2
10	Communication with customers How to train for customer communication skills. Discussion on the best methods for communicating different things. Expressing result. Adjective &	1

	Noun collocations.

Suggested Theory distribution:

The suggested theory distribution as per Bloom's taxonomy is as per follows. This distribution serves as guidelines for teachers and students to achieve effective teaching-learning process

Distribution of Theory for course delivery and evaluation					
Remember	Understand	Apply	Analyse	Evaluate	Create
20%	20%	20%	10%	10%	20%

A. W. S.

Subject Code: 01IT0503
Subject Name: Advanced Computer Network
B.Tech. Year - III

Objective: Introduction of primary networking concepts and technologies is prime objective of this course. This course specifically make student able to develop the skills required to plan and implement small networks across a variety of networking applications.

Credits Earned: 5 Credits

Course Outcomes: After completion of this course, student will be able to

- Describe concepts of scaling networks and wireless LAN (Analyze)
- Implement OSPF operations, configuration and troubleshoot (Apply)
- Implement EIGRP operations, configuration and troubleshoot (Apply)
- Implement PPP operations, configuration and troubleshoot (Apply)
- Design ACL for IPv4 and IPv6 with advance configuration (Create)

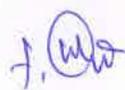

Pre-requisite of course: Basics of Computer Networks.

Teaching and Examination Scheme

Teaching Scheme (Hours)			Credits	Theory Marks			Tutorial/ Practical Marks		Total Marks
Theory	Tutorial	Practical		ESE (E)	Mid Sem (M)	Internal (I)	Viva (V)	Term work (TW)	
4	0	2	5	50	30	20	25	25	150

Contents:

Unit	Topics	Contact Hours
1	Introduction to Scaling Networks Introduction to Scaling Networks, Implementing a network design, selecting network devices, LAN redundancy, spanning tree concepts, variety of spanning tree protocols, spanning tree configuration, first hop redundancy protocol (FHRP), Link aggregation concepts and configuration	6
2	Wireless LAN Wireless concepts, Wireless LAN operations, Wireless LAN security, Wireless LAN configurations	6

3	OSPF Advanced Single-Area OSPF concepts and configuration, Advanced Single-Area OSPF implementation and troubleshooting, Multiarea OSPF operations, Multiarea OSPF configuration	6
4	EIGRP Characteristics of EIGRP, EIGRP configuration for IPv4, EIGRP operations, EIGRP configuration for IPv6, Advanced EIGRP configurations, EIGRP troubleshooting	8
5	Connecting Networks WAN concepts, Overview and selection of WAN technologies, Concepts of point-to-point connections, Serial Point-to-Point Overview, PPP Operation and Implementation, PPP troubleshooting	6
6	Branch Connections Remote Access Connections, PPPoE, VPNs, GRE, eBGP	5
7	ACL Standard ACL Operation and Configuration, Extended IPv4 ACLs, IPv6 ACLs, Troubleshoot ACLs	5
8	Network Security and Monitoring LAN Security, SNMP, Switch Port Analyzer (SPAN), QoS Overview, QoS Mechanisms	7
9	Network Evolution Internet of Things, Cloud and Virtualization, Network Programming	7
	Total Hours	56

The suggested theory distribution as per Bloom's taxonomy is as per follows. This distribution serves as guidelines for teachers and students to achieve effective teaching-learning process

f. W. O.

Distribution of Theory for course delivery and evaluation					
Remember	Understand	Apply	Analyse	Evaluate	Create
5%	10%	30%	25%	15%	15%

Suggested List of Experiments:

1. Configuring VLANs Instructions and Configuration of Trunks.
2. Configuring VLANs, VTP (VLAN Trunking Protocol) and DTP (Dynamic Trunking Protocol) in network topology.
3. Configuring STP (Spanning Tree Protocol) in network topology.
4. Configuring PVST+ (Per VLAN Spanning Tree) in network topology.
5. Configuring EtherChannel in network topology.
6. Configuring Basic EIGRP with IPv4.
7. Configuring OSPFv2 in a Single Area.
8. Configuring PAP and CHAP Authentication.

Instructional Method:

- a. The course delivery method will depend upon the requirement of content and need of students. The teacher in addition to conventional teaching method by black board, may also use any of tools such as demonstration, role play, Quiz, brainstorming, MOOCs etc.
- b. The internal evaluation will be done on the basis of continuous evaluation of students in the laboratory and class-room.
- c. Practical examination will be conducted at the end of semester for evaluation of performance of students in laboratory.
- d. Students will use supplementary resources such as online videos, NPTEL videos, e-courses, Virtual Laboratory

f. (Signature)

Subject Code: 01IT0601

Subject Name: Software Engineering

B.Tech. Year - III

Objective: To understand and apply various software project management techniques based on Software Engineering guidelines and Principles.

Credits Earned: 4 Credits

Course Outcomes: After completion of this course, student will be able to

- Understand various software engineering principles and their application (Understand)
- Demonstrate use of various Agile methodologies for software development (Apply)
- Apply various modelling techniques for designing system requirement (Apply)
- Identify different types of risk and evaluate its impact on software system (Evaluate)
- Distinguish different testing strategies and Create test cases. (Create)

Prerequisite: Object Oriented Programming fundamental.

Unit	Topics	Contact Hours

J. N. S.

1	Introduction: Software engineering, Dual role of software, Software Crisis history ,Various Myths Associated with Software, Different Software Process Models, The Linear Sequential Model, The Prototyping Model, The RAD Model, Evolutionary Process Models, Component-Based Development, Process, Product and Process.	4
2	Agile Development: SDLC: Agile Method, Manifesto, Various Agile Modeling Techniques, Scrum, Scrum Reference Card, LSS (Large Scale Scrum), XP, ASD, Crystal.	4
3	Project Management Concepts, Requirement Engineering & Metrics: The Management Spectrum, 4P's (The People, The Project, The Product), The W5HH Principle. Basic concept of Requirement (Functional & Non Functional), Requirement Modeling and Analysis. Software Process and Project Metrics, Measures, Metrics, and Indicators, Metrics in the Process and Project Domains, Software Measurement, Metrics for Software Quality.	5
4	Project Planning Scheduling & Tracking: Software Scope, Feasibility Analysis, Empirical Estimation Models, Defining a Task Set for the Software Project, Defining a Task Network, Scheduling	3
5	Risk Analysis And Management: Reactive versus Proactive Risk Strategies, Risk Management Process, Risk Identification, Risk Projection, Risk Refinement, RMMM Plans, Safety Risks and Hazards.	4
6	Software Quality & Configuration Management: Quality Concepts and Software Quality Assurance, Quality principles and Attributes, Quality Audits. Software Reviews, Formal Technical Reviews, The SQA Plan, Software Reliability, The Quality Standards: ISO 9000, CMM, Six Sigma for SE, Software Versioning and Change Control.	5
7	Software Analysis and Design Modeling: The Elements of the Analysis Model, Data Modeling, Functional Modeling and Information Flow, Behavioral Modeling, Software Design and Software Engineering, The Golden Rules, Design Principles and Design Concepts (Abstraction, Refinement, Modularity, Software Architecture, Control Hierarchy, Structural Partitioning, Data Structure, Software Procedure ,Information Hiding), Effective Modular Design (Functional Independence, Cohesion, Coupling), Design Documentation.	8
8	Software Coding & Testing: Coding standards & Coding Guidelines, Code Review, Abstraction, Refinement, Modularity, Software Architecture, Control Hierarchy, Software Testing Techniques, Software Testing	5

A. No

	Fundamentals, White Box Testing Techniques in detail, Black Box Testing Techniques in detail.	
9	Advance Topics: Clean Room Software Engineering, Web Engineering, Re-Engineering, Computer Aided Software Engineering, Software as a Service, SaaS Architecture, Emergency Trends in Software Engineering, Client/Server Software Engineering.	4
	Total Hours	42

f. (u)la

Objective: The increasing use of Internet and WWW encourages everyone to use web-based solutions for their requirements. Web technology refers to the methods by which End-user devices like computers/mobiles communicate with each other. This communication involves the use of web publishing languages like HTML, CSS, JavaScript and PHP. This subject will attempt to give you a basic understanding of various aspects of web technologies.

Credits Earned: 4 Credits

Course Outcomes: End of this course will help to understand following aspects.

- To understand and compare the fundamentals of Web hosting and domain name services. (Analysis)
- To understand various non-browser specific web design principles. (Knowledge)
- To understand the need and be able to develop HTML/XHTML and CSS pages with valid structure as well as content. (Synthesis)
- To understand and be able to develop JavaScript/jQuery code to access the DOM structure of web document and object properties. (Synthesis)
- To develop dynamic web pages with usage of server-side scripting PHP and MySQL. (Synthesis)

Pre-requisite of course: Programming Fundamentals

Teaching and Examination Scheme

Suggested Theory distribution:

The suggested theory distribution as per Bloom's taxonomy is as per follows. This distribution serves as guidelines for teachers and students to achieve effective teaching-learning process.

Distribution of Theory for course delivery and evaluation					
Remember	Understand	Apply	Analyze	Evaluate	Create
10%	10%	30%	10%	10%	30%

List of Experiments:

Practical List should be designed in such a way that it covers entire syllabus and results in a semester mini project.

Suggested Practical List:

1. Design Wireframes for your semester project based on Web Design Principles (Tools like, www.cacoo.com www.gliffy.com)
2. Formatting web pages with CSS (Inline CSS, Document level CSS and External CSS) [Create semester project website's home page]
3. Formatting web pages with CSS [Create semester project website's inner pages]
4. Browser interaction and form validations (Web browser environments, forms and validations, image sliders) [Image slider plugins of jQuery, Client-side validation of Registration & Login page to be created in semester project website]
5. Introduction to PHP (Starting to script on server side, Arrays, function, validations) [Server-side validations for Registration and Login page of semester project website]
6. Advanced PHP (Management of sessions and cookies) [Implement Admin login/logout functionality and cookie wherever required]
7. PHP with MySQL connectivity (Forms, Advance PHP and database handling) [Semester Project]

A. Ma

Instructional Method:

- a) The course delivery method will depend upon the requirement of content and need of students. The teacher in addition to conventional teaching method by black board, also need to use ICT tools and facilities.
- b) The internal evaluation will be done on the basis of continuous evaluation of students in the laboratory and class-room.
- c) Practical examination will be conducted at the end of semester for evaluation of performance of students in laboratory.

Supplementary Resources:

Students will use supplementary resources such as online videos, NPTEL videos, e-courses, Virtual Laboratory.

- a) <http://nptel.ac.in>
- b) <http://www.w3schools.com/>
- c) <http://getbootstrap.com/>

A. (Ula)

Subject Code: 01CE0701
Subject Name: Mobile Computing
B.Tech. Year - IV

Objective: Students taking this course will develop an understanding of the ways that mobile technologies can be used for teaching and learning. They will also consider the impact of mobile computing on the field of education.

Credits Earned: 4 Credits

Course Outcomes: After completion of this course, student will be able

- To understand concepts of Mobile Communication. (Understand)
- To analyse next generation Mobile Communication System. (Analyze)
- To understand network and transport layers of Mobile Communication. (Understand)
- Analyze various protocols of all layers for mobile and ad hoc wireless communication networks. (Analyze)
- To understand IP and TCP layers of Mobile Communication. (Understand)

Pre-requisite of course: Fundamental of Networking.

Teaching and Examination Scheme

A. W. S.

Subject Code: 01CE0702
Subject Name: Artificial Intelligence
B.Tech. Year - IV
Objective:

With the approach of the World Wide Web expanding, the field of AI and its strategies are being utilized in numerous territories which influence human life specifically. Different practices for encoding data in PC frameworks, for example, Predicate Logic, Production rules, Semantic systems discover use in true issues. The fields of AI, for example, Game Playing, Natural Language Processing, and Connectionist Models are likewise basic. Graduates should realize some programming language just as the nuts and bolts for AI and its procedures.

Credits Earned: 5 Credits

Course Outcomes: After completion of this course, students will be able to

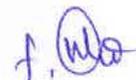

- Assess critically the techniques presented and to apply them to real world problems(Analyze)
- Mindful of the significant difficulties confronting AI and the multifaceted nature of run of the mill issues inside the field(remember)
- Comprehend the significant zones and difficulties of AI(Understanding)
- Apply fundamental AI calculations to take care of issues(Apply)
- Get a learning of utilizations in various zones of registering including the web and human communication(Evaluate)

Pre-requisite of course:

- Knowledge of Programming Techniques
- Data structures, such as balanced binary trees
- Mathematics

Suggested List of Experiments:

- 1) Write a program to implement Tic-Tac-Toe game problem
- 2) Write a program to implement BFS (for 8 puzzle problem or Water Jug problem or any AI search problem)
- 3) Write a program to implement DFS (for 8 puzzle problem or Water Jug problem or any AI search problem)
- 4) Write a program to implement Single Player Game (Using Heuristic Function)
- 5) Write a program to Implement A* Algorithm
- 6) Write a program to Implement AO* Algorithm

T, W

Computer Engineering

- 7) Write a program to solve N-Queens problem using Prolog.
- 8) Write a program for the following task:
Create a suitable database and then find the following
 - Students who are living in Rajkot
 - Age Greater Than 15
 - Students who has more than 60%
- 9) Write a program to solve 8 puzzle problem using Prolog.
- 10) Write a program to check whether given value is character or digit
- 11) Write a program to generate random number with respect to entered digit.
- 12) Write a program to implement login system.
- 13) Write a program to implement login system recursively
- 14) Write a program to solve travelling salesman problem using Prolog.
- 15) Write a program to display the element of give list.
- 16) Write a program for the family tree
- 17) Write a program to check given element is in the list or not.
- 18) Convert following Prolog predicates into Semantic Net
cat(tom).
cat(cat1).
mat(mat1).
sat_on (cat1,mat1).
bird (bird1).
caught (tom,bird1).
like (X,cream) :- cat(X).
mammal(X) :- cat (X).
has(X,fur) :- mammal(X).
animal (X) :- mammal(X).
animal(X) :- bird (X).
owns (john,tom).
is_coloured (tom,ginger).
- 19) Write a program to print the last element of the list
- 20) Write a program to print the sum of the elements of the given list
- 21) Write the Conceptual Dependency for following statements.
 - (a) John gives Mary a book
 - (b) John gave Mary the book yesterday
- 22) Write a programme for File.
- 23) Monkey Banana problem.

Instructional Method:

- The course delivery method will depend upon the requirement of content and need of students. The teacher in addition to conventional teaching method by black board, may also use any of tools such as demonstration, role play, Quiz, brainstorming, MOOCs etc.
- The internal evaluation will be done on the basis of continuous evaluation of students in the laboratory and class-room.

A. W. S.

- Practical examination will be conducted at the end of semester for evaluation of performance of students in laboratory.
- Students will use supplementary resources such as online videos, NPTEL videos, e-courses, Virtual Laboratory

A, (M)

Subject Code: 01CE0703

Subject Name: iOS Programming

B.Tech. Year - IV

Objective: Apple Inc. has developed an operating system to power its iPhone, iPad, and iPod Touch which is called iPhone OS (iOS). It is one of the most popular mobile OS. iOS is being maintained by Apple Inc. and versions of iOS are released annually and made available for all iOS devices.

iOS Programming makes use of Swift programming language and XCode IDE. Swift is a programming language developed by Apple for macOS, iOS, watchOS and tvOS. XCode is the IDE used to design and develop applications for the apple devices.

Credits Earned: 5 Credits

Course Outcomes: End of this course will help to understand following aspects.

- To be able to design iOS application. (Apply)
- To be able to develop an application using Swift Programming language (Create)
- To be able to develop multi-screen application using XCode (Create)
- To understand the need and be able to use Different UI Controllers. (Understand)
- To be able to debug an application using XCode debugger. (Analyse)

Pre-requisite of course: Basics of programming language, Concepts of OOP and Database

Unit	Topics	Contact Hours
1	Fundamentals: Overview of iOS and X-CODE: Installation, Create and manage project using XCode, Introduction to iPhone Architecture, Introduction to SWIFT, Developer Technology Overview: The Apple Developer Tool, Swift, Cocoa Touch, Model-View-Controller, Interface Builder, Overview of latest iOS features.	8
2	Swift Basics: Object oriented programming with swift, File structure in Swift, Swift Programming Basics: Data types, Constants, Variables, Operators, Decision making and Branching, Arrays, Functions, Enumerations. Introduction to iOS Playground.	10
3	iPhone Application Development: Exploring the iOS Framework with XCode, Cocoa Fundamentals, Tracking the iOS Application Life cycle, Understanding Interface Builder, Creating User Interface, Customizing the Interface Appearance using Layout, Views, Outlets and Actions, View Controllers and UI Controllers like Labels, Buttons, Sliders, Different Views, Gestures, etc. Connecting the code with Accelerometer, Location service, 3D touch, Push notifications Understand the MVC Design pattern, MVC in XCode, Using Application Templates, User Input and Output: Handling Keyboard Input, Implementing Alert, Sounds and Vibrations, Using XCode debugger.	20
4	Database Management and Web Services: Parsing JSON data, Parsing XML data, SQLite databases, Web Service APIs calls.	12
5	Submit App to Apple Store: Create Apple developer account, Submit App to Apple Store.	3
	Total Hours	53

Suggested Theory distribution:

The suggested theory distribution as per Bloom's taxonomy is as per follows. This distribution serves as guidelines for teachers and students to achieve effective teaching learning process.

Distribution of Theory for course delivery and evaluation					
Remember	Understand	Apply	Analyse	Evaluate	Create
15%	23%	15%	15%	13%	19%

List of Experiments:

Practical List should be designed in such a way that it covers entire syllabus and results in a semester mini project.

Suggested Practical List:

1. Installation of x-code on MAC.
2. Write a swift program to check the palindrome string.
3. Write a swift program for basic calculator.
4. Create an application to demonstrate different UI controllers.
5. Create an application which can play audio and video files.
6. Develop an application in which user can insert, update and delete the record in database.
7. Develop an application for signing-up user with details like: Username, Password, Gender, Birth-date, Country, Image etc. fields.
8. Develop an application to fetch user data using API service and display on the screen.

f. (M)

Instructional Method:

- a) The course delivery method will depend upon the requirement of content and need of students. The teacher in addition to conventional teaching method by black board, also need to use ICT tools and facilities.
- b) The internal evaluation will be done on the basis of continuous evaluation of students in the laboratory and class-room.
- c) Practical examination will be conducted at the end of semester for evaluation of performance of students in laboratory.

Supplementary Resources:

Students can use supplementary resources such as online videos, e-courses, etc.

- a) <https://developer.apple.com>
- b) <https://developer.apple.com/xcode/>
- c) <http://www.tutorialspoint.com/swift/>

J. Na

Subject Code: 01CE0704
Subject Name: Android Programming
B.Tech. Year - VII

Objective: This course facilitates classroom and laboratory learning, letting students develop competence and confidence in android programming and understand the entire Android Apps Development Cycle, as well as it would also enable the students to independently create Android Applications

Credits Earned: 5 Credits

Course Outcomes: After completion of this course, student will be able to

- Demonstrate the Understanding of fundamental of Android Programming. (Understand)
- Build their ability to develop software with reasonable complexity on mobile platform. (Apply)
- Discover the life cycles of Activities, Applications, intents and fragments. (Evaluate)
- Design the Android apps by using Java Concepts. (Create)

Pre-requisite of course: Java or object-oriented programming experience.

Teaching and Examination Scheme

Teaching Scheme (Hours)			Credits	Theory Marks			Tutorial/ Practical Marks		Total Marks
Theory	Tutorial	Practical		ESE (E)	Mid Sem (M)	Internal (I)	Viva (V)	Term work (TW)	
4	0	2	5	50	30	20	25	25	150

Contents:

Unit	Topics	Contact Hours
1	Basic of Android Programming: Introduction to Android OS, Setting up the Android Application Development Environment, Creating, Testing and Debugging Applications, Android Stack, Android applications structure, Activity life cycle, Understanding implicit and explicit intents.	8

f. M. S.

2	User Interface in Android: Adaptive and responsive user interfaces, User Input Controls, Menus, Screen Navigation, RecyclerView, Drawables, Themes and Styles, Fragments Fragment Life Cycle, Introduction to Material Design, Testing the user interface.	12
3	Background tasks: AsyncTask, AsyncTaskLoader, Connecting App to Internet, Broadcast receivers, Services, Notifications, Alarm managers.	8
4	Sensor, Location and Maps: Sensor Basic, Motion and Position Sensors, Location services, Google maps API, Google Places API	8
5	Working with data in Android: Shared Preferences, App Setting, SQLite primer, Store data using SQLite database, Content Providers, Content Resolver, Loader	8
6	Performance Improvement of App: Performance Parameters, Profiling Tools, Rendering and Layout, Garbage Collection and Memory Leaks, Best Practices.	7
7	Publishing Your App: Preparing for publishing, Signing and preparing the graphics, Publishing to the Android Market	5
Total Hours		56

3. Programming android by Zigurd Mednieks
4. Android User Interface Design: Turning Ideas and Sketches into Beautifully Designed Apps by Ian G. Clifton
5. Android Developer Fundamental Course by Google.
6. Advance Android Developer Course by Google.

Suggested Theory distribution:

The suggested theory distribution as per Bloom's taxonomy is as per follows. This distribution serves as guidelines for teachers and students to achieve effective teaching-learning process

A. (W)

Distribution of Theory for course delivery and evaluation					
Remember	Understand	Apply	Analyse	Evaluate	Create
20%	20%	20%	15%	10%	15%

Suggested List of Experiments:

1. Install Android Studio with Specific Latest SDK in your System.
2. Develop an android app which displays "Hello World" message.
3. Develop an android app which displays a form to get following information from user. 1) Username 2) Password 3) Email Address 4) Phone Number 5) Country
Form should be followed by a Button with label "Submit". When user clicks the button, a message should be displayed to user describing the information entered.
Utilize suitable UI controls (i.e. widgets). [When user enters country in Auto Complete TextView, list of states should be displayed in Spinner automatically.
4. Create sample application that demonstrates activity life cycle's all methods.
5. Using Android, Create a login Activity. It asks "username" and "password" from user. If username and password are valid, it displays Welcome message using new activity
6. "Happy Birth Day" App using TextView and ImageView
7. Create "Hello Toast" App by implementing a click handler method for the button to display a message on the screen when the user clicks. Use Linear Layout for creating view.
8. Create the MP3 player like application with service
9. The Simple Calculator app has two edit texts and four buttons. When you enter two numbers and click a button, the app performs the calculation for that button and displays the result.
10. Devolpe one App. Which Contains Specific User Interface and design Interface.

Instructional Method:

- a. The course delivery method will depend upon the requirement of content and need of students. The teacher in addition to conventional teaching method by black board, may also use any of tools such as demonstration, role play, Quiz, brainstorming, MOOCs etc.
- b. The internal evaluation will be done on the basis of continuous evaluation of students in the laboratory and class-room.
- c. Practical examination will be conducted at the end of semester for evaluation of performance of students in laboratory.

f. (M)

- d. Students will use supplementary resources such as online videos, NPTEL videos, e-courses, Virtual Laboratory

f. (W)

Subject Code: 01CE0705
Subject Name: Programming with Python
B.Tech. Year - IV

Objective: Python is next generation multi-purpose programming language, that allows different users to create applications of various domains. Students will be able to learn primary fundamentals of python programming and potential of python is to achieve modern computing requirements.

Credits Earned: 05
Course Outcomes: After completion of this course, student will be able to

- Apply various fundamentals for problem solving using python. (Application)
- Implement modular programming and differentiate mutability of various datatypes. (Analyze)
- Create object-oriented solution by applying various concept like polymorphism, inheritance and package with python programming. (Create)
- Implement multithreading and manage security in Linux operating system. (Create)

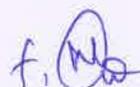

Pre-requisite of course: Object oriented concepts, Programming fundamentals

Teaching and Examination Scheme

Teaching Scheme (Hours)			Credits	Theory Marks			Tutorial/ Practical Marks		Total Marks
Theory	Tutorial	Practical		ESE (E)	Mid Sem (M)	Internal (I)	Viva (V)	Term work (TW)	
4	0	2	5	50	30	20	25	25	150

Contents:

Unit	Topics	Contact Hours
1	Basics of Python: Python Installation and Working of it, get familiar with python variables and data types, Operator understanding and its usage, detail study of python blocks,	8

2	Structure Types and mutability: Hands on with conditional blocks using if, else and elif, Hands on examples and study of looping with range, list and dictionaries. hands on to organize python code with function, modular approach in python.	10
3	Exception, Testing and Debugging: Handling if exceptions to handle the code cracks, handling and helping file operations, coding with the exceptional handling and testing Anonymous method, Properties, Indexers, Exception Handling	10
4	Classes and OOP Concepts: Procedural and Object-Oriented Programming, Classes and working with instances, Method overloading, Polymorphism, importing internal module as well as external modules in the code Packages understanding and their usage, hands on with Lambda function in python coding with the use of functions, modules and external packages	14
5	Algorithm and Data Structure: Stack, Queue, Tree, ordered list, Introduction to Recursion, Divide and Conquer Strategy, Greedy Strategy, Graph Algorithms.	10
6	Advance Topics: Regular Expression, Multi thread Programming, Security	4
Total Hours		56

A. (W)

Suggested Theory distribution:

The suggested theory distribution as per Bloom's taxonomy is as per follows. This distribution serves as guidelines for teachers and students to achieve effective teaching-learning process

Distribution of Theory for course delivery and evaluation					
Remember	Understand	Apply	Analyze	Evaluate	Create
10%	10%	40%	15%	15%	10%

List of Experiments:

- 1) Implement a Python program to Calculate GCD of two numbers.
- 2) Implement a Python Program to Calculate the square root of a number by Newton's Method.
- 4) Implement a Python Program to find the largest number from a list of numbers.
- 5) Implement a Python Program to perform Search
 1. Implement a Python Program to perform Liner search
 2. Implement a Python Program to perform Binary search
- 6) Implement a Python Program to perform insertion sort.
- 7) Implement a Python Program to perform selection sort.
- 8) Implement a Python program to multiply matrices.
- 9) Implement a Python program to Calculate the most frequent words in a text from a file.
- 10) Implement function overloading with different function signatures.
- 11) Implement concept of class, instances and inheritance.
- 12) Implement internal and external library.
- 13) Solve algorithmic problems by program using different problem-solving strategies.
- 14) Search content using regular expression library in python.
- 15) Implement Matrix multiplication using multi-threading in python.
- 16) Perform Linux administration task using python.

Instructional Method:

- a. The course delivery method will depend upon the requirement of content and need of students. The teacher in addition to conventional teaching method by black board, may also use any of tools such as demonstration, role play, Quiz, brainstorming, MOOCs etc.
- b. The internal evaluation will be done on the basis of continuous evaluation of students in the laboratory and class-room.

f. (M)

Subject Code: 01CE0706
Subject Name: Advanced .NET Technologies
B.Tech. Year - IV

Objective: The objective is to study web development technology and tools provided by Microsoft .NET platform. Students are expected to learn how to design and develop web application along with database connectivity using Microsoft .NET Technology.

Credits Earned: 5 Credits

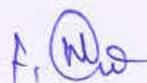

Course Outcomes: After completion of this course, student will be able to

- Understand web concepts and features of ASP.NET (Understand)
- Create applications with strong object oriented principles (Create)
- Implement web applications using various ASP.NET controls (Apply)
- Create enhanced backend/data layer quickly using LINQ (Create)
- Implement web applications using ASP.NET MVC (Apply)
- Develop cross platform mobile applications using Xamarin (Apply)
-

Pre-requisite of course: C#.NET, Object oriented concepts, .NET Technologies, Programming fundamentals

Teaching and Examination Scheme

Teaching Scheme (Hours)			Credits	Theory Marks			Tutorial/ Practical Marks		Total Marks
Theory	Tutorial	Practical		ESE (E)	Mid Sem (M)	Internal (I)	Viva (V)	Term work (TW)

Syllabus for Bachelor of Technology

Computer Engineering

7. Create ASP.NET MVC App that does basic CRUD (create / read / update / delete operations)
8. Create XAMRIN App to use various XAMRIN controls to demonstrate Mobile app frontend interaction.

A. W.

Subject Code: 01CE0707

Subject Name: Data Mining & Information Retrieval

B.Tech. Year - IV

Objective: The course is designed for a section level investigation of data mining and information retrieval methods. It is about how to discover significant data and therefore separate important patterns from it. The fundamental speculations and scientific models of data mining and information retrieval are covered in the syllabus.

Credits Earned: 5 Credits

Course Outcomes: After completion of this course, student will be able to

- Analyze various data warehousing techniques used in industry. (Analysis)
- Apply different indexing techniques on real data set. (Apply)
- Apply and demonstrate different classification methods on real and synthetic data set. (Apply)
- Discover knowledge using various Data Mining methods for any system/application. (Create)

Pre-requisite of course: Database Management Systems, Data Structures.

- c) Practical examination will be conducted at the end of semester for evaluation of performance of students in laboratory.
- d) Students will use supplementary resources such as online videos, NPTEL videos, e courses, Virtual Laboratory as suggested by subject faculty.

f. r. W. D.

Objective: The purpose of this course is to teach the students about the basic techniques, theory and computational models of Fuzzy and Soft computing. This subject focuses on how to apply several neural network algorithms over real-time problems to get optimized outcome.

Credits Earned: 5

Course Outcomes:

- Recognize and depict soft computing methods and their roles to build intelligent systems. (Knowledge)
- Apply fuzzy principles and thinking to deal with vulnerability and tackle realtime issues. (Apply)
- Apply genetic algorithms to generate optimized results for a particular problem. (Apply)
- Apply neural networks to design classification problems. (Apply)
- Evaluate and compare solutions by various soft computing approaches for a given problem. (Evaluate)

f. Ma

Subject Code: 01CE0801

Subject Name: Natural Language Processing

B.Tech. Year - VIII

Objective: Natural language processing deals with written text. Students will learn how to process written text from basic of fundamental knowledge starts with Finite automata, Regular expression and probabilistic model with n-grams. Recognizing Speech and parsing with grammar. This course also covers basis of semantic analysis and discourse analysis and drives it to machine translation. This NLP course will boost student knowledge to research level where they can conduct new level of research. It really helpful for undergraduate students.

Credits Earned: 5 Credits

Course Outcomes: After completion of this course, student will be able to

- Learn and Understand Natural Language Processing (Comprehension).
- Probabilistic model of defining language and techniques.(Application)
- Applying Hidden Markov model and Speech Recognition.(Application)
- Application of context free grammar and language parsing.(Application)
- Implement probabilistic and language parsing.(Application)
- Differentiation of semantic and discourse in terms of NLP.(Analyse)

Pre-requisite of course: Data Structure, Theory of Computation, Compiler Design.

Suggested Theory distribution:

The suggested theory distribution as per Bloom's taxonomy is as per follows. This distribution serves as guidelines for teachers and students to achieve effective teaching-learning process.

Distribution of Theory for course delivery and evaluation					
Remember	Understand	Apply	Analyse	Evaluate	Create
10%	20%	35%	15%	10%	10%

Instructional Method:

- a. The course delivery method will depend upon the requirement of content and need of students. The teacher in addition to conventional teaching method by black board, may also use any of tools such as demonstration, role play, Quiz, brainstorming, MOOCs etc.
- b. The internal evaluation will be done on the basis of continuous evaluation of students in the laboratory and class-room.

A. (Signature)

- c. Practical examination will be conducted at the end of semester for evaluation of performance of students in laboratory.
- d. Students will use supplementary resources such as online videos, NPTEL videos, e-courses, Virtual Laboratory

Supplementary Resources:

1. <https://blog.algorithmia.com/introduction-natural-language-processing-nlp/>
2. <https://www.udacity.com/course/natural-language-processing-nanodegree--nd892>
3. <https://www.coursera.org/learn/language-processing>
4. <https://towardsdatascience.com/a-practitioners-guide-to-natural-language-processing-part-i-processing-understanding-text-9f4abfd13e72>
5. <https://www.edx.org/course/natural-language-processing>

Practical Resources:

Any 10 practical related to text parsing, tokenization and semantic word fetching related. which is up to faculties, faculties can plan further practical based upon his/her knowledge.

f, No

Subject Code: 01CE0802
Subject Name: Big Data and Analytics
B.Tech. Year - IV

Objective: Big data is an extremely useful area in the era of computing techniques as it aids in finding useful pattern from large datasets. Large datasets are so huge that they cannot be processed with traditional technologies. We require special computing system which can handle large data and tandem it with other important aspects like parallel processing, data failure and data pre-processing.

Credits Earned: 5 Credits

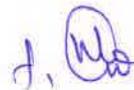

Course Outcomes: After completion of this course, student will be able to

- Gain Understanding about Big Data Technology and its Tools. (Understand)
- Understand and apply extracting useful pattern from large datasets. (Apply)
- Implementation of Big data mining techniques using different software. (Create)
- Understand how data analytics and data science maps to current industry.(Analyze)
- Understanding and implementing Algorithms in an optimized way using various Big Data Tools. (Apply)

Pre-requisite of course: Basic Programming Knowledge, Data Mining.

Teaching and Examination Scheme

Teaching Scheme (Hours)			Credits	Theory Marks			Tutorial/ Practical Marks		Total Marks
Theory	Tutorial	Practical		ESE (E)	Mid Sem (M)	Internal (I)	Viva (V)	Term work (TW)	
4	0	2	5	50	30	20	25	25	150

Contents:

Unit	Topics	Contact Hours
1	Introduction to Big Data Introduction-Distributed file System, What is Big Data? Difference between traditional Distributed file system and Big Data Software, Big Data Analytics, Big data Applications.	4
2	Introduction to Hadoop: How Hadoop works? Hadoop Architecture, Explanation of Hadoop EcoSystem, Hadoop Basic commands.	7
3	Hadoop Input and Output: Data Integrity in Hadoop, Data Compression and Data Serialization in Hadoop, Avro, How Avro works?	7
4	Hadoop MapReduce: Mapper, Reducer, MapReduce YARN, Job Scheduling, Sorting and Shuffling in MapReduce, MapReduce Input Formats, MapReduce Output Formats, How to code in MapReduce program , analyze data using MapReduce.	10
5	Hadoop Ecosystem/Environment: Pig, Hive, Hbase, ZooKeeper Pig Latin Structures, Statements, Functions, User-Defined Function in Pig, Loading, Storing and Sorting Data in Pig, HiveQL, Tables in Hive, Querying Data, User-Defined Function in Hive, Introduction to HBase, HBASE vs RDBMS, What is ZooKeeper, Zookeeper Services, Build Application with ZooKeeper.	12
6	Apache Spark: Introduction to Apache Spark, pySpark, RDD, Working with Key-value pair, Loading and saving data in spark, Learning about Machine Learning Library in Spark.	7
7	NoSql: Introduction to NoSql, NoSql vs SQL, NewSql, Introduction to MongoDB, MongoDB Create-Drop Databases, Create-Drop Collection, CRUD operation in documents, MongoDB indexing, Aggregation, replication, sharding, Connect Java Application with MongoDB.	5
Total Hours		52

Suggested Theory distribution:

The suggested theory distribution as per Bloom's taxonomy is as per follows. This distribution serves as guidelines for teachers and students to achieve effective teaching-learning process.

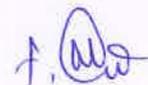

Distribution of Theory for course delivery and evaluation					
Remember	Understand	Apply	Analyse	Evaluate	Create
0%	20%	40%	20%	0%	20%

Suggested List of Experiments:

1. Installation and use of Hadoop in ubuntu.
2. Run HDFS commands in hadoop environment.
3. Implementation of a MapReduce Algorithm.
4. Hive Installation.
5. Run Hive related commands on given data.
6. UDF creation in Hive to truncate blank space.
7. Install HBASE and Apply various table queries.
8. Install MongoDB and execute basic commands in MongoDB Shell.
9. Connect MongoDB with java.
10. Install Scala and program in interactive mode and script mode.
11. Run a job on Apache spark.

Instructional Method:

- a) The course delivery method will depend upon the requirement of content and need of students. The teacher in addition to conventional teaching method by black board, may also use any of tools such as demonstration, role play, Quiz, brainstorming, MOOCs etc.

Computer Engineering

- b) The internal evaluation will be done on the basis of continuous evaluation of students in the laboratory and class-room.
- c) Practical examination will be conducted at the end of semester for evaluation of performance of students in laboratory.

A. N. S.

Subject Code: 01CE0803
Subject Name: Cloud Computing
B. Tech. Year: IV

Objective:

This course is intended to analyze the basics of cloud computing, and make aware students with diversified technologies working for cloud architecture. Course will be focusing on architecture, service models, privacy & security in cloud.

Credits Earned: 5 credits

Course Outcomes:

After the completion of this course, student will be able to

- Understand and analyze the architecture of Cloud (Analyze).
- Identify and apply deployment and management options of AWS Cloud Architecture (Apply).
- Design architectures to decouple infrastructure and reduce interdependencies (Create).
- Formulate policy based scenarios in Cloud simulators (Create).

Prerequisite of course: Operating System , Computer Networks

A. N. S.

Subject Code: 01CE0804

Subject Name: Machine Learning

B.Tech. Year - IV

Objective: To learn machine learning, artificial neural networks and genetic algorithms for intelligent behavior. To learn various optimization techniques.

Credits Earned: 5 Credits

Course Outcomes: After completion of this course, student will be able to

- Understand machine-learning concepts.(Understand)
- Understand Optimization theory and concepts.(Understand)
- Understand and analyse different method of Gradient Descent. (Analyze)
- Apply concept of Supervised and Unsupervised learning.(Apply)
- Apply the concepts of machine learning and optimization in designing intelligent systems.(Apply)

Pre-requisite of course: Computer Programming, Mathematics.

Remember	Understand	Apply	Analyse	Evaluate	Create
0%	40%	40%	20%	0%	0%

Suggested List of Experiments:

1. Develop a cost function of linear regression using sample data.
2. Develop a Gradient descent of linear regression using sample data.
3. Implement linear regression algorithm using sample data.
4. Implement logistic regression algorithm using sample data.
5. Develop regularization in already developed logistic regression algorithm.
6. Calculate bias and variance from already computed algorithm.
7. Calculate Error Matrix for already implemented algorithm.
8. Implement k-means algorithm using sample data.
9. Develop PCA based on sample data.
10. Develop and implement Neural-network based any algorithm using sample data.

A. W. S.

Instructional Method:

- a. The course delivery method will depend upon the requirement of content and need of students. The teacher in addition to conventional teaching method by black board, may also use any of tools such as demonstration, role play, Quiz, brainstorming, MOOCs etc.
- b. The internal evaluation will be done on the basis of continuous evaluation of students in the laboratory and class-room.
- c. Practical examination will be conducted at the end of semester for evaluation of performance of students in laboratory.
- d. Students will use supplementary resources such as online videos, NPTEL videos, e-courses, Virtual Laboratory

Supplementary Resources:

1. Machine Learning by Andrew NG on Coursera

A, A handwritten signature in blue ink, consisting of the letter 'A' followed by a stylized, cursive name.

Subject Code: 01CE0805

Subject Name: Business Intelligence

B. Tech. Year - IV

Objective: Exponential increase in size and availability of data makes Business Intelligence (BI) an extremely valuable subject. BI as a methodology and technique for gathering, storing, analyzing, sharing and providing access to data, to help University, Enterprise or any other organization to make a better decision. Now a days as internet users are increasing, so there is a requirement of techniques through which raw data can be converted into Information. This course will cover data science, data visualization dashboard design, performance dashboard and future of BI.

Credits Earned: 5 Credits

Course Outcomes: After completion of this course, student will be able to

- Graduates will learn concept, process, and practice of the data science and how methodologies are applied to visualize information from raw data. (Apply)
- Encourage and motivate students for learning BI involving predictive and statistical approach. (Understand)
- Understand and analyze BI concepts and techniques. (Analyze)
- Understand and apply BI Techniques for various situations. (Apply)
- Implement BI techniques by using various tools and Create data visualization. (Create)

Pre-requisite of course: Data Mining

Teaching and Examination Scheme

Teaching Scheme (Hours)			Credits	Theory Marks			Tutorial/ Practical Marks		Total Marks
Theory	Tutorial	Practical		ESE (E)	Mid Sem (M)	Internal (I)	Viva (V)	Term work (TW)

Subject Code: 01CE0806
Subject Name: Internet of Things
B.Tech. Year - IV

Objective: In this course, student will explore various components of Internet of things such as Sensors, internetworking and cyber space. In the end they will also be able to design and implement IoT circuits and solutions.

Credits Earned: 05

Course Outcomes: After successful completion of this course, student will be able to

- Understand general concepts of Internet of Things (IoT) (Understand)
- Recognize various devices, sensors and applications (Knowledge)
- Apply design concept to IoT solutions (Apply)
- Analyze various M2M and IoT architectures (Analyze)
- Evaluate design issues in IoT applications (Evaluate)
- Create IoT solutions using sensors, actuators and Devices (Create)

Pre-requisite of course: Fundamentals of computer network, Network Security, internet technology.

Subject Code: 01IT0701

Subject Name: Advance Web Technology

B.Tech. Year - IV

Objective: The increasing practice of MVC architecture in Web based applications, this course focuses on Advanced PHP concepts and Laravel Framework along with Node.js. This subject will attempt to give basic understanding of cURL methods, MVC Framework, Unit Testing, Web Services, API, Node Servers and routing.

Credits Earned: 4 Credits

Course Outcomes: After completion of this course, students will be able to

- Apply Object Oriented concepts in developing PHP applications (Apply) • Use various third party APIs and advance concepts of PHP to develop Applications (Apply)
- Create and deploy scalable web based system using Laravel (Create) • Develop server side web applications using Node.js (Create)

Pre-requisite of course: Programming Fundamentals, Web Technology

Teaching and Examination Scheme

Subject Code: 01IT0703
Subject Name: Major Project - I
B.Tech. Year - IV

Objective: The objective is to enhance practical skills of students which will help them to analyze and solve real world problems by using latest software / hardware / tools and by applying theoretical knowledge

Credits Earned: 1 Credit

Course Outcomes: After completion of this course, student will be able to

- To analyze real world problems and design solutions for those problems (Analyze)
- To identify practical aspect of studied technologies (Evaluate)
- To use latest software / hardware as per requirement (Apply)
- To develop complete solutions for read world problems (Create)
- To use different testing methodologies for implemented work (Apply)
- To present and document implemented work effectively (Create)

Pre-requisite of course: Hardware/Software Knowledge, Software Engineering, Mini Project

0%	0%	35%	15%	15%	35%

f, nla

Subject Code: 01IT0801

Subject Name: Major Project - II

B.Tech. Year - IV

Objective: Students will find out about the need of industry, explore latest technologies, work on industry / social problems with team members.

Credits Earned: 9 Credits

Course Outcomes: After completion of this course, student will be able to

- Understand, analyze and solve Medium / Large scale industrial / social problems (Analyse)
- Demonstrate the application of various engineering subjects to solve industrial / social problems (Apply)
- Communicate in the way industry demands in oral and documented way. (Create)
- Demonstrate teamwork and leadership qualities. (Apply)
- Demonstrate professional and ethical conduct as per industrial expectations. (Evaluate)

Pre-requisite of course: Mini Project, Major Project I, Software Engineering

**Syllabus for Bachelor of Technology
Department of Computer Engineering /
Information Technology**

Subject Code: 01CE0408

Subject Name: Creativity, Problem Solving and Innovation

B. Tech. 2nd Year Semester: IV

Prerequisite: Zeal to learn the subject.

Course Objective: To develop creative thinking skill in the students using cone of learning components leading to understanding of various strategies for creativity, problem solving and innovation.

Course Outcome:

After learning the course, the students will be competent

1. Importance of creativity, problem solving and innovation while addressing science, engineering and social issues.
2. Demonstrate the ability to contextualize knowledge related to professional engineering practices.
3. Demonstrate the functioning effectively as an individual and team member.
4. Ability to engage in life-long learning in the context of technological change.

Teaching and Examination Scheme:

Syllabus for Bachelor of Technology

Mechanical Engineering

Subject Code: 01ME0101

Subject Name: Elements of Mechanical Engineering

B.Tech. Sem-I

Type of course: Engineering Science

Prerequisite: Zeal to learn the subject

Rationale: Understanding of basic principles of Mechanical Engineering is required in various field of engineering.

Teaching and Examination Scheme:

Teaching Scheme			Credits	Examination Marks					Total Marks
L	T	P	C	Theory Marks			Practical Marks		
				ESE	IA	CSE	Viva	TW	
3	0	2	4	50	30	20	25	25	150

Content:

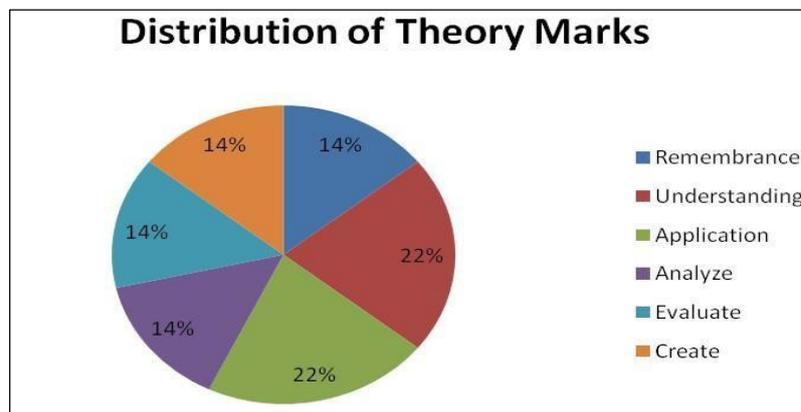

Sr. No.	Content	Total Hrs	%Weight age
1	Introduction: Prime movers and its types, Concept of Force, Pressure, Energy, Work, Power, System, Heat, Temperature, Specific heat capacity, Change of state, Path, Process, Cycle, Internal energy, Enthalpy, Statements of Zeroth Law and first law	4	25%
2	Properties of gases: Gas laws, Boyle's law, Charle's law, Combined gas law, Gas constant, Relation between Cp and Cv, Various non-flow processes like constant volume process, constant pressure process, Isothermal process, Adiabatic process, polytropic process	6	
3	Properties of steam: Steam formation, Types of Steam, Enthalpy, Specific volume, Internal energy and dryness fraction of steam, use of Steam tables, steam calorimeters	6	30%
4	Heat engines: Heat Engine cycle and Heat Engine, working substances, Classification of heat engines, Description and thermal efficiency of Carnot; Rankine; Otto cycle and Diesel cycles	6	
5	Steam Boilers: Introduction, Classification, Cochran, Lancashire and Babcock and Wilcox boiler, Functioning of different mountings and accessories	4	

Syllabus for Bachelor of Technology

Mechanical Engineering

6	Internal Combustion Engines: Introduction, Classification, Engine details, four-stroke/ two-stroke cycle Petrol/Diesel engines , Indicated power, Brake Power, Efficiencies	4	20%
7	Turbo machines: Types and operation of Reciprocating, Rotary and Centrifugal pumps, Priming and air compressors	4	
8	Refrigeration & Air Conditioning: Refrigerant, Vapor compression refrigeration system, vapor absorption refrigeration system, Domestic Refrigerator, Window and split air conditioners	4	25%
9	Couplings, Clutches and Brakes: Construction and applications of Couplings (Box; Flange; Pin type flexible; Universal and Oldham), Clutches (Disc and Centrifugal), and Brakes (Block; Shoe; Band and Disc)	4	
10	Transmission of Motion and Power: Shaft and axle, Belt drive, Chain drive, Friction drive, Gear drive	4	

Reference Books:

1. Basic Mechanical Engineering by Pravin Kumar, Pearson
2. Thermal Science and Engineering by Dr. D.S. Kumar, S.K. Kataria & sons, Publication New Delhi
3. Fundamental of Mechanical Engineering by G.S. Sawhney, PHI Publication New Delhi

Syllabus for Bachelor of Technology

Mechanical Engineering

4. Elements of Mechanical Engineering by Sadhu Singh S. Chand Publication

Course Outcome:

After learning the course the students should be able to:

1. To understand the fundamentals of mechanical systems
2. To understand and appreciate significance of mechanical engineering in different fields of engineering

List of Experiments:

1. To understand and appreciate significance of mechanical engineering in different fields of engineering
2. To understand construction and working of different boiler mountings and accessories.
3. To determine brake thermal efficiency of an I. C. Engine.
4. To understand construction and working of different types of air compressors.
5. To demonstrate vapor compression refrigeration cycle of domestic refrigerator OR window air conditioner OR split air conditioner.

Design based Problems(DP)/ Open Ended Problem:

1. Develop a prototype of gear train/drive for certain velocity ratios.
2. Develop a small boiler with different mountings.
3. Develop a hot air engine

- A Text Book of Engineering Drawing by S. S. Chawan, Chand Company Ltd., New Delhi
- A Text Book of Engineering Drawing by R. L. Hill, S. S. Chatterjee Sons, Delhi.

After completion of this course, student will be able to

- Know, understand and able to define the methods of engineering drawing.
- Learn basic sketching methods.
- Understand engineering drawings using fundamental mathematics.
- Construct engineered drawing.
- Develop visualization skills so that they can create new product design.
- Understand the theory of projection, learn technical communication skill.

The suggested theory distribution as per Bloom's taxonomy is as per follow. This distribution serves as guidelines for teachers and students to achieve effective teaching-learning process

Distribution of theory for course delivery and evaluation					
Remember	Understand	Apply	Analyze	Evaluate	Create
□□□	□□□	□□□	□□□	□□□	□□□

The suggested practical work is as per follow.

- Practice sheet
 - Dimensioning methods, types of line, Methods to draw different polygons, Equal division of line and angle
 - Scale plane and diagonal scale
 - Curves
 - Projection of straight line and projection of plane surfaces.
 - Projection of solid and section of solid
 - Orthographic projection and sectional orthographic projection
 - Isometric projection and Isometric view.

□

Internal Method

- a. The course delivery method will depend upon the requirement of content and need of students. The teacher in addition to conventional teaching method by blackboard may also use any of tools such as demonstration, role play, quiz, brainstorming
- The internal evaluation will be done on the basis of continuous evaluation of students in the laboratory and classroom.
- c. Practical examination will be conducted at the end of the semester for an evaluation of the performance of students in the laboratory.
- d. Students will use supplementary resources such as online videos, printed videos, e-courses

Subject Code: 01ME1104

Subject Name: Workshop

B.Tech. Ist Year Semester: II

Type of course: Under Graduate

Prerequisite: Zeal to learn subject

Rationale: Mechanical Workshop is of paramount importance for the engineering students to enhance their technical skills as per the need of industries. Practice of engineering workshop make students aware about practical work in industrial environment as well as day-to-day life work.

Course Outcome:

After learning the course, the students will be competent to

1. Apply knowledge of hand tools, power tools and safety related rules and regulations
2. Apply knowledge of conventional machining processes
3. Apply knowledge of advanced manufacturing processes
4. Apply knowledge of manufacturing processes of composite materials

Teaching and Examination Scheme:

Content:

Sr. No.	Content	Total Hrs.
1	<p>Introduction: Introduction to mechanical workshop its plan and layout. Learn about various safety related rules and regulation.</p> <p>Demonstration of various tools which are used in workshop like hand tools, power tools, various measurement equipment, study of different types of materials, various processes like Finishing, Marking, Cutting, Smoothing, Bending etc.</p>	04

2	Fitting Shop and Carpentry Shop Demonstration of fitting and carpentry job and make job physically	08
3	Metal Removing Operations Introduction to Lathe machine, Various parts of Lathe machine, Various operations on lathe machine	04
4	Laser Cutting Operation Introduction to 2D CAD drawing, exporting 2D drawing to software, Principle of Laser cutting machine, Demonstration of laser cutting operation.	04
5	Additive Manufacturing Introduction to Additive Manufacturing, use of 3D models in additive manufacturing, demonstration of 3D printing process	04
6	Manufacturing of composite materials Introduction to composite materials, different manufacturing methods of composite materials, materials used for manufacturing of composite materials, GFRP manufacturing	04

List of Experiments:

1. Fitting job and Carpentry job
2. Metal removing operations on lathe machine
3. Laser cutting operation
4. Manufacturing of prototype using 3D printer
5. Manufacturing of GFRP composite

Major Equipment:

1. Hand tools and Power tools
2. Bench vise
3. Lathe machine
4. Laser cutting machine
5. 3D printer

Reference books:

1. NPTEL Courses

A handwritten signature in blue ink, consisting of several vertical strokes followed by a horizontal flourish.

Subject Code: 01ME0301

Subject Name: Applied Differential Equation

B.Tech. IInd Year Semester: III

Type of course: Under Graduate

Prerequisite: Engineering Mathematics I, Engineering Mathematics II

Rationale: After learning this subject student will be able to apply Fourier series, Laplace transform and differential equation methods for solution of engineering problems

Course Outcome:

After completion of this course, student will be able to

1. Expand various functions in terms of sine and cosine functions.
2. Classify and apply the standard methods to solve ordinary and partial differential equations.
3. Apply Laplace transform and Fourier series to solve differential equations.
4. Apply the knowledge of differential equations and its solutions to evaluate engineering problems.

Teaching and Examination Scheme:

Teaching Scheme			Credits	Examination Marks					Total Marks
L	T	P		Theory Marks			Practical Marks		
			ESE(E)	IA	CSE	Viva (V)	Term Work		
4	2	-	5	50	30	20	25	25	150

Content:

Sr.	Content	Total
1	Fourier series: Periodic functions, Fourier series of functions of any period, Fourier series of Even and odd functions, Half range Expansions, Fourier integrals.	14
2	Laplace Transforms: Laplace transforms definition, Laplace transforms of some elementary functions, Inverse transforms, Linearity and shifting properties, Laplace transforms of derivatives and integrals, Differentiation and integrations of Transforms, Convolution theorem and its application to obtain inverse Laplace transform, Laplace transform of periodic functions, Unit step function, Unit impulse function (Dirac delta function), second shifting property, Applications of Laplace transforms to solve ODE and system of ODE.	16

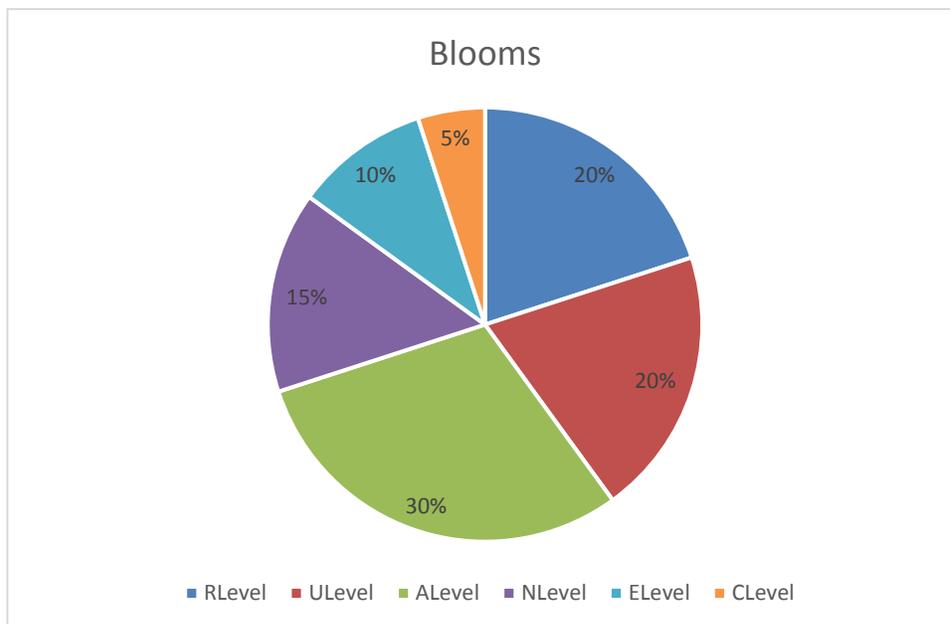

3	<p>Linear Differential Equations:</p> <p>Solution of homogeneous linear differential equations with constant coefficients, Non homogeneous linear differential equations, particular integrals by Inverse Operators and Variation of Parameters, Euler-Cauchy's differential equations with variable coefficients, Power Series solution of ODE.</p>	10
4	<p>Partial Differential Equations:</p> <p>Formation of PDE, Methods of solutions, Lagrange's linear partial differential equation, Special types of Nonlinear PDE of the first order, method of separation of variables.</p>	10
5	<p>Applications of differential equations:</p> <p>Application of ODE: Mechanical vibration system, Electrical circuit system, Application of PDE: Heat, wave, Laplace equations and their solution by method of separation of variables and Fourier series.</p>	10

COURSE OUTCOME

After learning the course, students will have/will be able to

1. Determine the fluid properties and flow parameters
2. Analyse various hydraulic systems by applying the fundamental laws of fluid statics
3. Distinguish between different types of fluid flows and solve the fluid flow governing equations by taking suitable assumptions
4. Evaluate major and minor losses in pipes
5. Apply principles of dimensional analysis on real life problems
6. Interpret the boundary layer aspects of laminar and turbulent flows

SR NO	CONTENTS	TOTAL HOURS	WEIGHTAGE
1	INTRODUCTION TO FLUID STATICS: Definition of fluid, Fluid properties, Classification of fluids, Pascal's Law and Hydrostatic Law, Pressure and its variation in a static Fluid, Measurement of static fluid pressure: Manometers	4	10 %
2	HYDROSTATIC FORCES AND BOUYANCY:	6	13 %

	Hydrostatic forces on Plane –Inclined and Curved surfaces, Buoyancy, Condition of Equilibrium for Submerged and Floating Bodies, Centre of Buoyancy, Metacentre–Determination of Metacentric Height		
3	FLUID KINEMATICS AND DYNAMICS: Fluid kinematics: Description of fluid motion – Lagrangian and Eulerian approach, Types of flows, Control volume, Material derivative and acceleration, Streamlines, Pathlines and Streaklines, Circulation and Vorticity, Stream function and velocity potential function, Vortex flow Fluid dynamics: Continuity equation, Euler’s equation of motion, Bernoulli’s equation, Practical applications of Bernoulli’s equation in flow measurement devices like venturi meter, orifice meter and pitot tube, elementary Theory of notches	10	24 %
4	VISCOUS FLOW AND TURBULANT FLOW: Reynolds number, flow of viscous fluid through circular pipe-Hagen Poiseuille formula, Flow of viscous fluid between two parallel fixed plates, power absorbed in viscous flow through - journal, foot step and collar bearing, movement of piston in dash pot, methods of measurement of viscosity, Moody diagram resistance of smooth and rough pipes shear stress and velocity distribution in turbulent flow through pipes	8	20 %
5	FLOW THROUGH PIPES: Darcy-Weisbach equation, major and minor losses in pipes, pipe friction, parallel, series and branched pipes	3	7%
6	DIMENSIONAL ANALYSIS: Dimensional homogeneity, Rayleigh’s method, Buckingham π theorem, Non-dimensional numbers, Model laws and distorted models, Modelling and similitude	5	12%
7	BOUNDARY LAYER FLOW: Boundary layers, Laminar flow and turbulent flow, Boundary layer thickness, Momentum integral equation, Drag and lift, Separation of boundary layer, Methods of preventing the boundary layer separation	6	14%
8	COMPRESSIBLE FLOW: Basic equations for one dimensional, compression, Pressure wave propagation, sound velocity in fluid, Mach number, Stagnation properties	Using Swayam/NPTEL platforms	

R Level	U Level	A Level	N Level	E Level
15	20	25	25	15

List of Experiments

1. To determine the different types of flow Patterns by Reynolds's experiment
2. Verification of Bernoulli's theorem
3. To determine the friction factor for different pipes
4. To determine the loss coefficients for different pipe fittings (for sudden enlargement and sudden contraction)
5. To determine the loss coefficients for different pipe fittings (for bend and elbow)
6. To determine the coefficient of discharge through an orifice meter
7. To determine the coefficient of discharge through venturi meter
8. To measure the velocity of flow using pitot tube
9. To determine the coefficient of discharge through open channel flow over a rectangular notch
10. To determine the coefficient of discharge through open channel flow over a V-shaped notch
11. To determine metacentric height of floating body
12. Free and forced vortex flow

Reference Books:

1. Manufacturing Engineering and Technology By S. Kalpakjian, Pearson.
2. Manufacturing Processes Vol-I, By P.N.Rao, Mac-grawhill publication.
3. Manufacturing technology –I, by P.C.Sharma, S.Chand Publication.
4. Manufacturing Processes and Systems, 9th Ed. Phillip F., Ostwald, Jairo Munoz, Wiley India
5. Casting Practice by John Campbell, Elsevier/Butterworth-Heinemann publication.
6. Welding Engineering and Technology, by R.S.Parmar, 2nd edition, khanna publication.
8. Welding Technology, by O. P. Khanna, Dhanpat Rai publishers.
9. Welding process technology by Houldcroft P.T., Cambridge University Press, 1977.

Course Outcome:

After learning the course the students should be able to:

- CO1** Understand the basic concept of different manufacturing processes and their parameters.
- CO2** Compare the different manufacturing processes and parameters.
- CO3** Choose the right manufacturing process according to requirements.
- CO4** Analyze any conventional processes and parameters.
- CO5** Develop the sequence of operations to produce the end product.
- CO6** Judge the limitations and scope of process to perform variety of functions.

Major Equipment:

1. Different patterns for Demonstration
2. Small Foundry
3. Arc welding Machine (SMAW, TIG, MIG etc.)
4. Resistant Spot welding m/c.
5. Oxy- Acetylene welding machine.

Subject Code:01ME0304

Subject Name: Design Thinking and Problem Solving Skills

B.Tech. Year - II

Objective: The main objective of this course is to inculcate interdisciplinary engineering skills in students for taking real time engineering problem available in our society/industry and to come-up with the grass root innovation, can be helpful to all level of human beings.

Credits Earned: 1 Credits

Course Outcomes: After completion of this course, student will be able to

1. Understand the importance of Design Thinking.
2. Evaluate the quality of your information and your emotions; keep thinking straight.
3. Identify skills and personality traits of successful problem solving.
4. Apply standard problem-solving heuristics to aid in problem solving.
5. Apply problem-solving techniques to programming activities.
6. Formulate and successfully communicate the solutions to problems.

Pre-requisite of course: Not Required.

Teaching and Examination Scheme

Teaching Scheme (Hours)			Credits	Theory Marks			Tutorial/ Practical Marks		Total Marks
Theory	Tutorial	Practical		ESE (E)	Mid Sem (M)	Internal (I)	Viva (V)	Term work (TW)	
0	0	2	1	0	0	0	25	25	50

Contents:

Units	Topics	Contact Hours
Module-1 Design Thinking Introduction	Introduction, Need of Design Thinking, Traditional Problem Solving versus Design Thinking, phases of Design Thinking, Tools for Design Thinking, Relevance of Design and Design Thinking in Engineering	3
Module-1 Team Formation, Documentation and Canvas	Team Building Domain Selection (Society/Industry project), Log Books-need, types of log book, preparation of log book, Importance of Documentation, Strategy Design	3
Module-1 Design Thinking Exercise	Formation of Team and aspects for the selection, Domain selection, Observation exercise, Design activities through Canvas, Brainstorming for the problem, Users Interview conduction, generation of records via logbooks	6
Module-2 Problem Solving Skills Introduction	Developing logical thinking. Introduction to Problem Solving in Computer Science domain, Errors in reasoning; verbal reasoning; analogy problems lateral thinking	4
Module-2 Problem Solving Techniques	Deductive and hypothetical reasoning; computational problem solving; generating, implementing, and evaluating solutions; interpersonal problem solving	4
Module-2 Problem Solving Exercise	Group Activities based assignments related to problem solving skills will be given for better understanding and development of problem solving skills	4
Module-3	Mini project exercise based on understanding of	6

Capstone Project	modules contents	
		Total Hours
		30

Note: Mentors are advised to take suitable project/activity to explore the above topics and make students understand the various concepts.

3. M. Levine, Effective Problem Solving, 2nd edition, Prentice Hall, Upper Saddle River, NJ, 1994

Instructional Method:

- a. The course delivery method will depend upon the requirement of content and need of students. The teacher in addition to conventional teaching method by black board, may also use any of tools such as demonstration, role play, Quiz, brainstorming, MOOCs etc.
- b. The internal evaluation will be done based on continuous evaluation of students in the laboratory and classroom.
- c. Practical examination will be conducted at the end of semester for evaluation of performance of students in laboratory.
- d. Students will use supplementary resources such as online videos, NPTEL videos, e-courses, Virtual Laboratory

Subject Code: 01ME0271

Subject Name: Numerical Analysis

B.Tech. IInd Year Semester: IV

Type of course: Under Graduate

Pre requisite: Adequate knowledge of Differentiation and Integration

Rationale: Application of various Numerical Analysis methods for solution of Engineering problems

Course Outcome:

After learning the course, the students will be competent

1. Recognize the error in the number generated by the solution
2. Compute solution of algebraic and transcendental equation by numerical methods like Bisection method and Newton Rapshon method
3. Apply method of interpolation and extrapolation for prediction
4. Use numerical methods and tools in the engineering problem solving process.
5. Student able to apply numerical integration in engineering problems
6. Student able to apply ordinary differential equation in engineering problems

Teaching and Examination Scheme:

No.	Content	Total Hrs
1	Numerical Analysis and Computers: Concepts and definition, Representation of numbers in computers, types of errors, basic sources of errors, significant digits, computer arithmetic, errors in computations with digital computers.	8
2	Approximate solutions of nonlinear equations and system of linear equations : Bisection method, Method of false position, Method of Iteration, Newton- Raphson method for single variable convergence criteria and rate of convergence and for simultaneous equations with two variables, Convergence criteria and rate of convergence, Convergence criteria and error estimates for these methods	12

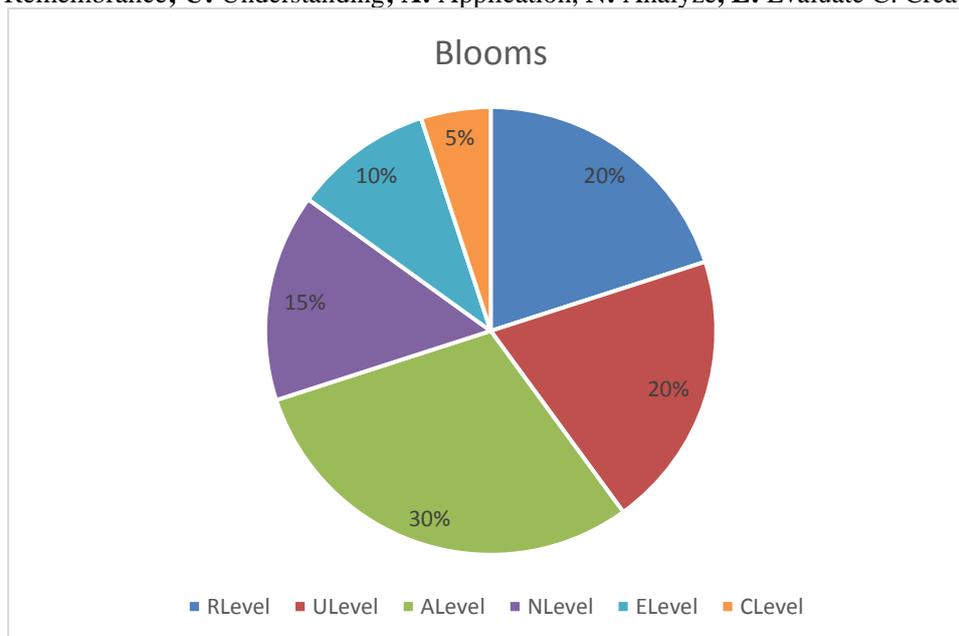

3	Numerical Differentiation and Integration Approximate differentiation based on Newton's interpolation, Newton – cotes quadrature formula, trapezoid rule, Simpson's rules, Remainder terms, error bounds and estimates of these rules, Gaussian integration.	10
4	Interpolation, Curve fitting Finite differences of various orders, difference table, Newton's formulae for interpolation, Lagrange's Interpolation formula, Error estimates of these formulae.	10
5	Numerical solution of ordinary differential equation Single step methods – Taylor series, Euler's and modified Euler, Runge - Kutta method of 2nd and 4th order, Multistep Methods- Milne's and Adam's – Bashforth predictor corrector methods.	10

..

Distribution of Theory Marks

R Level	U Level	A Level	N Level	E Level	C Level
20	20	30	15	10	5

Legends: R: Remembrance; **U:** Understanding; **A:** Application, **N:** Analyze, **E:** Evaluate **C:** Create

List of Assignment:

1. Theory and Example on Numerical Analysis and Computers.
2. Theory and Example on Approximate solutions of nonlinear equations and
3. Theory and Example on Numerical Differentiation and Integration.
4. Theory and Example on Interpolation, Curve fitting
5. Theory and Example on Numerical solution of ordinary differential equation.

Reference books:

1. Introductory Methods of Numerical Analysis – S.S. Sastry, Prentice Hall of India
2. Computer Oriented Numerical Methods – V Rajaraman, Prentice Hall of India
3. Numerical methods with programs in C++ - S Balachandra Rao & C K Shantha
4. Numerical Methods with programs in C and C++ - Veerarajan & Ramchndran. Tata McGraw Hill
5. A textbook of Computer based numerical and Statistical Techniques – A. K. Jaiswal & Anju Khandelwal, New Age International Publishers

			ESE	IA	CSE	Viva	Term Work		
4	0	2	5	50	30	20	25	25	150

Content:

Sr. No	Content	Theory hrs	%Weight age
1	Principle Stresses: Introduction: Two-dimensional stress system. Evaluation of stresses in an inclined plane for members subjected to orthogonal stresses. Definition of principal plane, principal stresses, angle of obliquity, and resultant stress. Principal Stress and Strain: Evaluation of Principal plane and Principal stresses using analytical method. Analysis of Principal stresses and principal planes for two-dimensional stress system. Application of Mohr's circle and ellipse of stress.	6	10
2	Design concepts of Mechanical Components: Concepts of stresses, Strain, strain and its relation, Shear loading and Torsion as well as Bending loads; Different theories of Failures and its limitation and application for Different theories i. e. Distortion energy, Maximum Shear stress, Maximum Principal stress, Coulomb-Mohr Theory, Factor of safety and its different parameters for selection, Selection of theories of failures and Use of theories of failures; Contact stresses, Crushing and Bearing pressure.	6	10
3	Design of Mechanical Joints: Temporary Joint Cotter and Knuckle Joints: Design of Cotter and Knuckle Joints Screw and nut: Different types of thread for Single as well as Multiple threaded screw, screw fastening and its types, Cap and Set screw, concept of uniform strength in bolt, locking devices , Different Terms of Screw thread, Simple and Eccentric loading. Calculation of torque for bolt tightening.	20	38

	<p>Design of Power screw: Different terms used to describe power screw, Calculation of torque required for lifting and lowering of Load, Efficiency of threads, Self-locking phenomenon, Co-efficient of friction.</p> <p>Permanent Joint : Welded Joints: different types of welded joints and stress relieving methods in weld joints, Strength of butt and fillet joint eccentric loading in the plane of weld, Welded joint subjected to bending and torsion.</p> <p>Riveted Joints: material selection and criteria for rivet joints and type of its failure, riveted joints efficiency and strength calculation, strength method for riveted joints like Caulking and Fullering, Longitudinal lap joint and circumferential lap joint, Eccentric loading condition riveted joint.</p>		
4	<p>Design of Machine Component : Shafts, Keys and Couplings Design of solid and hollow circular shaft subjected to torque as well combined loading; Design of shaft based on rigidity and stiffness; Design of Keys: Saddle, Sunk, Woodruff, Square, and Flat. Design and Concept of Couplings, Rigid coupling Flexible coupling.</p>	16	22
5	<p>Design and analysis of levers: Cranked, Bell crank, Foot, Rocker arm.</p>	6	10
6	<p>Columns: Type of loading compressive axial loading of columns and struts, Slenderness ratio, Compressive stress and buckling of components, Effect of end forms. Euler's equation with applications and validate with limitations, Rankine and Johnson's equation, Eccentric loading for long columns.</p>	6	10
7	<p>Geometric Dimensioning and Tolerance (GD&T) : Basic terminology of GD & T , major advantages of geometric dimensioning and tolerance GD&T Concepts and its application, Size Tolerance Machining flowchart, Requirement of dimensional tolerance, Tolerance dimensioning, Methods of conveying tolerance in industrial drawing, Identifying the tolerance for the assembly drawing, Tolerance for Manufacturing process.</p>	6	To be covered in Lab
8	<p>Limits , Fit, And Tolerances & Surface Roughness : Deviation , Hole and shaft basic system , Indian Tolerance grades, Different types of Fits with application , Allowance , Clearance, Maximum Material Condition of a feature of size , Minimum Material Condition of a feature of Modifiers and Symbols , Types of geometric characteristic symbols , Fourteen geometric characteristic symbols , Common modifying symbols used in geometric tolerance , Detecting the parts of a feature control frame , Detecting the additional symbols used in geometric tolerance Parameters of surface texture and qualifications, Relation of surface roughness and various manufacturing processes, Surface Lay Indication.</p>	8	To be covered in Lab

Course Outcome:

After learning the course the students will be competent

1. To Recognize the Important of GD & T.
2. To generate and interpret assembly and production drawings in 2D Drafting Computer software Packages.
3. To analyze components subjected to various mechanical loads.
4. To analyze beams and columns for stresses and deflection.
5. To design and analyze shafts, keys and couplings.
6. To select fasteners and design welded / riveted joints.

List of Experiments:

Practical should be designed to include chapter no 4 & 5. Industrial Drafting Portion.

1. Problems related to Limits, fits and tolerances & Indian Tolerance Grade.
2. Introduction to computer aided drafting tools and 2D software Packages, Using drafting software, generate Assembly and Production drawings after completion of basic Drawing.
3. Understanding of Reverse Engineering and Draw at least two Assembly drawing and Detailed Drawing of Actual Machines per industrial Standard.
4. Case study on Drafting and Designing problem Any Real case of Industrial problem and Solution.

List of Assignment:

Assignment should be designed to include chapter no 1, 2 & 3. Machine Design Portion.

1. Theory and Example on Beam & Column.
2. Theory and Example on Lever & Rocker Arm.
3. Theory and Example on Shaft, Key and Coupling.
4. Theory and Example on Power Screw.
5. Theory and Example on All Temporary Joint.
6. Theory and Example on All Permanent joint.

Major Equipment: 1. Computational facility. 2. CAD Software 3. Workshop hand tool and Machinery.

Design based Examples (DE)/ Open Ended Example:

Design / Analyse a mechanical structure which may involve different components included in Syllabus from Machine Design Portion. Prepare assembly and production drawings in 2D computer Graphics.

Subject Code: 01ME0403

Subject Name: Material Science and Metallurgy

B. Tech: (II Year) IV Semester, Mechanical & Automobile Engineering

Type of course: Engineering Science

Pre requisite: Basic knowledge of Physics, Chemistry

Teaching Scheme:

Teaching Scheme			Credits	Examination Marks					Total Marks
L	T	P		C	Theory Marks			Practical Marks	
			ESE(E)		IA	CSE	Viva	TW	
4	0	2	5	50	30	20	25	25	150

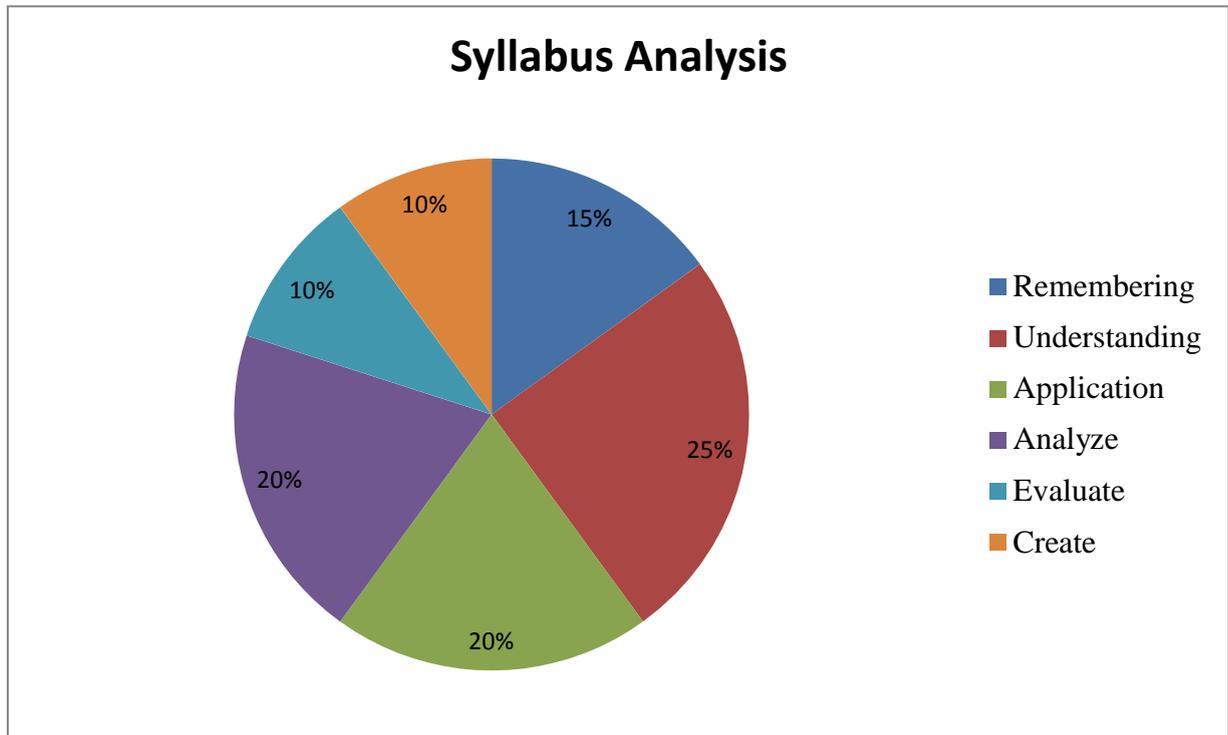

Detailed Syllabus:

Sr. No	Name of Module and Detail	Teaching Hours	Module Weighage (%)
1.	Introduction of Material science and Metallurgy: Introduction to properties of materials, Engineering Requirements of materials, Classification of Engineering Materials, Criterion for selection of materials.	02	5
2.	Metallography: Macro-examination and Micro examinations, Procedure for preparing the specimen for macro and micro examination.	01	
3.	Crystal Geometry and Structure: Crystal Structure for Metallic Elements, Types of crystal systems, Crystal lattice, Lattice parameter, co-ordination number, Atomic radius, atomic packing factors for various cubic systems, crystal Directions, Lattice Planes and Miller Indices.	06	10
4.	Solidification of Metals and Phase Diagrams: Solid Solutions: Types Solid Solutions, Hume-Rothery's Rules. Concept of solidification of metals, Solidification of pure metals, Nucleation, Growth, Growth of the new phase, Solidification of alloys, Progressive, Directional solidification & control of solidification to obtain sound	10	20

	casting. Phase Diagrams: Objectives & classification of System, phases & structural constituent of phase diagram, Gibb's solid phase rule, Cooling Curves (Time-Temperature Curves), Eutectic, Peritectic & Eutectoid system, Equilibrium diagrams for non ferrous alloys, Lever rule.		
5.	Iron-Carbon Diagram: Allotropic forms of Iron, Iron- Iron carbide equilibrium Diagram, Development of microstructure in iron-carbon alloys.	05	10
6.	Heat Treatment Processes: Definition, Purpose & classification of heat treatment processes for various types of special steels, Introduction applications of various case hardening & surface hardening treatments. TTT & CCT curves.	06	12
7.	Ferrous Materials Pig Iron, Wrought Iron Cast Iron: Classification of Cast irons Gray cast irons, nodular cast irons, white cast irons, malleable cast irons, chilled. Effect of various parameters on structure and properties of cast irons. Steel: Classification and application of steels, Effect of alloying elements, Specification of some commonly used steels for Engineering applications (e.g. En. AISI, ASTM, IS etc.) with examples. Classification and application of plain carbon steels.	08	15
8.	Non-ferrous alloys: Introduction, Aluminium Alloys, Magnesium and Beryllium Alloys, Copper Alloys, Nickel and Cobalt Alloys, Titanium Alloys, Refractory and Precious Metals.	04	8
9.	Non-Destructive Testing's (NDT): Radiography Testing, Dye, Penetration Testing, Magnetic Particle Testing, Ultrasonic Testing. Eddy current testing with their Principle of non-destructive testing, the test methods, relative merits, demerits and applications.	06	12
10.	Powder Metallurgy Introduction, Methods of manufacturing powders, mixing of powders, compaction, sintering, secondary operation, advantages and limitation of powder metallurgy.	04	8

* **Highlighted topics should be covered during lab session only.**

**Text Books:**

- Physical Metallurgy, Sydney H. Avner, Tata McGraw-Hill.
- Material science & Engineering of materials, Donald Asklund & Pradeep Phule, Thomson Learning.

Reference Books:

- Materials Science and Engineering, W.D. Callister, John Wiley & Sons.
- Material Science, O.P. Khanna, Dhanpat rai Publication.
- Metallurgy for engineers, V. Raghvan, PHI Learning.
- Material Science and Metallurgy, U.C. Jindal, Pearson Education.

List of Experiments:

1. To understand the construction and working of a Metallurgical Microscope.
2. To study of microstructures for various ferrous and non ferrous materials.
3. **To prepare the specimen for microscopic observation.**
4. **To determine the strength and hardness of ferrous and non-ferrous specimen.**
5. To study the effect of Heat treatment process on the Hardness and Tensile Strength of Mild Steel.

6. To show the effect of different quenching media (Oil, Water and Brine) on the hardness of Mild steel.
7. To determine the hardenability of a specimen by Jominy end quench test.
8. To study of powder metallurgy.
9. To determine the surface defect by liquid penetrant test and magnetic particle test.
10. To determine the internal defect by Ultrasonic Test.

Important Equipment Used:

1. Metallurgical Microscope.
2. Belt grinder and Polishing Machine.
3. Hardness Tester i.e. Rockwell Hardness test.
4. Muffle Furnace.
5. Jominy end quench tester.
6. NDT equipments.

Course Outcome:**After successful completion of course student will be able to:**

- CO1: Enhance the technical knowledge on Engineering materials & its applications.
- CO2: Establish important relationships between internal structure, properties and performance of materials during processing and use.
- CO3: Design the alloy system based on their knowledge of phase diagrams and metal characteristics.
- CO4: Understand different non-destructive testing methods
- CO5: Know the various heat treatment processes for steels.
- CO6: Apply the knowledge of Heat treatment process for emphasizing relation between microstructure and mechanical properties.

Design based Problems (DP)/ Open Ended Problem:

1. Students may be asked for metallography to prepare specimens for microstructure analysis. Moreover they may be asked to provide design of heat treatment cycles of specific types of steels for their applications, e.g., design heat treatment cycle for tool steel.
2. Students may be asked to choose a material for given application based on structure-property-performance relationship. Also they should give specification and designation of a chosen material.

Subject Code: 01ME0405

Subject Name: Human Centric Design Approach

B.Tech. Year - II

Objective: This course focuses to build the empathy for the people for designing to solve the societal problem as Human-centred design. It is a creative repeatable approach for problem solving by understanding the real need of the users.

Credits Earned: 1 Credits

Course Outcomes: After completion of this course, student will be able to

1. Understand the Human Centric approach for design.
2. Understand significance of the empathy and solution based on empathy
3. Importance of design thinking when addressing social change
4. Generate the innovative ideas and will convert in new solutions.
5. Build a possible prototype solutions

Pre-requisite of course: No

Teaching and Examination Scheme

Teaching Scheme (Hours)			Credits	Theory Marks			Tutorial/ Practical Marks		Total Marks
Theory	Tutorial	Practical		ESE (E)	Mid Sem (M)	Internal (I)	Viva (V)	Term work (TW)	
0	0	2	0	0	0	10	20	20	50

Contents:

Unit	Topics	Contact Hours
Phase :1 Introduction to Human Centred Design	Introduction to Human-Centered Design, Design Principles, the Diamond Model, The Human-Centered Design Process, Systems Thinking, Psychology behind Design, History of Design/History of Innovation. Activity: Mini Design Challenge	4
Phase:2 Inspiration Phase	Defining and Visualizing Challenges, Team formation, Key Assumptions. Activity: Choose Your Design Problem, Plan Your Research build Interview Guide	4

	+ Activity: Conduct activity with canvas for this phase	
Phase:3 Ideation Phase	A business case developed, High-level requirements are elicited; and, A Project Overview Statement (POS), Share Stories and Learning from User Research, Ideation Methods to Select Ideas Activity: Conduct activity with canvas for this phase	4
Phase:4 Prototype Phase	What is Prototype, Types of Prototyping- Low-Fidelity Prototyping, High-Fidelity Prototyping, Guidelines for Prototyping. Discussion: Determine What to Prototype Activity: Brainstorm, Selecting Best Ideas, checking viability, Creating a Storyboard, Start Prototyping, Test Prototype and Get Feedback.	8
Module-5- Implementation Phase	Activity: Create an Action Plan Activity: Create a Pitch Activity: Share Your Solution Reflection Discussion: Moving Forward	8
	Total Hours	28

Note: Faculty are advised to take suitable project/activity to explore the above topics and make students understand the various concepts.

6. Dubberly, Hugh and Shelley Evenson. (2010). Designing for Service: Creating an Experience Advantage. Wiley Online Library

Instructional Method:

- a. The course delivery method will depend upon the requirement of content and need of students. The teacher in addition to conventional teaching method by black board, may also use any of tools such as demonstration, role play, Quiz, brainstorming, MOOCs etc.
- b. The internal evaluation will be done on the basis of continuous evaluation of students in the laboratory and class-room.
- c. Practical examination will be conducted at the end of semester for evaluation of performance of students in laboratory.
- d. Students will use resources like online videos, NPTEL course videos, e-courses, Virtual Laboratory

Subject Code: 01ME0305

Subject Name: Fundamental of Machine Design

B. Tech. IInd Year Semester: III

Type of course: Under Graduate

Prerequisite: Engineering Graphics and Physics

Rationale: Understanding the fundamental principles, concepts and techniques, both theoretical and experimental, with emphasis on the application of these to the solution of mechanics based suitable problems in all engineering.

Course Outcome:

After learning the course, the students will be competent

1. To understand the laws of mechanics and their application to engineering problem.
2. Apply resultant force to move or equilibrant force to keep body in equilibrium.
3. To apply the fundamentals of stress/strain analysis with confidence to simple structure.
4. Apply shear force and bending moment diagrams to analyze the resistance offered by the beam and evaluate the stresses induced in beam.
5. To Analyze the Deflection of Beams, Torsion of Circular Shafts.

Teaching and Examination Scheme:

Teaching Scheme			Credits	Examination Marks					Total Marks
L	T	P		Theory Marks			Practical Marks		
			ESE(E)	IA	CSE	Viva (V)	Term Work (TW)		
4	0	2	5	50	30	20	25	25	150

Content:

Sr. No.	Topic Name	Hours
1	Introduction Terminologies: space, time, particle, rigid body, deformable body. Force: Definition, categorization of forces, Characteristics of a force, System of forces and resolution of forces. Principles of mechanics: Principles of Transmissibility, superposition, Gravitational Law and Parallelogram Law of Forces.	2

2	Fundamentals of Statics	8
	<p>Force and Force system: System of Forces its definition and application in Engineering.</p> <p>Coplanar concurrent force system: Derivation of resultant force and equilibrant force using analytical and graphical methods. Triangle law of forces and Polygon law of forces.</p> <p>Equilibrium of rigid bodies: Conditions of equilibrium, Lami's theorem and its derivation. Concept of Free body diagram in engineering. Application of Lami's theorem in various problems.</p> <p>Coplanar non-concurrent forces: Definition of moment, couple and its effect on rigid bodies. Properties of couple, equivalent force couple system with examples, Varignon's theorem and its derivation.</p> <p>Resultant of Coplanar non-concurrent Force system: Calculation of resultant force in coplanar non-concurrent force system by analytical and graphical methods.</p>	
3	Shear force and Bending moment in beams	8
	<p>Classification of loads and supports</p> <p>Support Reactions: Calculation of support reactions for determinate beams subjected different loads viz. (i) Concentrated loads and moment, (ii) Uniformly distributed load, and (iii) Uniformly Varying loads.</p> <p>Internal forces in beams: Definition of shear force and bending moment. Correlation between loading, shear force & bending moment in beams.</p> <p>Shear Force and Bending Moment Diagrams: Bending moment and shear force diagrams for beams subjected to; i) Concentrated loads and moment, (ii) Uniformly distributed load, and (iii) Uniformly Varying loads. Point of Contra flexure and maximum bending moment in a beam.</p> <p>Deflection of Beams</p>	
4	Concepts and Application of Static Friction	6
	<p>Introduction: Theory, Classification and laws of Static and Dynamic friction.</p> <p>Glossary of Terms: Angle of friction, Coefficient of friction, Angle of repose and Cone of friction.</p> <p>Application of Static Friction -</p> <p>(a) Block friction: Solutions of problems involving block friction in horizontal and inclined planes.</p> <p>(b) Ladder Friction: Solution of various problems.</p> <p>(c) Wedge, Belt and Rope Friction: Solution of various problems.</p>	

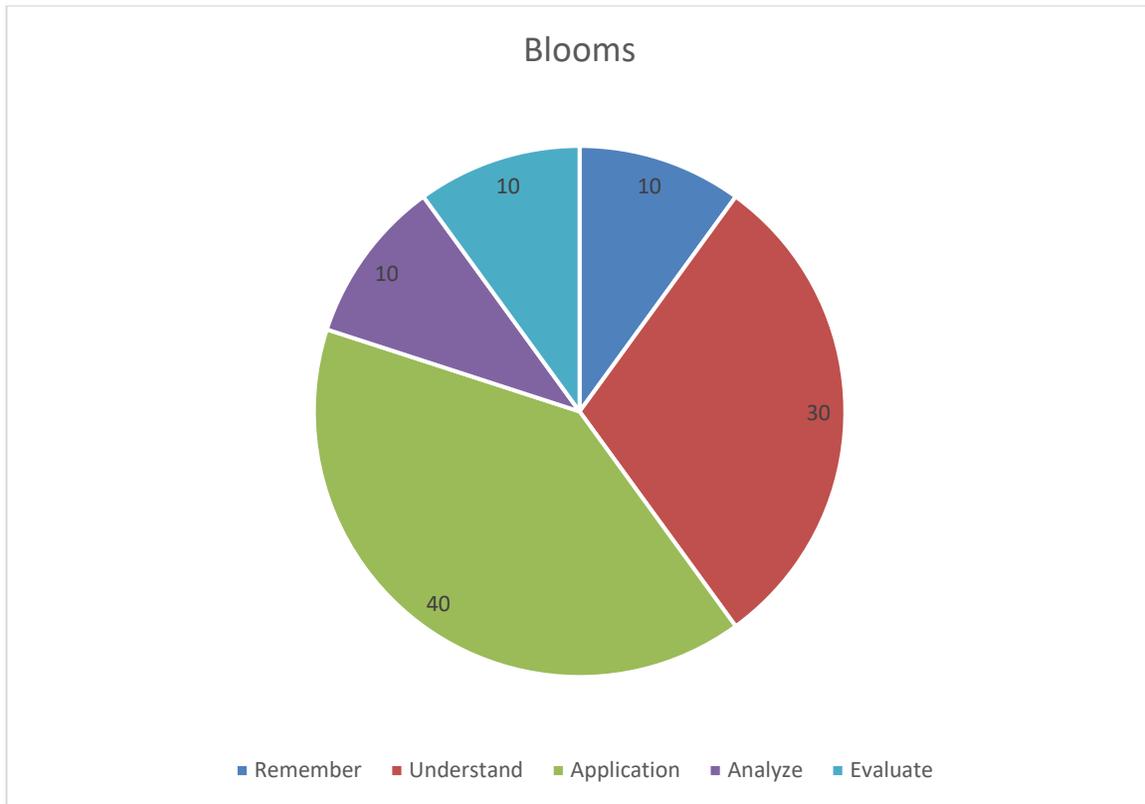

5	<p>Centroid and Moment of Inertia</p> <p>Centroid: Definition, concept, and evaluation of centroid for one-dimensional standard geometry viz. horizontal, vertical, inclined and circular curved lines.</p> <p>Centroid of Standard Geometrical shapes: Determination of centroid for standard two-dimensional and three-dimensional shapes viz. rectangular, triangular, circular, semi-circular, quarter circular, circular segments, and cylindrical, conical, spherical and cubical shapes.</p> <p>Calculation of Centroid: Calculation of centroid for composite lines, areas and volumes.</p> <p>Pappus - Guldinas Theorem: Pappus Guldinus theorem and its application in calculating surface area and volume.</p> <p>Introduction to Moment of Inertia: Definition and concept of Moment of Inertia. Perpendicular axis, Parallel axis theorem, Polar Moment of inertia, and radius of gyration.</p> <p>Moment of Inertia for Planar cross-sections: Determination of Moment of Inertia for planar sections using parallel axis theorem for standard lamina.</p> <p>Moment of Inertia for composite planar elements: Determination of moment of Inertia for composite lamina.</p>	9
6	<p>Simple Stresses & Strains</p> <p>Introduction: Definition and types of simple stresses (direct and indirect) and strains (linear and lateral) in an element and its importance in engineering.</p> <p>Relation between stress and strain: Hooke's law, Poisson's ratio, Modulus of Elasticity, Rigidity, and Bulk modulus.</p> <p>Stresses and strains Members: Evaluation of stresses and strains in members subjected to axial and shear loading for homogenous, composite, prismatic and tapered sections.</p> <p>Thermal Stresses: Evaluation of stresses in elements subjected to temperature effects in homogeneous and composite members</p> <p>Inter-relationship between various Moduli: Relationship between modulus of elasticity, rigidity, bulk modulus and Poisson's ratio with problems.</p> <p>Multidirectional Stresses: Volumetric strains, effect of multi-directional stresses on homogeneous members.</p>	10
7	<p>Stresses in Beams</p> <p>Theory of Pure Bending – Assumption, theory and derivation of equation for pure bending. Determination of bending stresses at various sections.</p> <p>Flexural stresses – Section modulus and determination of flexural stress distribution in beams of various cross sections.</p> <p>Equation of Shearing stress – Derivation of equation for shear stress across the cross section in a beam.</p> <p>Shear stresses – Qualitative and Quantitative determination of shear stress distribution in beams having various cross sections.</p>	6

8	<p>Torsion: Equation of Pure Torsion: Definition of Torsion, Assumption and derivation of equation for pure torsion in circular shafts, Torsional rigidity and its application. Stresses due to Torsion: Torque generated due to Power transmitted in shaft. Stresses generated in members subjected to circulatory motion in circular and hollow circular shafts</p>	7

Distribution of Theory Marks

R Level	U Level	A Level	N Level	E Level
10	30	40	10	10

Legends:R:Remembrance;U:Understanding;A:Application,N:Analyze,and E:Evaluate

List of Experiments:

1. Law of Parallelogram of Forces
2. Coplanar Non-Concurrent Forces
3. Co-efficient of Static Friction
4. Compressive Strength
5. Tensile Strength
6. Hardness Number
7. Izod Impact Test
8. Shear forces and bending moment Diagrams.

List of Assignment:

Assignment should be designed to include chapter no 2, 3, 4 & 6

1. Theory and Examples on Coplanar Concurrent & Non-concurrent Forces
2. Theory and Examples on Support reaction and Shear Force and Bending moment diagram
3. Theory and Examples on Centre of Gravity & Moment of Inertia
4. Theory and Examples on Simple Stresses and Strain

Major Equipment:

1. Universal Testing Machine
2. Impact Tester machine
3. Hardness Tester Machine

Design based Examples (DE)/Open Ended Example:

1. Design a stable object
2. Centroid, centre of gravity and moment of inertia

Text Books:

Applied Mechanics S. B. Junarkar & H. J. Shah-Charotar Publication

2. <https://web.mit.edu/emech/dontindex-build/>

Subject Code: 01CR0501

Subject Name: Business Benchmark (Semester 5, 3rd Year, Level 3)

Branch: ME, Civil & Chemical

Objective: This, an upper-intermediate qualification that shows students have a level of English that is adequate for practical everyday use in a business environment.

Credits Earned: 1 Credit

Course Outcomes: This an upper-intermediate level qualification, which shows students can:

- ✓ Write short pieces of business correspondence reports or proposals.
- ✓ Read extracts from business publications. Ask for the information required.
- ✓ Listen to, understand and contribute to discussions in meetings.
- ✓ Give a prepared presentation on a familiar topic.

Pre-requisite of course: NA.

Teaching and Examination Scheme

Teaching Scheme (Hours)			Credits	Theory Marks			Tutorial/ Practical Marks		Total Marks
Theory	Tutorial	Practical		ESE (E)	Mid Sem (M)	Internal (I)	Viva (V)	Term work TW=CSE	
1	0	0	1	00	00	00	50	50	100

Contents:

Unit	Topics	Contact Hours
1	The working day Changing places, job swapping at work. Discussion on how to describe jobs. Understanding job titles names of company department.	1
2	Getting the right job Reading through job satisfaction at Sony Mobile and advice on job applications for how to make web entries and writing a short email. Discussion on format of emails and letters. Language work on past simple regular and irregular verbs. Using comparatives and superlatives	2
3	Making Contact A quiz on telephone with phone answering tips. Short talk on what is important when making a business telephone call. Language work on present passive and modal verbs for obligation. Present simple and continuous: time expressions and state verbs, asking questions, expressing likes and introducing reasons.	1
4	Launching a product Reading through a Drink Me Chai success story. How to launch and promote new products. How to write a marketing report. Language work on Present Continuous for	2

	future, will and am going to forms and the differences between them.	
5	Starting a business Setting up an international franchise. Writing the letter of enquiry. Language work on perfect tense and simple past tense & Past continuous and using prepositions in time phrase.	2
6	Making arrangements and transport How to make travel arrangements. Writing a letter responding to an invitation. Discussion on what factors are important while on a business trip.	1
7	Business Meetings Study on survey of meetings. Writing an email about giving instructions and business trip. Discussion on how meeting should be conducted. Language work on using collocations describing reasons for meetings and referencing. Using modals to Showcase responsibility and ability.	1
8	Social media and business Ways of using social media. Writing an email arranging a meeting and introducing a company. Discussion on how to use social media. Making recommendations and using passive to express opinions and ideas.	1
9	Job applications Writing your CV. Writing a letter inviting a candidate for interview and letter giving the result of an application. Headings for CVs and describing application procedure.	2
10	Communication with customers How to train for customer communication skills. Discussion on the best methods for communicating different things. Expressing result. Adjective & Noun collocations.	1
	Total Hours	14

Suggested Theory distribution:

The suggested theory distribution as per Bloom's taxonomy is as per follows. This distribution serves as guidelines for teachers and students to achieve effective teaching-learning process

Distribution of Theory for course delivery and evaluation					
Remember	Understand	Apply	Analyse	Evaluate	Create
20%	20%	35%	10%	10%	15%

Subject Code:01ME0501
Subject Name: Dynamics of Machine -1
B.Tech. III Year – (Sem-5) Mechanical
Type of course: Progame Core

Prerequisite: KOM

Rationale:- Dynamics of Machine-I is a fundamental course. It is essential for mechanical engineer to understand motion of machine elements and force analysis of static and dynamic reciprocating parts

Teaching and Examination Scheme:

Teaching Scheme (Hours)			Credits	Evaluation Scheme					Total Marks
				Theory Marks			Practical Marks		
Theory	Tutorial	Practical		ESE (E)	IA	CSE	Viva (V)	Term Work (TW)	
4	---	2	5	50	30	20	25	25	150

COURSE OUTCOME

Students will be able to

1. Identify the fundamental of dynamics of machine along with associated terminologies.
2. Distinguish static and dynamic condition of machine.
3. Evaluate the different harmonic motion of machine.
4. Design and development of Flywheel for IC engine
5. Static and dynamic force analysis of machine components

SR No	CONTENTS	TOTAL HOURS	WEIGHTAGE
1	Gyroscopic Couple and ProceSSIONAL Motion : Concept of Gyroscope, Change in the first Euler angle, fundamental of Gyroscopic effect, Define active and reactive couple along with axes, Evaluate the effects of gyroscopic couple on ship, airplane, two wheeler and four wheeler, Stability of two and four wheeler exposed to curved path	14	28%
2	Clutch, Breaks and Dynamometer: Introduction and classification of clutch, pressure and wear theory of clutch, single plate, multi plate and centrifugal plate clutch, equation of energy and thermal aspects in clutch. Introduction and classification of brakes, braking effect, analysis of band, block and combination of band and block brakes, analysis of internal expansion shoe break, Introduction and classification of dynamometer, analysis of	8	16%

	dynamometer: prony brake, rope break, hydraulic, belt transmission, epicyclical train and bevis-gibson torsion		
3	Governors: Introduction and classification of governors, governor terminologies, watt governor, porter governor, proell governor and hartnell governor, governor stability and hunting, introduction to isochronism in governor, sensitivity in governor	6	12%
4	Turning Moment Diagrams and Flywheel: Introduction to turning moment diagrams and flywheel, turning moment diagrams for IC engine. Speed and energy fluctuation in flywheel, flywheel rim dimensions, flywheel in punching press.	**	4%
5	Simple Harmonic Motion: Introduction to simple harmonic motion (SHM), velocity and acceleration of a particle moving with SHM, differential equation of SHM, simple pendulum, compound pendulum, center of percussion, bifilar suspension and trifler suspension	8	16%
6	Force Analysis of Reciprocating Parts: Introduction, resultant of forces in system, two force and three force systems, force and couple, free body diagrams, static force analysis of mechanisms, D'Alembert's principle, velocity and acceleration of the reciprocating parts, Klein's construction, ritterhaus's construction, Bennett's construction, velocity and acceleration of piston and connecting rod –Approximate analytical approach, forces acting on reciprocating parts of an engine. Dynamically equivalent and non-equilibrium system, correction couple, analytical method for inertia torque	12	24%

**** Should be covered during practical session only.**

Distribution of Theory Marks

Subject Code: 01ME0502
Subject Name: Fluid Power Engineering
B.Tech. III Year – (Sem-5) Mechanical Engineering
Type of course: Programme Core
Prerequisite: Elements of Mechanical Engineering, Fluid mechanics.

Rationale: To provide the detailed understanding of fluid power and different major equipment which are dealing with fluid power.

Teaching and Examination Scheme:

Teaching Scheme(Hours)			Credits	Evaluation Scheme					Total Marks
Theory	Tutorial	Practical		Theory Marks			Practical Marks		
				ESE (E)	IA	CSE	Viva (V)	Term Work (TW)	
4	0	2	5	50	30	20	25	25	150

COURSE OUTCOME

Students will be able to

- CO1** Understand the operation and use of different fluid machines like hydraulic turbine, pumps, compressors, hydraulic crane, fluid coupling and fluid torque convertor etc.
- CO2** Learn the benefits and limitations of fluid power technologies compared with other power transmission and generation technologies.
- CO3** Apply their knowledge to calculate various performance parameters related to fluid machines.
- CO4** Analyze the selection of fluid machines.
- CO5** Design different fluid machines depending on various field applications.
- CO6** Predict the performance of fluid machines for the different operating conditions.

Sr. No.	Content	Total Hrs	% Weightage
1	Impact of Jet: ✓ Introduction, Force exerted on flat stationary & moving plate held		

	normal and inclined to jet, Force exerted on stationary & moving curved plate when jet is striking at center, when Jet is striking on curved vane tangentially at one tip and leaving at other end, Jet propulsion in ships	07	20
2	Hydraulic Turbines: <ul style="list-style-type: none"> ✓ Introduction & Classification of hydropower plant, Advantages and disadvantages of hydropower plant, ✓ Introduction & Classification of turbines, construction, working and performance of Pelton, Francis and Kaplan Turbines, Draft tube, Cavitations, Unit quantities, specific speed and model relationships, Governing of hydraulic turbines. 	09	25
3	Centrifugal Pumps: <ul style="list-style-type: none"> ✓ Pump classification and selection criterion, Centrifugal pumps, Pump losses and efficiencies, Net positive suction head, Characteristic curves of centrifugal pumps, priming, maximum suction limit - minimum starting speed to deliver the discharge, Multistage pumps, cavitation, pump selection 	06	12
4	Reciprocating Pumps: <ul style="list-style-type: none"> ✓ Operation of Reciprocating pumps, discharge co-efficient, volumetric efficiency, slip, work done and power required to drive reciprocating pumps, effect of air vessels, effect of friction on performance of reciprocating pump 	04	8

Subject Code: 01ME0503

Subject Name: Machine Design - I

B.Tech. III Year – (Sem-5) Mechanical Engineering

Type of course: Programme Core

Prerequisite: Machine Design & Industrial Drafting

Rationale: To develop an ability to design a system, component, or process to meet desired needs within realistic constraints. To determine the fundamentals of design procedure of machine components like Pressure vessel, spring and transmission system like belts, chain and ropes and analysis of components subjected to fluctuating loads.

Teaching and Examination Scheme:

Teaching Scheme (Hours)			Credits	Evaluation Scheme					Total Marks
Theory	Tutorial	Practical		Theory Marks			Practical Marks		
				ESE (E)	IA	CSE	Viva (V)	Term Work (TW)	
4	0	2	5	50	30	20	25	25	150

COURSE OUTCOME

After completion of syllabus, students will be able to:

1. Understand basic knowledge of design and design procedures and its effect under certain conditions.
2. Carry out preliminary selection of materials for mechanical components.
3. Design mechanical components subjected to fatigue failure criteria.
4. Design mechanical springs with geometrical features and use the techniques, skills and modern tools necessary for the practice.
5. Design pressure vessels using conventional methods and understanding of standard codes.
6. Evaluate and design a Belt drive, Chain drive and Rope drive systems to meet desired needs in the field of mechanical engineering.

Sr. No.	Contents	Total Hours	Weightage
1	Machine Design Introduction: Classification of machine design, Design Procedure of Machine Elements, Manufacturing considerations in Design, Aesthetic Considerations in Design, Ergonomic Considerations in Design, Concurrent Engineering, Selection of Preferred Sizes, Selection of Material, BIS System of Designation of Steels, Cast Irons, Alloy Steels.	6	10 %
2	Design for Fluctuating Loads: Stress Concentration, Stress Concentration Factors, Reduction of Stress Concentration, Fluctuating Stresses, Fatigue Failure, Endurance Limit, Low cycle and High cycle Fatigue, Notch Sensitivity, Endurance Limit - Approximate Estimation, Reversed Stresses - Design for Finite and Infinite Life, Cumulative Damage in Fatigue, Soderberg and Goodman Lines, Modified Goodman Diagrams, Gerber Equation, Fatigue Design under Combined Stresses.	10	20 %
3	Design of Springs: Introduction, Types of Springs, Terminology of Helical Springs, Styles of End, Stress and Deflection Equations, Series and Parallel Connections, Spring Materials, Design of Helical Springs, Spring Design – Trial and Error Method, Concentric Springs, Optimum Design of Helical Spring, Surge in Spring, Helical Torsion Springs, Spiral Springs, Multi-Leaf Spring, Nipping of Leaf Springs, Introduction of Belleville Spring, Shot Peening.	8	20 %
4	Belt Drives: Belt Drives, Belt Constructions, Geometrical Relationships, Analysis of Belt Tensions, Condition for Maximum Power, Characteristics of Belt Drives, Selection of Flat-belts from Manufacturer's Catalogue, Pulleys for Flat Belts, Arms of Cast-iron Pulley, Working of Timing belt, V-belts, Selection of V-belts, V-grooved Pulley, Belt-Tensioning Methods, Ribbed V-belts.	9	20 %

5	Chain Drives and Rope Drives: Chain Drives, Roller Chains, Geometric Relationships, Polygonal Effect, Power Rating of Roller Chains, Sprocket Wheels, Design of Chain Drive, Chain Lubrication, Silent Chain, Rope Drives, Construction and Lay of Wire Ropes, Stresses in Wire Ropes, Pulley System, Design of Sheave and drums.	5	10 %
6	Design of Cylinders and Pressure Vessels: Thin and Thick Cylinders, Design of Thin Cylindrical Vessels, Design of Thin Walled Spherical Vessels, Design of Thick Cylinders, Lame's Equation, Clavarino's Equation, Birnie's Equation, Cylinders Subjected to External Pressure, Autofrettage, Compound Cylinder, Gaskets, Gasketed Joint, Thickness of Cylindrical and Spherical Shells, End Closures, Introduction of design codes for pressure vessel.	10	20 %

Note: Use of Design data book should be permitted during the examination.

Subject Code: 01ME0504
Subject Name: Metrology
B.Tech. III Year – (Sem-5) Mechanical Engineering
Type of course: Programme core

Pre requisite: Nil

Teaching Scheme:

Teaching Scheme			Credits	Examination Marks					Total Marks
L	T	P		C	Theory Marks			Practical Marks	
			E		I	CSE	Viva	TW	
3	0	2	4	50	30	20	25	25	150

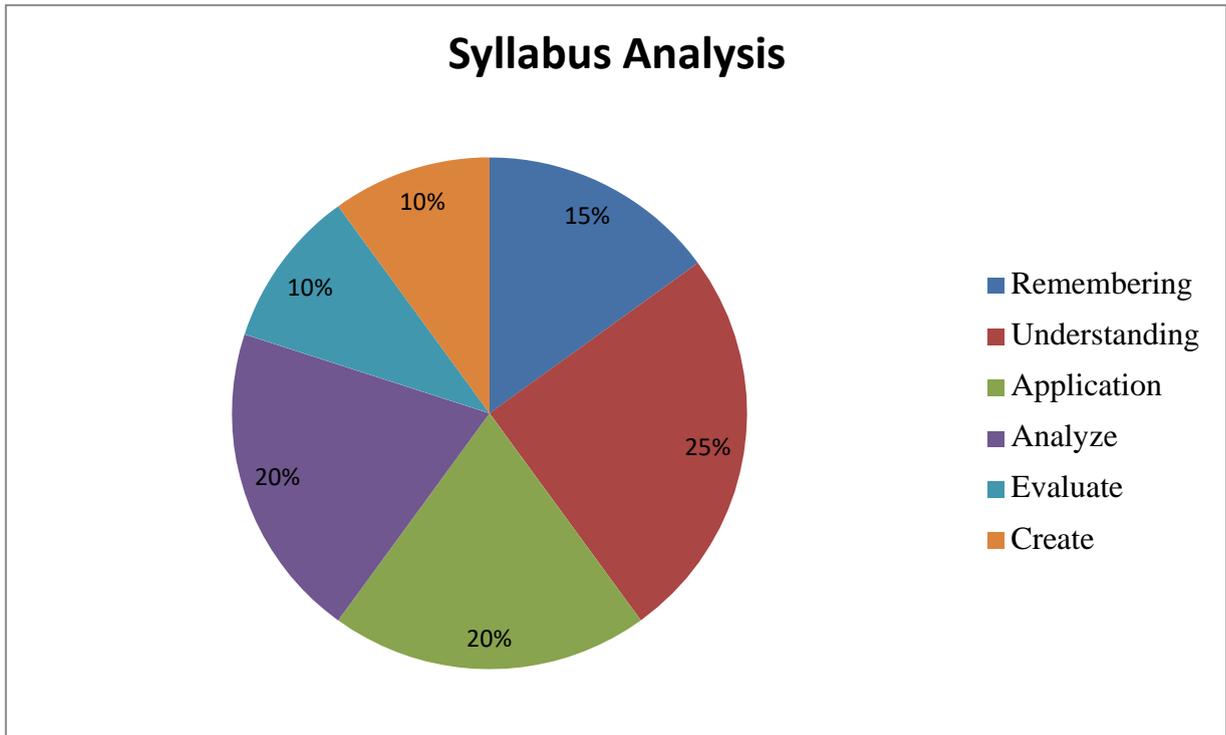

Detailed Syllabus:

Sr. No	Name of Module and Detail	Teaching Hours	Module Weightage (%)
1.	Basics of Metrology and Measurement: Meaning, Necessity and Objectives of Metrology, Standards of Measurement, Elements of Measuring System, Methods of Measurement, Static Performance Characteristics, Dynamic Performance Characteristics, Precision and Accuracy, Sources of Errors, Selection and Care of instruments, Standardizing organizations	06	12
2.	Liner and Angular Measurements: *(Introduction & classification of Linear Measuring Instruments, Least count, working principle, Vernier Height Gauge, Vernier Depth Gauge, Micrometres, slip gauges, Dial indicators-construction & working), comparators, calibration of various linear measuring instruments; Introduction, Working principle & construction of Angular Measuring instruments like Bevel Protractors, Sine bars, Taper Measuring instruments: Measurement of taper shafts & holes.	07	14
3.	Measurement of Motion and Force: Motion Measurement of displacement, velocity, acceleration and vibrations by potentiometer, strain gauges, seismic pickups, velocity pickups and acceleration pickups, calibration of pickups. Force Torque and shaft power measurement, Basic method of force	06	14

	measurements, Load Cell, Proving Ring, differential transformers, torque measurement on rotating shaft, shaft power measurement by dynamometers.		
4.	Measurement of Pressure Basic method of pressure measurement, dead weight gauges and manometers, elastic transducers and force balance transducer.	03	10
5.	Temperature Measurement: Measurement of temperature by liquid – in – glass thermometers, pressure thermometers, thermocouples, their calibration, resistance thermometer, bimetallic thermometer, thermistors, radiation and optical pyrometers.	04	10
6.	Metrology of Gears and screw threads: Gear tooth terminology, Sources of errors in manufacturing of gears, Measurement of tooth thickness: Gear tooth vernier, Constant chord method, Addendum comparator method and Base tangent method, Measurement of tooth profile: Tool maker's microscope or projector, Involute tester, Measurement of pitch, Measurement of run out, Lead and Backlash checking. Measurement of concentricity, Alignment of gears. Screw Thread Measurement: Errors in threads, screw thread gauges, measurement of element of the external and internal threads, thread calliper gauges.	07	18
7.	Metrology of Surface finish: Surface Metrology Concepts and terminology, Analysis of surface traces, Specification of surface Texture characteristics, and Method of measuring surface finish: Stylus system of measurement, Stylus probe instruments, Wave length, frequency and cut off, other methods for measuring surface roughness: Pneumatic method, Light Interference microscopes, Mecrin Instruments.	06	12
8.	Miscellaneous Metrology: Precision Instrumentation based on Laser Principals, Coordinate measuring machines: Structure, Modes of Operation, Probe, Operation and applications. Optical Measuring Techniques: Tool Maker's Microscope, Profile Projector, Optical Square. Basics of Optical Interference and Interferometry, Optoelectronic measurements,	04	10
	Total	43	100%

* **Highlighted topics should be covered during lab session only.**

**Text Books:**

- 1.R.K. Jain, Khanna Publishers - A Text Book of Engineering Metrology
- 2.M.Mahajan, DhanpatRai, New Delhi - A Text Book of Metrology
- 3.D.S. Kumar, Metropolitan book Co. - Mechanical Measurement & Control
- 4.R.K.Rajput, S.K.Kataria& Sons. - Mechanical measurement and instrumentation

Reference Books:

- 1.Engineering Metrology and Measurement, N V Raghavendra and Krishnamurthy, Oxford University Press,
2. Engineering Metrology and Measurements, Bentley, Pearson Education
3. Theory and Design for Mechanical Measurements, 3rd Edition, Richard S Figliola, Donald E Beasley, Wiley India
4. Metrology and Measurement, Anand Bewoor & Vinay Kulkarni McGraw-Hill
5. Doebelin's Measurement Systems Ernest Doebelin, Dhanesh Manik McGraw-Hill
6. Instrumentation, Measurement and Analysis, B.C. Nakra, K.K. Chaudhry McGraw-Hill
7. A Text book of Engineering Metrology, I C Gupta, Dhanpat Rai Publications
8. A course in Mechanical Measurements and Instrumentation, A K Sawhney, Dhanpat Rai Publications
9. Mechanical Measurements and Instrumentations, Er. R K Rajput, Kataria Publication(KATSON)
10. Mechanical Measurement and Metrology by R K Jain, Khanna Publisher Mechanical Measurement & Control by D.S. Kumar.
11. Industrial Instrumentation & Control by S K Singh, McGrawHill
12. Mechanical Measurements by Beckwith & Buck, Narosa publishing House
13. Thomas G. Beckwith, Pearson Edu. - Mechanical Measurement

List of Experiments:

1. Basic understanding of measurements and metrology: concepts, application, advantage and future aspects
2. Performance on linear measurements using Vernier Calliper, Vernier height gauge, and Micrometer.
3. Performance on Angular Measurement using Bevel protector and Sine bar.
4. Performance on Temperature measurements and check different characteristics of measurements and also do calibration
5. Performance on force/torque measurements and check different characteristics of measurements and also do calibration
6. Performance on Speed/Velocity, acceleration measurements.
7. Performance on surface measurements
8. Performance on measurements of gears and screw threads

Important Equipment Used:

1. Temperature Measurements Equipments
2. Force Measurements Equipments
3. Surface Measurements Equipments
4. Linear/Angular Measurements Equipments
5. Tachometers
6. Gears/Screw Threads Measurements Equipments

Course Outcome:**After successful completion of course student will be able to:**

- CO1: Understand the basic concept of Metrology & to select instrument for particular measurement. Describing the calibration of instrument
- CO2: Demonstration of various instrument for hands on experience.
- CO3: Application of various measuring instrument in industry & day to day life
- CO4: Analysing the error in measurement & measuring instruments
- CO5: Discriminate the various methods of measurement
- CO6: Describe the use of advanced measuring instrument

Design based Problems (DP)/ Open Ended Problem:

1. Students may be asked for Calibration of temperature measuring devices.
2. Students may be asked to prepare and perform experiments on linear and angular measurements
3. Students may be asked to prepare and perform experiments on Displacement, Speed/Velocity and acceleration measurement.

Subject Code: 01ME0506
Subject Name: Computer Graphics
B.Tech. V Year (Sem-III) Mechanical Engineering.
Type of course: Engineering Science

Rationale: Computer have become inevitable in today era and find their application in various stages of product design. Computer Graphics is intended to impart the fundamental knowledge of various input output devices, geometric transformations and 2D/3D modeling. This course intends to introduce students to learn computer graphics designed to give an overview of fundamental principles.

Teaching and Examination Scheme:

Teaching Scheme (Hours)			Credits	Evaluation Scheme					Total Marks
Theory	Tutorial	Practical		Theory Marks			Tutorial/Practical Marks		
				ESE (E)	IA	CSE	Viva (V)	Term Work (TW)	
3	0	2	5	50	30	20	25	25	150

Content:

Sr. No.	Content	Total Hrs	%Weight - age
1	Introduction: A typical product cycle, CAD tools for the design process of product cycle, CAD / CAM system evaluation criteria, Input / Output devices; Graphics Displays: Refresh display, DVST, Raster display, pixel value and lookup table, estimation of graphical memory, LCD, LED fundamentals. Concept of Coordinate Systems: Working Coordinate System, Model Coordinate System, Screen Coordinate System. Line and Curve generation algorithm: DDA, Bresenham's algorithms. Graphics exchange standards and Database management systems.	08	20%

2	Curves and Surfaces: Parametric representation of lines: Locating a point on a line, parallel lines, perpendicular lines, distance of a point, Intersection of lines. Parametric representation of circle, Ellipse, parabola and hyperbola. Synthetic Curves: Concept of continuity, Cubic Spline: equation, properties and blending. Bezier Curve: equations, properties; Properties and advantages of B-Splines and NURBS. Various types of surfaces along with their typical applications.	10	24%
3	Mathematical representation of solids: Geometry and Topology, Comparison of wireframe, surface and solid models, Properties of solid model, properties of representation schemes, Concept of Half-spaces, Boolean operations. Schemes: B-rep, CSG, Sweep representation, ASM, Primitive instancing, Cell Decomposition and Octree encoding.	05	12%
4	Geometric Transformations: Homogeneous representation; Translation, Scaling, Reflection, Rotation, Shearing in 2D and 3D; Orthographic and perspective projections. Window to View-port transformation.	07	16%
5	Viewing: Viewing world co-ordination system, Normalized co-ordinate system, Device/Image co-ordination system, Window definitions, View port definitions, Viewing transformation.	06	14%
6	Clipping: Clipping: Point clipping, Line clipping, Cohen- Sutherland clipping, Midpoint clipping method, Sutherland and Hodgman Clipping.	06	14%

References:

1. Ibrahim Zied, CAD / CAM: Theory and Practice, McGraw-Hill
2. Hearn E J and Baker M P, Computer Graphics, Pearson.
3. Sinha & Udai, Computer Graphics, McGraw-Hill Education

Course Outcomes:

1. Understand and appreciate use of computer in product development.
2. Apply algorithms of graphical entity generation.
3. Understand mathematical aspects of geometrical modelling.
4. To understand the various computer graphics hardware technologies.
5. Various 2D and 3D objects transformation techniques .

List of Experiments:

1. Develop the DDA Line drawing algorithm using C language.
2. Develop the Bresenham's Line drawing algorithm using C language.
3. Develop the Bresenham's Circle drawing algorithm using C language.
4. Perform the following 2D Transformation operation Translation, Rotation and Scaling.
5. **Introductory exercise for 3-D modelling and editing options.**
6. **Exercise for surface modelling.**
7. Exercise for Assembly modelling.
8. Exercise for advanced 3-D modelling.

7. Dickson, John. R, and Corroda Poly, Engineering Design and Design for Manufacture and Structural Approach, Field Stone Publisher, USA, 1995.
8. Fixel, J. Design for the Environment McGraw Hill., 1996.

Course Outcome:

After learning the course the students should be able to:

1. Understand the concept & role of Design in manufacturing.
2. Design different components/parts for manufacturing.
3. Identify application of different materials
4. Apply proper rules and criteria for designing of a component.
5. Design components for industrial applications.

Subject Code: 01ME0505
Subject Name: Power Plant Engineering
B. Tech. III Year – (Sem-5) Mechanical Engineering
Type of course: Core

Prerequisite: Engineering Thermodynamics, Fluid Mechanics

Rationale: To impart basic knowledge of various types of power plants & components with required equations.

Teaching and Examination Scheme:

Teaching Scheme (Hours)			Credits	Evaluation Scheme					Total Marks
Theory	Tutorial	Practical		Theory Marks			Practical Marks		
				ESE (E)	IA	CSE	Viva (V)	Term Work (TW)	
3	0	2	4	50	30	20	25	25	150

COURSE OUTCOME

Students will be able to

1	Understand basics of power plant including thermodynamic cycles, site selection criteria and modern power plant concept.
2	Understand working of different types of steam generators and different material handling system for power plant.
3	Analyze functioning of condensers and cooling systems.
4	Analyze working and performance parameters of different draught systems.
5	Understand various types of feed water treatment.
6	Understand nuclear power plants with basic physics and new concepts.

SR NO	CONTENTS	TOTAL HOURS	WEIGHTAGE
1	INTRODUCTION: Thermodynamic cycles related to power plant, structure and working of modern power plant, site selection criteria and current scenario of power generation in India.	4	10
2	STEAM GENERATORS: Pressure ranges for boilers, Advantages of high pressure boilers. Various high pressure boilers, super critical boilers.	6	14

3	Coal and Ash Handling Systems: Coal storage, Burning systems, Types of stokers and their working, Pulverized fuel handling systems, Pulverized mills, Pulverized coal burners, Oil burners, Necessity of ash disposal, types of ash handling systems, Dust collection and its disposal, Mechanical dust collector, Electrostatic precipitator.	8	20
4	CONCEPT OF CONDENSERS AND COOLING TOWERS: Introduction, types of condensers, Air leakage & its effect on performance, Dalton's law of partial pressure, vacuum & condenser efficiency and methods to improve them, requirement of quantity of cooling water, Edward air pump, necessity of cooling towers & ponds and types.	8	16
5	INTRODUCTION TO DRAUGHT SYSTEM: Working principle of natural draught & chimney height formula with maximum discharge condition, types of artificial draught systems, and power requirement of blowers.	4	10
6	FEED WATER TRETMENT: Requirement of feed water treatment, various impurities & its effects, effect of PH on corrosion and scale formation and different types of water treatment processes.	4	10
7	NUCLEAR POWER PLANTS: Types of nuclear processes, Fission- fuels, chain reaction, components of fission reactors, various reactors, current scenario in India, Fusion- comparison of fusion-fission, introduction of plasma state, types of plasma confinement, tokamak.	8	20

Distribution of Theory Marks

R Level	U Level	A Level	N Level	E Level
20	35	25	20	10

Legends: **R:** Remembrance; **U:** Understanding; **A:** Application, **N:** Analyze, **and E:** Evaluate

Reference Books:

Subject Code: 01ME0508

Subject Name: Reverse Engineering

B.Tech. Year - III

Objective: The objective of the module is to go through the Reverse Engineering process as it is a self-learning tool used to summarize the process of reconstructing/reformation of an already existing object.

Credits Earned: 1Credit

Course Outcomes: After completion of this course, student will be able to

1. Understand the problem in the existing process.
2. Collect the large number of data/ information for the product
3. Depth analyze of the products and extraction of real time data
4. Understand the principles behind the design of the product, ways to redesign and improve the performance of the system.

Pre-requisite of course: Not Required

Teaching and Examination Scheme

Teaching Scheme (Hours)			Credits	Theory Marks			Tutorial/ Practical Marks		Total Marks
Theory	Tutorial	Practical		ESE (E)	Mid Sem (M)	Internal (I)	Viva (V)	Term work (TW)	
0	0	2	1	0	0	0	25	25	50

Contents:

Units	Topics	Contact Hours
Module-1 Reverse Engineering Basics	Need of reverse engineering, Methodologies for Reverse Engineering, understanding of Reverse Engineering through example, reasons for reverse engineering, process for Reverse Engineering, Phases of Reverse	6

	Engineering, conceptual System Reasons for Reverse Engineering, Difficulties in Reverse Engineering, Levels of abstraction: Application level, Functional level, Structural level	
Module-2 Reverse Engineering Methodology	Detailed study of Reverse Engineering for Branch Specific learning Disassemble the existing selected artefact/ product/ component/ process/ system to study technical aspects and design detail, Reverse engineering in various computer software/ application, CASE STUDY EIS Client Application, Implementation level	6
Module-3 Software Reverse Engineering	Reverse engineering of software, Binary reverse engineering, Binary software techniques, Software classification, Source code, number of UML tools, Reverse engineering of Protocols	10
Module-4 Capstone Project	Mini project exercise based on understanding of modules contents	6
Total Hours		28

Note: Mentors are advised to take suitable project/activity to explore the above topics and make students understand the various concepts.

Instructional Method:

- a. The course delivery method will depend upon the requirement of content and need of students. The teacher in addition to conventional teaching method by black board, may also use any of tools such as demonstration, role play, Quiz, brainstorming, MOOCs etc.
- b. The internal evaluation will be done on the basis of continuous evaluation of students in the laboratory and class-room.
- c. Practical examination will be conducted at the end of semester for evaluation of performance of students in laboratory.
- d. Students will use supplementary resources such as online videos, NPTEL videos, e-courses, Virtual Laboratory

A handwritten signature in blue ink, consisting of several vertical strokes and a horizontal line at the bottom.

Subject Code: 01ME0601
Subject Name: Dynamics of Machine - II B.Tech.
III Year – (Sem-6) Mechanical Engineering
Type of course: Under Graduate

Prerequisite: Higher order ODE, PDE, and Kinematics of Mechanism

Rationale: Understanding & Analysis of Vibration in Mechanical System.

Teaching and Examination Scheme:

Teaching Scheme(Hours)			Credits	Evaluation Scheme					Total Marks
Theory	Tutorial	Practical		Theory Marks			Practical Marks		
				ESE (E)	IA	CSE	Viva (V)	Term Work (TW)	
4	0	2	5	50	30	20	25	25	150

COURSE OUTCOME

Student will be able to

- 1 Analyze unbalance force and bearing reaction force in rotating mass and its effects.
- 2 Analyze unbalance force in reciprocating engine and its effects.
- 3 Analyze natural frequency of Vibrating Mechanical system and develop methods to overcome its ill effects.
- 4 Understand critical speed of shaft and analyze the effects of critical speed.
- 5 Understand cam-follower system and analyze forces acting on cam follower system

SR NO	CONTENTS	TOTAL HOURS	WEIGH TAGE
1	Rotating Mass Balance: Understanding static and dynamic balancing, Investigation of effect of unbalance rotating mass (Single & Multi plane), Methods for measuring unbalance force & mass. Bearing reactions.	04	08 %
2	Balancing of Reciprocating Mass: Balancing of slider crank chain mechanisms, Modelling real system for static and dynamic analysis. Inertia force, disturbing force and torque, Balancing of Multi Cylinder Engines: Analysis of Multi Cylinder In-line Engines: Direct and Reverse crank method, optimized configuration of in-line engine. Balancing of Radial Engine : Evaluation of V and radial engine, Analytical & Graphical methods.	12	25 %

	Fundamental of Mechanical Vibrations: Vibration and oscillation, Reason for generation of vibration, Parameters of Vibration- spring, mass, damper, Damper models, Motion –periodic, non-periodic, harmonic, non- harmonic, Degree of freedom, static equilibrium position, Vibration classification.	02	04 %
3	Free Undamped Single Degree of Freedom Vibration System Longitudinal, transverse, torsional vibration system, Methods for formulation of differential equations by Newton, Energy, and Rayleigh’s Method, Free Damped Single Degree of Freedom Vibration System Viscous damping, Under, Critically & Over damped System, Damping Factor, Logarithmic decrement, Free Undamped vibration of Two Degrees of freedom System: Characteristics Equation and basic mode of vibration, torsional vibrations of two and three rotor system, torsionally equivalent shaft, geared system. Forced Vibration: Undamped Forced vibrations, Damped Forced Vibration, Equivalent viscous damping; Externally Applied forces due to unbalanced masses. Vibration Isolation and Transmissibility: Force Transmissibility, Motion Transmissibility Typical isolators & Mounts	20	40 %
4	Vibration in Rotating System: Whirling of shafts, Critical speed and its practical influence in the design of shafts, Application of Dunkerley’s method and Rayleigh’s method for determination of critical speed of shafts	04	08 %
5	Vibration Measurement: Basic of vibration measurement and analysis Instruments used: Vibrometer, velocity pickup, accelerometer, FFT analyzer.	04	08 %
6	Cam Dynamics: Dynamics of force-closed cam follower system: Jump phenomenon: Reason for Jump, response of spring force and static mass on jumping of cam.	03	07 %

Distribution of Theory Marks

R Level	U Level	A Level	N Level	E Level
10	15	15	15	15

5. R L Norton, Design of Machinery, McGraw-Hill.
6. A. G. Ambekar, Mechanical vibrations and noise engineering
7. G. K. Grover, Mechanical Vibration.

Sr No	List of the Experiment
1	Balancing of rotating mass in different plane.
2	Analysis of unbalanced reciprocating mass.
3	Experimental analysis of Free Undamped longitudinal Vibration of single degree of freedom system
4	Experimental analysis of Free Undamped torsional vibration of single degree of freedom system
5	Experimental analysis of Free Undamped torsional vibration of two rotor system
6	Experimental analysis of Damped torsional vibration
7	Experimental analysis of forced vibration
8	Experimental analysis of forced damped vibration
9	To verify Dunkerley's theorem for lateral vibration
10	To determine critical speed of the shaft and study effect of shaft diameter and end conditions on the same.
11	To determine jump speed and effect of dead weight and spring force on it.

Subject Code: 01ME0602
Subject Name: Heat and Mass Transfer
B.Tech. III Year – (Sem-6) Mechanical & Automobile Engineering
Type of course: Science

Prerequisite: Thermodynamics, Fluid Mechanics

Rationale: The course is prepared to provide the detailed understating of heat and mass transfer principles.

Teaching and Examination Scheme:

Teaching Scheme(Hours)			Credits	Evaluation Scheme					Total Marks
Theory	Tutorial	Practical		Theory Marks			Practical Marks		
				ESE (E)	IA	CSE	Viva (V)	Term Work (TW)	
4	0	2	5	50	30	20	25	25	150

COURSE OUTCOME

Students will be able to

1. Understand the modes and phenomenological origin of laws for the different modes of heat and mass transfer
2. Analysis of heat conduction in a steady and transient state for various geometrics
3. Apply empirical correlation for analyzing free and forced convection problem
4. Evaluate the performance of heat exchangers by using the method of heat exchanger effectiveness
5. To analyze radiation heat exchange between surfaces and in diffuse, gray enclosure

Sr no	Contents	Total hours	Weightage
1	Introduction to Heat Transfer Basic concepts and laws of Conduction, Convection and Radiation, Difference between Thermodynamics and Heat Transfer, Thermal conductivity, Thermal diffusivity, General heat conduction equation in Rectangular, Cylindrical and Spherical coordinates and its reduction to specific cases.	3	7

2	Conduction Heat conduction in plane and composite wall including thermal resistance concepts, Heat conduction in multilayered cylinders and spheres, electrical analogy, Contact resistance, Overall heat transfer coefficient, Critical radius of insulation for cylinder and sphere, Overall heat transfer coefficient.	5	11
3	Extended Surfaces Types and applications of fins, Heat flow through uniform cross section of fin, infinitely long fin, fin insulated at the tip and fin losing heat at the tip, Fin efficiency, Fin effectiveness, Estimation of error in temperature measurement in a thermometer well	5	12
4	Transient heat conduction Transient heat conduction in solids having infinite thermal conductivity, Significance of Biot and Fourier number, Time constant, Transient heat conduction in solids with finite conduction and convective resistances	4	9
5	Convection Introduction to dimensionless number, Physical significance of dimensionless number, Dimensional analysis applied to natural and forced convection, Empirical correlations applied to natural and forced convection problems, Conservation of mass, momentum and energy equations, Hydrodynamic and thermal boundary layer, General solution of Von-Karman integral momentum equation	5	11
6	Heat exchanger Types of heat exchanger, Analysis of heat exchanger, Log Mean Temperature Difference for parallel and counter flow heat exchanger, condenser and evaporator, overall heat transfer coefficient, Fouling factor, Correction factors for multi pass arrangement, Effectiveness and NTU method for parallel and counter flow heat exchanger	7	16
7	Radiation Radiation properties, blackbody radiation, Different laws of radiation, Intensity of radiation and solid angle, Lambert's cosine law, Radiation heat exchange between black bodies, Shape factor, Heat exchange between non-black bodies-infinite parallel planes and infinite long concentric cylinders, Radiation shield, Heat exchange between two grey surfaces, electrical analogy	7	16
8	Boiling and Condensation Boiling regimes, Film wise & drop wise condensation, laminar film condensation on vertical plate, turbulent film condensation, film condensation on tubes.	4	9
9	Mass Transfer Modes of mass transfer, concentrations, velocities and fluxes, Fick's law, general equation of mass diffusion in stationary media, steady state diffusion through a plain membrane, steady state equimolar counter diffusion, isothermal evaporation of water into air from a surface, mass transfer coefficient, convective mass transfer.	4	9

Distribution of Theory Marks

4	0	2	5	50	30	20	25	25	150

COURSE OUTCOME

Students will be able to

- 1 Analyze the functional requirements of various I.C. Engine Components.
- 2 Design various I.C. Engine Components
- 3 Design gears and gear boxes based on application requirements.
- 4 Evaluate the performance parameters of gears for various applications.
- 5 Design and select the bearings based on application requirements.

SR NO	CONTENTS	TOTAL HOURS	WEIGHTAGE
1	Design of I.C. Engine Components Introduction, selection of type of engine, engine power requirements, design of cylinder and cylinder liners, design of cylinder head, design of piston, piston ring, piston pin, design of connecting rod, whipping stress in connecting rod, design of center crankshaft and overhung crankshaft, design of various components of valve gear mechanism.	16	26 %
2	Design of sliding contact bearings Classification of bearings, journal bearing types, basic modes	10	18 %

	<p>of lubrication, viscosity, viscosity index, bearing materials.</p> <p>Hydrodynamic Bearings: petroff's equation, McKee's investigation, Reynold's equation, Raimondi and Boyd method for design of journal bearing, selection parameters for bearing design.</p> <p>Hydrostatic Bearings: Viscous flow through rectangular slot, hydrostatic step bearing, Energy losses</p>		
3	<p>Design of Rolling Contact Bearings: Classification, static load carrying capacity, Stribeck's equation, dynamic load carrying capacity, Load-life relation, selection of bearing from catalogue, design for cyclic load and speed, Bearing with probability of survival other than 90%, Lubrication for rolling contact bearing.</p>	05	10 %
4	<p>Design of spur gears and parallel axis helical gears: Classification of gears, selection of type, gear terminology, standard system of gear tooth, interference and undercutting, gear tooth failures and gear materials</p> <p>Spur gears: force and stress analysis, dynamic effects, fatigue strength, factor of safety, module and face width, power rating calculation based on beam strength and wear strength consideration.</p> <p>Parallel axis helical gears: introduction, pressure angle in normal and transverse plane, helix angle, equivalent numbers of teeth, force and stress analysis, estimating size of helical gears.</p>	12	20 %
5	<p>Design of bevel gears and worm gears: Bevel Gears: Introduction, tooth terminology, straight and spiral bevel gears, force and stress analysis, equivalent number of teeth, safety of bevel gears. Worm gears: Introduction, Advantages and limitation, terminology and designation of worm and worm gears, force and stress analysis, estimating size of the worm gear pair, efficiency of worm and worm gears, modes of failure and materials for worm gears.</p>	08	14 %
6	<p>Design of gear boxes: Introduction, geometric progression, general design procedure, selection of best structure diagram, selection of gear layout and ray diagram, determination of number of teeth on gears.</p>	5	12 %

Design based problems/Open ended problems:

1. Design an I.C. engine component and prepare a CAD model.

Subject Code: 01ME0604
Subject Name: Operation Research
B.Tech. III Year – (Sem-6) Mechanical Engineering
Type of course: Core

Prerequisite: Nil

Rationale: Understanding Operation research and to apply problem solving techniques to organization activities such as transportation, assignment, queuing, Project management and Inventory control.

Teaching and Examination Scheme:

Teaching Scheme (Hours)			Credits	Evaluation Scheme					Total Marks
Theory	Tutorial	Practical		Theory Marks			Practical Marks		
				ESE(E)	IA	CSE	Viva(V)	Term Work (TW)	
3	2	0	4	50	30	20	25	25	150

COURSE OUTCOME

After learning the course the students should be able to:

- Describe Characteristics and applications of Operation Research.
- Formulate real world problems as a mathematical programming model and solve Linear Programming problems.
- Formulate and solve transportation and work/job assignments problems.
- Understand policies for the replacement of machines/components in the industry.
- Solve problems related to CPM and PERT for project management techniques.
- Solve Queuing and Inventory problems related to practical applications.

Sr. No.	Content	Total Hrs	Weightage
1	Introduction: Introduction to operation research, History of Operation Research, Methodology and characteristics, Different phases, Limitations & Applications of Operation research.	02	5 %
2	Linear Programming Problems: Introduction to linear programming, Basic assumptions of Linear Programming, General Mathematical form, Formulation of Linear Programming Graphical solution technique for Linear Programming , Limitations of Linear Programming.	04	10 %
3	Analytical Methods for LPP: Concept of slack and surplus variables, Solution of LP using Simplex method, Two phase method, Big M method, Primal and Dual problems.	08	15 %
4	Transportation Problem: Introduction to Transportation Problems, Mathematical Model for Transportation Problem, Unbalanced Problems, Methods for initial basic feasible solution: Northwest corner method, Least cost method, Vogel's approximation method. Degeneracy in transportation, Optimal solution using Modified Distribution method, Special cases - Unbalanced problems and profit maximization problems. Transshipment Problems.	06	15 %
5	Assignment Problem: Introduction to Assignment Problems, Mathematical formulation of the problem, Hungarian method to solve Assignment problem, Travelling salesman Problem.	04	10 %
6	Queuing Theory: Basics of queuing theory, Operating Characteristics of queuing, Components of queuing system, Kendall's Notation, Classification of Queuing Models, Preliminary examples of M/M/1 : ∞ / FCFS.	04	10 %

7	Replacement Theory: Introduction to Replacement Models, Replacement of capital equipment which depreciated with time, replacement by alternative equipment, Group replacement policy, Individual replacement policy.	05	10 %
8	Project Management: Introduction to Introduction to Project Management, Network diagram components and Rules of Network Construction, Fulkerson's Rules, critical Path calculation, float calculation and its importance, PERT method, Cost reduction by Crashing of activity.	06	15 %
9	Inventory Control : Introduction to Inventory Control, Inventory Classification, Types of Inventories, Different cost associated to Inventory, Economic order quantity, Inventory model with deterministic demand (Constant rate of demand, No shortage allowed & instantaneous replenishment), ABC analysis.	04	10 %

Distribution of Theory Marks

Subject Code: 01ME0605
Subject Name: IC Engines & Automobiles
B.Tech. III Year – (Sem-6) Mechanical Engineering
Type of course: Programme elective

Prerequisite: Elements of Mechanical Engineering

Rationale: The course is designed to provide the detailed understanding of Internal Combustion Engine mainly based on its performance and emission parameters.

Teaching and Examination Scheme:

Teaching Scheme (Hours)			Credits	Evaluation Scheme					Total Marks
Theory	Tutorial	Practical		Theory Marks			Practical Marks		
				ESE(E)	IA	CSE	Viva(V)	Term Work(TW)	
3	0	2	4	50	30	20	25	25	150

Course Outcome

After learning the course the students should be able to:

- Identify different types of internal combustion engines, its components and their applications.
- Understand the performance parameters of the engine and its signification with the economical and environmental issues.
- Apply principles of thermodynamics, fluid mechanics, and heat transfer to the design and analysis of engines and engine components.
- Analyze the various methods of power enhancement such as supercharger and turbocharger
- Analyze fuel supply systems, ignition and governing systems of IC Engines.
- Evaluate the performance of I.C. engines based on the different test on SI and CI engines

Sr. No.	Content	Total Hrs	% Weightage
1	Introduction Components of I. C. Engines and its material, Classification of I. C. Engines, Two stroke/Four stroke - Petrol/Diesel engine and its comparison, Valve timing diagram, Scavenging and its types, Application of I. C. Engines	2	5
2	Fuel Air Cycles and Actual Cycles Assumptions for fuel-air cycles, Reasons for variation of Specific heat of gases, Change of Internal energy and Enthalpy during a process with variable Specific heats, Isentropic expansion with variable Specific heat, Effect of variable Specific heat on Otto, Diesel and Dual cycle,	7	15

	Dissociation, Comparison of Air standard and Fuel air cycles, Effect of operating variables, Comparison of Air standard and Actual cycles, Effect of Time loss, Heat loss and Exhaust loss in Petrol and Diesel engines, Valve and Port timing diagrams		
3	Combustion Combustion equation, Minimum air requirement for complete combustion, Stoichiometric Air fuel ratio, Enthalpy of formation, Adiabatic Flame Temperature, Calculate Calorific values of fuels, Bomb and Junkers Gas Calorimeter	4	10
4	Spark Ignition Engines Fuel Supply System Air - Fuel mixture requirements, Fuel-Air ratio, Working of Simple Carburettor, Types of carburettor Ignition System Function of Ignition system, Battery and Magneto Ignition system, Electronic Ignition system, Spark plug and its types, Firing order, Governing System Combustion Stages of Combustion in Spark Ignition engine, Factors affecting Ignition lag and Flame propagation, factors affecting Knocking, Effect and Control of Knocking, Types of Combustion Chamber used in SI Engines	8	18
5	Compression Ignition Engines Fuel Injection System Requirement of Fuel Injection system, Fuel pump, Fuel injector, Types of Nozzles and Fuel Spray Pattern Combustion Stages of Combustion in Compression Ignition engine, Detonation, factors affecting Detonation, Controlling Detonation, Types of Combustion Chamber used in CI Engines	8	18
6	Supercharging Purpose and objectives of Supercharging, Thermodynamic cycles of Supercharged engine, Types of Supercharger, different arrangement of Supercharger, Limitations of supercharging, Turbocharger and its types	3	8
7	Performance Measurement of Internal Combustion Engine Methods of measuring Indicated Power, Brake power and Friction power, Air and Fuel consumption, Indicated and Brake Thermal efficiency, Indicated and Brake specific fuel consumption, Mechanical efficiency, Volumetric efficiency, Heat balance sheet of I.C.Engines	3	8
8	Lubrication and Cooling of Internal Combustion Engine Types of Lubricants, properties of Lubricant, SAE ratings, Wet and Dry sump lubricating system, Requirement of Engine cooling, Types of cooling system, comparison of cooling system	2	5

9	Emissions from Internal Combustion Engine and its Control Spark Ignition and Compression Ignition Engine Emissions, Effect of emissions on Human Health and Environment, Control of engine emissions - Catalytic Converter, EURO and BHARAT norms	3	8
10	Non Conventional Internal Combustion Engines Stratified Charged Engine, Wankel Engine, Free Piston Engine, Stirling Engine, Variable Compression Ratio Engine, Dual Fuel Engines, Multi Fuel Engines	2	5

6. Tech P S G, "Design Data Book", Kalaikathir Achchagam, Coimbatore, 2003

Practical: Design based Problems (DP)/ Open Ended Problem:

- Major Project: Design of hoisting equipment including assembly and detailed drawings.

Course Outcome:

After learning the course, the students should be able to:

- Understand the basic Fundamentals of Material Handling Equipment.
- Design various hoisting elements like, chains, Hemp and wire ropes, Pulley systems, Sprockets & drums, forged hooks and eye hooks and Girders.
- Design a Conveyors and Selection based on the Application.
- Design of Bucket and Cage Elevator.

Subject Code: 01ME0610

Subject Name: Design Engineering and Project Management
B.Tech. Year - III

Objective: The main objective of this course is to put on the engineering problem solving procedure to solve basic engineering design and analysis problems. using various techniques. This course is also designed with aim to demonstrate planning, execution and testing of various Projects.

Credits Earned: 1 Credit

Course Outcomes: After completion of this course, student will be able to

1. Understand the importance of Design Engineering.
2. Identify various Design Engineering approaches.
3. Apply various methodologies to design the product and in testing the product.
4. Understand various Project Management Processes.
5. Demonstrate effective project execution and control techniques that result in successful projects.

Pre-requisite of course: Not Required.

Instructional Method:

- a. The course delivery method will depend upon the requirement of content and need of students. The teacher in addition to conventional teaching method by black board, may also use any of tools such as demonstration, role play, Quiz, brainstorming, MOOCs etc.
- b. The internal evaluation will be done based on continuous evaluation of students in the laboratory and classroom.
- c. Practical examination will be conducted at the end of semester for evaluation of performance of students in laboratory.
- d. Students will use supplementary resources such as online videos, NPTEL videos, e-courses, Virtual Laboratory

Supplementary Resources

1. <http://nptel.ac.in/syllabus/107106009/>

Subject Code: 01ME0701
Subject Name: Finite Element Methods
B.Tech. IV Year – (Sem-7) Mechanical Engineering
Type of course: Under Graduate

Prerequisite: Zeal to learn the Subject

Rationale: The FEM subject will be helpful to teach numerical methods for solving governing equations of mechanical systems. The various mechanical problems of one and two dimensional structural, thermal and fluid analysis; beams and frames and 3D structural problems will be analyzed.

Teaching and Examination Scheme:

Teaching Scheme (Hours)			Credits	Evaluation Scheme					Total Marks
				Theory Marks			Practical Marks		
Theory	Tutorial	Practical		ESE (E)	IA	CSE	Viva (V)	Term Work (TW)	
4	---	2	5	50	30	20	25	25	150

Course Outcome:

This course will help students to :

1. Understand the basics of finite element method for solving Mechanical Engineering problems.
2. Apply the knowledge of FEM for 1D stress analysis, heat transfer analysis and fluid flow analysis.
3. Formulate and solve problems of trusses, beams and frames.
4. Solve two dimensional FE formulations involving triangular, quadrilateral elements and higher order elements.
5. Prepare algorithms and write Finite Element code for solving simple design problems and understand the use of commercial packages for complex problems.

Content:			
Sr. No.	Topics	Teaching Hrs.	Module Weightage
1	Understanding Mathematical models for structural problems: Equilibrium of continuum. Formulation of mathematical equations, Energy Approach-Integral formulation, Methods of Weighted Residuals (Galerkin, Least-squares). Principle of Virtual work Variational formulation. Various methods for the solution of the mathematical models like : Rayleigh-Ritz methods,	6	15%
2	Bars, Trusses and Beams Application of finite element analysis in design, Modelling and discretization, Types of elements and Degrees-of-Freedom, Shape functions, Strain – displacement relation, Local and Global equations, Applications of FEA. One dimensional Elements for Structural Problems: Linear and Quadratic elements, Elimination and Penalty Approach, Properties of global stiffness matrix. One dimensional thermal conduction and fluid flow	18	40%

	problems. Formulation of Truss element, Plane truss. Formulation of Beam Element , plane frames, various loading and boundary conditions.		
3	Two Dimensional Elements: Gauss Quadrature formula, Gauss Quadrature in two and three dimensions. Plate stress and plane strain matrices. Constant strain Triangle and Linear strain Triangle Limitations of elements. Rectangular Elements, The Shape function, The Jacobian matrix, strain and displacement matrix, stress to strain relationship matrix, force vector	12	25%
4	Plate and Shell Elements: Conforming and nonconforming elements, degenerated shell elements, reduced and selective integration, shear locking in shell element and hour glass phenomenon.	10	20%

Subject Code: 01ME0702
Subject Name: Project - 1
B.Tech. IVth Year Semester: VII
Type of course: Under Graduate

Prerequisite: Basic knowledge of Mechanical Engineering subjects

Rationale: The objective of Project Work I is to enable the student to take up investigative study in the broad field of Mechanical Engineering

Course Outcome:

After learning the course, the students will be competent

1. To Design and Analyze Mechanical System.
2. To perform Product design and development tasks.
3. To perform Industry need based project.
4. To Conducting preliminary analysis/ Modeling/ Simulation/ Experiment/ Design/ Feasibility

Teaching and Examination Scheme:

Teaching Scheme			Credits	Examination Marks					Total Marks
L	T	P		Theory Marks			Practical Marks		
			ESE(E)	IA	CSE	Viva (V)	Term Work (TW)		
0	0	12	6	0	0	0	100	100	200

The objective of Project Work I is to enable the student to take up investigative study in the broad field of Mechanical Engineering, either fully theoretical/practical or involving both theoretical and practical work to be assigned by the Department on an individual basis or three/four students in a group, under the guidance of a Supervisor. This is expected to provide a good initiation for the student(s) in R&D work.

The project may be based on any of the following suggested list:

- Design, analysis and/or fabrication,
- Conducting preliminary analysis/ Modelling / Simulation/ Experiment/ Design/

Feasibility

- Product design and development,
- Design and development of laboratory equipments/test rigs,
- Developing computer programmes /software,
- Industry need based basic survey or Testing or Analysis etc.

- The student can undertake project single handed or in a group of not more than four students.
- The students need to Prepare a Written Report on the Study conducted for presentation to the Department.
- The student also needs to give Seminar /oral Presentation before a Departmental Committee.

Subject Code: 01ME0703

Subject Name: Rapid Casting-1

B.Tech. IV Year – (Sem-7)

Type of course: Engineering

Prerequisite: Manufacturing Process, Computer aided Manufacturing,

Rationale: The course aims to impart skills required in pattern making and mold making for metal casting.

Course Outcome

- 1 To get hands on experience on calculation of pattern allowances applicable for different material. Also, hand on experience of pattern making using different methods.
- 2 To develop technical skills associated in designing feeding and filling system for metal casting.

Teaching and Examination Scheme:

Teaching Scheme(Hours)			Credits	Evaluation Scheme					Total Marks

2	0	4	4	50	30	20	25	25	150

Content

Sr. No	Course Content	Total Hours	% Weightage
1	<p>Pattern Making and Design</p> <p>Types of pattern, allowances for patterns, pattern materials (metal, wood, plastic, thermocol, etc.) pattern making methodologies (Machining, and 3D printing),</p> <p>Use of VMC in pattern making, specification of VMC machine, control of VMC machine, Introduction of G codes/ M codes used in VMC; Introduction of parametric programming.</p>	15	51

	Types of 3D printing technologies, applications of 3D Printing technology in pattern making, use of 3D printer in pattern making, specification of 3D printing machine, working of 3D printing machine.		
2	Moulding Process Design Types of sand used in metal casting, sand testing, properties of sand, types of molds, core making, design consideration in core making, Design considering in mold making	8	28
3	Pouring and Feeding Feeder/riser design, optimum cavity layout, different feed aids, effect of feed aids on metal casting. Types of furnace, calculation on heat required for melting, design of furnace (Resistance heating furnace), comparison of various furnaces for efficiency on melting; Methods of pouring: manual, semi-automatic, automatic pouring, effect of different pouring methods on quality of casting, gating system design	6	21

Distribution of Theory Marks:

- 12 Manufacturing Science 2nd Edition Ghose and Mallik

List of Experiments

1. Study of different types of pattern materials used in metal casting
2. Pattern making using 3D Printer and CNC Router (Modeling of pattern will be part of assignment)
3. Study of different types of sand used in metal casting
4. Sieve analysis and Permeability test of sand used in metal casting.
5. Design of feeder for sand casting
6. Design of filling system for sand casting
7. Mold making using 2 parts and 3 parts binder system.
8. Demonstration of 3D scanner and its application in metal casting
9. Study of advanced techniques in pattern making

Major Equipment:

- 1) 3D Scanner
- 2) 3D Printer
- 3) VMC Engrave Machine
- 4) Induction Furnace
- 5) Sieve Shaker
- 6) Permeability tester

SUBJECT CODE: 01ME0732
RENEWABLE ENERGY ENGINEERING
B.Tech. IV Year – (Sem-7) Mechanical Engineering
Type of course: Programe Elective

Prerequisite: Fluid Mechanics, Heat Transfer

Rationale: REE course is designed to provide knowledge of various renewable energy sources, systems and applications in the present situation.

Teaching and Examination Scheme:

Teaching Scheme			Credits	Examination Marks					Total Marks
L	T	P		Theory Marks		Practical Marks			
			ESE	IA	CSE	Viva	T.W.		
								4	

Content:

Sr. No.	Content	Total Hrs	% Weightage
1	Scenario of Renewable Energy Sources: Needs of renewable energy, benefits and limitations of Renewable Energy, present energy situation of conventional and Renewable Energy sources	2	03
2	Solar Energy: Energy available from the sun, spectral distribution, solar radiation outside the earth's atmosphere and at the earth's surface, solar radiation geometry, Instruments for solar radiation measurements, empirical equations for predicting availability of solar radiation, calculation of radiation on tilted surface conversion of solar energy into heat, different types of solar collectors, solar air heater : evacuated and non-evacuated, concentrated collectors, liquid flat plate collector: Thermal analysis, cylindrical parabolic collector, thermal storage of solar energy, heating and cooling of buildings, Solar Equipments : pump, cooker, solar still, solar drier, refrigeration & air conditioning, solar pond, furnace, air heater, Solar photovoltaic system for power generation, cell modules and arrays, types of solar cell , material, applications, advantages and disadvantages of solar systems	22	40
3	Wind Energy: Energy available from wind, basics of lift and drag, basics of wind energy conversion system, effect of density, angle of attack and wind speed, windmill rotors, horizontal and vertical axes rotors, drag, lift, torque and power coefficients, tip speed ratio, solidity of turbine, wind turbine performance curves, wind energy potential and site selection, basics of wind farm	12	22
4	Bio Energy : Different Types of biogas plants, biogas generation, factors for biogas generation, advantages and disadvantages, biomass energy, bio energy plantation, gasification, gasifiers types and their applications	03	05
5	Ocean Energy: OTEC principle, open, closed and hybrid cycle OTEC system, Energy from tides, estimation of tidal power, tidal power plants, ocean plants : single and double basin, site requirements, advantages and	08	12

	limitations, wave energy, devices for wave energy conversion, advantages and disadvantages of ocean thermal energy Geothermal energy: Introduction, vapor and liquid dominated systems, binary cycle, hot dry rock resources, magma resources, advantages and disadvantages, applications Magneto Hydro Dynamic Power generation: concept and working principle		
6	Economic Analysis: Basic definitions of various costs Initial and annual cost, present value calculations, calculation of repayment of loan :annual installments, annual savings, clean development mechanism, cumulative saving and life cycle cost, Solar system Economic analysis, Calculation of payback period,	09	18

Equipments:

- (a) Solar water heater (b) Solar air heater (c) Pyranometer (d) Pyrheliometer
(e) Solar PhotoVolatic system (f) Wind mill (g) Biogas plant (h) Gasifier (i) Solar cooker

Suggested Specification table with Marks (Theory):

Distribution of Theory Marks					
Remembrance	Understanding	Application	Analyze	Evaluate	Create
10	15	25	10	05	05

Reference Books:

1. Solar Energy: Principles of Thermal Collection and Storage, S. P. Sukhatme and J. K. Nayak, McGraw-Hill Education
2. Solar Engineering of Thermal Processes, John A. Duffie, William A. Beckman, John Wiley, New York
3. Non-conventional energy resources, Shobh Nath Singh, Pearson India
4. Solar Energy Engineering, Soteris Kalogirou, Elsevier/Academic Press.
5. Principles of Solar Energy, Frank Krieth & John F Kreider, John Wiley, New York

Course Outcome:

student will be able to understand,

- Importance of Renewale Eenergy sources
- Applications of different Renewale Eenergy sources
- Carry our preliminary economic analysis of Renewale Eenergy systems

List of Open Source Software/learning website:

- <http://nptel.ac.in/courses/112104117/18>
<http://nptel.ac.in/courses/112104117/4>
<http://nptel.ac.in/courses/112104117/17>

Type of course: PROGRAMME ELECTIVE
Prerequisite: None

Rationale: A revolutionary change has taken place in the field of Fluid Power Technology. An engineer in the field of design may require knowledge of power transmission; or in the field of operation and maintenance needs to know the power transmission system of machine tools, presses, equipment. An engineer should be well acquainted with various selection and manufacturing techniques, control, procedure and application of hydraulic/pneumatic components.

Teaching and Examination Scheme:

Teaching Scheme (Hours)			Credits	Evaluation Scheme					Total Marks
				Theory Marks			Practical Marks		
Theory	Tutorial	Practical		ESE (E)	IA	CSE	Viva (V)	Term Work (TW)	
4	---	2	5	50	30	20	25	25	150

Content:

Sr. No.	Content	Total Hrs	% Weightage
1	Introduction: Functional requirements of a power transmission, how these requirements can be fulfilled by various power transmission systems like mechanical, oil hydraulic, pneumatic, electrical or their combinations; Fundamentals of oil hydraulics and pneumatics, Control functions of oil hydraulic systems; Comparison between Mechanical, Oil Hydraulic, Pneumatic and Electrical power transmission systems; Advantages, disadvantages and Applications of Oil Hydraulic and Pneumatic power transmissions.	3	10%
2	System Components: Hydraulic & Pneumatic Symbols as per ISO/ANSI, Properties and selection of hydraulic fluids, Filtration, Hydraulic Reservoirs and Accumulators, Intensifiers or Pressure Boosters, Seals and Packing.	4	5%
3	Oil Hydraulic Pumps and Actuators: Construction, working principle and operation of rotary & reciprocating pumps like Gear, Vane, Generated-Rotor, Screw, Axial Piston, Radial Piston, Pump characteristics, Specifications and selection of pumps; Linear actuators like Ram type, Telescopic and Single acting/double acting, types of their constructions, types of mountings, cylinder materials, cushioning of hydraulic	6	15%

	cylinders, Rotary actuators, specifications, sizing and selection of pumps and actuators.		
4	Control Valves: Construction, working principle and operation of Direction control valves, Flow control valves and Pressure control valves; including Check, Pressure relief, Compound Pilot operated Pressure Relief, Safety, Sequence, Pressure Reducing, Unloading, Counterbalance valves. Different types of center positions of DCVs, Methods of actuation of DCVs.	8	10%
5	Hydraulic and Pneumatic Controllers used in Feedback Control systems: Construction, working principle and operation of Proportional and Servo control valves including Servo-type DCV like nozzle valve, flapper type valve, mechanical servo valve, single and double stage servo valves; Applications of servomotor systems in feedback control systems.	4	10%
6	Hydraulic Circuits: Reciprocation, quick return, sequencing, flow control circuits, synchronizing circuits, accumulator circuits, industrial circuits like press circuits, machine tool circuits, forklift, earth mover circuits- design and selection of components.	4	15%
7	Pneumatic Systems and Circuits: Pneumatic fundamentals, Construction, working principle and operation of pneumatic power transmission system components like Power source, FRL unit, Actuators and control valves like DCV, FCV, PCV, time delay, quick exhaust, twin pressure, shuttle; Pneumatic circuits like reciprocating circuits, switching circuits, sequential circuits, hydro pneumatic circuits, solenoid operated circuits, simple logic circuits, Programmable logic circuits using PLC/Microcontroller and their applications; selection, sizing and specifications of pneumatic components.	12	35%

Reference Books:

1. Industrial Hydraulics by John Pippenger and Tyler Hicks, McGraw Hill.
2. Oil Hydraulic Systems, Principle and Maintenance by S R Majumdar, McGraw-Hill.
3. Fluid Power with Applications by Anthony Esposito, Pearson.
4. Fluid Power: Generation, Transmission and Control, Jagadeesha T., Thammaiah Gowda, Wiley.
5. The Analysis & Design of Pneumatic Systems by B. W. Anderson, John Wiley.
6. Control of Fluid Power Analysis and Design by Mc Clay Donaldson, Ellis Horwood Ltd.
7. Hydraulic and Pneumatic Controls: Understanding made Easy, K.Shanmuga Sundaram, S.Chand & Co Book publishers, New Delhi, 2006 (Reprint 2009)
8. Basic Pneumatic Systems, Principle and Maintenance by S R Majumdar, McGraw-Hill.
9. Basic fluid power Dudley, A. Pease and John J. Pippenger, , Prentice Hall, 1987

Course Outcome:

After learning the course the students should be able to:

1. Identify and analyze the functional requirements of a power transmission system for a given application. (Application involving fluid power transmission)
2. Design an appropriate hydraulic or pneumatic circuit or combination circuit like electro-hydraulics, electro-pneumatics for a given application. Develop a circuit diagram.
3. Visualize how the hydraulic/pneumatic circuit will work to accomplish the function.

4. Selection and sizing of components of the circuit.

List of Experiments:

- A. Experiments on Hydraulics: Circuits:
 - 1) Extend-Retract and Stop system of a linear actuator and Actuation of a rotary actuator.
 - 2) Regenerative circuit.
 - 3) Speed Control circuits: meter-in, meter-out and bleed off.
 - 4) Sequencing circuit
 - 5) Use of solenoid operated DCV.
 - 6) Rapid Traverse and Feed circuit.
- B. Experiments on Pneumatic Circuits:
 - 1) Study of Compressor, FRL unit and 5/3 DCV.
 - 2) Reciprocating motion of a single and a double acting actuators using 5/3 DCV & Pilot operated DCV.
 - 3) Speed control circuits.
 - 4) Automatic to & fro motion of a pneumatic linear actuator.
 - 5) Sequencing circuit
 - 6) Time delay circuit
 - 7) Logical circuits using shuttle valve and twin pressure valve
- C. Students should build up the above circuits on computer using software like Automation Studio and simulate the flow of fluid during the operation, should learn and check the forward and return path. Afterwards, they themselves can physically connect the connections to build up a circuit on the hydraulic/pneumatic trainer and run the circuit.

Design based Problems (DP)/Open Ended Problem:

Student should be given an application of a power transmission system for which he will evaluate the functional requirements of power transmission and design appropriate circuit with due justification. He has to select and size the components, and specify the components. He should explain the working of circuit (preferably with the help of software like Automation Studio, Festo FluidSIM) through a presentation. The application must involve use of hydraulics/pneumatics and/or combinations of different power transmission systems.

Major Equipment:

1. A hydraulic trainer.
2. A pneumatic trainer.
3. Software like Automation Studio, where the simulation can be visualized.

List of Open Source Software/learning website:

- 1) Autosim Premium
- 2) Hydrosym
- 3) Scilab

Review Presentation (RP): The concerned faculty member shall provide the list of peer reviewed Journals and Tier-I and Tier-II Conferences relating to the subject (or relating to the area of thesis for seminar) to the students in the beginning of the semester. The same list will be uploaded on GTU website during the first two weeks of the start of the semester. Every student or a group of students shall critically study 2 papers, integrate the details and make presentation in the last two weeks of the semester. The GTU marks entry portal will allow entry of marks only after uploading of the best 3 presentations. A unique id number will be generated only after uploading the presentations. Thereafter the entry of marks will be allowed. The best 3 presentations of each college will be uploaded on GTU website.

Subject Code: 01ME0731
Subject Name: Refrigeration & Air-conditioning
B.Tech. IV Year – (Sem-7) Mechanical Engineering
Type of course: Program Elective

Prerequisite: Thermodynamics, Fluid mechanics, Heat and mass transfer

Rationale: The course is prepared to provide the detail knowledge of refrigeration and air conditioning principles, components and various refrigeration cycle, air conditioning terms, load estimation, air handling and distribution systems.

Teaching and Examination Scheme

Teaching Scheme Hours			Credits	Evaluation Scheme					Total Marks
Theory	Tutorial	Practical		Theory Marks			Practical Marks		
				Q	A	SA	QA	Term Work	
1	1	1	1	10	20	10	10	20	50

COURSE OUTCOME

- Students will be able to
- 1. Gather basic concepts and knowledge of refrigeration and Air conditioning system
 - 2. Analyze performance parameters of Air refrigeration system, vapour compression & vapour Absorption refrigeration by using various refrigerants.
 - 3. Examine different terminology of psychrometry and psychrometric processes for human comfort with load calculation sheet
 - 4. Predict the duct design method and air distribution system for analyzing duct and piping system
 - 5. Categorize refrigeration and air conditioning system components based on application

Cr no	Contents	Total hours	Weightage
1	Introduction to refrigeration - Refrigeration, unit of refrigeration, application of refrigeration, methods of producing cooling, ton of refrigeration, coefficient of performance	1	1
2	Refrigerants - Classification of refrigerants, designation system for refrigerant, properties of refrigerants, ozone depletion and Montreal protocol	1	1
3	Air refrigeration - Difference between heat engine, refrigerator and heat pump, reversed Carnot cycle, Bell Coleman cycle, basic air refrigeration	1	1

	system, bootstrap air refrigeration system, regenerative air refrigeration system, reduced ambient air refrigeration		
<input type="checkbox"/>	Vapour compression refrigeration system - Concept of vapour compression refrigeration μ , ν on h and s diagrams, factors affecting the performance of the cycle, actual vapour compression cycle Compound vapour compression system - Compound compression with intercooler, flash gas removal and flash intercooler, multiple evaporators with back pressure valves and with multiple expansion valves without flash inter cooling, analysis of two evaporators with flash intercooler and individual expansion valve and multiple expansion valve, cascade refrigeration system	<input type="checkbox"/>	<input type="checkbox"/>
<input type="checkbox"/>	Absorption refrigeration system - Aqua ammonia absorption system, Electrolux refrigeration system, water lithium bromide absorption system	<input type="checkbox"/>	<input type="checkbox"/>
<input type="checkbox"/>	Refrigeration system components - Classification, construction and working of compressor, condensers, expansion devices and evaporators, evacuation and charging of refrigerant, properties and classification of thermal insulation	<input type="checkbox"/>	<input type="checkbox"/>
<input type="checkbox"/>	Psychrometric properties and processes - Dalton's law of partial pressure, dry bulb temperature, wet bulb temperature, relative humidity, enthalpy of moist air, specific humidity, dew point temperature, humidity and temperature measuring instruments, psychrometric chart, bypass factor, sensible heat factor, psychrometric processes such as sensible heating, sensible cooling, humidification and dehumidification, heating and humidification, cooling and dehumidification, air washer, cooling and humidification, heating and dehumidification	<input type="checkbox"/>	<input type="checkbox"/>
<input type="checkbox"/>	Air conditioning and human comfort - Air conditioning and its types, application of air conditioning, air conditioning system, human comfort, factors affecting thermal comfort, effective temperature, factors governing effective temperature	<input type="checkbox"/>	<input type="checkbox"/>
<input type="checkbox"/>	Load estimation - Outdoor and indoor design conditions, classification of loads, flywheel effect of building material and its use in design, effect of wall construction on cooling load, instantaneous heat gain μ and instantaneous cooling load ν , sensible heat gain through building structure, solar heat gain through wall and transparent surfaces, ventilation and air infiltration, heat load from occupants, heat load from lighting equipment, heat gain from power equipment, heat gain from appliances	<input type="checkbox"/>	<input type="checkbox"/>
<input type="checkbox"/>	Duct design and air distribution - Duct classification, economic factors influencing duct layout, method of duct design, use of friction chart, dynamic losses and its determination, requirements of air distribution system, air distribution, grills, outlets, application, location	<input type="checkbox"/>	<input type="checkbox"/>

Distribution of Theory Marks

R	U	A	N	E
10%	20%	30%	30%	10%

Legends: R: Rememberance; U: Understanding; A: Application, N: Analyse, and E: Evaluate

Reference Books

- 1. Refrigeration and Air Conditioning by P. D. Kumar, P. D. Patraia P. D. S.
- 2. Refrigeration and Air Conditioning by P. D. Arora, Mc Graw Hill India Publishing Ltd.
- 3. Refrigeration and Air Conditioning by P. D. Stocker and P. D. Jones, Mc Graw Hill
- 4. Refrigeration and Air Conditioning by P. D. Arora, Prentice Hall of India
- 5. Refrigeration and Air Conditioning by Ameen Ahmadul, P. D. India
- 6. Refrigeration and Air Conditioning by Manohar Prasad, New Age International Publisher
- 7. Principles of Refrigeration by P. D. Rossat, Pearson Education

List of experiment

- 1. To understand different components of RAC system and to determine its COP
- 2. To understand construction and working of reciprocating, rotary and centrifugal compressor used for RAC.
- 3. To understand construction and working of window air conditioner / split air conditioner
- 4. To study packaged plant
- 5. To perform sensible heating and cooling & dehumidification process and analyse the same using psychrometric chart.
- 6. To perform heating and humidification process and analyse the same using psychrometric chart.
- 7. To determine COP of air to air heat pump
- 8. To understand working of Electrolux refrigerator and to determine its COP
- 9. To determine COP and apparatus dew point of an air conditioning test rig.
- 10. To calculate cooling load of a confined space using table and compare the same with load estimation sheet.

Open ended design problem

- Evaporative cooling using sand pot

List of Open Source Software/learning website

- 1. <http://nptel.ac.in>
- 2. www.learnerst.com

Subject Name: Computer Aided Process Management
B.Tech.. IV Year-(Sem-VII) Mechanical Engineering

Type of course: Programme Core

Prerequisite: Zeal to learn the subject

Rationale: This course aims to provide an overview of production management, focusing on the computer aided tools applicable in managing automated production. It comprehends about the production systems, facility location and layout, production planning and control, Materials resource planning, scheduling, shop floor control, Simulation of Machine shop and modern approaches.

Teaching and Examination Scheme:

Teaching Scheme (Hours)			Credits	Evaluation Scheme					Total Marks
				Theory Marks			Practical Marks		
Theory	Tutorial	Practical		ESE (E)	IA	CSE	Viva (V)	Term Work (TW)	
4	---	2	5	50	30	20	25	25	150

Content:

Sr. No.	Content	Total Hrs
1	Fundamentals: System concept, Hierarchical structure, System design, Decision making procedure, Manufacturing Systems, Factors affecting selection of Manufacturing Process, Modes of Production- Jobbing / Intermittent / Continuous/ Mass Production.	02
2	Product / Process Planning and Design : Facilities (Plant) Location - Facility location and layout – Factors to be considered in Plant location, Comparative Study of rural and urban locations Methods of selecting plant layout , Requirements of good layout Principles for better plant lay out, Different Types of layout. Computerized technique for relative allocation of facility , automated layout design program and computerized relationship layout planning for facility location and layout.	12
3	MRP : Material Requirement – Terminology – types of demands – inputs to MRP- techniques of Material Requirement Planning, methods for Lot sizing, benefits and limitations of MRP – Manufacturing Resources Planning (MRP –II).	05

4	Job scheduling : Scheduling – Policies – Types of scheduling – Forward and Backward Scheduling, Gantt Charts, Flow shop Scheduling of n jobs and 2 machines, n jobs and 3 machines, job shop Scheduling, 2 jobs and n machines, Line of Balance.	06
5	Computer Aided Process Planning: feature based and CAD based CAPP, Types of Generative and variant , backward and forward approach,	05
6	Shop Floor Control: Database structures, hierarchical, network, Relational concepts, keys, relational operations, query languages; Shop Floor Data Collection Systems-Types of data, on-line and off-line data collection, Automatic data collection systems.	06
7	Modern approaches in Manufacturing: Cellular Manufacturing, Detailed Group Technology, Composite part, ROC technique (Rank Order Clustering Technique), Hollier method for Group Technology, cell layouts; Flexible Manufacturing- Concept, principles, Lean manufacturing concept, principles.	06
8	Simulation in Manufacturing system : Major activities, purpose, simulation process, methodology, simulation packages, process quality simulator, computer requirements trends, applications simulation of machine shop.	05

Suggested Specification table with Marks (Theory):

Distribution of Theory Marks					
Remembrance	Understanding	Application	Analyze	Evaluate	Create
10	10	30	20	20	10

Reference Books:

2. Production & operations management, Chary S N, McGraw-Hill.
3. Computer Aided Production Management, Mahapatra P B, PHI.
4. Manufacturing Processes, Kalpakjian, Pearson

5. Facility Layout & location – An analytical approach – Richard L. Francis, John A. white
6. Production & operations management, Nair G N, McGraw-Hill.
7. An Introduction to Computer Aided Production Management, Childe, S., Springer.

Course Outcomes:

Sr. No.	CO statement	Marks % weightage
CO-1	Understand relevance and importance of the Different Production and operations management techniques and their applications.	25
CO-2	Capable to design, analyse and assess production planning and control systems, including those operating within distributed manufacturing environment.	25
CO-3	Be able to develop simulation of machine shop.	30
CO-4	Gain an overall understanding of computer aided production management.	20

List of Experiments:

1. Salient features and facilities of ideal software.
2. Algorithm and program for sequencing / scheduling
3. Forecasting methods and program of any one.
4. Group technology
5. Computerized plant layout design
6. Computer aided process planning
7. Material requirement planning
8. Shop floor control

Equipment / Computational facility:

1. Computational Facility and programming software

List of Open Source Software/learning website: <https://nptel.ac.in/>

Subject Code: 01ME1722
Subject Name: Data Mining and Analysis
B.Tech. IV Year-(Sem-VII) Mechanical Engineering
Type of course: Science

Prerequisite: Basic concept of linear algebra, calculus, probability, Manufacturing Processes

Objective: To understand the implementation of data mining in manufacturing

Teaching and Examination Scheme:

Subject Code: 01ME0711
Subject Name: Advanced Machine Design
B.Tech. IV Year – (Sem-7) Mechanical Engineering
Type of course: PE
Prerequisite: Machine Design, Strength of Materials

Rationale: - The course is intended to strengthen fundamentals of applied mechanics of solids and help understanding design and analysis of machine components under variable loading. The course explains design procedure and analysis of machine components at elevated temperature. The course teaches fundamentals and application of fracture mechanics and surface failures in mechanical component design.

Teaching and Examination Scheme:

Syllabus for Bachelor of Technology

Reference Books:

1. Machine Design: An Integrated Approach Third addition Norton Pearson Education.
2. Fundamentals of Machine Design 5th Edition R C Juvinall & K M Marshek Wiley India.
3. Mechanical Design of Machine Elements and Machines: H Busby and G Stabb Wiley India.
4. Dislocations and Mechanical Behaviour of Materials M. N. Shetty PHI.
5. Mechanical Behaviour of Materials, 2nd Edition T H Courtney McGraw-Hill / Overseas Press India.
6. Metal Fatigue in Engineering R I Stephens, A Fatemi, R R Stephens and H O Fuchs. John-Wiley.
7. Elements of Fracture Mechanics Prashant Kumar McGraw-Hill.
8. Engineering Design Dieter, G McGraw-Hill
9. Mechanical Behavior of Materials: Engineering Methods for Deformation Fracture and Fatigue Fourth edition Dowling Pearson Education.

List of Experiments:

1. Students should be assigned at least five different case studies related to design of mechanical components which covers all kind of stresses. Students must use design data books and various design standards for design and selection of the components. Students must prepare detail design reports including necessary drawings.

Blooms level distribution

Department of Mechanical Engineering

Department of Mechanical Engineering

Department of Mechanical Engineering

Department of Mechanical Engineering

Department of Mechanical Engineering basic concept of machining

The course is prepared to provide the detailed understanding of production technology.

Department of Mechanical Engineering

Teaching Scheme Hours			Credits	Evaluation Scheme					Total Marks
Theory	Tutorial	Practical		Theory Marks			Practical Marks		
					A		viva	Term work	

Department of Mechanical Engineering

Students will be able to,

- Understand the basic concept of production technology
- Design of jig and fixture for metal cutting
- Apply the knowledge of sheet metal operations in manufacturing industries.
- Analyze the machining processes

Department of Mechanical Engineering

Sl. No.	Topic	Theory Marks	Practical Marks
1	Principles of metal cutting, classification of Metal cutting machining processes orthogonal and oblique cutting, effect of tool geometry and other cutting parameters, Mechanisms of chip formation, different types of chips, chip breakers, specific cutting pressure, the forces acting on the cutting tool, measurement of cutting forces, Merchant's circle diagram, force dynamometer, force and velocity relationship, tool wear, factors causing tool wear, tool life, variables affecting tool life, economical cutting speed, machinability of metals		

Subject Code: 01ME0802
Subject Name: Project -II
B.Tech. IVth Year Semester: VIII
Type of course: Under Graduate

Prerequisite: Basic knowledge of Mechanical Engineering subjects

Rationale: The object of Project Work II is to enable the student to extend further the investigative study taken up under Project work I, either fully theoretical/practical or involving both theoretical and practical work

Course Outcome:

After learning the course, the students will be competent

- To Design and Analyze Mechanical System.
- To perform Product design and development tasks.
- To perform Industry need based project.
- To Conducting preliminary analysis/ Modeling/ Simulation/ Experiment/ Design/ Feasibility

Teaching and Examination Scheme:

Teaching Scheme			Credits	Examination Marks					Total Marks
L	T	P		Theory Marks			Practical Marks		
			ESE(E)	IA	CSE	Viva (V)	Term Work (TW)		
0	0	12	6	0	0	0	100	100	200

The objective of Project Work II is to enable the student to perform in depth study of the topic assigned in the light of the Report prepared under project I, either fully theoretical/practical or involving both theoretical and practical work, under the guidance of a Supervisor. This is expected to provide a good initiation for the student(s) in R&D work.

The project may be based on any of the following suggested list:

- Design, analysis and/or fabrication,
- Conducting preliminary analysis/ Modelling / Simulation/ Experiment/ Design/ Feasibility
- Product design and development,

- Design and development of laboratory equipments/test rigs,
- Developing computer programmes /software,
- Industry need based basic survey or Testing or Analysis etc.

- The student can undertake project single handed or in a group of not more than four students.
- The students need to Prepare a Written Report on the Study conducted for presentation to the Department.
- The student also needs to give Seminar /oral Presentation before a Departmental Committee.

Subject Code: 01ME0803

Subject Name: Rapid Casting-2

B.Tech. IV Year – (Sem-8)

Type of course: Engineering

Prerequisite: Casting Processes

Rationale: The course aims to impart basic understanding and practice of inspection, simulation and automation in casting industries

Course Outcome

1. Understanding the basic concept of various destructive, non-destructive and metallurgical testing in casting
2. Application of various testing method in casting
3. Analysis of various testing method used in casting
4. Simulation of different components using AutoCAST.
5. Design of circuits using Arduino and Data Taker.

Teaching and Examination Scheme:

Teaching Scheme (Hours)			Credits	Evaluation Scheme					Total Marks
Theory	Tutorial	Practical		Theory Marks			Practical Marks

Content

Sr. No	Course Content	Total Hours	% Weightage
1	Inspection Introduction, type of data, stages of inspection, classification of inspection, Economics analysis of inspection, basic concept of quality management	3	20
2	Destructive Testing Introduction, tensile test, compressive test, bending testing hardness testing, impact test, various standards for test.	6	20

**Syllabus for Bachelor of Technology
Department of Mechanical Engineering**

3	Non Destructive Testing and metallurgical testing Introduction, Liquid penetration test, magnetic particle test, ultrasonic test, radiography test, Microscope for various ferrous and non ferrous metal	6	20
4	Simulation Introduction to basic parameters of casting, Parting line Selection, Design parameters of core Design parameters of core print, Design of Feeding and Filling System	8	20
5	Automation Introduction to Automation and IoT, Sensors, Data Acquisition, Arduino.	4	20

Distribution of Theory Marks:

R Level	U Level	A Level	N Level	E Level	C Create
10	20	25	25	20	-

Legends: R: Remembrance; **U:** Understanding; **A:** Application, **N:** Analyze, and **E:** Evaluate

Reference Books:

1. Testing of Metallic Materials by Suryanarayana, A.V.K. BS Publicationsx`
2. Mechanical Metallurgy by Dieter, George McGraw Hill publication
3. Textbook of Material Science and Metallurgy by O P Khanna Dhanpat Rai & Co
4. Metal Casting by B. Ravi
5. Getting Started with Arduino by Massimo Banzi and Michael Siloh, Makermedia
6. Getting Started with Sensors by Kimmo Karvinen and tero Carvinen, Makermedia
7. Manufacturing Science by Amitabh Ghosh and Asok Kumar Malik

List of Experiments

1. Perform tensile testing of ferrous and non ferrous metals
2. Perform compressive testing of material
3. Perform bending testing of material
4. Perform hardness testing of metals
5. Perform various non destructive testing of metals
6. Perform grain structure analysis of metal
7. Simulation of different components for Sand Casting Process.
8. Simulation of different components for Investment Casting Process.
9. Designing of Circuit using Arduino
10. Perform Temperature measurement experiment on DataTaker.

Major Equipment:

- 1) Universal testing Machine
- 2) Rockwell and Vickers hardness
- 3) Non destructive testing equipment
- 4) Metallurgical microscope
- 5) AutoCAST Simulation software.
- 6) Arduino MicroController
- 7) DataTaker

Q	Mod	Exam Mod	Q	Q
Q	Stresses in Pressure Vessel	Introduction to stresses in pressure vessel and its application, stresses in circular plate, Stresses in cylinder, Thermal stresses, Bending of circular plates of uniform thickness, Bending of centrally loaded circular plates	Q	Q
Q	Pressure Vessel Design Code	Introduction to ASME standard for pressure vessel design, Pressure Vessel and related components design using ASME standard Design of nozzle	Q	Q
Q	Supports design for pressure Vessel	Design of base plate and support lugs, Types of anchor bolt, its material and stresses, Design of saddle supports	Q	8
Q	Design consideration in pressure Vessel	Buckling of pressure vessels Elastic Buckling of circular ring and cylinders under external pressure, Failure of thick walled cylinders or tubes under external pressure, buckling under combined external pressure and axial loading,	25	12

		fatigue failure, high strength, light weight pressure vessels resistant to external high pressures found in undersea exploration		
	Piping design	Flow diagram, Piping layout and piping stress analysis, Reliability factor and stress intensification factor, Design of piping as per ASME piping code, Piping components (ends, tees, elbows and valves). Types of piping supports and their behavior, Introduction to piping codes and standards.		

Attendance	Order			

Department of Mechanical Engineering

- To study the basic design procedure of pressure vessel design
- Application of ASME code for pressure vessel design
- Design the nozzle for pressure vessel
- Design the support for the pressure vessel
- Design the circumferential stiffness in pressure vessel
- To study the design procedure of piping in pressure vessel

Dr. Jyoti Chavhan

- Rowenell, J. and Young, J. "Process Equipment Design, Wiley Eastern Ltd. India
- ASME Pressure Vessel and Boiler Code, Section VIII, I, II, and III, ASME.
- American standard code for pressure piping, VIII, ASME.
- Henry Mednar, Pressure Vessel Design and Book, McGraw-Hill Publishers and Distributors
- Phillip Lengerger, Pressure Vessels ASME Code Simplified, ASME.
- Smith, Fundamentals of Piping Design, Elsevier.

Dr. Jyoti Chavhan

- Student are able to understand the design consideration of pressure vessel
- Student are able to design the support of the pressure vessel
- Student are able to design nozzle for pressure vessel
- Student are able to design piping system for pressure vessel

Dr. Jyoti Chavhan

Subject Name: Computer Integrated Manufacturing

Subject Code: 01ME0821

B.Tech. Semester VIII (Year-IV) Mechanical Engineering

Type of course: Science

Prerequisite: Basic Manufacturing

Rationale: The course is prepared to provide the detailed understating of Computer Integrated Manufacturing

Teaching and Examination Scheme:

Teaching Scheme (Hours)			Credits	Evaluation Scheme					Total Marks
Theory	Tutorial	Practical		Theory Marks			Practical Mars		
				ESE (E)	IA	CSE	Viva (V)	Term Work (TW)	
4	0	2	5	50	30	20	25	25	150

Course Outcome

Students will be able to

1. Apply modeling, manufacturing concepts and management principles.
2. Classify and compare different manufacturing processes and systems.
3. Develop solid models and part program for manufacturing of different machine components.
4. Analyze the behavior of manufacturing system using simulation.

Course Contents

Sr. no.	Contents	Total hours
1	Introduction Introduction, evolution of CIM, types of manufacturing system, components of CIM, CIM Wheel, role of management in CIM. Impact of CIM on personnel, Levels of Automation, Lean Production and Just-In Time Production.	03
2	Geometric Modeling Solid Modeling, solid modeling methods – CSG; B-rep; hybrid modeling, feature based modeling, constraint based modeling, manipulation techniques of solids, assembly.	07

3	Flexible Manufacturing System Introduction & component of FMS, needs of FMS, general FMS consideration, objectives, types of flexibility, FMS layout and advantages. Automated material handling system: Types and Application, Automated Storage and Retrieval System, Automated Guided Vehicles, Automated Tool Management and supply system, Tool Monitoring System, Flexible Fixturing, Flexible Assembly Systems.	06
4	Robot Technology Introduction: Robot Anatomy, Laws of Robot, human System and robotics, coordinate system, specifications of robot, different configurations of robots, power sources, actuators and transducers, robotic sensors, grippers, robot safety, applications, economic considerations of robotics system. Concepts of Computer Vision and Machine Intelligence	06
5	NC/CNC Machine Tools Types, Classification, Specification and components, Construction Details, Controllers, Sensors and Actuators, CNC hardware: Re circulating ball screw, antifriction slides, step/servo motors. Axis designation, NC/CNC tooling. Fundamentals of manual Part programming, absolute and incremental dimensioning Types of format, Part Programming for drilling, lathe and milling operations, subroutines, canned Cycles, parametric sub routines. Software based programming cycles: <ul style="list-style-type: none"> • Turning Cycles Stock Removal, Groove, Undercut, Thread-OD, Cut-off, contour and plunge turning operations • Milling Cycles Face Milling, Pocket, Multi-edge spigot, slot, Thread Milling, Engraving) • Drilling Cycles Centring, Drilling, Deep Hole Drilling, Boring, Threading 	20
6	Programmable Logic Controllers Introduction, Programmable controller architecture, relay device components, programming a programmable controller, tools for PLC logic design.	02

Reference Books:

1. Principles of Computer-integrated Manufacturing by S. Kant Vajpayee
2. Automation, Production Systems and Computer Integrated Manufacturing by Mikell P Groover Pearson Education
3. Robotics Technology and Flexible Automation, by S R Deb, S Deb, McGraw Hill Education Private Limited
4. Ibrahim Zied, CAD / CAM: Theory and Practice, McGraw-Hill
5. Flexible Manufacturing Cells and System -William. Luggen
6. CNC Machines by B.S. Pabla
7. CNC Machines and Automation by J.S. Narang

List of Experiments

1. To study about NC/CNC technology.
2. To prepare the manual part programs for Turning/Milling job and to simulate them with CNC simulator.
3. To prepare the software-based part programs for Turning/Milling job and to simulate them with CNC simulator.
4. Error estimation in CNC machine.
5. Tool Path Optimization.
6. Exercise on Solid modelling.
7. Exercise on Advance Solid modelling.
8. Exercise on Assembly modelling.
9. To study about the Flexible Manufacturing System.
10. To study about Robot Technology.

Equipment / Software facility:

1. CNC Turning centre
2. CNC Vertical Milling Centre
3. Robotic Arm
4. PTC Creo

Subject Code: 01ME0832
Subject Name: Computational Fluid Dynamics
B. Tech. IV Year – (Sem-8) Mechanical Engineering
Type of Course: Programme core

Pre-requisite of course: Higher Engineering Mathematics, heat transfer and Fluid Mechanics at UG level

Rationale: This course aims to introduce numerical modelling and its role in automotive field; it will enable the students to understand the various discretisation methods and solving methodologies and to create confidence to solve complex problems in the automotive field with the knowledge of Heat transfer and fluid dynamics. Further students can able to develop finite difference and finite volume discretized forms of the CFD equations and to formulate explicit & implicit algorithms for solving the Euler Equations & Navier Stokes Equations.

7. Fundamentals of Computational Fluid Dynamics, Tapan K. Sengupta, Universities Press.
8. Introduction to Fluid Mechanics, Edward J Shaughnessy,Jr., Ira M Katz, Oxford University press

Course Outcomes:

After completion of this course, student will be able

- To develop perception of major theories, approaches and methodologies used in CFD.
- To apply differential equations to Fluid Dynamic problems.
- To gain the elementary knowledge of finite elements method for flow and heat transfer problems.
- To analyse the numerical simulation to solve major engineering design problems involving fluid flow and heat transfer.
- To build up the skills in the implementation of CFD methods (e.g. boundary conditions.) in actual engineering using commercial CFD codes.

List of experiments:

1. Perform Numerical analysis on flow through pipe.
2. Perform Numerical analysis on flat plate boundary layer.
3. Perform Numerical analysis on compressible flow in nozzle.
4. Perform Numerical analysis on convective heat transfer.
5. Perform Numerical analysis on steady flow past a cylinder.
6. Perform Numerical analysis on unsteady flow past a cylinder.
7. Perform Numerical analysis on flow over an airfoil.
8. Perform Numerical analysis on heat conduction through wall.

Equipment / Computational facility:

To perform various numerical analysis, high configuration / specification computer systems are mandatory.

Subject Code: 01ME0406

Subject Name: Creativity, Problem Solving and Innovation

B. Tech. 2nd Year Semester: IV

Prerequisite: Zeal to learn the subject.

Course Objective: To develop creative thinking skill in the students using cone of learning components leading to understanding of various strategies for creativity, problem solving and innovation.

Course Outcome:

After learning the course, the students will be competent

1. Importance of creativity, problem solving and innovation while addressing science, engineering and social issues.
2. Demonstrate the ability to contextualize knowledge related to professional engineering practices.
3. Demonstrate the functioning effectively as an individual and team member.
4. Ability to engage in life-long learning in the context of technological change.

Content:

Sr. No.	Content	Total Hrs
1	Phase 1: To introduce the subject of the course: this course as a needed skill for your future. Psychology of problem solving; Vertical versus Lateral thinking	02
2	Phase 2: Strategy of Questioning; Method of questioning; Importance of asking the right question. Who, what, when, where, why, how?	02
3	Phase 3: Learning and its importance; Sources of learning; Methods of learning. Purpose and value of education in future creativity in real life.	02

4	Phase 4: Strategy of Knowing how to see; Making your thought visible; Visualizing thinking; Mapping of mind, Fishbone diagram.	02
5	Phase 5: Strategy of Thinking Fluency; Generating all possibilities; more the better; Quantity without screening is helpful; SCAMPER technique; Creative or divergent idea generating thinking versus Critical or convergent idea selection thinking.	02
6	Phase 6: Strategy of Fusing of ideas; Making novel combinations; Connecting the unconnected.	02
7	Phase 7: Strategy of Looking at the other side, looking in other world, finding what you are not looking for and following it up.	02
8	Phase 8: Strategy of Play, Importance of play; Diversion; Unstructured activities for sheer joy, Activities for joy, Let subconscious figure it out, Various puzzles as play or fun.	02
9	Phase 9: Strategy of Awakening the collaborative spirit, Collaborative thinking, brain storming, Innovation requires collaboration to make it happen.	02
10	Phase 10: Review Strategies for Creative problem solving methods, Five building blocks as per Fogler & LeBlanc, Stanford D school approach.	02
11	Phase 11: Strategy for critical thinking for Choosing, Creative or divergent thinking needs follow up by Critical thinking or Convergent thinking in order to choose the solution for implementation, Kepner-Tregoe (K.T.) method with an example, Edward De Bono CoRT thinking process including PMI (Plus, Minus and Interesting), Also Edward de Bono method of decision making called Six thinking hats.	02
12	Phase 12: Edward de Bono explaining and teaching his ideas having evolved many years ago consisting as CoRT thinking tool, Lateral thinking and the decision making by Six thinking hats method.	02
13	Phase 13: Strategy for Making; From idea to innovation.	02
14	Phase 14: Individual presentation for 75 minutes by 15 students (5 minutes per student).	04

Robotics and Automation

Robotics and Automation

Robotics and Automation

Robotics and Automation Programme Core

Robotics and Automation, A.

This subject is useful to understand concepts and techniques in robot manipulator kinematics, enough to evaluate, choose, and incorporate robots in engineering systems. Familiarize with applications of Group Technology, Flexible manufacturing techniques, Materials Requirement Planning and Manufacturing Resource planning to solve manufacturing and other industry related problems.

Department of Mechanical Engineering

Teaching Scheme Courses			Credits	Evaluation Scheme					Total Marks
Theory	Tutorial	Practical		Theory Marks			Practical Marks		
					A		Final	Term Work	

Robotics and Automation

Sl. No.	Topic	Theory Marks	Practical Marks
1	Introduction, fundamentals of robot technology anatomy, work volume, drives system, types of end effectors, robot sensor. Robot and its peripherals basic control systems, controllers sensors.		
2	Introduction to manipulator kinematics, homogeneous transformations and robot kinematics, Matrix representation point, vector, frame and rigid body, representation of transformations of pure translation, rotation and combined, Denavit-Hartenberg matrix representation, concept of forward and inverse kinematics. Robot programming languages, Factory planning of robot motion.		
3	Robot cell design, robot cell layout, multiple robots machine interference, work cell control, robot cycle time analysis Material transfer, Machine loading unloading process applications, Robot implementation integration into manufacturing.		
4	Proximity sensors and their operation, image acquisition and processing, object recognition and interpretation.		
5	Elements of CIM, different modules and information flow, design aspects of CIM, CIM planning implementation process, requirements of CIM, Computerized production activities, Computerized integrated quality		

	concept, inventory management, shop floor control, production costing, computerized maintenance management, MRP, information system		
	definition of concept, flexible automation, productivity, components of CIM, different types of CIM, design problem of CIM, technology required for CIM system, robots and their function, programming in CIM, Bottleneck Model and related formula		
	part family, part classification and coding, production flow analysis, classification system, cellular manufacturing, quantitative analysis in cellular manufacturing, rank order clustering technique, Loller Method, Single linkage cluster Analysis technique		

Mr. Ramesh Kumar

Mr. Ramesh Kumar					
Memorandum	Understanding	Application	Analysis	Evaluate	

Mr. Ramesh Kumar

- Industrial Robotics Technology Programming Applications Mitchell Weiss, Roger S. Vogel, Mcraw Hill International
- Automation, Production Systems and Computer Integrated Manufacturing M. S. Grover Rentice Hall of India
- Robot Engineering textbook Mohsen Chahinpoor Harper Row Publishers
- Introduction to Robotics Analysis, Systems, Applications S. K. Gupta Publishers
- Robotics Technology Flexible Automation S. K. Gupta Mcraw Hill
- Robotics and Control S. S. Mittal, Tata Mcraw Hill
- Robot Technology James R. Ramas, DelMar Cengage Learning

Mr. Ramesh Kumar

- Introduce the state of art technology and products Automation and Robotics to enable the students them to take up challenging assignment in future and spread the learning to the peers and creating professional environment.
- Make familiarize the students with the concepts and techniques in robot manipulator kinematics, enough to evaluate, choose, and incorporate robots in engineering systems.
- Acquaint him/her with applications of group technology and flexible manufacturing techniques to solve manufacturing and other industry related problems.

4. Expose him / her to the significance of various scientific tools and models including Materials Requirement Planning and Manufacturing Resource planning that are available in the subject to take decisions in a complex environment.

List of Experiments:

1. Experiments based on robot kit to make different kind of configuration.
2. Using robot simulation software to perform variety of task.
3. Experiments based on robot manipulator to perform variety of task for example loading and unloading, stacking, decision making, using sensor to test input and output function.
4. Experiments based on programing using C-language and MAT-lab tool.

Design based Problems (DP)/Open Ended Problem:

Student may be given a task to write program for robot.

Major Equipment:

Robot Manipulator, simulation software and virtual reality software or any other robotics kit may be used for the performance of experiments.

List of Open Source Software/learning website:

The website of NPTEL may be utilized for additional learning.

ACTIVE LEARNING ASSIGNMENTS: Preparation of power-point slides, which include videos, animations, pictures, graphics for better understanding theory and practical work. The faculty will assign chapters/ parts of chapters to students so that the entire syllabus to be covered. The power-point slides should be put up on the e resources in library, along with the names of the students of the group.

FACULTY OF PHYSIOTHERAPY

Program & Subject:

Bachelor of Physiotherapy - B.P.T.
(4½ Year Degree Course)

INTRODUCTION:

The Bachelor of Physiotherapy program shall be under the Faculty of physiotherapy. The name of the Degree program shall be Bachelor of Physiotherapy (or, Bachelor of Physical Therapy) – The Faculty of Physiotherapy is Marwadi University's foray into creating the finest healthcare professionals for the country. With the support of knowledgeable academicians, superlative top management, and strong clinical practice, we are confident of making a mark in this prestigious profession.

Faculty of physiotherapy Marwadi institute build a professional to play a role in health promotion and treatment of the injury. They gain in-depth knowledge of the body and how it works with specialized hands-on clinical skills to assess, diagnose and treat symptoms of disease, illness, and disability.

VISION:

The vision of the Faculty of physiotherapy, Marwadi University is to be the recognized best in education and clinical practice.

MISSION:

1. To deliver world-class, cross-disciplinary, and quality education in the field of Physiotherapy through a well-devised and synchronized delivery structure and system.
2. To serve the patients/clients with efficient and cost-effective care with professional and ethical standards of Physiotherapy practice.
3. To foster knowledgeable, responsible, and skilled professionals.

PROGRAM OUTCOMES:

At the end of the program, graduates graduate must able to...

A handwritten signature in black ink, appearing to read 'Ashish', enclosed within a hand-drawn oval.

1. Do independent physiotherapy assessment and treatment for patient/client.
2. Work in conjunction with a multidisciplinary team to diagnose and treat movement dysfunctions as per red and yellow flags.
3. Develop skills for physical & functional diagnosis, treatment planning, management, and administration of physiotherapy treatment for patient support.
4. Find employment opportunities in Hospitals/Nursing homes/Sports Teams/Fitness Centers /Community Rehabilitation centers/Health planning boards/Health promotions services/Special Schools/Education Institutes/Industrial Sectors in both private and public sectors as well as in independent physiotherapy clinics.
5. Shall be able to pursue further qualifications to attain a senior position in the professional field and to keep abreast with the recent advances and new technology.
6. Ability to communicate effectively and flexibly in a manner that is appropriate for the patients and other healthcare professionals.
7. Acquaint with the basics of research, and involve in the research process.
8. Apply ethical principles and commit to professional ethics and responsibilities and norms of the Physiotherapy practice as provided by national and state council.

1. CRITERIA OF ELIGIBILITY FOR ADMISSION:

- a) As per the rules of the Admission Committee for Professional Medical Educational Courses of Gujarat and/or the Government of Gujarat.
- b) A candidate applying for the degree of B.P.T being eligible for admission to the Physiotherapy College affiliated to UGC recognized University must have passed the Higher Secondary (10+2) or equivalent examination recognized by any Indian University or a duly constituted Board and passed in Physics, Chemistry and Biology, and English.

Or

Candidates who have studied abroad and have passed the equivalent examination as per the guidelines of the Association of Indian Universities to determine the eligibility and must have passed in the subjects: Physics, Chemistry, Biology, and English up to 12th Standard level.

- c) He /She has attained the age of 17 years as of 31st December of the concerned year.
- d) He/she should furnish at the time of submission of the application form, a certificate of Physical fitness from a registered medical practitioner that the candidate is physically fit to undergo the Physiotherapy course.
- e) A candidate fulfilling the above requirements will be provisionally admitted in the First Year of the B.P.T. Degree Program, as per the rules of the Admission Committee for Professional Medical Educational Courses of Gujarat and/or Government of Gujarat.

2. DURATION OF COURSE:

B.P.T is 4½ years regular & full-time degree Program. The 4½ years include **4 academic years for study and 6 months** (minimum 1144 hours) of the compulsory rotatory internship.

3. MEDIUM OF INSTRUCTION:

English shall be the medium of instruction for all the subjects of study and examination of the course.

4. ADMISSION TO THE PROGRAMME:

Admission granted by the Central Admission Committee appointed by the State Government to

any student shall be provisional till the Enrollment/ Registration/ Enlistment is made by the Marwadi University, and in case of admission is granted based on provisional eligibility certificate, the condition & instruction given by the Marwadi University should be complied within the time limit fixed by the University, otherwise, term kept and fees paid by such a student will be forfeited.

5. RE-ADMISSION AFTER BREAK OF STUDY:

All re-admissions of candidates are subject to the approval of the Provost of Marwadi University.

6. ASSESSMENT PROCEDURE/ EVALUATION PROCEDURE:

- ❖ The complete academic performance of a student is evaluated in-house by the concerned teacher /department except in the case of practical work where an external examiner shall be nominated for the practical/ viva voce.
- ❖ The student's performance in each year of BPT, in general, is evaluated based on:
 - ❖ Continuous Semester/Annual Evaluation (CSE)
 - ❖ Internal Assessment (IA)
 - ❖ End-year examination. (University Final Exam)

7. SCHEDULE OF EXAMINATION:

- ❖ The scheme of examination for the B.P.T course shall be divided into 4 professional examinations; each examination will be held at the end of each respective Academic year.
- ❖ There will be 1 internal examination (mid-year) after the completion of 4 months of the onset of the Academic year. There will be 1 Preliminary exam before the University exam.
- ❖ There will be a University examination through written paper and/or practical examination for 80% of the marks of the subject at the end of every Academic year.
- ❖ Internal evaluation is based on Continuous Semester/Annual Evaluation (CSE) and internal/ preliminary examination (IA), for 20% of the marks of the subject.
- ❖ Marwadi University will conduct supplementary exams for failed students after 4 months and before 6 months from the previous exam.

8. ELIGIBILITY CRITERIA TO APPEAR IN UNIVERSITY EXAMINATION:

- ❖ Attendance: A candidate must secure a minimum of 75% of attendance. A candidate is required to attend at least 75% of the total classes conducted in a year in all subjects prescribed for that year (separately), in theory, and practical/clinical to become eligible to appear for the University examination.
- ❖ No relaxation, whatsoever, will be permissible to this rule under any ground including indisposition, etc.
- ❖ Filling of University examination form: Candidates desirous of appearing for University examination must forward their applications in the prescribed form to the registrar through the Principal of the Institutions on or before the date prescribed for the purpose.

9. STUDENTS' ASSESSMENT:

- ❖ The complete academic performance of a student is evaluated in-house by the concerned teacher/department except in the final exam of practical work where an external examiner shall be nominated for the practical/viva voce.
- ❖ The student's performance in each course, in general, is evaluated based on in-year

continuous assessment, internal assessment (preliminary examination), and end-year examination.

- ❖ An in-year Continuous Semester/Annual Evaluation (CSE) is spread through the duration of the course and is done by the teacher teaching the course with a weightage of 10%. The assessment is done through various means.

The performance of every student in each subject will be evaluated as follows:

Subject with only theory components is as follows:

S r. N o. .	Assessment Tool	Weightage
1	❖ IN-YEAR CONTINUOUS SEMESTER/ANNUAL EVALUATION (CSE) WHICH INCLUDES: 1.Attendance 2.Tutorials 3.Assignment 4.Surprise Test 5.Class Test 6.MCQ based quizzes 7.Presentations 8.Projects 9.Field visits 10.Seminars 11.Group discussions/activities etc.	TOTAL 10%
2	INTERNAL ASSESSMENT WHICH INCLUDES (IA) Internal &/Preliminary exam (compulsory) before University exam.	10%
3	END YEAR EXAMINATION (FINAL EXAM) University examination through written paper and/or practical examination	80%

- Subjects with practical components

Sr . N o. .	Assessment Tool	Weightage
1	INTERNAL ASSESSMENT WHICH INCLUDES a) Internal/Preliminary practical exam (10%) b) CSE/Journal (10%)	20%
2	END YEAR EXAMINATION (FINAL EXAM) University examination through practical examination	80%

10. PASSING CRITERIA:

- ❖ Every student should have an aggregate score of a minimum of 50% marks in theory and practical examination i.e., combining internal evaluation and university examination
- ❖ Students should get 35% in Theory and 40% in Practical in both the component combined (IA+CSE) or else he/she has to appear in the exam for that component again.

11. GENERAL INSTRUCTIONS FOR UNIVERSITY PRACTICAL EXAMINATION:

- ❖ The practical examination should be taken and marks should be given by a pair of examiners only and not by a single examiner. For the practical exam of Medical subjects, the number of examiners is as per Marwadi University rules. One examiner should be from the other university.
- ❖ Examiners shall not keep any kind of rough or fair copy of any mark sheet with him/her number of students per examiner examined per day should not exceed 50.

12. REASSESSMENT /REVIEW OF ANSWER PAPERS OF CANDIDATES:

As per the regulations prescribed for review of answer papers by the Marwadi University.

13. INTERNAL EVALUATION FOR REPEATERS:

- a. A candidate who has been declared fail in University examination for either of 1st, 2nd, 3rd, and 4th-year B.P.T is a repeater for said examination/paper/subject.
- b. The eligibility criteria for appearing for the University examination shall be applicable for repeaters. But the candidate may appear for the theory and practical held during that Academic year i.e., preliminary exam (I.A), for the improvement of internal marks for the subsequent University examination in the paper/papers he/she has failed. If a candidate does not wish to appear in a repeat internal examination, marks obtained in the previous internal examination will be counted as final marks.

14. PROMOTION CRITERIA / CARRY OVER SYSTEM:

Promotion Criteria/ Carry Over System is as per Marwadi University Guidelines.

15. GRACE MARKS:

The Grace marks may be awarded by the Marwadi University to a student, who has failed in any paper either theory or practical; but it is subject to the discretion of the Provost.

16. DEFINITION OF TRIAL/ATTEMPT

The first trial/attempt is deemed to take place when the candidate is due to appear as per the regulation of the University for the examination. Similarly, 2nd, 3rd, etc., trials relating to the subsequent examination. There is no limit to the number of trails in any year to pass the examination.

17. EXEMPTION FROM RE-EXAMINATION:

Candidates who have failed in the examination, but obtained pass marks in any subjects shall be exempted from re-examination in those subjects. Candidates who have failed in theory &/or practical in any subject will have to appear in respective component for that particular subject.

18. COMPULSORY ROTATORY INTERNSHIP

- a. Only after passing all the subjects in all years will he/she will be allowed to undergo

- internship. It includes a minimum of 1164 hours. The candidate will have to join the internship within 15 days of declaration of the 4th-year University examination result.
- b. The internships should be done in only Hospitals/Institutions recognized by the Gujarat State Council for Physiotherapy (GSCPT). No candidate shall be awarded a degree certificate without successfully completing six months of Internship.
 - c. The Internship should be rotatory and cover clinical branches concerned with Physiotherapy such as Orthopedics, Cardiothoracic including Intensive Care Unit (ICU), Neurology, Pediatrics, General Medicine, General Surgery, Obstetrics, Geriatrics, Women's health, Community Based Rehabilitation (CBR), and Gynecology both in-patient and out-patient services.
 - d. On completion of all postings, the duly completed logbooks will be submitted to the Principal/Head of the program to be considered as having completed the internship program.

19. DRESS-CODE:

Professionalism with respect to dressing is encouraged throughout the course. It is each student's responsibility to have appropriate dressing during all class assignments and learning activities. Students are supposed to wear an apron compulsorily during practical and clinical hours.

20. MIGRATION/TRANSFER OF CANDIDATES:

The Provost shall have the powers to place any migration/transfer he/she is fit for grant of permission for migration/transfer to candidates undergoing a course of study in another University as prescribed by the University

21. COURSE OF STUDY – SUBJECTS & HOURS DISTRIBUTION

- 1 credit = 1 classroom lecture per week for 20 weeks (1 term) (makes 20 lectures in one term)
or
2 Practical/clinical hours per week for 20 weeks (1 term) (makes 40 practical hours in one term)

FIRST YEAR B. PHYSIOTHERAPY

Serial No.	Course Code	Course name	Theory Hours	Practical Hours	Total Hours	Credits
1	17PT0101	Human Anatomy	160	120	280	11
2	17PT0102	Human Physiology	120	120	240	9
3	17PT0103	Biochemistry	80	-	80	4
4	17PT0104	Psychology	80	-	80	4
5	17PT0105	Sociology	80	-	80	4

7	17PT0107	Biomedical Physics	80	40	120	5
8	17PT0110	Health Care Delivery System + Professional Practice & Ethics*	40	-	40	2
9	17PT0108	English*	40	-	40	2
10	17PT0109	Computer applications*	-	40	40	1
11	17PT0106	Environment Studies*	40	-	40	2
12	17PT0113	Observational Clinical/ Community Orientation/ Clinical Visit/ Study Tour*	-	120	120	3
Total			840	600	1440	57

*Not for university exam.

SECOND YEAR B. PHYSIOTHERAPY

Serial No .	Course Code	Course name	Theor y Hours	Practical Hours	Total Hour s	Credit s
1	17PT0201	Pathology	80	-	80	4
2	17PT0202	Microbiology	80	-	80	4
3	17PT0203	Pharmacology	80	-	80	4
4	17PT0204	Kinesiology	120	-	120	6
5	17PT0205	Electrotherapy	120	120	240	9
6	17PT0206	Exercise Therapy- 2	120	120	240	9
7	17PT0207	Psychiatry	40	-	40	2
8	17PT0208	Radiology/ENT/Ophthalmology*	40	-	40	2
9	17PT0209	Ethics & Allied Therapeutics*	40	-	40	2
10	17PT0210	Clinical Practice*	-	480	-	12
Total			720	720	1440	54

*Not for university exam.

THIRD YEAR B. PHYSIOTHERAPY

Serial No.	Course Code	Course name	Theory Hours	Practical Hours	Total Hours	Credits
1	17PT0301	Medicine (General Medicine & Skin)	100 (80+20)	-	100	5
2	17PT0302	Neurology & Pediatrics	100 (80+20)	-	100	5
3	17PT0303	Surgery (General Surgery, Plastic Surgery, Neurosurgery, Cardiothoracic Surgery, Obstetrics & Gynecology)	160 (40+20+20+40+40)	-	160	8
4	17PT0304	Physical & Functional Diagnosis	80	80	160	6
5	17PT0305	Orthopedics (Traumatic & Non-traumatic)	80	-	80	4
6	17PT0306	Preventive Healthcare and Community Medicine	80	-	80	4
7	17PT0307	Professional Practice & Ethics + Evidence Based Practice & ICF*	40	-	40	2
8	17PT0308	Clinical Hours*	-	720	720	18
Total			640	800	1440	52

*Not for university exam.

22. SCHEME OF EXAMINATION: SUBJECTS AND DISTRIBUTION OF MARKS

First Year B. Physiotherapy						
Sr . N o.	Subject	Theory Marks		Practical Marks		Total Marks
		External	Internal	External	Internal	
1	Human Anatomy	80	20	80	20	200
2	Human Physiology	80	20	80	20	200
3	Biochemistry	40	10	----	----	50
4	Psychology	40	10	----	----	50
5	Sociology	40	10	----	----	50
6	Exercise Therapy- 1 & Soft Tissue Mobilization	80	20	80	20	200
7	Biomedical Physics	40	10	----	----	50
Total		400	100	240	60	800

Second Year B. Physiotherapy						
Sr . N o.	Subject	Theory Marks		Practical Marks		Total Marks
		External	Internal	External	Internal	
1	Pathology	40	10	----	----	50
2	Microbiology	40	10	----	----	50
3	Pharmacology	40	10	----	----	50
4	Exercise Therapy 2	80	20	80	20	200
5	Kinesiology	40	10	----	----	50
6	Psychiatry	40	10	----	----	50
7	Electrotherapy	80	20	80	20	200
Total		360	90	160	40	650

Third Year B. Physiotherapy						
S r · N o ·	Subject	Theory Marks		Practical Marks		Total Marks
		External	Internal	External	Internal	
1	Medicine (General Medicine & Skin)	80	20	----	----	100
2	Neurology & Pediatrics	80	20	----	----	100
3	Surgery (General Surgery, Plastic Surgery, Neurosurgery, Cardiothoracic Surgery Obstetrics & Gynecology)	80	20	----	----	100
4	Physical & Functional Diagnosis	80	20	80	20	200
5	Orthopedic (Traumatic & Non- traumatic)	80	20	----	----	100
6	Preventive Healthcare and Community Medicine	40	10	----	----	50
Total		440	110	80	20	650

23. STRUCTURE OF QUESTION PAPERS

Paper-style for 80 marks subjects for University (External) examination

Duration: 3 Hours		
Que. 1 Long Answer	02 x 10 = 20	(Any 2 out of 3)
Que. 2 Short Answer	02 x 05 = 10	(Any 2 out of 3)
Que. 3 Very Short Answer	05 x 02 = 10	(Any 5 out of 6)
Que. 4 Long Answer	02 x 10 = 20	(Any 2 out of 3)
Que. 5 Short Answer	02 x 05 = 10	(Any 2 out of 3)
Que. 6 Very Short Answer	05 x 02 = 10	(Any 5 out of 6)

Paper-style for 40 marks subjects for University (External) examination

Duration: 2 Hours		
Que. 1 Long Answer	02 x 10 = 20	(Any 2 out of 3)
Que. 2 Short Answer	02 x 05 = 10	(Any 2 out of 3)
Que. 3 Very Short Answer	05 x 02 = 10	(Any 5 out of 6)

FIRST YEAR SYLLABUS

A. HUMAN ANATOMY

Course Outcomes

In the end, of course, the candidate will be able to...

1. Acquire the knowledge of the structure of the human body in general.
2. Understand the regional anatomy in detail.
3. Understand anatomical changes right from the embryonic period till old age.
4. Understand histological features of various organs.
5. Understand its application in medical science.
6. Apply the concept of functional Anatomy in physiotherapy practice.

THEORY

SR. N O.	TOPICS
1	General Anatomy
1.1	Introduction & anatomical terms
1.2	Skin, Superficial Fascia & deep fascia
1.3	Cardio-Vascular System (CVS), Portal system, collateral circulation & arteries
1.4	Lymphatic system
2	Histology
2.1	Cell
2.2	Epithelia
2.3	Connective tissue general
2.4	Cartilage
2.5	Bone
2.6	Muscles
2.7	Nerves
2.8	Blood and phagocytic system
2.9	Lymph and lymphatic system
2.10	Blood vessels
2.11	Skin and its appendages
2.12	Central nervous system
3	General Embryology
3.1	Spermatogenesis
3.2	Structure of Spermatozoon
3.3	Oogenesis
3.4	Ovarian follicle
3.5	Fertilization
3.6	Formation of germ layers
3.7	Placental development
3.8	Brachial arches
3.9	Development of the skeletal system
3.10	Development of all type muscular system

3.11 Development of the locomotor system

3.12 Development of the nervous system

4 Myology, Osteology & Arthrology

4.1 Fascia & muscles of scalp and face

4.2 Muscles of mastication

4.3 Temporomandibular joint

4.4 Muscles of orbit & related nerves

4.5 Superficial and lateral cervical muscle

4.6 Platysma, trapezius, Sternocleidomastoid (SCM)

4.7 Anterior triangle of neck-suprahyoid & infrahyoid

4.8 Anterior and lateral vertebral muscles

4.9 Cervical plexus

4.10 Cranial nerves

4.11 Suboccipital triangle & sub occipital muscles

4.12 Joints of the vertebral column to the cranium

4.13 Muscles of thorax and movement of respiration

4.14 Joints of thorax including sternochondral & chondrocostal joints

4.15 Muscles of abdomen

4.16 Muscles of pelvis & perineum

4.17 Vertebral joint

4.18 Joints of the pelvis (lumbosacral, sacrococcygeal, pubic symphysis)

4.19 Deep muscles of the back

4.20 Muscles connecting upper limb to the vertebral column with regional structures

4.21 Scapular muscles including regional structures

4.22 Axilla and brachial plexus

4.23 Joints of the shoulder girdle

4.24 Shoulder joint

4.25 Muscles of arm

4.26 Elbow joint & cubital fossa

4.27 Anterior antebrachial muscles (front of the forearm) with regional structure

4.28 Posterior antebrachial muscles (back of forearm) with regional structures

4.29 Radioulnar joint (superior, middle, and inferior)

4.30 The retinacula, fascia, and synovial sheath of wrist and hand

4.31 Radiocarpal / wrist joint

4.32 Muscles of hand

4.33 Other joints of the hand

4.34 Muscles connecting lower limb to the vertebral column with regional structures

4.35 Muscles of the iliac region (psoas muscle) and lumbar plexus

4.36 Anterior femoral muscles (front of thigh) including regional structures

4.37 Medial femoral muscles (adductor compartment) including regional structures

4.38 Muscles of the gluteal region including regional structures

4.39 Posterior femoral muscles (back of thigh) including regional structures

4.40 Hip joint

- 4.41 Anterior crural muscles including regional structures
- 4.42 Lateral crural muscles including regional structures
- 4.43 Posterior crural muscles including regional structures
- 4.44 Knee joint
- 4.45 Popliteal fossa
- 4.46 Muscles of foot
- 4.47 Tibiofibular joint (superior, middle, and inferior)
- 4.48 Talocrural joint (Ankle joint)
- 4.49 Joints of foot & Arches)

5 Nervous System

- 5.1 Introduction to nervous system & meanings
- 5.2 Spinal cord & peripheral nerves and vertebral canal
- 5.3 Brain stem
- 5.4 Cerebellum
- 5.5 Diencephalon with basal ganglia
- 5.6 The limbic system with the olfactory region
- 5.7 Cerebrum & functional areas
- 5.8 Spinal tracts & overview of Central Nervous System (CNS)

6 Respiratory System

- 6.1 Thoracic cage.
- 6.2 Respiratory organs - lungs, pleura, bronchial tree, broncho-pulmonary segments.
- 6.3 Diaphragm: Origin, insertion, nerve supply, and action, openings in the diaphragm.
- 6.4 Intercostal muscles and Accessory muscles of respiration: Origin, insertion, nerve supply, and action.

7 Cardiovascular System (Heart & Vessels)

- 7.1 Blood, lymph, and tissue fluid- characteristic, composition, function.
- 7.2 The heart – position, shape, and parts; main arteries, veins, capillaries.
- 7.3 Lymph circulation.

8 Digestive System

- 8.1 Anatomy of digestive organs– Esophagus, Stomach, Intestine, Rectum, etc.
- 8.2 Digestive glands, Liver, Pancreas, Gall bladder.

9 Urinary System

- 9.1 Anatomy of urinary organs, kidneys, ureters, urinary bladder, urethra in males and females, etc.
- 9.2 Types of bladder especially in paraplegics.

10 Endocrine System

- 10.1 Glands -classification, sites, and secretion.
- 10.2 Hormones.

11 Reproductive System

- 11.1 A brief outline of genital organs.
- 11.2 Outline of the male and female reproductive system.

12 Special Sensory Organs & Sensations

- 12.1 Emphasis on skin, ear, and eyes.

12.2 Less detail on smell and taste.

A handwritten signature or set of initials, possibly 'Ashley', written in a cursive style with a large initial 'A'.

PRACTICAL

SR. NO.	TOPICS
1	Dissection of upper and lower limbs & back.
2	Identification of anterolateral abdominal wall, posterior abdominal wall & thoracic cage.
3	Anatomical position & description of all bones.
4	Surface marking in cadaver and living body.
5	Radiological examination of the upper limb, lower limb & other special X-rays.
6	In Brain: Identification of all parts and various sections at different levels.
7	In Histology Practical: Identification of basic tissues of the body.

Recommended Study Materials:

Textbooks:

1. Human Anatomy by B.D. Chaurasia, Vol.1, 2, 3 and general anatomy handbook Latest edition; CBS publications.

Reference books:

1. Textbook of Anatomy by Inderbir Singh; Latest edition; Jaypee Publications.
2. Handbook of Osteology by Poddar; Latest edition; Scientific Book Company.
3. Principles of anatomy and physiology by Tortora; Latest edition; Harper& Row Publications.
4. Cunningham's Manual of Practical Anatomy; Latest edition, Vol: 1, 2, 3; Oxford Publications.
5. Clinical Anatomy for Medical Students by Richard Snell, Latest edition, Lippincott, Williams & Wilkins.
6. Anatomy & Physiology by Ross & Wilson's, Latest edition, Churchill Livingstone.
7. Gray's Anatomy, Latest edition, Elsevier Publications.
8. Grant's atlas of anatomy, Anne MR; Latest edition.

B. HUMAN PHYSIOLOGY

Course Outcomes

In the end, of course, the candidate will be able to...

1. Understand the contribution of various organs & systems in maintaining homeostasis and body functions.
2. To involve a detailed study of the physiology of the various systems of the body including functional physiology of the cell, blood, neuromuscular, cardiovascular, and pulmonary systems, nervous system, special senses, excretory system, digestive system, reproductive system, and endocrine system at a microscopic and macroscopic level.
3. Understand the role of hormones, enzymes, and other different types of cells in the human body.
4. Understand how these separate systems interact to yield integrated physiological responses to challenges such as exercise, fasting, and ascent to high altitude, and how they can sometimes fail.
5. To relate the concept of human physiology in physiotherapy application including exercise physiology.

THEORY

SR. NO	TOPIC
1.	General Physiology
1.1.	Cell: Morphology. Organelles: their structure and functions.
1.2.	Transport Mechanisms across the cell membrane
1.3.	Body fluids: Distribution, composition
2.	Blood
2.1.	Introduction: Composition and functions of blood.
2.2.	Plasma: Composition, formation, functions. Plasma proteins.
2.3.	Red Blood Cell (RBC): Count and its variations. Erythropoiesis-stages, factors regulating. Reticulo-endothelial system (in brief). Hemoglobin-structure, function, and derivatives Anemia (in detail), types of Jaundice. Blood indices, Packed Cell Volume (PCV), Erythrocyte Sedimentation Rate (ESR).
2.4.	White Blood Cell (WBC): Classification. Morphology, functions, count, its variation of each. Immunity.
2.5.	Platelets: Morphology, functions, count, its variations. Hemostatic mechanisms: Blood coagulation-factors, mechanisms. Their disorders Anticoagulants.
2.6.	Blood Groups: Landsteiner's law. Types, significance, determination, Erythroblastosis foetalis.
2.7.	Blood Transfusion: Cross-matching. Indications and complications.
2.8.	Lymph: Composition, formation, circulation, and functions.

3. Cardiovascular System (CVS)

- 3.1 Introduction: Physiological anatomy and nerve supply of the heart and blood vessels. Organization of CVS. Cardiac muscles: Structure, the Ionic basis of the action potential, and pacemaker potential. Properties.
- 3.2 Conducting system: Components. Impulse conduction Cardiac Cycle: Definition. Phases of the cardiac cycle. Pressure and volume curves. Heart sounds—causes, character. ECG: Definition, Different types of leads. Waves and their causes. P-R interval. Heart block.
- 3.3 Cardiac Output: Definition. Normal value. Determinants. Stroke volume and its regulation. Heart rate and its regulation. Their variations. Cardiovascular reflex.
- 3.4 Arterial Blood Pressure: Definition. Normal values and their variations. Determinants.
- 3.5 Peripheral resistance. Regulation of Blood Pressure (BP).
- 3.6 Hemorrhage and shock.
- 3.7 Regional Circulation: Coronary, Cerebral, and Cutaneous circulation.
- 3.8 Cardio-vascular changes during exercise.

4. Respiratory System

- 4.1 Introduction: Physiological anatomy—Pleura, tracheobronchial tree, alveolus, Respiratory membrane, and their nerve supply. Dead Space: Types and their definition. Functions of the respiratory system. Respiratory muscles.
- 4.2 Mechanics of breathing: Intra-pleural and Intra-pulmonary pressure changes during respiration. Chest expansion. Lung compliance: Normal value, pressure-volume curve, factors affecting compliance and its variations. Surfactant—Composition, production, functions. Respiratory Distress Syndrome (RDS).
- 4.3 Spirometry: Lung volumes and capacities. Timed vital capacity and its clinical significance, Peak Expiratory Flow Rate (PEFR), Maximum ventilation volume, Respiratory minute volume.
- 4.4 Pulmonary Circulation. Ventilation-perfusion ratio and its importance.
- 4.5 Transport of respiratory gases: Diffusion across the respiratory membrane. Oxygen transport—Different forms, oxygen—hemoglobin dissociation curve. Factors affecting it.
- 4.6 Regulation of Respiration: Neural Regulation. Factors affecting respiration, Voluntary control. Chemical Regulation.
- 4.7 Hypoxia: Effects of hypoxia. Types of hypoxia. Hyperbaric oxygen therapy. Acclimatization Hyper-capnoea, Asphyxia, Cyanosis—types and features.
- 4.8 Disorders of Respiration: Dyspnea, orthopnea. hyperpnea, hyperventilation, apnea, tachypnoea. periodic breathing—types of Artificial respiration.
- 4.9 Respiratory changes during exercise.

5	Digestive System
5.1	Introduction: Physiological anatomy and nerve supply of alimentary canal. Enteric nervous system.
5.2	Salivary Secretion: Saliva Composition. Functions. Regulation. Mastication (in brief). Swallowing: Definition. Different stages. Function.
5.3	Stomach: Functions. Gastric juice: Gland, composition, function, regulation. Gastrin: Production, function, and regulation. Peptic ulcer. Gastric motility. Gastric emptying. Vomiting. Pancreatic Secretion: Composition, production, function. Regulation.
5.4	Liver: Functions of the liver. Bile secretion: Composition, functions, and regulation. Gallbladder: Functions.
5.5	Intestine: Succus entericus: Composition, function, and regulation of secretion. Intestinal motility and its function and regulation.
5.6	Mechanism of Defecation.
6	Nutrition:
6.1	Digestion, absorption, and metabolism of carbohydrates.
6.2	Digestion, absorption, and metabolism of fats.
6.3	Digestion, absorption, and metabolism of proteins.
6.4	Vitamins, sources, functions, and resources.
6.5	A balanced diet in different age groups and occupations.
7	Endocrine System
7.1	Introduction: Hormone. Classification, mechanism of action, the function of hormones.
7.2	Pituitary Gland: Anterior Pituitary and Posterior Pituitary hormones: Secretory cells action on target cells, regulation of each hormone. Disorders: gigantism, acromegaly, dwarfism, diabetes insipidus. Physiology of growth and development hormonal and other influences. Pituitary-hypothalamus relationship.
7.3	Thyroid Gland: Thyroid hormone and calcitonin: secretory cells, synthesis, storage action, and regulation of secretion. Disorders- myxedema, cretinism, grave's disease.
7.4	Parathyroid hormones: secretory cell, regulation of secretion. Disorders- hypothyroidism and hyperthyroidism.
7.5	Adrenal Medulla: Secretory cells, action, regulation of secretion of adrenaline and noradrenaline.
7.6	Adrenal Gland: Adrenal Cortex: Secretory cells, synthesis, action, regulation of secretion of aldosterone, cortisol, and androgens.
7.7	Endocrine Pancreas: Secretory cells, action, regulation of secretion of insulin and glucagon. Glucose metabolism and its regulation. Disorders- diabetes mellitus.
7.8	Calcitriol, thymus, and pineal gland (in brief)

8	Reproductive System
8.1	Introduction: Physiological anatomy reproductive organs. Sex determination. Sex differentiation. Disorder.
8.2	Male Reproductive System: Functions of testes. Pubertal changes in males. Spermatogenesis. Testosterone: action. Regulation of secretion. Semen.
8.3	Female Reproductive System: Functions of ovaries and uterus. Pubertal changes in females. Oogenesis. Hormones: estrogen and progesterone-action.
8.4	Menstrual Cycle: Phases. Ovarian cycle. Uterine cycle. Hormonal basis. Menarche. Menopause.
8.5	Pregnancy: Pregnancy tests. Physiological changes during pregnancy. Functions of the placenta. Lactation. Contraception method.
9	Excretory System
1.1	Introduction: Physiological anatomy. Nephrons—cortical and juxtamedullary. Juxtaglomerular apparatus. Renal blood flows and its regulation. Functions of kidneys.
1.2	Mechanism of Urine Formation: Glomerular Filtration: Mechanism of glomerular filtration. Glomerular Filtration Rate (GFR): Normal value and factors affecting. Renal clearance. Creatinine clearance.
1.3	Mechanism of concentrating and diluting the Urine: Counter-current mechanism. Regulation of water excretion. Diuresis. Diuretics.
1.4	Micturition: Mechanism of micturition. Atonic bladder, automatic bladder.
1.5	Acid-Base balance (very brief).
1.6	Artificial Kidney: Principle of hemodialysis.
1.7	Skin and temperature regulation
10	Neuromuscular Physiology
10.1	Structure of neuron, membrane potential, and generation of the action potential, nerve impulse conduction, saltatory conduction.
10.2	Neuromuscular junction and drugs affecting it, myasthenia gravis, Lambert Eaton syndrome.
10.3	Degeneration and regeneration.
10.4	Types of muscles and their gross structures.
10.5	Strength duration curve, stimulus, and chronaxie rheobase.
10.6	Structure of sarcomere- basis of muscle contraction, starlings' law, changes during muscle contraction.
10.7	Electrical- biphasic and mono-phasic action potential.
10.8	Isometric and isotonic contractions. Chemical, thermal and physical changes.
10.9	Motor unit and its properties.
10.10	Nature of voluntary contraction. Fatigue.
11	Nervous System
11.1	Introduction: Organization of Central Nervous System (CNS) and Peripheral Nervous System (PNS) including Autonomic Nervous System (ANS). Functions of the nervous system.
11.2	Synapse: Functional anatomy, classification, Synaptic transmission.
11.3	Sensory Mechanism: Sensory receptors: function, classification, and properties. Sensory

pathway: The ascending tracts—Posterior column tracts, lateral spinothalamic tract, and the anterior spinothalamic tract—their origin, course, termination, and functions. The trigeminal pathway. Sensory cortex. Somatic sensations: crude touch, fine touch, tactile localization, tactile discrimination, stereognosis, vibration sense, kinesthetic sensations. Pain sensation: mechanism of pain. Cutaneous pain—slow and fast pain, hyperalgesia, deep pain, Visceral pain, referred pain. Gate control theory of pain. Tabes dorsalis, sensory ataxia.

- 11.4 Motor Mechanism: Motor Cortex. Motor pathway: The descending tracts— pyramidal tracts, extrapyramidal tracts—origin, course, termination, and functions. Upper motor neuron and lower motor neuron.
- 11.5 Reflex Action: Monosynaptic and polysynaptic reflexes, superficial reflexes, deep reflexes. Stretch reflex— the structure of muscle spindle, pathway, higher control, and functions. Inverse stretch reflex. Muscle tone—definition, and properties: hypotonia, atonia, and hypertonia.
- 11.6 **Spinal cord Lesions:** Complete transaction and Hemisection of the spinal cord.
- 11.7 Cerebellum: Functions. Cerebellar ataxia.
- 11.8 Posture and Equilibrium: Postural reflexes—spinal, medullary, midbrain, and cerebral reflexes.
- 11.9 Thalamus and Hypothalamus: Nuclei, functions. Thalamic syndrome.
- 11.10 Reticular Formation and Limbic System: Components and Functions. Basal Ganglia: Structures included and functions. Parkinson's disease.

12 Special Senses

- 12.1 Vision: Introduction: Functional anatomy of the eyeball. Functions of the cornea, iris, Pupil, aqueous humor—glaucoma, lens—cataract, vitreous humor, rods, and cones. Photopic vision. Scotopic vision.
- 12.2 Visual Pathway and the effects of lesions.
- 12.3 Refractive Errors: myopia, hypermetropia, presbyopia, and astigmatism.
- 12.4 Visual Reflexes: Accommodation, Pupillary, and Light. Visual acuity and Visual field.
- 12.5 Light adaptation. Dark adaptation. Color vision—color blindness. Nyctalopia.
- 12.6 Audition: Physiological anatomy of the ear. Functions of the external ear, middle ear, and inner ear. Structure of Cochlea and organ of Corti. Auditory pathway. Types of Deafness. Hearing tests. Audiometry.
- 12.7 Taste: Taste buds. Primary tastes. Gustatory pathway.
- 12.8 Smell: Olfactory membrane. Olfactory pathway.
- 12.9 Vestibular Apparatus: Crista ampullaris and macula. Functions. Disorders.

PRACTICAL/DEMONSTRATION

SR. NO.	TOPIC
1	Nerve Muscle physiology (Chart & Video demonstration) Gastrocnemius Muscle-Sciatic Nerve Prep. Action Potential etc. Effect of Temperature on Simple Muscle Curve (SMC) Effect of Load on Skeletal Muscle Contraction
2	Cardio-Vascular System (CVS) Electrocardiogram (ECG) Blood Pressure (BP) Radial Pulse Spirometry/Respiratory Efficiency Test Examination of CVS and Respiratory system
3	Instruments Recording Body Temperature
4	Hematology Total red Cell Count Total White Blood Count Cells in Peripheral blood film Differential WBC count Absolute count, Arneth count Blood grouping Bleeding time/Clotting Time, Blood, Packed Cell Volume (PCV), Erythrocyte Sedimentation Rate (ESR)
5	Central Nervous System Examination of sensory function Examination of motor functions Examination of reflexes Cranial nerves

Recommended Study Materials:

Textbooks:

1. Human Physiology, Sembulingam: 4th Edition, Jaypee Brothers.

Reference books:

1. Concise Medical Physiology by Chaudhari, 4th Edition: New Central Book Agency.
2. Textbook of Medical Physiology by Guyton & Hall, 11th edition; Elsevier Publication.
3. Human Physiology, Chatterjee. Vol: 1 & 2: 10th Edition: Medical & Allied Agency.
4. Practical Physiology by Vijaya Joshi: Vora Medical Publication.
5. A Textbook of Practical Physiology, Ghai C L, Jaypee Brothers.
6. Medical Physiology for undergraduate student: Indu Khurana Elsevier Publication

C. BIOCHEMISTRY

Course Outcomes

In the end, of course, the candidate will be able to...

1. Describe the structure and function of the cell in brief.
2. Describe basal metabolic rate and factors affecting basal metabolic rate.
3. Describe nutritional aspects of carbohydrates, lipids, proteins, vitamins, and minerals and their metabolism.
4. Understand the basics and clinical aspects of enzymes and regulation of enzymatic activity and diagnostic use of enzymes.
5. Describe in detail the biochemical aspects of muscle contraction.
6. Understand how to apply clinical biochemistry tests like blood, liver, and renal functions and their importance in body functions.
7. Acquire knowledge in brief about the electrolyte balance and acid-base balance and their importance.

SR. NO	TOPICS
1.	Biochemical Characteristics of Living Mater.
1.1	Biochemistry, the morphology of cell
1.2	Membrane structure and function
1.3	Functions of intracellular organs
2.	Nucleic Acids
2.1	Deoxyribose Nucleic Acid (DNA), Ribose Nucleic Acid (RNA): Definition, structure, catabolism of purines: Gout.
3.	Proteins & Amino Acids
3.1	Chemistry, definition, classification of amino – acids, protein.
3.2	Metabolism, digestion and absorption, decarboxylation, deamination, transmethylation, transamination, and their importance and detoxification of ammonia including the urea cycle.
3.3	Neurotransmitters & Plasma proteins including immunoglobulins
3.4	Hemoglobin, Myoglobin, their functions, hemoglobinopathies, thalassemia.
3.5	Structural proteins: Collagen, Elastin.
4.	Enzymes
4.1	Definitions, classification, factors.
4.2	Coenzymes.
4.3	Inhibition and type of inhibitors
4.4	Isoenzymes.
4.5	Clinical and therapeutic uses of enzymes.
5.	Carbohydrates
5.1	Chemistry, definition, classification with examples
5.2	Function of mucopolysaccharide
5.3	Reducing properties of sugars of clinical and diagnostic importance (e.g.: Benedict's test, Barfoed's test, etc.)

5.4	Metabolism, digestion, and absorption of carbohydrates, glycolysis: aerobic and anaerobic, energetics and regulation.
5.5	Krebs's cycle, its energetics regulation Gluconeogenesis
5.6	Hormonal regulation of blood sugar level and diabetes mellitus.
6.	Lipids
6.1	Chemistry, definition, classification, and function.
6.2	Metabolism, digestion, and absorption of lipids, beta-oxidation of fatty acids and their energetics, regulation of fat metabolism in adipose tissue, ketone bodies formation and its utilization, cholesterol, and importance of lipoproteins.
7.	Vitamins
7.1	Definition, classification, functions.
7.2	Deficiency symptoms, Recommended Dietary Allowance (RDA)
8.	Hormones
8.1	Definition, composition & functions
9.	Nutrition
9.1	Importance of nutrition, nutritional aspects of Carbohydrates.
9.2	Proteins, Fats and Fibers, Classification of fibres, calorimetry, energy values, respiratory quotient.
9.3	Basal Metabolic Rate (BMR), Protein Energy Malnutrition (PEM), Balanced diet.
10.	Biochemistry of connective tissues, nerve tissue, and muscle.
11.	Water, electrolyte, and acid-base balance and Minerals.
11.1	Phosphate, calcium, and iron. Magnesium fluoride, Zinc, Copper, Selenium, Molybdenum Recommended Dietary Allowance (RDA), iodine sources, absorption, transport, excretion, function, and disorders.
11.2	Acid-base balance, water and electrolyte balance.
12.	Chemistry of biological materials. Biochemistry of connective tissue – Collagen, Glycoprotein, Proteo-glycans
13.	Physicochemical Phenomenon.
14.	Common procedures used in biochemistry.
14.1	Liver function test.
14.2	Renal function test.

Recommended Study Materials:

Textbooks:

1. Essentials of Biochemistry by U. Satyanarayan, Latest Edition, Books and Allied Publications.
2. Medical Biochemistry for Physiotherapy students by Harpreet Kaur, Jagmohan Singh, Latest edition, Jaypee Publications.

Reference books:

1. Textbook of Medical Bio-Chemistry– Dr M. N. Chatterjea, Latest Edition, Jaypee Publication.
2. Textbook of Biochemistry for medical students: DM Vasudevan: Jaypee Publication.
3. Medical Biochemistry by N. Mallikarjuna Rao, Latest Edition, New Age International Publication.

D. PSYCHOLOGY

Course Outcomes

In the end, of course, the candidate will be able to...

1. Define the term psychology and its importance in the health delivery system and gain knowledge of psychological maturation during human development and growth and alteration during the ageing process.
2. Understand behavioural patterns of individuals, theories of development, normal and abnormal aspects of motor, social, emotional, and language development, communication, and interaction skills appropriate to various age groups.
3. Understand the importance of the psychological status of the person in the health and diseases, environmental and emotional influence on the mind and personality.
4. Acquire the knowledge as to how to deal with the patient.

SR. NO	TOPICS
1.	The Art & Science of Psychology
1.1	Beginning the study of psychology & Subfields of psychology.
1.2	Methods of psychology.
2.	Evolution, Genetics & Behavior
2.1	Genetics & Behavior.
2.2	Nature & Nurture.
3.	The Development of Behavior
3.1	Early Development.
3.2	Cognitive Development.
3.3	Social Development.
4.	The Principles of Learning
4.1	Beginning the study of Learning
4.2	Classical Conditioning
4.3	Operant Conditioning
4.4	Cognitive Learning
5.	Thinking & Problem Solving
5.1	The Thinking Process.
5.2	Solving Problems.
5.3	How We Learn Concepts.
6.	Drives & Motivation
6.1	The Nature of Motivation.
6.2	Primary Motives.
6.3	Social Motives
6.4	Need
6.5	Hierarchy theory of Maslow.
7.	Arousal, Emotion & Awareness
7.1	Physiological basis of arousal & emotion.
7.2	Emotional feelings & Situations.

7.3	Altered Feelings & Awareness
8.	The Senses
8.1	Sensory Mechanisms.
8.2	Vision.
8.3	Hearing.
9.	Perception
9.1	Objective Perception.
9.2	Perceptual Constancies.
9.3	Depth Perception
9.4	Influences on Perception.
10.	Psychological Testing
10.1	Uses of Tests.
10.2	Intelligence & Aptitude Tests.
10.3	Differences in Intelligence.
10.4	Personality tests.
11.	Personality
11.1	What is Personality?
11.2	Theories of Personality.
11.3	The Shaping of Personality.
11.4	Coping Behavior.
12.	Memory
12.1	Phases of memory
12.2	Short-term storage memory and perception thinking, etc.
12.3	Forgetting testimony and recall of events.
12.4	Memory and ageing
13.	Behaviour Disorders & Their Treatment
13.1	Defining the Behavior Disorders.
13.2	Psychoneurotic Reactions.
13.3	Psychotic Reactions.
13.4	Personality Disorders.
13.5	Psychotherapies.
13.6	Behaviour Modification
14.	Attitudes & Prejudice
14.1	The Nature of Attitudes.
14.2	Prejudice & Discrimination.
14.3	Development of Attitudes.
14.4	Social Movements.
15.	Interpersonal Behavior
15.1	Experimental analysis on social interaction, studies of the interview situation
15.2	Behaviour in formal and informal groups
15.3	Group norms and roles.
15.4	Leadership in formal and informal groups, group morale.
15.5	Behaviour therapy, behaviour modification techniques, token economy.

16. Stress
16.1 Stress and response.
16.2 Disorders.
16.3 Coping with stressors.
16.4 Four maxims.
16.5 Meditational yoga
17. Pain
17.1 Physiological and psychological pain
17.2 Types of pain
17.3 Pain measurement
18. Psychotherapy & Counseling
18.1 Goals, Psychodynamic therapy.
18.2 Humanistic therapy.
18.3 Behaviour therapy- Relaxation training (Jacobson training), Hypnosis, Biofeedback.
18.4 Behaviour Modification Therapies (BMT)
18.5 Cognitive therapy- Elli's rational/ emotive therapy, Beck's cognitive, Meichenbaum's self-instructional training

Recommended Study Materials:

Textbooks:

1. Introduction to psychology by–Morgan and King, 7th Edition, Tata McGraw-Hill. Edition.
2. Psychology for Physiotherapists by Thangamani Ramalingam A, Latest Edition, Jaypee Publications.

Reference books:

1. Psychology for Physiotherapists by E. Naomi Dunkin, Latest Edition, British Psychology Society.
2. Beginning Psychology by Charles Stangor, Latest Edition, Flat World Knowledge Publisher.

E. SOCIOLOGY

Course Outcomes

In the end, of course, the candidate will be able to...

1. Define the term sociology and its importance in the health delivery system.
2. Understand the basic sociological concepts, principles and social process, social institutions about the individual family and community, and the various social factors affecting the family in the rural and urban communities in India.
3. Understanding the various social factors affecting health and diseases.
4. Understand the effects of disease on a patient's behaviour affected by social factors and how to deal with a patient.

SR. NO	TOPICS
1.	Introduction
1.1	Meaning–definition and scope of sociology. Its relation with anthropology, psychology, social psychology, and ethics.
1.2	Methods of sociology–case study, social serve, questionnaire interview, and opinion Methods.
1.3	Importance of its study with special reference to health care professionals.
2.	Social Factors in Health & Disease
2.1	The meaning and nature of socialization.
2.2	The role of social factors in health and illness.
3.	Socialization
3.1	Meaning and nature of socialization.
3.2	Primary, secondary and anticipatory socialization.
3.3	Agencies of socialization.
4.	Social Groups
4.1	Concepts of social groups.
4.2	Influence of formal and informal groups on health and sickness.
4.3	Role of primary groups and secondary groups in the hospital and rehabilitation settings.
5.	Family
5.1	The family-Meaning, Definition & Function.
5.2	Types & Changing family patterns.
5.3	Influence of family on individual health, family and nutrition, the effect of sickness on family and psychosomatic diseases, and their importance to physiotherapy.
6.	Community
6.1	Rural community–meaning and features–health hazards of rural ties.
6.2	Urban community–meaning and features–health hazards of urbanities
7.	Culture & Health
7.1	Concept of culture.
7.2	Culture and behaviour.
7.3	The cultural meaning of sickness.
7.4	Culture and Health Disorders.

8.	Social Change
8.1	Meaning of social changes.
8.2	Factors of social changes.
8.3	Human adaptation and social change.
8.4	Social change and stress.
8.5	Social change and deviance.
8.6	Social change and health program.
8.7	The role of social planning in the improvement of rehabilitation.
9.	Social Problems of Disabled
9.1	Consequences of the following social problems about sickness, disability and remedies to prevent this problem.
9.2	Population explosion.
9.3	Poverty and unemployment.
9.4	Beggary.
9.5	Juvenile delinquency.
9.6	Prostitution.
9.7	Alcoholism.
9.8	Problems of women in employment
10.	Social Security
10.1	Social security and social legislation concerning the disabled.
11.	Social Worker
11.1	Meaning of social work, the role of a medical social worker

Recommended Study Materials:

Textbooks:

1. Sociology for Physiotherapists by Dibyendunaryan Bid, 1st edition, Jaypee Publication.
2. Textbook of Sociology for Physiotherapy Students by KP Neeraja, 1st Edition, Jaypee Publication.

Reference books:

1. An introduction to sociology by Sachdeva and Bhushan, 32nd Edition, Kitab Mahal Publication.
2. Indrani T K, Text Books of Sociology for Graduates Nurses and Physiotherapy Students, JP Brothers.

F. EXERCISE THERAPY-I & SOFT TISSUE MANIPULATION

Course Outcomes

In the end, of course, the candidate will be able to...

1. Understand the basic mechanical principles and effect of exercises in the restorations of physical function.
2. Describe and acquire the skills of application and demonstration of the use of various tools of the therapeutic gymnasium and various starting and derived positions.
3. Describe the movements- Classification, Principles, Technique & its Uses.
4. Describe the physiological and therapeutic effect of various movements and demonstrate them in various anatomical planes.
5. Acquire the skills of application of various massage manipulations and describe the physiological effect, therapeutic uses, merit – demerits of the same.
6. Acquires the skills of application of various exercise therapeutic modalities in the restoration of physical function and describes the physiological effect, therapeutic uses, merits/demerits of the same.

EXERCISE THERAPY-I

SR. NO.	TOPICS
1.	Introduction to exercise therapy. Physiological effects and uses of exercise. Use of apparatus in exercise therapy.
2.	Force of gravity, the centre of gravity, line of gravity, and base. Axes and planes of movement and gravity.
3.	Simple machine: Lever, mechanical advantage, angle of pull, pulley, wheel and axle, fixed and movable pulley, pendulums, elasticity, spring properties of spring.
4.	Joint movement: Terminology and range axes and planes of movement, levers.
5.	Fundamental starting positions, derived positions-effects and uses, pelvis tilt & Muscle work for all positions.
6.	Classification of movements, types of muscle work
7.	Active movements: Definition, types, techniques, effects, and uses.
8.	Free Exercises: Classification, technique, effects of free exercises - application for shoulder, neck, hip, and knee joints, techniques of mobilization for stiff joints
9.	Passive movements: Definition, Types, techniques of relaxed passive movements and uses, comparison of both movements.
10.	Posture (Outlines only)
11.	Resisted Exercises: Techniques and types of resistance, Oxford method, Delorme method, Macqueen's method.
12.	Measurement of joint movements: Goniometry, types of the goniometer, bubble, and gravity goniometer.
13.	Causes of restriction of range of movement, Distinguish between skin, muscles, Capsular

	contractures. Capsular pattern, End feel.
14.	Suspension therapy: Definitions of suspension and point of suspension, types of suspension, pulleys, and use of pulleys in suspension therapy, application of suspension therapy either to increase the joint range or to increase muscle power.
15.	Breathing: Mechanism of breathing (normal), Muscles of respiration, changes in the thoracic cage during the process of respiration Diaphragmatic breathing, segmental breathing, Pursed lip breathing & Glossopharyngeal Breathing - significance.
16.	Group work: Criteria of selection of patients, advantages, and disadvantages of group class exercises. Home exercises: trick movements.
17.	Normal gait cycle: Phases of gait
18.	Walking Aids: Introduction, types, measurement, uses, precautions, progression.
19.	Measurement of limb length, methods of measurements.
20.	Maintenance and record of volume, range of motion, resistance, limb length. Girth measurement.

SOFT TISSUE MANIPULATION

SR. NO .	TOPICS
21.	Massage Manipulation
21. 1	Introduction-brief history, definition, classification.
21. 2	Physiological effects and therapeutic uses, contra-indications.
21. 3	Preparation of patient, basic points to be considered before and during massage procedure.
21. 4	Technique, effects, and uses of each manipulation and contra-indications. The practice of soft tissue manipulation in subjects.
21. 5	Specific effects of certain manipulations.
21. 6	Massage for arm, leg, neck, and upper back face.
21. 7	Massage for oedema, scar, tendinitis, fibrosis (tight fascia)
21. 8	Mobilization of soft tissues, joints, and fluid collection.

Recommended Study Materials:

Textbooks:

- Principles of Exercise Therapy by Dena Gardiner, 4th Edition, CBS Publication.

2. Therapeutic Exercise by Kisner & Colby, 4th Edition; Jaypee Publication.
3. Principles and Practices of Therapeutic Massage, Sinha A G, Jaypee Publication

Reference books:

1. Handbook of Clinical Massage latest edition Casser M P, Elsevier Publication.
2. Measurement of Joint Motion – a guide to Goniometry by Cynthia Norkin, Latest Edition; Jaypee Publication.
3. Practical Exercise Therapy by Margaret Hollis, 4th Edition; Blackwell Sciences Publication.

A handwritten signature in black ink, appearing to read 'Ashish', enclosed within a hand-drawn oval.

G. BIOMEDICAL PHYSICS

Course Outcomes

In the end of course, the candidate will be able to...

1. Understand the physics principles & Laws of Electricity, Electromagnetic Spectrum & ultrasound.
2. Describe effects of environmental & man-made electromagnetic fields at the cellular level & risk factors on prolonged exposure.
3. Describe the main electrical supply, electric shock –precautions.
4. Enumerate types & production of various therapeutic electrical currents. Describe the panel diagrams of the machines.
5. Describe in brief, certain common electrical components such as transistors, valves, capacitors, transformers, etc. & the simple instruments used to test/calibrate these components (such as a potentiometer, oscilloscope, etc.) of the circuitry & will be able to identify such components.
6. Describe & identify various types of electrodes used in therapeutics, describe electrical skin resistance & the significance of various media used to reduce skin resistance.
7. Understand the fundamentals of physics, its relation in Physiotherapy sciences, and basic physical principles of sound, light, and heat and their application in the physiotherapy field.

SR. NO	TOPIC
1.	General Mechanics & Properties of Matter
1.1	Force – Definition, unit, resolution of forces, Newton’s laws of motion. Types of motion, direction and quantity of motion, Speed, Velocity, Work, Energy and Power.
1.2	Reaction forces, ground reaction force, Equilibrium, determination of equilibrium of a body, Inertia, Acceleration, Momentum and Torque.
1.3	Friction – the force of friction, static and dynamic friction, the limit of friction, friction a necessity, and evil.
1.4	Fluid mechanics: Viscosity, definition, coefficient of viscosity, streamline and turbulent flow, the effect of temperature and pressure on viscosity. Principle of Archimedes, laws of floatation, hydrostatic pressure, buoyancy, surface tension, Physical property of water.
2.	Heat & Temperature:
2.1	Heat transfer, properties of thermal radiation, Specific heat, thermal capacity, Energy conversion, I and II law of thermodynamics, physical effects of heat: expansion, evaporation, thermionic emission, etc.
2.2	Concept of heat and temperature, measurement of heat thermometry, thermometer. Method of measuring body temperature. Human body temperature
2.3	Biophysics of superficial heat and cold.

3. Waves & Sound
 - 3.1 Sound: Origin of sound, Characteristics of sound waves (Intensity of Sound, loudness, pitch and frequency, noise, echo, Factors affecting sound propagation)
 - 3.2 Simple Harmonic Motion Revisited: Damping and Resonance, Wave Concepts, Traveling Waves, Waves at a Boundary: Interference, Standing Waves and Resonance
 - 3.3 The Human Ear: Physiology and Function, The Doppler Effect in Sound, Ultrasound, Ultrasonic – production and its application, Piezoelectricity.
 - 3.4 Frequencies of sound waves, Infrasonic, Normal hearing band and Ultrasonics, Reflection, Refraction, and Attenuation of Sound waves, Acoustic Impedance, Interference of sound waves, Resonance, Echo, Doppler effect and Fresnel and Fraunhofer zones in Ultrasonics.
4. Modern Optics
 - 4.1 Electromagnetic Spectrum: Electromagnetic Radiation (EMR): Laws Governing EMR, Laws of Reflection, Refraction, Absorption, Cosine law, Attenuation, Inverse-square law. Grotthuss law etc.
 - 4.2 Light: Emission and absorption spectra. Electromagnetic spectrum. Laws of transmission, reflection, refraction, absorption. Internal reflection and fiberoptics, Interference of light. LASER and its application.
5. Electricity & Magnetism
 - 5.1 Structure of atom, Isotopes, States of matter; Compound formation (covalent formation).
 - 5.2 Static Electricity: Theories of Electricity, Production of Electric Charge, Characteristic of a Charged body, Potential and Capacity, Potential Difference.
 - 5.3 Current Electricity: Energy sources for electricity, Electromotive Force (EMF), Resistance, Intensity, Ohm's Law, resistance in Series / Parallel, Devices for regulating Intensity (Types, Construction, and working of Rheostat), Electric energy and power, Thermal Effects of Electric (Joule's Law).
 - 5.4 Magnetism: Nature, Type, Molecular Theory of Magnetism, Property of Magnet, Magnetic Effect of Electric Current, Electromagnets, Milliamperemeter & Voltmeter (Construction and working), Meters for measuring AC.
 - 5.5 Capacitor / Condenser: Principles, Capacity (Measurement and factors determining), Types and Construction, Electric field, lines of force and characteristics of lines of force, Charging and discharging of the condenser, Duration of discharge, discharge through inductance, capacitive reactance, and uses of a condenser.
 - 5.6 Electromagnetic Induction: Principles (Faraday's/Lenz's law), Production, Direction of Induced EMF, Strength of induced EMF, Types (Self and Mutual) and inductive reactance. Eddy Currents, Dynamo, Transformers (Functions, Types, Constrictions), Choke coil.
 - 5.7 Thermionic Valves (Diode and Triodes), Types of rectification (Half and full-wave– Voltage halving and Westinghouse Bridge), Semi-Conductors: Types, semiconductor diodes, Metal rectifier & Transistors, Integrated circuits (IC)
 - 5.8 Main Supply: Production of Electricity, Types, Distribution, Earthing, Types of Plugs & Switches. Fuse.

- 5.9 Electric and electronic circuits: Oscillating circuit, Smoothing Circuit, surging circuit, CR circuit, multivibrator circuit, faradic coils (Lewis Jones and Smart Bristow), panel diagram of an electrical stimulator, Production of high-frequency current by a klystron, magnetron.
- 5.10 Frequencies of Current – Low, Medium and High-frequency currents and their characteristics, Biological Cell as a capacitor and resistor, frequency of current and its relation to capacitive reactance (resistance)
- 5.11 Types of current – Direct Current (DC) and Alternating Current (AC), Sources of DC, Necessity for rectification of AC, Use of DC as a therapeutic current and its dangers, Electrical Skin Resistance, Electrolysis, acidic and alkaline reactions under anode and cathode, Electrolytic burns and its prevention
- 5.12 Shock: Types (Electric Shock, Earth Shock), Definition, Severity, Effects, Causes, and Precautions.

Recommended Study Materials:

Textbooks:

1. Clayton's electrotherapy- Theory and Practice, Forster and Palastanga; 8th edition.
2. Fundamental of Electrotherapy and Biomedical Physics, Ashish Kakkad; Jaypee Brothers.
3. Biomedical Physics. Jignasha Patel; New Popular Publication

Reference books:

1. Physics-Foundation & frontiers by George Cramow & John M. Cleveland
2. Physics of the life sciences by Jay Newman. 2008.

H. HEALTH CARE DELIVERY SYSTEM + PROFESSIONAL PRACTICE & ETHICS

(Not For University Exam, Only Internal Exam)

COURSE OUTCOMES

At the end of course, the candidate will be able to...

1. Understand basic health care delivery systems in India and abroad.
2. Act for referral of patients depending on requirements in clinical practice.

INTRODUCTION TO NATIONAL HEALTHCARE DELIVERY SYSTEM IN INDIA

SR. NO.	TOPIC
1.	Introduction to healthcare delivery system
1.1	Healthcare delivery system in India at a primary, secondary and tertiary care
1.2	Community participation in healthcare delivery system
1.3	Health system in developed countries.
1.4	Private Sector
1.5	National Health Mission
1.6	National Health Policy
1.7	Issues in Health Care Delivery System in India
2.	National Health Program -Background objectives, action plan, targets, operations, achievements, and constraints in various National Health Program
3.	Introduction to AYUSH system of medicine
3.1	Introduction to Ayurveda.
3.2	Yoga and Naturopathy
3.3	Unani
3.4	Siddha
3.5	Homoeopathy
3.6	Need for integration of the various system of medicine
4.	Health scenario of India- past, present, and future
5.	Demography & Vital Statistics-
5.1	Demography – its concept
5.2	Vital events of life & its impact on demography
5.3	Significance and recording of vital statistics
5.4	Census & its impact on health policy
6.	Epidemiology
6.1	Principles of Epidemiology
6.2	Natural History of disease
6.3	Methods of Epidemiological studies
6.4	Epidemiology of communicable & non-communicable diseases, disease transmission, host defence immunizing agents, cold chain, immunization, disease monitoring, and surveillance.

PROFESSIONAL PRACTICE & ETHICS

SR. NO .	TOPIC
1.	Introduction to the history of physiotherapy.
2.	Orientation to the curriculum, clinical areas, and geographical location
3.	Concept of morality & ethics.
4.	Concept of professionalism and professional dress code.

Recommended Study Materials:

Textbooks:

1. Textbook of Preventive & Social Medicine- Dr K. Park
2. Textbook of Community Medicine: V. K. Mahajan
3. Physical Therapy Ethics by Donald L. Gabard, Mike W. Martin, F.A. Davis, 2003
4. GSCPT (Gujarat state council for Physiotherapy)- rules and regulations-full text
5. The Indian Association of Physiotherapists memorandum of the association rules and regulations-full text

Reference books:

1. Population studies – Asha Bhendre
2. Effective communication methods – Asha Kaul
3. Hospital Administration - Tabish
4. Medical Ethics by CM Francis, the second edition

I. COMPUTER APPLICATIONS
(Not for University Exam)

Course Outcomes

At the end of course, the candidate will be able to...

1. Understand the fundamentals of computers and their applications in clinical setups.

SR. NO.	TOPIC
1.	Introduction to Data Processing: 1.1 Features of computers. What are Hardware and Software? 1.2 Advantages of using computers. Role and uses of computers. What is data processing? 1.3 Application areas of computers and common activities in data processing. Types of data processing, characteristics of the application.
2.	Hardware Concepts: 2.1 The architecture of computers – characteristics of discs, tapes, terminals, printers, network. 2.2 Types of storage devices. 2.3 Concept of damage. Application of networking concept of PC system care, floppy care, data care, etc.
3.	Concept of Software 3.1 Classification of software: System software. 3.2 Application of software, Operating System, Computer System, computer virus, precautions against viruses, dealing with viruses, computers in medical electronics.
4.	Basic anatomy of Computers: 4.1 Principles of Programming: Computer application – principles in scientific research, word processing, medicine, libraries, museum, education, information system. 4.2 Data processing 4.3 Computers in Physical Therapy – Principles of EMG, Exercise testing equipment, Laser.

Recommended Study Materials:

Textbooks:

1. Computing Fundamentals by Faithe Wempen, Latest Edition, Wiley Publications

Reference books:

1. Microsoft Office 2019 all-in-one by Peter Weverka, Latest Edition, Wiley Publication.

J. ENGLISH

(Not for University Exam)

Course Outcomes

At the end of course, the candidate will be able to...

1. Understand, read and communicate in the English language grammatically correct English.
2. Appreciate the value of the English language in professional life.

SR. NO.	TOPIC
1.	Introduction:
1.1	Study techniques
1.2	Organization of effective note-taking and logical processes of analysis and synthesis.
1.3	Use of the dictionary
1.4	Enlargement of vocabulary
1.5	Effective diction
2.	Applied Grammar:
2.1	Correct usage
2.2	The structure of sentences
2.3	The structure of paragraphs
2.4	Enlargement of vocabulary
3.	Written Composition:
3.1	Precise writing and summarizing
3.2	Writing of Bibliography
3.3	Enlargement of vocabulary
4.	Reading and Comprehension: Review selected materials and express oneself in one's words and enlargement of vocabulary.
5.	The study of various forms of composition: Paragraph, essay, letter, summary, practice in writing.
6.	Verbal Communication: Discussions and summarization, debates, oral reports, use in teaching.

Recommended Study Material:

Reference Books:

1. Effective Communication Skills – Cornell Local Roads Program, New York LTAP Program
2. Improve Your Communication Skills – Alan Barker, Koganpage

K. ENVIRONMENTAL SCIENCES

(Not for University Exam)

Course Outcomes:

At the end of course, the candidate will be able to...

1. Be aware of the environment around us and develop an understanding of sustainable development Acquire a basic scientific understanding of environmental issues and their possible solutions

SR. NO.	TOPIC
1.	Multidisciplinary Nature of Environmental Studies
1.1	Definition, scope and importance
1.2	Need for public awareness.
2.	Natural Resources: Renewable & Non-Renewable Resources: Natural Resources & Associated Problems. Use & overexploitation of ...
2.1	Forest resources: Use and over-exploitation, deforestation, case studies. Timber extraction, mining, dams, and their effects on forest and tribal people.
2.2	Water resources: Use and over-utilization of surface and groundwater, Floods, drought, conflicts over water, dams-benefits, and problems.
2.3	Mineral resources: Use and exploitation, environmental effects of extracting and using mineral resources, case studies.
2.4	Food resources: World food problems, changes caused by agriculture and overgrazing, effects of modern agriculture, fertilizer-pesticide problems, waterlogging, salinity, case studies.
2.5	Energy resources: Growing energy needs, renewable and non-renewable energy sources, use of alternate energy sources. Case studies.
2.6	Land resources: Land as a resource, land degradation, man-induced Landslides, soil erosion, and desertification.
2.7	Role of an individual in conservation of natural resources.
2.8	Equitable use of resources for sustainable lifestyles.
3.	Ecosystems
3.1	Concept of an ecosystem.
3.2	Structure and function of an ecosystem.
3.3	Producers, consumers, and decomposers.
3.4	Energy flow in the ecosystem.
3.5	Ecological succession.
3.6	Food chains, food webs, and ecological pyramids.
3.7	Introduction, types, characteristic features, structure, and function of the following ecosystem: • Forest ecosystem • Grassland ecosystem • Desert ecosystem • Aquatic ecosystems (ponds, streams, lakes, rivers, oceans, estuaries)
4.	Biodiversity & Its Conservation
4.1	Introduction – Definition: genetic, species, and ecosystem diversity.
4.2	Biogeographical classification of India
4.3	Value of biodiversity: consumptive use, productive use, social, ethical, aesthetic, and option values
4.4	Biodiversity at global, national, and local levels.

4.5	India as a mega-diversity nation
4.6	Hot-spots of biodiversity.
4.7	Threats to biodiversity: habitat loss, poaching of wildlife, man-wildlife conflicts.
4.8	Endangered and endemic species of India
4.9	Conservation of biodiversity: In-situ and Ex-situ conservation of biodiversity.
5.	Environmental Pollution
5.1	Definition, Cause, effects, and control measures of air pollution, Water pollution, Soil pollution, Marine pollution, Noise pollution, Thermal pollution, nuclear hazards
5.2	Solid waste Management: Causes, effects and control measures of urban and industrial wastes.
5.3	Role of an individual in prevention of pollution.
5.4	Pollution case studies.
5.5	Disaster management: floods, earthquakes, cyclones, and landslides.
6.	Social Issues & The Environment
6.1	From Unsustainable to Sustainable development (Already covered in module 2)
6.2	Urban problems related to energy
6.3	Water conservation, rainwater harvesting, watershed management
6.4	Resettlement and rehabilitation of people; its problems and concerns.
6.5	Case Studies
6.6	Environmental ethics: Issues and possible solutions.
6.7	Climate change, global warming, acid rain, ozone layer depletion, nuclear
6.8	Accidents and holocaust. Case Studies.
6.9	Wasteland reclamation.
6.10	Consumerism and waste products.
6.11	Environment Protection Act. l) Air (Prevention and Control of Pollution) Act. m) Water (Prevention and Control of Pollution) Act n) Wildlife Protection Act o) Forest Conservation Act p) Issues involved in the enforcement of environmental legislation. q) Public awareness.
7.	Human Population & The Environment
7.1	Population growth, variation among nations.
7.2	Population explosion – Family Welfare Program.
7.3	Environment and human health.
7.4	Human Rights.
7.5	Value Education.
7.6	Human Immunodeficiency Virus (HIV)/Acquired Immunodeficiency Syndrome (AIDS).
7.7	Women and Child Welfare.
7.8	Role of Information Technology in Environment and human health.
7.9	Case Studies.
8.	Field Work
8.1	Visit a local area to document environmental assets river/ forest/grassland/hill/mountain.
8.2	Visit a local polluted site-Urban/Rural/Industrial/Agricultural.
8.3	Study of common plants, insects, birds.
8.4	Study of simple ecosystems-pond, river, hill slopes, etc.

Recommended Study Materials:

Textbooks:

1. Agarwal, K.C. 2001 Environmental Biology, Nidhi Publications Ltd. Bikaner
2. Clark R.S. Marine Pollution, Clarendon Press Oxford

Reference books:

1. Miller T G. Jr Environmental Science, Wadsworth Publishing Co
2. Odum, EP. 1971 Fundamentals of Ecology. WB Saunders Co.
3. Townsend C, Harper J and Michael Begon, Essentials of ecology, Blackwell Science.

A handwritten signature in blue ink, appearing to read 'Ashish', enclosed within a hand-drawn oval.

SECOND YEAR SYLLABUS

A. PATHOLOGY

Course Outcomes

At the end of course, the candidate will be able to...

1. Learn the pathological changes in various conditions, diseases and disorders, which are commonly treated by physiotherapy.
2. Understand how to protect themselves and their patients from infections during their interactions.
3. Students should be able to understand disease processes and their clinical significance (with special emphasis on Neuro Musculoskeletal and Cardiovascular -Respiratory systems).

SR. NO .	TOPIC
1	General Pathology: 1.1 Importance of pathology in physiotherapy 1.2 Definition of health, the pathological basis of health, disease 1.3 Inflammation: general aspects, types 1.4 Tissue repair: wound healing, fracture 1.5 Cell injury-degeneration: physical and chemical irritants; ionizing radiations –cellulitis 1.6 Disturbances of circulation: edema, thrombosis, embolism 1.7 Necrosis, gangrene 1.8 Growth cellular adaptation: atrophy, hypertrophy, hyperplasia 1.9 Cellular ageing 1.10 Tumors: definitions, classification, etiology and spread 1.11 Infection: acute/chronic, Acquired Immuno-Deficiency Syndrome (AIDS) 1.12 Blood: Anemia, definition, classification, etiology, laboratory investigations, blood picture, hemorrhagic disorders (causes and classification), Autoimmune disorders: Rheumatoid Arthritis (RA), Systemic Lupus Erythematosus (SLE)
	Systemic Pathology: (Including causes, risk factors, pathogenesis or pathophysiology, sign and symptoms, diagnosis, and gross and microscopic picture for morphology study for following system)
2	Respiratory systems 2.1 Bronchitis 2.2 Bronchial 2.3 Asthma 2.4 Emphysema 2.5 Pneumonia 2.6 Carcinoma of lung
3	Cardiovascular system 3.1 Rheumatic Heart Disease (RHD) 3.2 Myocardial Infarction (MI) 3.3 Atherosclerosis

3.4	Congenital Heart Diseases (CHD)
4	Alimentary system
4.1	Tuberculosis intestine
4.2	Peptic ulcer
5	Liver
5.1	Hepatitis
5.2	Cirrhosis
6	Central nervous system
6.1	Meningitis
6.2	Encephalitis
6.3	Cerebral hemorrhage
6.4	Central Nervous System (CNS) tumor
7	Peripheral nerves
7.1	Neuritis,
7.2	Neuralgia,
7.3	Guillain-Barre syndrome,
7.4	Neuropathies
8	Bones-joints
8.1	Osteomyelitis,
8.2	Osteoarthritis,
8.3	Septic arthritis,
8.4	Gout arthritis,
8.5	Osteomalacia
8.6	Bone tumors - giant cell tumor, osteosarcoma, Ewing's sarcoma
9	Muscle & neuro-muscular disorders
9.1	Poliomyelitis
9.2	Myopathies
9.3	Myasthenia gravis
10	Skin
10.1	Scleroderma
10.2	Psoriasis
11	Urinary system
11.1	Nephritis
11.2	Glomerulonephritis
11.3	Nephrotic syndrome
12	Endocrine system
12.1	Thyroid: thyroiditis, thyroid tumors
12.2	Diabetes

Recommended Study Materials:

Textbooks:

1. Textbook of pathology – Harsh Mohan
2. General Pathology - Bhende
3. General Pathology review - Dr M L Gupta (2nd Ed.)
4. Textbook of Pathology - Dr Dutta

Reference books:

1. Pathologic basis of disease - Cortran, Kumar, Robbins
2. General and systemic pathology - JCE, Underwood
3. Pathology - Boyd
4. Pathology –

Anderson

A handwritten signature in black ink, appearing to read "Ashish", enclosed within a hand-drawn oval border.

B. MICROBIOLOGY

Course Outcomes

At the end of course, the candidate will be able to...

1. Understanding the microbiology of common diseases that therapists would encounter in their daily practice.
2. Understand agents responsible for causing human infections, of CNS, CVS, musculoskeletal and respiratory system.

SR. NO	TOPIC
1	General Bacteriology
1.1	Introduction, historical background
1.2	Basics of morphology and physiology of bacteria
1.3	Staining of bacteria
1.4	Sterilization and disinfection
1.5	Cultivation and culture media
2.	Systemic Bacteriology
2.1	Gram-positive cocci: Staphylococci, Streptococci and Pneumococci
2.2	Gram negative cocci: Gonococci and Meningococci
2.3	Gram-positive bacilli
2.4	Aerobic: Diphtheria, Tuberculosis, Leprosy
2.5	Anaerobic: Tetanus, Gas gangrene, Botulism
2.6	Gram-negative bacilli: Typhoid, Cholera, Dysentery
2.7	Gram-negative Spiral: Syphilis
3.	General Virology
3.1	Poliomyelitis
3.2	Rabies
3.3	Introduction to Bloodborne Viral infections
3.4	Demonstration of tests: Diagnosis of AIDS, Hepatitis B & C
3.5	Corona
3.6	Herpes
4.	Immunology
4.1	Immunity
4.2	Antigen and Antibodies
4.3	Agglutination, Precipitation
4.4	Basic of hypersensitivity reactions
5.	Parasitology
5.1	Introduction to important parasitic infections
5.2	Malaria
5.3	Amoebiasis
5.4	Roundworm and hookworm
5.5	Scabies
6.	Mycology

6.1	Introduction to important fungal infections
6.2	Candidiasis,
6.3	Ringworm
7.	Applied Microbiology concerning systemic, Parasitology, Mycology, Immunology, hypersensitivity tests
7.1	Infection of bones/joints
7.2	Infection of burns case
7.3	Serological test – interpretation of Antistreptolysin O (ASO), Rheumatoid Arthritis (RA), Venereal Disease Research Laboratory (VDRL), C-Reactive Protein (CRP), Widal, Enzyme-Linked Immunoassay (ELISA) (HIV, HBsAg), PCR based diagnosis
7.4	Demonstration of gross/microscopic appearance of various parasites
8	Aseptic universal precautions & practices
8.1	Biomedical waste and universal precautions

PRACTICALS: (Demonstration only)

Staining, Microscopy, Sterilization, Media, Stool sample, Serology tests

Recommended Study Materials:

Textbooks: -

1. Microbiology for Physiotherapy students – B.S. Nagoba

Reference books: -

1. Textbook of Microbiology – R. Ananthnarayan & CK Jayram Panikar

2. Textbook of Microbiology – Chakraborty

3. Textbook of Microbiology – Dr Arora

4. Essentials of Medical Microbiology – Rajesh Bhatia, Rattan Lal Ichhpujani

5. Essentials of Medical Microbiology – Apurba Sankar Sastry and Sandhya Bhat

C. PHARMACOLOGY

Course Outcomes

At the end of course, the candidate will be able to...

1. Possess relevant knowledge in basic principles of pharmacology and its recent advances.
2. Understand the basic pharmacology of common drugs used, their importance in the overall treatment including Physiotherapy.
3. Understand the general principles of drug action and the handling of drugs by the body.
4. Understand the contribution of both drug and physiotherapy factors in the outcome of treatment.

SR. NO	TOPIC
1.	<p>General Principles</p> <p>1.1 Introduction and scope of pharmacology (definitions)</p> <p>1.2 Routes of drug administration (With more emphasis on oral, sublingual, IV, IM and SC routes)</p> <p>1.3 Pharmacokinetics: Factors affecting absorption, bioavailability, the volume of distribution, plasma protein binding, Prodrugs, drug metabolism, first-pass metabolism, elimination kinetics, biological half-life ($t_{1/2}$) and steady-state concentration (in brief)</p> <p>1.4 Pharmacodynamics: Concept of receptors and signal transduction mechanisms</p> <p>1.5 Adverse drug reactions</p> <p>1.6 Factors influencing drug actions (in brief)</p>
2.	<p>Drug acting on the peripheral nervous system (autonomic nervous system)</p> <p>Classification, mechanism of action, Pharmacological action of Prototype, ADR and uses</p> <p>2.1 Adrenergic agonists and antagonists (prototype agents – Adrenaline, Propranolol)</p> <p>2.2 Cholinergic agonists and antagonists (Prototype agents – Acetylcholine, Atropine)</p> <p>2.3 Skeletal muscle relaxants (Prototype – d-Tubocurarine)</p>
3.	<p>Autacoids related drugs</p> <p>Classification, mechanism of action, Pharmacological action of Prototype, ADR and uses</p> <p>3.1 Non-steroidal anti-inflammatory drugs (NSAID) (prototype agents – Aspirin, paracetamol)</p> <p>3.2 Drug therapy of Rheumatoid arthritis</p> <p>3.3 Gout</p>
4.	<p>Drugs for respiratory disorders</p> <p>Classification, mechanism of action, Pharmacological action of Prototype, ADR and uses</p> <p>4.1 Drug therapy of cough</p> <p>4.2 Drug therapy of bronchial asthma, Chronic Obstructive Pulmonary Disease (COPD)s</p>
5.	<p>Drugs for cardiovascular diseases</p> <p>Classification, mechanism of action, Pharmacological action of Prototype, ADR and uses</p> <p>5.1 Drugs used in the management of hypertension</p> <p>5.2 Angina pectoris (prototype- Nitroglycerine), congestive heart failure (prototype - Digitalis), cardiac arrhythmias,</p> <p>5.3 Diuretics</p>

6. Drugs used in central nervous system (CNS) disorders

Classification, mechanism of action, Pharmacological action of Prototype, ADR and uses

- 6.1 Sedatives and hypnotics & antianxiety drugs (Prototype – Barbiturates & benzodiazepines)
- 6.2 Antiepileptic drugs (Prototype – Phenytoin, Carbamazepine)
- 6.3 Opioid analgesics (Prototype - Morphine)
- 6.4 Antidepressants (Prototype – TCA, SSRI)
- 6.5 Antipsychotics (Prototype – Chlorpromazine, Clozapine)
- 6.6 General and local anaesthetic agents (In brief)
- 6.7 Drugs used in the treatment of parkinsonism (Prototype – Levodopa – Carbidopa combination)

7. Chemotherapy

- 7.1 General classification of antibiotics and mechanisms of resistance

Classification, mechanism of resistance, mechanism of action, ADR and uses

- 7.2 Antitubercular drugs
- 7.3 Antileprosy drugs

Other chemotherapeutic drugs:

Classification, mechanism of action, ADR and uses

- 7.4 Antibacterial drugs: Sulfonamides & cotrimoxazole, fluoroquinolones, beta-lactam antibiotics (prototype – Penicillin G, cephalosporins – classification and uses), aminoglycosides (Prototype – Streptomycin), tetracyclines, chloramphenicol, macrolide antibiotics.

8. Endocrine pharmacology

Classification, Pharmacological actions of Prototype, mechanism of action, ADR and uses

- 8.1 Thyroid (Prototype - Thyroxine) and antithyroid drugs
- 8.2 Insulin (insulin release, actions & preparations) and other antidiabetic drugs
- 8.3 Drugs used in the treatment of osteoporosis
- 8.4 Glucocorticosteroids (in brief)

9. Drugs used in gastrointestinal disorders

Classification, mechanism of action, ADR and uses

- 9.1 Diarrhoea,
- 9.2 Vomiting,
- 9.3 Constipation,
- 9.4 Peptic ulcer

10. Miscellaneous drugs

- 10.1 Drugs used in the management of anaemia (classification based on the type of anaemia)

Classification, mechanism of action, ADR and uses

- 10.2 Immunomodulators (more emphasis on Calcineurin inhibitors, Antimetabolites and glucocorticoids), vaccines and sera (brief)

Recommended Study Materials:

Textbooks:

1. Essentials of Medical Pharmacology – KD Tripathi
2. Pharmacology for Physiotherapy students - Padmaja Udaykumar, Jaypee Publication.
3. Pharmacology & Pharmacotherapeutics - RS Satoskar, SD Bhandarkar & Nirmala N Rege

Reference books:

1. Clinical Pharmacology - D.R. Laurence, PN Bennet, MJ Brown
2. Goodman & Gilman's the pharmacological basis of therapeutics
3. Basic and Clinical Pharmacology- Bertram G Katzung

A handwritten signature in blue ink, appearing to read "Ashish", enclosed within a hand-drawn oval.

D. EXERCISE THERAPY 2

Course Outcomes

At the end of course, the candidate will be able to...

1. Provide high quality, ethical, effective, and cost-efficient practices by students and gain expertise in the exercise prescription to patients.
2. Understand principles and procedures, indications, contraindications and precautions, appropriate methods of application of each of the assessment strategy and treatment techniques hands-on and on models with Application of different exercise therapeutic modality to patients.
3. Understand the effect of exercise therapeutic modality in the restoration of physical function.
4. Describe the physiological and therapeutic effects of various movements and acquire the skills of using various tools of the therapeutic gymnasium.

SR. NO .	TOPIC
1.	Stretching: 1.1 Definitions related to stretching, types of contractures and differentiation properties of soft tissues affecting elongation and aims of stretching 1.2 Manual and mechanical stretching 1.3 Cycle mechanical stretching, indications and aims of stretching 1.4 Principles and contraindications
2.	Continuous Passive Movement (CPM) unit: 2.1 Definition 2.2 Method of application 2.3 Indications 2.4 Contra-indications and 2.5 Precautions
3.	Traction: 3.1 Types 3.2 Effects 3.3 Principles of application for cervical and lumbar spine 3.4 Traction to soft tissues of joints – gliding movements
4.	Mobilization: 4.1 Causes of restriction of Range of Motion (R.O.M.) 4.2 Prevention of restrictions 4.3 Techniques of mobilization of various joints of limbs to mobilize joint R.O.M. through functional diagonal patterns 4.4 Joint mobilization; manipulation-definition 4.5 Types 4.6 Joint shapes 4.7 Types of motion 4.8 Stretching 4.9 Glides

4.10	Compression
4.11	Traction
4.12	Indications
4.13	Contraindications
4.14	Precautions
5.	Advance soft tissue Mobilization:
5.1	Basic principles of Muscle Energy Techniques (MET)
5.2	Myofascial Release Techniques (MFR)
5.3	Positional Release Therapy (PRT)
5.4	Neural Tissue Mobilization (NTM)
6.	Manual Muscle Testing (M.M.T.):
6.1	Uses
6.2	Fundamental principles
6.3	Anatomical and physiological basis
6.4	Oxford scale of muscle gradation
6.5	Principles of isolation, substitution, stabilization
6.6	Grading procedure for muscles of upper and lower extremities (group and individual)
6.7	Neck and trunk
6.8	Voluntary control of movement gradation by Bobath, Brunnstrom
7.	Crawling exercises:
7.1	Principles
7.2	Types
7.3	Effects & Uses.
8.	Progressive Resisted Exercise (PRE) /Strengthening of muscles:
8.1	Principles involved to prevent muscle wasting
8.2	Rood's technique of initiating muscle contraction
8.3	Progressive strengthening of muscles (loads assisted and resisted exercises)
8.4	Use of equipment
8.5	Reeducation of muscles and restoration of functions
8.6	The practice of strengthening of muscles of limbs; Neck, Trunk and face, Emphasis on hand and foot muscles, Quadriceps, Glutei, Triceps, Deltoid and face muscles
8.7	Use of manual and mechanical resistance
8.8	Contraindications
8.9	Plyometrics
8.10	Muscle Energy Techniques (MET)
8.11	Dynamic exercise: Concentric and eccentric
8.12	Dynamic exercise- Constant versus variable resistance
8.13	Isokinetic exercise
8.14	Open chain and closed chain exercise
8.15	De-Lormes, Oxford, Mac Queen, circuit weight training
8.16	Multiple angle isometrics, isokinetic regimens
9.	Proprioceptive Neuromuscular Facilitation (PNF):
9.1	Introduction
9.2	Principles
9.3	Basic procedures for Facilitation
9.4	Basis techniques of PNF patterns: Arm, Leg, Neck, Head and trunk, Face

9.5	Techniques for emphasis
10.	Relaxation:
10.1	Muscle tone,
10.2	Postural tone
10.3	General and local relaxation techniques of relaxation
11.	Neuromuscular coordination:
11.1	Factors governing co-ordination
11.2	Principles of re-education
11.3	Frenkel's exercises and its techniques
12.	Balance:
12.1	Background and concept
12.2	Key Terms and Definitions
12.3	Balance Control
12.4	Sensory Systems and Balance Control
12.5	Motor Strategies for Balance Control
12.6	Balance Control under Varying Conditions
12.7	Impaired Balance: Sensory Input Impairments Sensorimotor Integration
12.8	Biomechanical and Motor Output Deficits
12.9	Deficits with Aging
12.10	Deficits from Medications
12.11	Health and Environmental Factors
13.	Functional Re-education:
13.1	Mat activities for the re-education of hemiplegics, paraplegics and cerebral palsy
13.2	Walking re-education in neurological and orthopedic conditions.
14.	Aerobic exercises:
14.1	Physiological effects and therapeutic uses
14.2	Fitness testing
14.3	Stress testing for healthy and convalescent individuals
14.4	Pharmacological aspects of exercises.
15.	Postural Drainage:
15.1	Indications and Contraindications,
15.2	Forced Expiration Technique (FET),
15.3	Assistive devices,
15.4	Techniques.
16.	Hydrotherapy:
16.1	Physiological properties of water and hydrodynamics
16.2	Physiological and applications of Bad- Ragaz Technique
16.3	Indications and contraindications
17.	Yoga-Asana, Pranayama and their scientific uses

Recommended Study Materials:

Textbooks:

1. Principles of Exercise Therapy by Dena Gardiner, 4th Edition, CBS Publication.
2. Therapeutic Exercise by Kisner & Colby, 4th Edition; Jaypee Publication.

3. Practical Exercise Therapy by Margaret Hollis, 5th Edition; Blackwell Sciences Publication.
4. Manual Muscle Testing by Daniel and Worthingham

Reference books:

1. Muscle testing - Kendall
2. PNF - Knott and Voss
3. PNF in practice - Susan Adler
4. Muscle Energy Technique - Leon Chaitow.
5. Tidy's Physiotherapy – Stuart Porter
6. The Myofascial Release Manual. - Carol J. Manheim

E. KINESIOLOGY

Course Outcomes

At the end of course, the candidate will be able to...

1. Analyse normal human movement from a global perspective, integrating biomechanics, force, muscle mechanics and motor control theory.
2. Experience quantitative methods of movement analysis using various methods.
3. Apply the analytic methods to specific examples of normal human motor performance.
4. Use these methods for the evaluation and treatment of disorders of the Musculoskeletal system.
5. Apply the analytic methods of different muscles and their effects on specific joints in the human body.

SR. NO .	TOPIC
1.	General bio-mechanics: Kinematics and Introduction to Kinetics
1.1	Determinants of motion (Kinematics): Types of motion, Laws of motion, Location of motion, Direction of motion, Magnitude of motion
1.2	Determinants of force (Kinetic): Definition of force, Magnitude of force, Point of application, Direction of force, Components of force, Composite effects of two or more forces, Torque, Force of friction, Force of inertia, Force of gravity, Equilibrium
1.3	Work
1.3.1	Lever: definition, orders of the lever, anatomical lever, levers in Physiotherapy
1.3.2	Anatomical pulley, anatomical wheel & axis
1.4	Principles of stability The base of support, Center of Mass (COM), Center of Gravity (COG), Segmentation, Visual factors, Psychological factors, Physiological factors
1.5	Mechanism of joint motion
1.5.1	Types of joints, the structure of joints, joint function and motion,
1.5.2	General Properties of Connective Tissue
1.5.3	General Changes with Disease, Injury, Immobilization, Exercise, and Overuse on joints
1.6	Mechanics of muscle action
1.6.1	Classification of muscle,
1.6.2	Types of muscle contractions,
1.6.3	Functional characteristics of muscle,
1.6.4	Line of pull,
1.6.5	The angle of pull,
1.6.6	Length-tension relationship,
1.6.7	Group action of muscles, Action of two joint muscle,
1.6.8	Effects of Immobilization, Injury, and Aging on muscle
2.	Skilled Movements:
2.1	Rope climbing,
2.2	Cycling,
2.3	Running,

2.4	Ballistic and
2.5	Volitional movements
3.	Impetus: The impetus to external objects and receiving impetus
4.	Locomotion:
6.1	Normal gait analysis: definition of gait, phases of normal gait, normal gait with kinetic and kinematics,
6.2	Abnormal pathological gaits,
6.3	Gait training
5.	Biomechanics of joints: Kinetics, kinematics and pathomechanics of joints:
5.1	Hip,
5.2	Knee,
5.3	Ankle,
5.4	Foot,
5.5	Shoulder,
5.6	Elbow,
5.7	Wrist,
5.8	Hand,
5.9	Temporomandibular
6.	Biomechanics of spinal column (Spinal curves, articulations, the non-contractile soft tissue of column, Inter- Vertebral (IV) disc, ligaments, intrinsic equilibrium, movements of the spinal column and muscle mechanics):
6.1	Cervical
6.2	Thoracic
6.3	Lumbar
6.4	Sacral & Coccyx
7.	Mechanics of pelvic complex:
7.1	Pelvis at rest, in standing body and motion,
7.2	Pathomechanics of the pelvis
8.	Mechanics of thorax:
8.1	Movements between ribs and vertebrae, sternum and ribs,
8.2	Patho mechanics of respiration
9.	Postural strain and occupational hazards: Correct use of body mechanics at home, at school and work, recreation, particular application for patients, physiotherapists and other staff.
10.	Kinetics and kinematics of Activities of Daily Living (ADL):
10.1	Supine to sitting,
10.2	Sitting to standing,
10.3	Squatting,
10.4	Climbing up and down,
10.5	Pushing & Pulling,
10.6	Overhead activities,
10.7	Walking,
10.8	Running
11.	Posture:
11.1	Types

11.2 Factors influencing posture

11.1 Regulation of posture and posture mechanism

11.2 Pelvic tilt and postural deviations of the spine and its treatment.

PRACTICALS: Skills to be practised on peer/model for required topics/units

Recommended Study Materials:

Textbooks:

1. Joint structure and function - Cynthia Norkin

Reference books:

1. Therapeutic exercise - Kisner and Colby

2. Principles of exercise therapy - Dina Gardiner

3. Clinical kinesiology – Brunnstrom

4. Muscles: Testing & Function with posture & pain. Florence Peterson Kendall

5. Kinesiology: The Mechanics & Pathomechanics of human movement – Carol A. Otis

6. Kinesiology - Wells, Katharine F.

7. The Physiology of Joints: I. A. Kapanji

A handwritten signature in blue ink, appearing to read 'Ashish', enclosed within a hand-drawn oval.

F. PSYCHIATRY

Course Outcomes

At the end of course, the candidate will be able to...

1. Describe various psychiatric disorders with special emphasis on movement/pain and ADLs & describe the methods of assessment and management.
2. Acquire the knowledge as to how to deal with the patient.

SR. NO .	TOPIC
1.	Mental health: 1.1 Normal Mental Health 1.2 Criteria of normality or matured personality 1.3 Factors contributing to normal mental health.
2.	Study of Abnormal Personality: 2.1 Neurotic 2.2 Hysterical 2.3 Psychotic 2.4 Paranoid 2.5 Schizoid 2.6 Psychopathic etc.
3.	General Etiological Factors: 3.1 Hereditary 3.2 Genetical Constitutional 3.3 Acquired 3.4 Traumatic 3.5 Infective 3.6 Toxic 3.7 Degenerative 3.8 Social and Environmental including pathogenic family patterns 3.9 Precipitating causes 3.10 Frustration and conflicts.
4.	Symptomatology and Treatment of Psychoses: 4.1 Functional: Functional Schizophrenic, reaction group, simple, paranoid, catatonic, hebephrenic paranoid state, paranoia, juvenile, schizophrenia, autistic thinking, dementia. 4.2 Organic: Toxic confused states, senile psychoses, arteriosclerotic, degenerative, General Paralysis/paresis of the Insane (G.P.I.) 4.3 Affective Disorders: Dynamics of Mania, hypomania, chronic mania, Multiple Personality Disorder (M.P.D.) 4.4 Involutional depression, senile depression, postpartum depressive reactions, reactive and neurotic depression, endogenous depression, suicide (egoistic, Altruistic, Anomic) 4.5 Epileptic Disorders: Epileptic Psychosis.

5.	Neurosis: Symptomatology, Diagnosis and Treatment and Psychodynamics of
5.1	Anxiety State
5.2	Hysteria, Conversion Reaction
5.3	Dissociative Reaction
5.4	Dual Personality
5.5	Obsessional Neurosis
5.6	Phobias
5.7	Hypochondriasis
5.8	Neurasthenia and Mental fatigue.
6.	Mental Retardation:
6.1	Definition, Etiological factors - Prenatal, postnatal, infective, hormonal, congenital.
6.2	Types of mental retardation,
6.3	Clinical types-microcephaly, hydrocephalus, mongolism, family idiocy, phenylketonuria etc. Symptomatology of various grades of retardation, differential diagnosis and treatments.
7.	Child Psychology:
7.1	Behaviour Disorders: Nail biting, Enuresis, Truancy, Thumb sucking, Speech difficulties, Pica, Vomiting, Anorexia, delinquency.
8.	Introduction to dynamics of Psychophysical disorders:
8.1	Asthma, Skin rashes, Hypertension, Bowel disorders.
8.2	Introduction to treatment in psychiatry: Electro-Convulsive Therapy (ECT), Insulin, coma therapy.
8.3	Drug therapy - Tranquilizer, Mood elevators, hypnotics and sedatives, Psychotherapy - Deep and superficial, individual and group, expressive, suppressive, environmental manipulation, re-educative.
8.4	Introduction to Physiotherapy in psychiatric conditions
8.5	Introduction to Psychodrama in psychiatric conditions
8.6	Introduction to Play Therapy in psychiatric conditions

Recommended Study Materials:

Textbooks:

1. A short textbook of Psychiatry by Niraj Ahuja, Latest Edition, Jaypee Publications

Reference books:

1. Psychiatry and Behavioural Science by David Baron, Latest Edition, Temple University Press.
2. Shorter Textbook of Psychiatry by Paul Harrison, Latest Edition, Oxford University Press.

G. ELECTROTHERAPY

Course Outcomes

At the end of course, the candidate will be able to...

1. Know the principles, production, physiological effects, therapeutic uses, merits/ demerits, technique and effects of electrotherapy as a therapeutic modality in the restoration of physical function in conditions like nerve injuries.
2. List the indications and contraindications of various types of electrotherapy, demonstrate different techniques and describe their effects.
3. Apply different electrotherapeutic modality to patients.

SR. NO	TOPIC
1.	Low Frequency Currents
1.1	Faradic Current: Definition, Characteristic and modified faradic current, Parameters of faradic stimulation, Physiological and therapeutic effects of faradic-stimulation. Indication, Contra-indications and precautions, Techniques of stimulation- group muscle stimulation, Faradic foot bath, Faradism under pressure and pelvic floor muscle re-education
1.2	Galvanic Current: Introduction, types, characteristics, Parameters of stimulation, Physiological and therapeutic uses of stimulation, Precautions
1.3	Iontophoresis: Definition, principles of iontophoresis, physiological and therapeutic uses, indications, techniques of iontophoresis, principles of treatment, contraindications and dangers.
1.4	Transcutaneous Electrical Nerve Stimulation (TENS): Definition, types, Theories of pain modulation emphasizing on "Pain gate" theory, techniques of treatment, indication and contraindications
1.5	Other Current: Sinusoidal current
2.	Medium Frequency Current
2.1	Interferential current: Definition, characteristics, physiological & therapeutic effects, techniques of application, indications, contraindications and precautions
2.2	Other Currents: Introduction to Russian current, Di-dynamic current, High Voltage Pulsed Galvanic Stimulation (HVPGS) and Micro-currents
3.	High-Frequency Current
3.1	Short Wave Diathermy (SWD): Introduction, physiological effects and Therapeutic effects, methods of application (capacitor field method and cable method etc.) Techniques of treatment, indication, contra-indications and dangers.
3.2	Pulsed SWD: Definition, characteristics, mechanism of work, physiological effects and therapeutic effects, indications, techniques of application, principles of treatment and contra-indications
3.3	Ultrasonic Therapy (US): Introduction and characteristics, parameters, coupling media, therapeutic effects, indications contra-indications and dangers, testing of apparatus, techniques of application & dosage, Phonophoresis
3.4	Infrared Rays (IRR): Production of infrared rays, luminous and non-luminous generators, penetration, the technique of application, physiological effects and therapeutic uses of infra-red rays, duration and frequency of treatment, indications and contraindications,

dangers and precautions.
3.5 Ultra Violet Rays (UVR): Production, test dose, physiological effects of UVR dosimetry in UVR. Psoralen UVA (PUVA)
3.6 LASER: Introduction and characteristics, effects on tissue, therapeutic effects, principles of application, indications, contra-indications and dangers
3.7 Microwave Diathermy (MWD): Introduction and characteristics, physiological effects, therapeutics effects, techniques of application and principles of treatment, indications, contra-indications and dangers
4. Electro-Diagnosis
4.1 Faradic-Galvanic (FG) Test
4.2 Strength Duration (SD) Curve: Methods of Plotting SD Curve, Apparatus selection, Characters of Normally innervated Muscle, Characters of Partially Denervated Muscle, Characters of Completely denervated Muscle, Chronaxie & Rheobase.
4.3 Nerve conduction velocity studies: Introduction, physiology and basics of its application and uses
4.4 Electromyography (EMG): Introduction, physiology and basics of its application and uses
4.5 Late Responses: F-wave, H-reflex
5. Superficial Heating & Cryotherapy
5.1 Superficial heat modalities: Paraffin Wax Bath, Heating pad, Moist heat, Fluidotherapy, Whirlpool bath: Construction, Method of application, Therapeutic uses, Indications & Contraindications.
5.2 Cryotherapy: Definition, Principles, Latent heat of fusion, Physiological & Therapeutics effects, Techniques of Applications, Indications & Contraindications, Dangers, Methods of application with dosages.
5.3 Contrast Bath: Methods of application, Therapeutic uses, Indications & Contraindications.
6. Recent Advances
6.1 Computerization in electrotherapy
6.2 Combination therapy: Principles, therapeutic uses and indications like Ultrasound therapy with stimulation or Trans-Cutaneous Electrical Nerve Stimulation (TENS) etc.
6.3 Advanced Therapies: High-intensity Laser Amplification by Stimulated Emission of Radiation (LASER), Shockwave, Pulsed Electromagnetic Energy (PEME), Long Wave Diathermy (LWD), Variable Muscle Stimulation, Spinal Decompression, Pneumatic Compression therapy, Functional Electrical Stimulation (FES), Virtual Reality (VR) training.
6.4 Biofeedback: Introduction, principles, therapeutic effects, indications and contra-indications, techniques of treatment

Recommended Study Materials:

Textbooks:

1. Textbook of Electrotherapy - Jagmohan Singh
2. Electrotherapy explained - Low & Reed
3. Basics of Electrotherapy - Subhash Khatri

Reference books:

1. Clayton's electrotherapy (6th and 9th Ed.)
2. Clinical electrotherapy - Nelson & Currier

3. Clinical electrophysiology: Electrotherapy & electrophysiological testing – Andrew J. Robinson & Lynn Snyder Mackler

A handwritten signature in blue ink, appearing to read "A. Robinson", enclosed within a hand-drawn oval.

H.

RADIOLOGY
(Not for University Exam)

Course Outcomes

At the end of course, the candidate will be able to...

1. Identify the differences between normal and abnormal X rays of extremities, spine and chest and also in specific conditions like OA.
2. Understand other radio imaging techniques like MRI, CT, USG etc.
3. Apply the use of interpretation of radiography findings for assessment and treatment of the patients.

SR. NO	TOPIC
1.	Introduction to Radiology
2.	Importance of Radiology in Physiotherapy
3.	X-rays of fractures of different bones in the body
4.	X-rays of different stages of fracture healing
5.	X-rays of different Orthopedic conditions - Osteoarthritis, Rheumatoid arthritis
6.	Cervical & lumbar spondylosis, foot deformities etc.
7.	X-rays of common chest conditions
8.	Other imaging techniques
8.1	C.T. Scan,
8.2	M.R.I.,
8.3	Ultrasound,
8.4	Endoscopy,
8.5	Fluoroscopy,
8.6	Angiography,
8.7	3D reconstruction of bones & joints (What is it, Indication, Contraindication, Technique, Benefits vs. Risks, and Cost)

Recommended Study Material:

Reference books:

1. Chest X-ray interpretation - Michael Darby et al.
2. Bone and joint imaging - Donald Resnick

I. EAR, NOSE, AND THROAT (ENT)

(Not for University Exam)

Course Outcomes

At the end of course, the candidate will be able to...

1. Describe the anatomy and physiology of hearing and the use of audiometry in the assessment of hearing.
2. Understand diseases of E.N.T. emphasis on otitis media, Bell's palsy, sinusitis and rhinitis

SR. NO .	TOPIC
1.	Anatomy & Physiology of Hearing:
1.1	Assessment & Management of Hearing Loss
2.	Introduction to Disease of ENT:
2.1	Otitis media,
2.2	Sinusitis &
2.3	Rhinitis
3.	Facial Nerve Palsy:
3.1	Causes & Management
4.	Larynx & Associated functional paralysis with tracheostomy & Care of tracheostomy
5.	Vertigo:
5.1	Causes, Assessment & Management.

Recommended Study Materials:

Textbooks:

1. Principles and practice of medicine by – Davidson, 20th Edition, Churchill Livingstone Publication
2. Principles of Internal medicine - Harrison

J. OPHTHALMOLOGY

(Not for University Exam)

Course Outcomes

At the end of course, the candidate will be able to...

1. Describe the anatomy and physiology of hearing and the use of audiometry in the assessment of hearing.
2. Describe Common eye diseases, vitamin A deficiency, Eye lesion in leprosy and disorders of ocular movements in myasthenia gravis, progressive supranuclear palsy and lower motor neuron diseases.

SR. NO	TOPIC
1.	Common eye diseases, including Refractory errors, Conjunctivitis, and Trachoma.
2.	Cataract and glaucoma.
3.	Squint and ptosis.
4.	Eye lesions in leprosy, including causes treatment and complications of lagophthalmos.
5.	Causes, clinical features and treatment of disorders of ocular movement occurring in diseases such as myasthenia gravis, progressive supranuclear palsy and lower motor neuron diseases.
6.	Causes, clinical features, treatment and prognosis in inflammatory disorders, vitamin A deficiency, emphasis on preventable causes and prophylactic measures.
7.	Definition of blindness, and visual disability evaluation, investigative procedures used for testing visual failures.

Recommended Study Materials:

Textbooks:

1. Principles and practice of medicine by – Davidson, 20th Edition, Churchill Livingstone Publication
2. Principles of Internal medicine - Harrison

K. ETHICS & PROFESSIONAL PRACTICE & ALLIED THERAPEUTICS
(Basics only) (Not for University exam)

ETHICS

Course Outcomes

At the end of course, the candidate will be able to...

1. Appraise the evidence, do an economic evaluation of evidence and communicate the evidence to clients, managers and funders.

SR. NO .	TOPIC
1.	Ethical code of concept
2.	Communication skills
3.	Physiotherapist-patient relationship
4.	Interviews – Types of the interview, skills of interviewing

EVIDENCE-BASED PRACTICE & ICF

Course Outcomes

At the end of course, the candidate will be able to...

1. Able to critically appraise the evidence, do an economic evaluation of evidence and communicate the evidence to clients, managers and funders.
2. Understand the concept of Evidence-Based Practice and its implementation in Physiotherapy.
3. Search, review and use the evidence in Physiotherapy

SR. NO .	TOPIC
1.	Introduction to Evidence-Based Practice
1.1	Definitions, Evidence-Based Practice, Evidence-Based Physiotherapy Practice
2.	Concepts of Evidence-based Physiotherapy Awareness, consultation, judgment, creativity
2.1	Development of Evidence-based knowledge
2.2	The individual professional, professionals within a discipline, professionals across disciplines
3.	Evidence-Based Practitioner
3.1	The reflective practitioners, the E model
4.	The Disablement Process,
4.1	Models of Disablement,
4.2	Use of Disablement Models,
4.3	Classifications in Physical Therapy.

ALLIED THERAPEUTICS

Course Outcomes

At the end of the course, the candidate will be able to...

1. Incorporate dry needling as a treatment modality in their practice as clinically indicated.
2. Describe the various principles of Naturopathy concerning the body, health, disease and therapy, diagnosis, and management.
3. Analyse the therapeutic values of magnets in the treatment of various diseases.

SR. NO	TOPIC
1.	Acupuncture and acupressure: 1.1 Definition, 1.2 Principles, 1.3 Techniques, 1.4 Physiological and therapeutic effects, 1.5 Contraindications and dangers
2.	Introduction to Naturopathy
3.	Introduction to Magneto therapy
4.	Dry Needling (DN) 4.1 Introduction, 4.2 General practice 4.3 Guidelines, 4.4 Safety, 4.5 Principles, 4.6 Hygiene, 4.7 Patient-skin preparation, 4.8 Correlation with acupuncture 4.9 Electrical stimulation and dry needling

Recommended Study Materials:

Textbooks:

1. Alternative Therapies – Swati Bhagat
2. Trigger Point Dry needling – Paras Joshi

Reference books:

1. Physical rehabilitation, Susan B. O'Sullivan
2. Tidy's Physiotherapy – Stuart Porter

THIRD-YEAR SYLLABUS

A. GENERAL MEDICINE

Course Outcomes

At the end of course, the candidate will be able to...

1. Acquire the knowledge of Etiology, Pathophysiology, signs and symptoms and management in brief, of the infectious diseases, cardiovascular and respiratory disorders, auto-immune conditions, endocrinal disorder and nutritional disorder.
2. Acquire the knowledge in medicine that is required to be practised in the community and at all levels of the health care system.
3. Understand relevant investigations which will help to know about the important medical conditions.
4. Able to describe the principles of management at the medical intensive care unit including the practice of first aid/Cardiopulmonary Resuscitation (CPR)

SR. NO.	TOPICS
1.	Respiratory Diseases
1.1	Lung function tests
1.2	Pneumonia
1.3	Interstitial Lung Disease (ILD)
1.4	Cystic fibrosis
1.5	Respiratory failure
1.6	Upper Respiratory Tract Infection (URTI)
1.7	Pulmonary oedema
1.8	Pulmonary embolism lung abscess
1.9	COPD (Bronchiectasis, Emphysema, Chronic Bronchitis)
1.10	Asthma
1.11	Pleural effusion
1.12	Pneumothorax
1.13	Empyema
2.	Cardio Vascular Diseases
2.1	Rheumatic fever
2.2	Valvular lesions
2.3	Congestive cardiac failure
2.4	Ischemic heart diseases (Angina pectoris and myocardial infarction) stress test
2.5	Cardiac arrest hypertension
2.6	Peripheral vascular diseases (TAO, Raynaud's disease)
2.7	Cardiomyopathy
2.8	Congenital heart disease
2.9	Myocarditis
3.	Endocrinal Disorders
3.1	Diabetes mellitus
3.2	Obesity
3.3	Thyroid disorder

4.	Gastrointestinal Disorders
4.1	Peptic ulcer
4.2	Pancreatitis
4.3	Dysenteries and Diarrhea
4.4	Inflammatory bowel diseases
4.5	Jaundice
4.6	Cirrhosis of liver
5.	Infectious Disease
5.1	Tuberculosis
5.2	Malaria
5.3	Typhoid
5.4	Infective hepatitis
5.5	Tetanus
5.6	Covid-19
5.7	Mucormycosis
6.	Nutritional Disorder
6.1	Vitamins and their deficiencies
6.2	Disorders including rickets and osteomalacia
7.	Rheumatology
7.1	Rheumatoid arthritis
7.2	Ankylosing spondylitis
7.3	Gout
7.4	Osteoarthritis
7.5	Spondyloarthritis
7.6	Systemic lupus erythematosus
7.7	Polyarteritis nodosa
7.8	Mixed connective tissue disorders
7.9	Scleroderma.
8	Blood disorder
8.1	Anaemia
8.2	Hemophilia

Recommended Study Materials:

Textbooks:

1. Textbook of medicine by Golwala, 18th edition
2. Principles and practice of medicine by – Davidson, 20th Edition, Churchill Livingstone Publication

Reference books:

1. Practical medicine by – P J Mehta, 20th Edition.
2. P.C.DAS and P.K. DAS textbook of Medicine, 6th Edition, Current Books International Publication.
3. ACP Medicine by – Davis C Dale, 2004-2005 Edition, Churchill Livingstone Publication.

A. SKIN (DERMATOLOGY)

Course Outcomes

At the end of course, the candidate will be able to...

1. Acquire knowledge of the structure and function of the skin.
2. The student will also be able to describe etiology, clinical features and management of bacterial, fungal, viral, allergic, autoimmune skin diseases.
3. The student will acquire knowledge in sexually transmitted diseases and leprosy.

SR. NO	TOPIC
1.	Structure and functions of normal skin, primary and secondary skin lesions.
2.	Scabies and pediculosis.
3.	Fungal infections of the skin: Dermatophytosis, Pityriasis, Versicolor, Candidiasis.
4.	Bacterial infections of skin-impetigo / Boil.
5.	Viral infections of skin-Herpes zoster.
6.	Eczema / Dermatitis / Allergies.
7.	Psoriasis / Acne / Alopecia / Vitiligo and Leukoderma.
8.	Leprosy / Lepra - reaction/Physiotherapy in leprosy.
8.	Sexually transmitted diseases: Syphilis: primary & secondary, Gonorrhoea, Chancroid, AIDS.

Recommended Study Materials:

Textbooks:

1. Dermatology and sexually transmitted disease, Neena Khanna

Reference books:

1. ABC of dermatology. P. K. Buxton

B. NEUROLOGY

At the end of course, the candidate will be able to...

1. Understand the basic neurological conditions which commonly cause disability and their management.
2. Know the etiology, Classification, Pathology, Clinical Features, Relevant Investigations, Complications, Surgical & Non-Surgical Management of various Neurological Conditions.
3. Understand the importance of various investigations like haematological, biochemical, electrophysiological & radio imaging investigations in diagnosis as well as in the management of neuro conditions

SR. NO	TOPIC
1.	Lesions and diseases of various areas of the brain 1.1 Pyramidal system, 1.2 Extra-pyramidal system, 1.3 Cerebellar system, 1.4 Spinal cord, 1.5 Upper and lower motor neuron, 1.6 Cranial nerves, 1.7 Brachial plexus, 1.8 Lumbosacral plexus and peripheral nerves.
2.	Causes, Clinical features, management of various conditions: 2.1 Unconscious patient, 2.2 Hemiplegia, 2.3 Paraplegia, 2.4 Quadriplegia, 2.5 Cerebral diplegia, 2.6 Spastic child, 2.7 Foot drop and wrist drop.
3.	Disorders of cerebral circulation.
4.	Infections: 4.1 Encephalitis, 4.2 Meningitis, 4.3 Poliomyelitis, 4.4 Transverse myelitis, 4.5 Slow viral diseases.
5.	Diseases of Peripheral nerves: 5.1 Peripheral neuropathy, 5.2 Other neuropathies.
6.	Muscle disorders: 6.1 Myopathy, polymyositis, 6.2 Muscular dystrophies.

7.	Degenerative diseases:
7.1	Parkinsonism,
7.2	Myasthenia gravis,
7.3	Motor neuron diseases,
7.4	Spinocerebellar degenerations and diseases of anterior horn cell,
7.5	Dementia.
8.	Costo-clavicular syndrome.
9.	Demyelinating disorders including multiple sclerosis.
10.	The basic concept of electrophysiology and electromyography.
11.	Giddiness and vertigo.

Recommended Study Materials:

Textbooks:

1. Neurology and neurosurgery illustrated, Lindsay
2. Textbook of medicine by Golwala, 18th edition
3. Practical Medicine by P J Mehta
4. Physical rehabilitation, Susan B. O'Sullivan

Reference books:

1. Clinical Neuroanatomy by Vishram Singh, Latest Edition, Elsevier
2. Cash's Textbook of Neurology for Physiotherapists by Patricia A. Downie, Latest Edition, Jaypee Publication
3. Physiotherapy in Neuro-conditions by Gladys Samuel Raj, Latest edition, Jaypee Publication

D. PAEDIATRICS

Course Outcomes

At the end of course, the candidate will be able to...

1. Describe the normal development and growth of a child.
2. Describe neuromuscular, Musculoskeletal and cardiopulmonary conditions in children and also acquire the skill of clinical examination of a child concerning neurological musculoskeletal and respiratory functions.

SR. NO	TOPIC
1.	Growth and development of a child from birth to 12 years, including physical, social, adaptive development.
2.	The maternal and neonatal factors contributing to high-risk pregnancy, the neonate, inherited diseases, maternal infections - viral and bacterial, maternal diseases incidental to pregnancy, induced hypertension, chronic maternal diseases such as heart diseases, renal failure, tuberculosis, diabetes, epilepsy, bleeding in the mother at any trimester.
3.	Community programs: International (WHO), national and local, for prevention of poliomyelitis, blindness, deafness, mental retardation and hypothyroidism, the immunization schedule for children.
4.	Cerebral Palsy: Etiology - prenatal, perinatal and postnatal causes, pathogenesis, types of cerebral palsy (classification), findings on examination, general examination, examination of C.N.S., musculoskeletal system, respiratory system, G.I. Tract and nutritional status.
5.	Downs syndrome, Mental retardation, microcephaly, blindness, hearing and speech impairment, squint and convulsions.
6.	Prevention: Appropriate management of high-risk pregnancies, prevention of neonatal and postnatal infections, metabolic problems.
7.	Muscular Dystrophy: Various forms, modes of inheritance and clinical manifestation, physical findings concerning disabilities, progression of various forms and prognosis, treatment goals in forms that are not fatal.
8.	Spina Bifida: 8.1 Meningomyelocoele: Development, clinical features - lower limbs, 8.2 Bladder and bowel complications – Urinary Tract Infection (UTI). and 8.3 Hydrocephalus, medical management.
9.	Still's Disease: Classification, pathology, in brief, physical findings, course and prognosis, treatment, prevention and correction of the deformity.
10.	Acute C.N.S. infections: Classification (Bacterial and Viral), the acute illness, C.N.S. sequelae leading to mental retardation, blindness, deafness, speech defect, motor paralysis, bladder and bowel problems, seizure disorder and specific problems such as subdural effusion, hydrocephalus, pressure sores, feeding difficulties.
11.	Arnold Chiari Malformation, Basilar Impression, Klippel-Feil Syndrome, Achondroplasia, Cerebral Malformation, Autism, Dandi Walker Syndrome
12.	Normal diet of newborn and child: List dietary calorie, fat, protein, mineral and vitamin requirement in normal child and a child with malnutrition. childhood obesity. Etiology, findings, and treatment of rickets, vitamin D deficiency and resistant rickets.

13. Lung infections: Clinical findings, complications and medical treatment of bronchiectasis

Recommended Study Materials:

Textbooks:

1. Essential of paediatric, OP Ghai

Reference books:

1. Nelson textbook of Paediatrics

E. SURGERY

Course Outcomes

At the end of course, the candidate will be able to...

1. Able to describe preoperative evaluation, surgical indications and various surgical approaches in various abdominal, neurological & cardiothoracic conditions.
2. To remember surgical approaches in the form of line diagram and will be able to describe the components of soft tissue, cut to reach the target tissue and possible post operative complications in the movement & posture.
3. Describe the management of head injury, spinal surgeries, intracranial tumors, peripheral nerve injury, pain, wound, ulcer, burns.

GENERAL SURGERY & PLASTIC SURGERY & NEUROSURGERY

SR. NO	TOPIC
1.	Acute infections, Inflammatory fever, bacteremia, septicemia, pyemia, toxemia. Specific types - Cellulitis - sites lymphangitis, abscess with special reference to hand infection, carbuncle.
2.	Specific types continued: Tetanus, gas gangrene, hospital infection, cross-infection with modes of spread and prevention, General survey of chronic inflammations, Syphilis (reference to other venereal diseases) leprosy, actinomycosis.
3.	General survey of trauma, pathology and clinical features of wound repair - primary, secondary and tertiary wound healing, Clean wounds, contaminated wounds and infectious wounds, Principles of treatment, survey of factors affecting wound healing, Ulcers and gangrene, Post-operative complications of abdominal surgery specifically chest, wound infection, oedema.
4.	Burns as a specific type of severe trauma, classification, early and late complications, management & reconstructive surgery - skin grafting as an example of the plastic procedure.
5.	Types of skin grafting - take of grafting - healing of grafting, Post-operative care of plastic surgery with the specific role of physiotherapy.
6.	Outline of surgical disorders of brain-head injuries. A general survey of surgical disorders of the spine and spinal cord problem of paraplegia, malignancy - spread and its behaviour, various abdominal incisions, abdominal drainage tubes, catheters and nasogastric tubes, ward demonstration for an hour a day for one week.
7.	Anesthesia, O.T. demonstrations.
8.	Neck, skin contractures and correction.
2.	Problems of trauma to hand and their management
3.	Principles of cineplasty, tendon transplant, cosmetic surgery types of grafts, surgery of hands with emphasis on management of traumatic and leprosy hand.
4.	Breast – Surgery
5.	Neurophysiology - Neurophysiology, basis of tone, disorders of tone and posture, bladder

control, muscle contraction, movement and pain with clinical features and management of the following:
12.1 Congenital and childhood disorders - hydrocephalus spina bifida
12.2 Trauma - Broad localization, first aid and management of squeal of head injury and spinal cord injury.
12.3 Diseases of the Spinal Cord - Craniovertebral junction anomalies, syringomyelia, cervical and lumbar disc disease, tumors.
12.4 Peripheral nerve disorders - Peripheral nerve injuries, localization & management.
12.5 Entrapment neuropathies.
12.6 Intracranial tumors - Broad classification, signs and symptoms.
12.7 Pre-operative Assessment and indications and contraindication for neurosurgery in intracranial tumors.
12.8 Management of pain, electrical stimulation of the brain and spinal cord.
12.9 Miscellaneous.
Clinical: Operation Theater (O.T.) Visit

CARDIOTHORACIC SURGERY

SR. NO .	TOPIC
1.	Basic anatomy chest wall, trachea and bronchial tree, lungs and bronchopulmonary segments, pleura and mediastinum.
2.	Physiology and mechanics of breathing and use of mechanical breathing - ventilator: (respirators).
3.	Investigation of lung diseases including endoscopies.
4.	Chest injury.
5.	Common suppurative diseases of lung - Bronchiectasis, lung abscess.
6.	Bronchogenic carcinoma.
7.	Common surgeries of the chest.
1.1	Thoracoplasty,
1.2	Pulmonary dissections,
1.3	Thoracotomy
1.4	Pneumothorax,
1.5	Hydrothorax-Pneumothorax,
1.6	Empyema.
2.	Common diseases of the oesophagus and related conditions causing dysphagia.
2.1	Cholecystectomy,
2.2	Colostomy,
2.3	Ileostomy,
2.4	Gastrectomy,
2.5	Hernias,
2.6	Appendicectomy,
2.7	Mastectomy,
2.8	Nephrectomy,

2.9	Prostatectomy.
3.	Surgery of portal hypertension.
4.	Surgery of pulmonary tuberculosis.
5.	Surgery of heart and great vessels.
6.	Investigation of a patient undergoing cardiac surgery.
7.	Basic principles of open-heart Surgery, Heart-lung bypass (Extra Co-portal circulation).
8.	Common diseases of the heart requiring surgery both congenital and acquired including open-heart surgery.
9.	Common drugs used in cardiac surgery, their uses, side effects.
10.	Common vascular surgery:
1.1	Embolectomy,
1.2	Vascular reconstructive surgery, (Thrombosis, Embolism, atherosclerotic and occlusive vascular diseases including coronary artery bypass).
Clinical:	
1.	Examination of patients as regards chest & heart diseases.
2.	Demonstration - Acquaintances with C.T. Surgery.
3.	Equipments, I.C.C.U., O.T.
4.	Radiology - X-ray studies - X-ray chest in various lung diseases.

Recommended Study Materials:

Textbooks:

1. A manual on Clinical Surgery, S Das
2. Neurology and neurosurgery illustrated, Lindsay

Reference books:

1. Short practice of surgery, Bailey and Love

G. PHYSICAL & FUNCTIONAL DIAGNOSIS

Course Outcomes

At the end of course, the candidate will be able to...

1. Acquire the skill of detection & objective documentation of the Neuro-Musculoskeletal dysfunction such as Pain, altered muscle power, mobility, endurance, limb length, posture, gait, hand function & A.D.L.s.
2. Analyse & discuss the Physiological & Biomechanical bases of movement dysfunction
3. Acquire the skill of performance and interpretation of electrodiagnostic tests and Pulmonary Function Test
4. Analyse Arterial Blood Gas analysis and Exercise Tolerance Test

SR. NO	TOPIC
1.	<p>General principles of Human development & maturation</p> <p>1.1 Aspects: physical, motor, sensory, cognitive, emotional, cultural, social.</p> <p>1.2 Factors influencing human development & growth: Biological, environmental, inherited.</p> <p>1.3 Principles of maturation - in general - in anatomical directional pattern cephalocaudal proximodistal, centro-lateral, mass to a specific pattern, gross to fine motor development.</p> <p>1.4 Reflex maturation tests</p> <p>1.5 Development in specific fields: Oromotor development, sensory development, neurodevelopment of hand function.</p>
2.	<p>Electrodiagnosis</p> <p>2.1 Bioelectricity-Physiology of generation & propagation of action potential, volume conduction.</p> <p>2.2 Therapeutic current as a tool for Electrodiagnosis.</p> <p>2.3 Physiological principles, use of alternating & direct currents in electro-diagnosis such as sensory & Pain threshold, Pain tolerance, Short & long pulse test, S.D. curves, Chronaxie & Rheobase, accommodation ratio.</p> <p>2.4 Principles of nerve conduction studies, late responses.</p> <p>2.5 E.M.G. instrumentation, basic components, panel diagram, types of electrodes.</p> <p>2.6 Principles of Electromyography, motor unit –Normal characteristics-activity at rest, recruitment/frequency pattern at minimal activity, Interference pattern.</p>
3.	<p>Assessment of Neurological dysfunction</p> <p>3.1 Higher functions, cranial nerves, sensations & sensory organization, body image, tone, reflexes: superficial & deep, voluntary control, muscle strength, coordination, balance, posture, gait.</p> <p>3.2 Scales: Functional Reach Test (FRT), Berg's Balance, modified Ashworth, Glasgow Coma, Time Up & Go Test (TUG), Functional Independence Measure (FIM).</p> <p>3.3 Functional diagnosis using ICF.</p> <p>3.4 Interpretation of electrodiagnostic findings, routine biochemical investigations.</p>
4.	<p>Assessment of Musculoskeletal Dysfunction</p> <p>4.1 Tightness, deformity, joint mobility, muscle strength, limb length, trick movement, girth, posture, gait, special tests in various clinical conditions</p>

4.2	Functional diagnosis using ICF.
4.3	Interpretation of X-ray of extremities & spine, routine biochemical investigations, CT scan, MRI.
4.4	Assessment of pelvic floor muscle strength and function
4.4.1	Digital evaluation of vagina
4.4.2	Perineometer
4.4.3	Pad test.
4.5	Disability Evaluation: Gait and gait parameters, percentage of disability (temporary and permanent).
5.	Assessment of cardio-pulmonary dysfunction
5.1	Vital parameters, chest expansion, chest excursion, breath-holding test, breathe sounds, Rate of Perceived Exertion (RPE), Peak Flow Rate (PFR).
5.2	Exercise Tolerance: six minutes' walk test, shuttle test, theoretical bases of Bruce's protocol, step test.
5.3	Ankle Brachial Index, tests for peripheral arterial & venous circulation.
5.4	Functional diagnosis using ICF.
5.5	Interpretation of X-ray chest, routine biochemical investigations, ABG, PFT, ECG (normal values).
6.	Assessment of pain
6.1	Intensity & quality.
6.2	Objective assessment & documentation: VAS, Numerical Rating Scale. Other scales.
7.	Assessment of Hand
7.1	Sensations, mobility of joints, strength.
7.2	Special tests.
7.3	Hand function: Precision & power grips.
8.	Assessment of Obesity
8.1	Classification.
8.2	Assessment – BMI, Waist circumference, Waist – Hip Ratio.
8.3	Introduction to Quality-of-Life Questionnaire.
9.	Assessment of wounds.
Practicals: Skills to be practised on peer/model.	

Recommended Study Materials:

Textbooks:

1. Orthopaedic Physical Assessment, David J Magee
2. Muscles: Testing and Function, with Posture and Pain: 5th edition. Kendall FP; McCreary E. K. et al. Lippincott Williams and Wilkins

Reference books:

1. Practical Exercise Therapy: 3rd edition. Hollis M; Cook PF. Wiley-Blackwell

H. ORTHOPEDICS

Course Outcomes

At the end of course, the candidate will be able to...

1. Understand the pathophysiology, clinical manifestations and conservative/surgical management of various traumatic, non-traumatic & infectious cases of the musculoskeletal conditions.
2. Able to gain the skill of clinical examination and interpretation of the preoperative cold cases and all the post-operative cases.
3. Able to read and interpret pathological/biochemical studies and radio imaging of orthopaedic conditions and able to correlate the findings with the clinical findings

ORTHOPEDICS (TRAUMATIC)

SR. NO.	TOPIC
1.	Introduction:
1.1	Fracture,
1.2	Dislocation and injuries of the upper limb.
1.3	Briefly mention general principles of orthopedic surgery,
1.4	Definition and scope,
1.5	Brief history.
2.	Fracture & dislocations:
1.1	Causes,
1.2	Types,
1.3	Mechanisms,
1.4	Displacement,
1.5	General symptoms,
1.6	Healing,
1.7	Principles of treatment,
1.8	Complications,
1.9	Malunion,
1.10	Delayed union,
1.11	Non-union,
1.12	Myositis Ossificans,
1.13	Volkman's ischemic contracture,
1.14	Fat embolism,
1.15	Sudeck's osteodystrophy.
2.	Injuries to the hand:
2.1	Types (open, closed),
2.2	Principles of treatment,
2.3	Injuries to the phalanges,
2.4	Sprains,
2.5	Dislocations of MP & IP joints,
2.6	Fractures of the phalanges,
2.7	Metacarpals,
2.8	Bennet's fracture,
2.9	Mallet's finger,

2.10	Tendon injuries (flexor & extensor).
3.	Wrist & Forearm injuries:
3.1	Wrist dislocation,
3.2	Colle's fracture,
3.3	Displaced epiphysis,
3.4	Smith's fracture,
3.5	Barton's fracture,
3.6	Injuries to carpal,
3.7	Scaphoid and sprains,
3.8	Fractures of forearm bones – greenstick fracture.
3.9	Infraction injury,
3.10	Galeazzi,
3.11	Monteggia fracture dislocation.
4.	Injuries to the elbow:
4.1	Traumatic synovitis,
4.2	Sprain,
4.3	Dislocation of the elbow joint.
5.	Fractures involving elbow joint:
5.1	Supracondylar fracture,
5.2	Intercondylar fracture,
5.3	Fracture medial epicondyle,
5.4	Fracture of the lateral condyle,
5.5	Myositis ossificans,
5.6	Volkman's Ischemic Contracture,
5.7	Fracture of the head of the radius,
5.8	Fracture of Olecranon.
6.	Injuries of shoulder and arm:
6.1	Fractures of the proximal end,
6.2	Neck and shaft of humerus,
6.3	Fractures of clavicle,
6.4	Acromioclavicular and sternoclavicular dislocations,
6.5	Fractures of the scapula.
7.	Injuries of the spine and thoracic cage:
7.1	Injuries to the cervical spine (Both upper and lower), atlantoaxial injuries
7.2	Dorso Lumbar spine: classification, mechanism and types of injuries, stable fracture without paraplegia, fracture-dislocation with paraplegia, management of fracture, management of paraplegia, bedsores and bladder care.
7.3	Fracture of rib and sternum.
8.	Injuries of the pelvis:
8.1	Fractures,
8.2	Mechanism,
8.3	Classification,
8.4	Management,
8.5	Fractures of Acetabulum,
8.6	Sacrum and coccyx.

9.	Injuries of the lower limb:
9.1	Dislocations of the hip joint,
9.2	Intracapsular and trochanteric fractures of femur,
9.3	Fractures of the neck of femur,
9.4	Fracture of the shaft of the femur,
9.5	Fracture femur in children Fracture of femoral condyles,
9.6	Tibial condyles and patella.
9.7	Injuries to extensor mechanism,
9.8	Contusion,
9.9	Hemarthrosis,
9.10	Knee joint dislocation and traumatic dislocation of the patella
9.11	Fracture and fracture-dislocation of the ankle,
9.12	Epiphyseal injury lower end of tibia Foot fracture of talus,
9.13	Calcaneum,
9.14	Metatarsals and phalanges.
10.	Soft tissue injuries:
10.1	Ligamentous injuries of ankle,
10.2	knee and injury to Muscles.
10.3	Orthopedic splints and appliances for injuries to muscles and tendons.
11.	Tendon transfer:
11.1	Principles,
11.2	Indications,
11.3	Common tendon transfer surgeries.
12.	Amputation:
12.1	Types,
12.2	Site,
12.3	Ideal stump,
12.4	Complications,
12.5	General principles of treatment
12.6	Upper extremity and lower extremity amputations – prosthesis and prosthetic service
12.7	Principles of operative management,
12.8	Indications and contraindications for arthroplasty,
12.9	Osteotomy,
12.10	Arthrodesis,
12.11	Spinal stabilization,
12.12	Arthroscopy.
13.	Limb reattachment:
13.1	Principles,
13.2	Indications,
13.3	Technique.
Clinical: Operation Theater (O.T.) Visit	

ORTHOPEDECS (NON-TRAUMATIC)

SR. NO	TOPIC
1.	General Orthopedics
1.1	Clinical examination of an orthopedic patient, investigation, radiological and imaging techniques (salient features)
1.2	Deformities, acquired deformities, causes and principles of management, splinting
1.3	Traction: procedures, materials
1.4	Preventive orthopedics
1.5	Geriatric orthopedics
2.	Congenital disorders
2.1	Torticollis, wry neck, kyphosis, lordosis, scoliosis, spina bifida, myelomeningocele, congenital dislocation of the hip, congenital genu recurvatum, talipes equinovarus
2.2	Elevation of scapula, Madelung's deformity, coxa vara
2.3	Endocranialdystosis, superior radio-ulna dysostosis, sternocleidomastoid tumor
3.	Infection of bones & joints
3.1	Osteomyelitis (acute and chronic), Brody's abscess as a complication of open fracture
3.2	Skeletal tuberculosis, principles of treatment, T.B. of the shoulder, elbow and wrist T.B. of hip, knee ankle, and foot
3.3	Dactylitis, caries rib
4.	Arthritis
4.1	Osteoarthritis, Rheumatoid arthritis, A.S, Gouty arthritis, acute pyogenic arthritis, septic arthritis of infancy, smallpox arthritis, Syphilitic infection of joint.
5.	Bone tumors
5.1	Classification, true bone tumors- osteosarcoma, giant cell tumor, Ewing's sarcoma, chondroblastoma, chondrosarcoma, fibrosarcoma, lymphoma of bone, plasmacytoma
5.2	Bone metastasis: synovial sarcoma, hemangioma of bone, adamantinoma of long bones and chondroma
5.3	Tumor like lesions: osteoid osteoma, benign osteoblastoma, non-osteogenic fibroma, osteoma, osteochondroma and enchondroma
6.	Neurological and Muscular disorders
6.1	Definition, causes, clinical feature, complications, management (Multidisciplinary approach) medical and surgical of the following conditions: Cerebral palsy, Poliomyelitis, Leprosy
6.2	Muscular dystrophy – types and treatment
6.3	Injuries to plexus and nerves: Radial, Ulnar, Median, Brachial plexus, Sciatic and Lateral Popliteal
7.	Regional conditions of Spine and Lower limb
7.1	Back: Kyphosis, Scoliosis, Spondylolisthesis, Lumbosacral strain, intervertebral disc prolapse, fibrositis back, Lumbar canal stenosis, sacroiliac strain, spondylosis, spondylolysis
7.2	Hip: Slipped capital femoral epiphysis, idiopathic chondrolysis of the hip

7.3	Knee: Genu valgum, genu varum, tibia varum, genu recurvatum, quadriceps fibrosis, recurrent dislocation of patella, bursa around the knee, loose bodies in the knee, chondromalacia patella, Plica syndrome, Hoffa's pad syndrome,
7.4	Foot: Painful heel (calcaneal spur) Plantar fasciitis, Posterior heel pain, flat foot, foot strain, pain in the forefoot, Hallux valgus, anterior metatarsalgia, tarsal tunnel syndrome, Morton's neuroma
8.	Regional conditions of Neck and Upper limb
8.1	Neck: Cervical spondylosis, intervertebral disc prolapses, Cervical rib, torticollis, Brachialgia
8.2	Shoulder: Supraspinatus tendinitis, calcification, rupture of the rotator cuff, peri-arthritis shoulder, deltoid fibrosis, subarachnoid bursitis, Bicipital tendinitis
8.3	Elbow: Tennis elbow, Golfer's elbow, recurrent slipping of ulnar nerve, cubitus varus and Valgus
8.4	Wrist and Hand: Ganglion, De Quervain's disease, trigger finger, trigger thumb, carpal tunnel syndrome and Dupuytren's contracture
8.5	Miscellaneous: metabolic disease, rickets, osteomalacia, osteoporosis, parathyroid osteodystrophy, scurvy etc.

Recommended Study Materials:

Textbooks:

1. Essential Orthopaedics, Maheshwari

Reference books:

1. Essential Orthopaedics for Physiotherapist, John Ebnezar
2. Clinical Orthopaedic rehabilitation, S Bent Brotzman

I. PREVENTIVE HEALTHCARE AND COMMUNITY MEDICINE

Course Outcomes

At the end of course, the candidate will be able to...

1. Able to describe the concept of health and diseases, the natural history of diseases.
2. Able to describe the health care delivery system and able to describe the health problems of vulnerable groups and national health programmes.
3. Able to identify occupational health hazards and their management and describe the role of various health agencies, Non-Government Organisation (NGOs) at the international and national level.
4. Acquire the knowledge in preventive and curative measures that are required to be practised in the community and at all levels of the health care system

SR. NO	TOPIC
1.	The general concept of health & disease: Regarding the natural history of disease with pre-pathology phase
2.	The role of social economics in communities
2.	Epidemiology and scope
3.	Public health administration Overall view of the health administration setup and central and state levels. Health care delivery programs in urban and rural areas, health and population Statistics
4.	The national health programs Highlighting the role of social, economic and cultural factors in the implementation of the national programs
5.	Health problems of vulnerable groups Pregnant and lactating women, infants and pre-school children, occupational groups and geriatrics
6.	Occupational health
7.1	Definition, scope, occupational diseases and hazards
7.2	Social security and other measures for the protection from occupational hazards, accidents and diseases
2.	Family planning
8.1	Objectives of national family planning programs and family planning methods
8.2	The general idea of advantages and disadvantages of methods
3.	Mental health Community aspects of mental health: role of physiotherapists/therapists in mental health problems such as mental retardation
4.	Nutrition and Health Classification of foods, nutritional profiles of principal foods, nutritional problems in public health, community nutrition program
5.	Environment and Health Components of environment, water and air pollution and public health:

Pollution control, disposal of waste, medical entomology	
12.	Communicable diseases & Non-communicable disease:
12.1	Communicable disease: Respiratory infections, Intestinal infections, Arthropod-borne infections, Zoonoses, Surface infections, Hospital-acquired infections
12.2	Non-communicable diseases and conditions: Cardiovascular diseases, Coronary heart disease, Hypertension, Stroke, Rheumatic heart disease, Cancer, Diabetes, Obesity, Blindness, Accidents and Injuries.
2.	An overall view of communicable diseases classified according to the principle mode of transmission. Role of insects and other vectors
3.	International health agencies
4.	Principles and process of communication
5.	Information Education and Communication (IEC)
6.	Health education
17.1	Philosophy, main principles and objectives
17.2	Methods and tools of health education individual and group methods
17.3	The role of the profession in health education
17.4	Role of another person in health education, co-ordination and co-operation, health education with other members of the health team
17.5	Elements of planning health education program
7.	Hospital waste management Sources of hospital waste, health hazards, waste management
8.	Disaster Management Natural and manmade disasters, disaster impact and response, relief phase, epidemiologic surveillance and disease control, nutrition, rehabilitation, disaster preparedness.
9.	Preventive medicine in obstetrics, pediatrics and geriatrics
10.	MCH problems, antenatal, intranatal and post-natal care, care of children, child health children, rights of the child and national policy for children, MCH services and indicator and MCH care.
11.	Preventive practice for various conditions
22.1	Prevention practice for musculoskeletal conditions
22.2	Prevention practice for cardiopulmonary conditions
22.3	Prevention practice for neuromuscular conditions
22.4	Prevention practice for integumentary disorders
22.5	Prevention practice for individuals with developmental disabilities

Recommended Study Materials:

Textbooks:

1. Park's textbook of preventive and social medicine

Reference books:

1. Textbook of Preventive Practice and Community Physiotherapy, Bellare Bharati Vijay
2. Essentials of Community-based Rehabilitation, Satya Bhushan Nagar

J. PROFESSIONAL PRACTICE & ETHICS
(Not for University exam)

Course Outcomes

At the end of course, the candidate will be able to...

1. At the end of the course, students should be able to critically appraise the evidence, do an economic evaluation of evidence and communicate the evidence to clients, managers and funders.

ETHICS

SR. NO	TOPIC
1.	Collecting data on psychosocial factors in Medicine/Surgery/Reproductive Health/Pediatrics
2.	Inter-professional communication
3.	Ethics in clinical practice

EVIDENCE-BASED PRACTICE & ICF

SR. NO	TOPIC
1.	Finding the Evidence Measuring outcomes in Evidence-Based Practice, measuring health outcomes, measuring clinical outcomes, inferential statistics and causation
2.	Searching for the Evidence: Asking questions, identifying different sources of evidence
3.	Assessing the Evidence Evaluating the evidence; levels of evidence in research using quantitative methods, levels of the evidence classification system, outcome measurements, biostatistics, the critical review of research using qualitative methods
4.	Systematically reviewing the evidence Stages of systematic reviews, Meta-analysis, the Cochrane collaboration
5.	Using the evidence Building evidence in practice, Critically Appraised Topics (CATs)
6.	International Classification of Function, Disability and Handicap

Recommended Study Materials:

Textbooks:

1. Practical evidence-based Physiotherapy (English, Paperback, Sir Iain Chalmers)

Reference books:

1. Guide to Evidence-Based Physical Therapist Practice (English, Hardcover, Jewell Dianne)

 Principal
 Faculty of Physiotherapy

Course having focus on
Employability
Entrepreneurship
Skill development
during last five years in
B.Tech Civil Engineering
(2017-2022)

Elements of Civil Engineering
01CI1101
Objective of the Course:

- To impart brief fundamental concept related to various materials and their use in building construction
- To acquaint about the concept of linear, angular and elevation measurements.
- To verse about current and modern constructional practices.

Credit Earned: 04
Students learning outcomes:

After successful completion of the course it is expected that student will be able to,

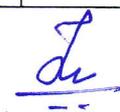

1. Recognize importance of civil engineering and its day to day applications
2. Interpret the plan/map; locate the objects on ground from map and from site to on paper plan/map.
3. Describe qualitative comparison between different materials and its selection.
4. Create & interpret building planning and will be able to draw plan, section and elevation.
5. Acquaint with the various modes of transportation.

Teaching and Examination Scheme

Teaching Scheme (Hours)			Credits	Theory Marks			Tutorial/ Practical Marks		Total Marks
Theory	Tutorial	Practical		ESE (E)	IA (M)	CSE (I)	Viva (V)	Term Work (TW)	
03	0	02	04	50	30	20	25	25	150

Detailed Syllabus

Sr No.	Title of the unit	Number of hours
1	Overview of Civil Engineering	03
	Evolution and broad disciplines of civil engineering, works of eminent civil engineers, scopes for a career as a civil engineer, construction as an industry, building & town planning, development of smart cities, common units used in practice of civil engineering & unit conversion, Construction Project Management.	

2	Surveying & Leveling	17
	Introduction: Applications, fundamental principles and classification of surveying, classification of plans & maps. Linear Measurement: Methods, instruments used in linear measurement, selection of stations, ranging, offsetting. Angular Measurement: Instruments used types of compass, types of meridians and bearings, measurement of bearings, computation of angles, compass traversing and correction of bearings for local attraction. Leveling: Aims and applications, definition of various terms, instruments for leveling, methods of leveling, recording observations in level-book, computing reduced levels by HI and rise & fall method, definition of contour, characteristics of contours of different terrains and application of contour maps. Modern Surveying Tools: Introduction to theodolite, total station, GIS, GPS & remote sensing.	
3	Building Materials	09
	Stone: Introduction to stone, uses of stone, characteristics of good building stone, availability, suitability and properties of different stone. Bricks: Comparison between stone work and brick work, advantages of bricks, characteristics of good brick, standard test for brick along with field test for brick. Lime: Classification of lime, precautions in handling lime. Cement: Basic ingredient of ordinary cement, physical properties of cement, field examinations of cement, storing of cement and its uses. Timber: Introduction to timber, importance of seasoning, wood base product. Steel: Introduction, use of different form of steel, marketable forms of steel. Aggregates: Classification, source, mechanical properties. Bitumen: Classification, properties. Plastic: Properties of plastics, types and uses of plastic.	
4	Building Planning & Construction	06
	Classification of buildings, types of load acting on building, building components & their functions, principles of planning, conceptual planning of residential & public building	
5	Transportation Engineering	05
	Role of transportation in national development, modes of transportation, types of roadways, introduction to traffic engineering, introduction to urban transportation system	
6	Advancement in Civil Engineering	02
	Building automation, green building, advanced materials, sky scrapers, civil engineering wonders in the world	
	Total	42

List of Practical

- 1) **Linear Measurement.**
- 2) **Perimeter Measurement.**
- 3) **Area Measurement.**
- 4) **Angular Measurement.**

- 5) Profile Leveling Survey Project.
- 6) Basics sign & conventional symbols.
- 7) **Building planning drawing sheet.**

Suggested Theory Distribution

The suggested theory distribution as per Bloom's taxonomy is as per follows. This distribution serves as guidelines for teachers and students to achieve effective teaching-learning process

Distribution of Theory for course delivery and evaluation					
Remember	Understand	Apply	Analyze	Evaluate	Create
30%	30%	10%	10%	10%	10%

Instructional Method and Pedagogy:

1. At the start of course, the course delivery pattern, prerequisite of the subject will be discussed.
2. Lectures will be taken in class room with the use of multi-media presentations, black board – mix of both.
3. Attendance is compulsory in lectures and laboratory which carries a 5% component of the overall evaluation.
4. Minimum two internal exams will be conducted and average of two will be considered as a part of 15% overall evaluation
5. Assignments based on course content will be given to the students at the end of each unit/topic and will be evaluated at regular interval. It carries a weightage of 5%.
6. Surprise tests/Quizzes will be conducted which carries 5% component of the overall evaluation.
7. The course includes a laboratory, where students have an opportunity to build an appreciation for the concepts being taught in lectures. Minimum 8 experiments are planned based on the course content.

Recommended Study Material**Text Books:**

1. Introduction to civil Engineering by Bhogayata, Shah & Vora – Tata McGraw hill.

Reference Books:

1. Surveying Vol. I by B.C. Punamia.
2. Building construction by B.C. Punamia.
3. Building Material by S.C.Rangwala.
4. Highway & Transportation engineering by Khanna & Justo.

A handwritten signature in blue ink, consisting of a stylized 'J' and 'a' followed by a horizontal line.

DIFFERENTIAL AND INTEGRAL CALCULUS
01MA2101
B.Tech. (Sem I)
Objective of the Course:

This subject aims to provide an essential background of differential and integral calculus to students of science and engineering courses at graduate level. A good science or engineering graduate is expected to have a sound knowledge of these two areas of mathematics as Differential and integral calculus are essential tools for learning Technology, Engineering and Sciences.

Credit Earned: 5
Course outcomes:

After successful completion of the course, it is expected that student will be able to

1. Appreciate and apply the concepts of convergence and divergence of infinite series in problem of science, technology and engineering.
2. Solve first order differential equations and will be able apply them to solve real life problems.
3. Explain the Euler's theorem and Modified Euler's theorem and will be able to verify it for given function of several variables.
4. Understand the role of multiple integral in finding volume of three dimensional objects, finding area between to two curves, finding moment of inertia etc.
5. Understand the key role of vector integral calculus in finding flux in vector field, finding potential function, etc.

Teaching and Examination Scheme

Teaching Scheme (Hours)			Credits	Theory Marks			Tutorial/ Practical Marks		Total Marks
Theory	Tutorial	Practical		ESE (E)	Mid Sem (M)	Internal (I)	Viva (V)	Term work (TW)	
3	2	0	5	50	30	20	25	25	150

Contents:

Sr No.	Title of the unit	Number of hours
1	Infinite Series and Expansion of functions: Concept of sequence, nature of infinite series, Properties for convergence, geometric series, Tests for convergence of positive term series, Concept of Expansion of functions, Taylor's series expansion, and Maclaurin's series expansion.	12
2	Ordinary Differential Equations: Reorientation, order and degree, Variable separable method, Linear differential equations, Bernoulli's and Exact differential equations.	08
3	Partial differentiation and Applications of Partial differentiation: Partial derivatives, Euler's theorem, Modified Euler's theorem and their applications, Implicit functions, Chain rule, Total differentials, Tangent plane and normal line to a surface, Constrained optimization using Lagrange's multiplier.	12
4	Multiple Integrals: Calculation of double and triple integrals, reverse the order of integration, Jacobian, change into polar.	10
5	Vector differential calculus and Vector Integral calculus: Recall the concept of vector algebra, Scalar and vector functions, gradient of a scalar point functions, Divergence and Curl of a vector point function, Physical meaning of gradient, divergence and curl, directional derivatives, Conservative vector fields, Irrotational and Solenoidal function., Line integrals, Path Independence of Line Integrals, Green's theorem	10
Total Hours		52

Suggested Theory Distribution:

The suggested theory distribution as per Bloom's taxonomy is as per follows. This distribution Serves as guidelines for teachers and students to achieve effective teaching-learning process. Distribution of Theory for course delivery and evaluation

Distribution of Theory for course delivery and evaluation					
Remember	Understand	Apply	Analyze	Evaluate	Create
20%	20%	30%	15%	10%	5%

Instructional Method:

1. The course delivery method will depend upon the requirement of content and need of students. The teacher in addition to conventional teaching method by black board, may also use any of tools such as demonstration, role play, Quiz, brainstorming, MOOCs etc.
2. The internal evaluation will be done on the basis of continuous evaluation of students in the laboratory and class-room.
3. Practical examination will be conducted at the end of semester for evaluation of performance of students in laboratory.
4. Students will use supplementary resources such as online videos, NPTEL videos, e-courses, Virtual Laboratory

Reference Book:

1. M. D. Weir et al : Thomas' Calculus, 11th Ed., Pearson Education, 2008.
2. Stewart James: Calculus Early Transcendental, 5th Ed., Thomson India, 2007
3. Wylie & Barrett: Advanced Engineering Mathematics, McGraw-Hill pub.
4. Greenberg M D: Advanced Engineering Mathematics, 2nd ed., Pearson
5. Erwin Kreyszig, Advanced Engineering Mathematics, 9/ e, John Wiley, INC
6. H. K. Dass, Advanced Engineering Mathematics, S Chand Publishing.

**Syllabus for Bachelor of Technology
 Civil /Auto/ Chemical/ Mechanical Engineering**

Subject Code: 01MA0103

Subject Name: Matrix Algebra and Vector Space

B.Tech. Year – I (Sem : II)

Objective: This subject aims to provide fundamentals of matrix algebra and vector calculus. The topics delivered in the paper are essential for engineering graduate-level courses.

Credits Earned: 5 Credits

Course Outcomes: After completion of this course, students will be able to.

- Apply vectors in higher dimensional space in experimental data, graphical images, civil and mechanical systems.
- Apply a System of linear equations in solving the problems of electrical and mechanical engineering, applied mechanics etc.
- Apply the concept of Eigenvalues and vectors in various fields of engineering like control theory, vibration analysis, quantum mechanics, etc.
- Understand the key role of vector integral calculus in finding flux in a vector field, finding potential function, etc.

Theory	Tutorial	Practical		ESE (E)	Mid Sem (M)	Internal (I)	Viva (V)	Term work (TW)	
3	2	-	5	50	30	20	25	25	150

**Syllabus for Bachelor of Technology
Civil /Auto/ Chemical/ Mechanical Engineering**

Contents:

Unit	Topics	Contact Hours
1	Matrix Algebra - I: Definitions of some basic types of Matrices, Row Echelon form and Reduced Row Echelon form, Rank by row operation and determinant, Consistency of system of linear equations by Gauss Elimination and Gauss Jordan Method, Inverse of matrix by Gauss Jordan Method.	09
2	Matrix Algebra -II: Eigen values and Eigen vector of matrix, AM and GM, Cayley- Hamilton theorem, Diagonalization, Orthogonally Diagonalization, Quadratic form, Value class (Nature), Index and Signature of Quadratic form, Canonical forms.	12
3	Vector space: Vector space, Subspace, Linear dependence and independence of vectors, Span, Basis and dimension of vector space, Inner product spaces and their properties.	12
4	Vector calculus: Recall the concept of vector algebra, Scalar and vector functions, gradient Divergence and Curl, directional derivatives, Conservative vector fields, Irrotational and Solenoidal function. Line integrals, Path Independence of Line Integrals, Concept of surface integrals , Green's theorem, Stoke's theorem and Divergence theorem.	10
5	Improper integrals: Improper integrals of type I and type – II , Convergence of Improper integrals.	02
6	Application of Linear Algebra by MATLAB: Introduction to MATLAB, some basic MATLAB command related to Matrices, Row Echelon form and Reduced Row Echelon form, Rank of Matrix, Solution of system of Linear equation, Inverse of Matrix, Characteristic polynomial of Matrix, Eigen value and Eigen vector of Matrix, Power of Matrix.	To be covered in Tutorial hours
	Total Hours	45

Recommended Textbooks:

1. Introduction to Linear Algebra with Application, Jim DeFranza, Daniel Gagliardi, Tata McGraw-Hill.
2. Elementary Linear Algebra, Applications version, Anton and Rorres, Wiley India Edition.
3. Advanced Engineering Mathematics, Erwin Kreysig, Wiley Publication.
4. Elementary Linear Algebra, Ron Larson, Cengage Learning.
5. Calculus, Volumes 2, T. M. Apostol, Wiley Eastern.
6. Linear Algebra and its Applications, David C. Lay, Pearson Education.
7. Linear Algebra: A first course with Applications in MATLAB, Larry E. Knop, CRC Press.

**Syllabus for Bachelor of Technology
 Civil /Auto/ Chemical/ Mechanical Engineering**

Suggested Theory distribution:

The suggested theory distribution as per Bloom's taxonomy is as per follows. This distribution serves as guidelines for teachers and students to achieve effective teaching-learning process

Distribution of Theory for course delivery and evaluation					
Remember	Understand	Apply	Analyze	Evaluate	Create
20%	20%	30%	15%	10%	5%

Instructional Method:

- a. The course delivery method will depend upon the requirement of content and need of students. The teacher in addition to conventional teaching method by black board, may also use any of tools such as demonstration, role play, Quiz, brainstorming, MOOCs etc .
- b. The internal evaluation will be done based on continuous evaluation of students in the laboratory and class -room.
- c. Practical examination will be directed toward the completion of semester for assessment of performance of understudies in laboratory.
- d. Students will use supplementary resources such as online videos, NPTEL videos, e-courses, Virtual Laboratory

Supplementary Resources:

1. <http://mathworld.wolfram.com/>
2. <http://en.wikipedia.org/wiki/Math>

Subject Code: 01EN1101

Subject Name: Basics of Environmental Studies

B. Tech. Year – I (Semester II)

Objective: Students should gain basic understanding of Environment and environmental issues.

Course Outcomes: After completion of this course, student will be able to:

1. Understand and realize the multidisciplinary nature of Environment & its components.
2. Know the importance of natural resources for the sustainable development of life.
3. Understand the effect of growing population on the Environment.
4. Classify the different types of pollution and measure to control pollution
5. Learn about the Environmental issues faced globally and various steps taken globally to solve such Environmental issues.

Teaching and Examination Scheme:

Teaching Scheme (Hours)			Credits	Theory Marks			Tutorial / Practical Marks		Total Marks

Contents:

Unit	Topics	Contact Hours
1	Introduction and Ecology Introduction to Environment, Ecology – scope and classifications, Ecosystem - Concept and types, Environmental degradation, Impact of humans on environment, role of environmental education	6
2	Population and Environment Factors Affecting Human Settlement, Define Over Population & Explain the Cause, Effect on Environment & Control of it, Methods of Population forecasting	5
3	Environmental Resources Forest resources, Energy resources, Water Resources and Land Resources	6
4	Environmental Pollution Water pollution, Air & Noise Pollution, Environmental sinks, solid and hazardous waste, E-waste & Biomedical waste, Introduction to Green chemistry	6

5	Global Environmental Issues Greenhouse Effect, Global warming, ozone layer depletion, Climate change, Acid Rain, Global Efforts to control issues	3
6	Governmental bodies for Environmental protection	2
Total Hours		28

Suggested Text books / Reference books:

1. Basics of Environmental Studies by U K Khare, 2011 Published by Tata McGraw Hill
2. Environmental Science A Global Concern by William P. Cunningham and Mary Ann Cunningham Published by Tata Mc Graw Hill

Suggested Theory distribution:

The suggested theory distribution as per Bloom's taxonomy is as per follows. This distribution serves as guidelines for teachers and students to achieve effective teaching-learning process.

Distribution of Theory for course delivery and evaluation					
Remember	Understand	Apply	Analyze	Evaluate	Create
40%	30%	20%	10%	-	-

Instructional Method:

1. The course delivery method will depend upon the requirement of content and need of students. The teacher in addition to conventional teaching method by black board, may also use any of tools such as demonstration, role play, Quiz, brainstorming, MOOCs etc.
2. The internal evaluation will be done on the basis of continuous evaluation of students in the laboratory and class-room.
3. Students will use supplementary resources such as online videos, NPTEL videos, e-courses, Virtual Laboratory

Subject Code: 01ME1104

Subject Name: Workshop

B.Tech. Ist Year Semester: II

Type of course: Under Graduate

Prerequisite: Zeal to learn subject

Rationale: Mechanical Workshop is of paramount importance for the engineering students to enhance their technical skills as per the need of industries. Practice of engineering workshop make students aware about practical work in industrial environment as well as day-to-day life work.

Course Outcome:

After learning the course, the students will be competent to

1. Apply knowledge of hand tools, power tools and safety related rules and regulations
2. Apply knowledge of conventional machining processes
3. Apply knowledge of advanced manufacturing processes
4. Apply knowledge of manufacturing processes of composite materials

Teaching and Examination Scheme:

Teaching Scheme			Credits	Examination Marks					Total Marks
L	T	P		Theory Marks			Practical Marks		
			ESE(E)	IA	CSE	Viva (V)	Term Work (TW)		
0	0	2	1	0	0	0	0	50	50

Content:

Sr. No.	Content	Total Hrs.
1	<p>Introduction: Introduction to mechanical workshop its plan and layout. Learn about various safety related rules and regulation.</p> <p>Demonstration of various tools which are used in workshop like hand tools, power tools, various measurement equipment, study of different types of materials, various processes like Finishing, Marking, Cutting, Smoothing, Bending etc.</p>	04

2	Fitting Shop and Carpentry Shop Demonstration of fitting and carpentry job and make job physically	08
3	Metal Removing Operations Introduction to Lathe machine, Various parts of Lathe machine, Various operations on lathe machine	04
4	Laser Cutting Operation Introduction to 2D CAD drawing, exporting 2D drawing to software, Principle of Laser cutting machine, Demonstration of laser cutting operation.	04
5	Additive Manufacturing Introduction to Additive Manufacturing, use of 3D models in additive manufacturing, demonstration of 3D printing process	04
6	Manufacturing of composite materials Introduction to composite materials, different manufacturing methods of composite materials, materials used for manufacturing of composite materials, GFRP manufacturing	04

List of Experiments:

1. Fitting job and Carpentry job
2. Metal removing operations on lathe machine
3. Laser cutting operation
4. Manufacturing of prototype using 3D printer
5. Manufacturing of GFRP composite

Major Equipment:

1. Hand tools and Power tools
2. Bench vise
3. Lathe machine
4. Laser cutting machine
5. 3D printer

Reference books:

1. Elements of Workshop Technology, Volume-2: Machine Tools, S.K. Hajra Choudhury, Nirjhar Roy, MPP Publication
2. The Laser Cutting Process: Analysis and Applications, Bekir Sami Yilbas, Elsevier Publication

3. Additive Manufacturing Technologies: 3D Printing, Rapid Prototyping and Direct Digital Manufacturing, Ian Gibson, David Rosen, Brent Stucker, Springer
4. Composite Materials: Science and Engineering, Krishan K Chawla, Springer

List of Open Base Software / learning website:

1. NPTEL Courses

A handwritten signature in blue ink, appearing to be 'Dr. [unclear]', with a horizontal line underneath.

01SL0102: Reading and Writing for Technology
Objectives:

1. To introduce students to fundamentals of reading and writing skills
2. To enable them to comprehend texts of technical and analytical nature
3. To enable them to carryout different writing tasks in the context of technology

Credits Earned: 2 Credits

Course Outcomes: After completion of this course, student will be able to

- To enhance reading skills for academic purposes.
- To evolve appropriate writing competence for academic purposes.
- To carry out reading and writing tasks in the context of technology and technology related content.
- To express their ideas in formal, academic written form

Pre-requisite of course: NA.

01SL0103: Speaking and Presentation Skills
Objectives:

1. To introduce students to the basics of speaking and presentation skills
2. To impart training regarding the form and manner of speaking for academic purposes
3. To impart training regarding preparing for and making an effective presentation

Credits Earned: 2 Credits

Course Outcomes: After completion of this course, student will be able to

- Develop speaking competence for academic purpose.
- Speak on a given topic in the context of technology.
- Express ideas in an organized way for conversations and interactions related to academic requirements.
- Enhance the ability to make a presentation on a given topic.
- Develop speaking competence for academic purposes.

Subject Code: 01CR1103
Subject Name: Value Education
B. Tech Year – I (Semester I , 1st year) (Level - 1)
Branch:

Objective: This course shall enrich students' value system, creativity, competence and confidence. It will enhance the softer aspects of life skills of students through the games, activities, group interactions and videos.

Credits Earned: No Credits

Course Outcomes: After successful completion of this course, student will be able to

- Understand importance of role of Values in developing self
- Inculcate right values, ethics, attitudes, manners and behaviors for life
- Respond and relate with expectations, competitions and power of networking

Pre-requisite of course: NA.

Theory	Tutorial	Practical		ESE (E)	Mid Sem (M)	Internal (I)	Viva (V)	Term work (TW = CCE)	
2	0	0	0	00	00	00	50	50	100

Contents:

Unit	Topics	Contact Hours
1	Experiencing worth of important personality attributes i.e Taking Initiatives, Thinking on the feet etc through Games	2
2	Values of Honesty and Integrity as corner stone in one's career and Life. Experiencing incidence and case studies related to Honesty, Integrity and Human Values in work set up.	2
3	Value of Creativity in one's career and Life Building an attitude of creativity, thinking out of the box and inculcate virtue of exploration and innovation in various aspects of life.	2
4	Values to self sustenance in difficult times and failures To Understand failure as stepping stone towards success, its inevitability and earning life lessons which makes an individual well equipped to deal with uncertainties of life.	2

5	Role of emotions in one's professional life Importance of building sound EQ with IQ, Understanding the causes and effects of emotions in life.	2
6	Workplace values 1 – Manners Understanding workplace as a second home and source of livelihood, inculcate spirit of belongingness towards work and exhibit sound manners that projects work place with dignity	2
7	Workplace values 2 – People, Policy and organization Understanding the importance of policies and people, ideal code of conduct at Workplace, building rapport with colleagues, sound behaviors with various stakeholders within the organization	2
8	Value for students' life 1 - Power of Positivity Importance of optimism in life, developing right kind of attitude towards self career and others. Power of generating right kind of thoughts that translates in right actions and behaviours.	2
9	Value for students' life 2 - Healthy Lifestyle Importance of fitness in life and career. Importance of regular exercising and taking up a sport. Focusing upon eating and sleeping habits that result in physical performance as body is considered to be the temple of soul.	2
10	Value for students' life 3 – Create First Impression Understanding the importance of making right impressions while in public, how to speak/introduce self, basic understanding of dress code, voice tone and body language	2
11	Understanding hazards of Social Networking sites Developing sound habits, breaking bad habits, understanding hazards of bad habits and excess of social media in life.	2
12	Creating Value through Social Networking sites (Linked-In and Quora) To ensure that technology is used to build bridges and not the barriers, focusing upon the career and importance of associating with right content in the virtual world. (Linkedin, Quora, GD communities, India Bix, Bodhi Booster)	2
13	Performance Values 1- How to avoid Procrastination Value and Importance of Time, Cause and effect of procrastination, How to maximize the day, Importance of setting up to –do lists and task lists	2
14	Performance Values 2- How to manage Pressure Situations (Exams and Evaluations) Handling anxiety, Value of planning and smart work, ensuring right state of mind and tips for a successful show.	2
	Total Hours	28

Suggested Theory distribution:

The suggested theory distribution as per Bloom's taxonomy is as per follows. This distribution serves as guidelines for teachers and students to achieve effective teaching-learning process

Distribution of Theory for course delivery and evaluation					
Remember	Understand	Apply	Analyse	Evaluate	Create
20%	20%	30%	15%	10%	5%

Instructional Method:

- a. The course delivery method will depend upon the requirement of content and need of students. The trainer shall train students through interactions, demonstration, role play, games, brainstorming, group tasks etc.
- b. Practical examination (VIVA) will be conducted at the end of semester for evaluation of performance of students.
- c. Students will use supplementary resources such as online videos and books.

Mr. Dhananjay Singh
Assistant Vice-President, L&D

01MA0301 Applied differential Equations

Objective: The subject aims to make the learner able to apply the knowledge of differential equations and transforms to solve core Engineering and real world problems.

Credits Earned: 5

Course Outcomes: After completion of this course, student will be able to

- Expand various functions in terms of sine and cosine functions.
- Classify and apply the standard methods to solve ordinary and partial differential equations.
- Apply Laplace transform and Fourier series to solve differential equations.
- Apply the knowledge of differential equations and its solutions to evaluate engineering problems.

**Teaching and Examination
 Scheme**

Teaching Scheme (Hours)			Credits	Theory Marks			Tutorial/ Practical Marks		Total Marks
Theory	Tutorial	Practical		ESE (E)	Mid Sem (M)	Internal (I)	Viva (V)	Term work (TW)	
4	2	-	5	50	30	20	25	25	150

Contents:

Unit	Topics	Contact Hours
1	Fourier series: Periodic functions, Fourier series of functions of any period, Fourier series of Even and odd functions, Half range Expansions, Fourier integrals.	14
2	Laplace Transforms: Laplace transforms definition, Laplace transforms of some elementary functions, Inverse transforms, Linearity and shifting properties, Laplace transforms of derivatives and integrals, Differentiation and integrations of Transforms, Convolution theorem and its application to obtain inverse Laplace transform, Laplace transform of periodic functions, Unit step function, Unit impulse function (Dirac delta function), second shifting property, Applications of Laplace transforms to solve ODE and system of ODE.	16
3	Linear Differential Equations : Solution of homogeneous linear differential equations with constant coefficients, Non homogeneous linear differential equations , particular integrals by Inverse Operators and Variation of Parameters, Euler-Cauchy's differential equations with variable coefficients, Power Series solution of ODE.	10
4	Partial Differential Equations : Formation of PDE, Methods of solutions, Lagrange's linear partial differential equation , Special types of Nonlinear PDE of the first order, method of separation of variables.	10

5	Applications of differential equations: Application of ODE: Mechanical vibration system, Electrical circuit system, Application of PDE: Heat, wave, Laplace equations and their solution by method of separation of variables and Fourier series.	10
	Total Hours	60

Suggested Theory distribution:

The suggested theory distribution as per Bloom's taxonomy is as per follows. This distribution serves as guidelines for teachers and students to achieve effective teaching-learning process

Distribution of Theory for course delivery and evaluation					
Remember	Understand	Apply	Analyze	Evaluate	Create
20%	20%	30%	15%	10%	5%

Instructional Method:

- The course delivery method will depend upon the requirement of content and need of students. The teacher in addition to conventional teaching method by black board, may also use any of tools such as demonstration, role play, Quiz, brainstorming, MOOCs etc.
- The internal evaluation will be done on the basis of continuous evaluation of students in the laboratory and class-room.
- Practical examination will be conducted at the end of semester for evaluation of performance of students in laboratory.
- Students will use supplementary resources such as online videos, NPTEL videos, e-courses, Virtual Laboratory

Supplementary Resources:

01CI0301: Mechanics of Solids
Objective of the Course

Objectives of introducing this subject at second year level in civil branches are:

- To study about identification of different types of forces, systematic evaluation of effect of these forces, behavior of rigid bodies subjected to various types of forces, at the state of rest or motion of the particles, as Universe exist due to force only.
- To understand the fundamental principles, concepts and techniques, both theoretical and experimental, with emphasis on the application of these to the solution of mechanics based suitable problems in all engineering.
- To provide a firm foundation and formwork for more advanced study at every higher semester as the subject of Mechanics of Rigid bodies cuts broadly across all branches of engineering profession.

Credits Earned : 5

Students Learning Outcomes

After studying this subject students will be able to:

- To apply fundamental principles of mechanics and equilibrium to get responses of rigid and deformable bodies
- To identify centroid, Center of Gravity, Center of Mass and moment of inertia of a simple and complex geometrical Shapes.
- To determine different types of stresses and strains developed in the Member subjected to axial, bending, shear, torsion & thermal loads.
- To analyze the determinate beam and draw its shear force and bending moment diagram.

Teaching and Examination Scheme

Subject Name	Teaching Scheme (Hours)			Credits	Theory Marks			Tutorial/ Practical Marks		Total Marks
	Theory	Tutorial	Practical		ESE (E)	Mid Sem (M)	Internal (I)	Viva (V)	Term Work (TW)	
Mechanics of Solids	4	0	2	5	50	30	20	25	25	150

Detailed Syllabus

Sr. No.	Topic Name	Hours
1	Introduction	2
	1.1 Terminologies: space, time, particle, rigid body, deformable body. Force: Definition, categorization of forces, Characteristics of a force, System of forces and resolution of forces.	
	1.2 Principles of mechanics: Principles of Transmissibility, superposition, Gravitational Law and Parallelogram Law of Forces.	

Sr. No.	Topic Name	Hours
2	Fundamentals of Statics	8
	2.1 Force and Force system: System of Forces its definition and application in Engineering.	
	2.2 Coplanar concurrent force system: Derivation of resultant force and equilibrant force using analytical and graphical methods. Triangle law of forces and Polygon law of forces.	
	2.3 Equilibrium of rigid bodies: Conditions of equilibrium, Lami's theorem and its derivation. Concept of Free body diagram in engineering. Application of Lami's theorem in various problems.	
	2.4 Coplanar non-concurrent forces: Definition of moment, couple and its effect on rigid bodies. Properties of couple, equivalent force couple system with examples, Varignon's theorem and its derivation.	
	2.5 Resultant of Coplanar non-concurrent Force system: Calculation of resultant force in coplanar non-concurrent force system by analytical and graphical methods.	
3	Analysis of Determinate Beams	8
	3.1 Classification of loads, supports and beams	
	3.2 Support Reactions: Calculation of support reactions for determinate beams subjected different loads viz. (i) Concentrated loads and moment, (ii) Uniformly distributed load, and (iii) Uniformly Varying loads.	
	3.3 Internal forces in beams: Definition of shear force and bending moment. Correlation between loading, shear force & bending moment in beams.	
	3.4 Shear Force and Bending Moment Diagrams: Bending moment and shear force diagrams for beams subjected to; i) Concentrated loads and moment, (ii) Uniformly distributed load, and (iii) Uniformly Varying loads. Point of Contra flexure and maximum bending moment in a beam.	
4	Concepts and Application of Static Friction	6
	4.1 Introduction: Theory, Classification and laws of Static and Dynamic friction.	
	4.2 Glossary of Terms: Angle of friction, Coefficient of friction, Angle of repose and Cone of friction.	
	4.3 Application of Static Friction -	
	(a) Block friction: Solutions of problems involving block friction in horizontal and inclined planes.	
	(b) Ladder Friction: Solution of various problems.	
(c) Wedge, Belt and Rope Friction: Solution of various problems.		

Sr. No.	Topic Name	Hours
5	Centroid and Moment of Inertia	9
	5.1 Centroid: Definition, concept, and evaluation of centroid for one-dimensional standard geometry viz. horizontal, vertical, inclined and circular curved lines.	
	5.2 Centroid of Standard Geometrical shapes: Determination of centroid for standard two-dimensional and three-dimensional shapes viz. rectangular, triangular, circular, semi-circular, quarter circular, circular segments, cylindrical, conical, spherical and cubical shapes.	
	5.3 Calculation of Centroid: Calculation of centroid for composite lines, areas and volumes.	
	5.4 Pappus-Guldinas Theorem: Pappus Guldinus theorem and its application in calculating surface area and volume.	
	5.5 Introduction to Moment of Inertia: Definition and concept of Moment of Inertia. Perpendicular axis, Parallel axis theorem, Polar Moment of inertia, and radius of gyration.	
	5.6 Moment of Inertia for Planar cross-sections: Determination of Moment of Inertia for planar sections using parallel axis theorem for standard lamina.	
	5.7 Moment of Inertia for composite planar elements: Determination of moment of Inertia for composite lamina.	
6	Simple Stresses & Strains	10
	6.1 Introduction: Definition and types of simple stresses (direct and indirect) and strains (linear and lateral) in an element and its importance in engineering.	
	6.2 Relation between stress and strain: Hooke's law, Poisson's ratio, Modulus of Elasticity, Rigidity, and Bulk modulus.	
	6.3 Stresses and strains Members: Evaluation of stresses and strains in members subjected to axial and shear loading for homogenous, composite, prismatic and tapered sections.	
	6.4 Thermal Stresses: Evaluation of stresses in elements subjected to temperature effects in homogeneous and composite members	
	6.5 Inter-relationship between various Moduli: Relationship between modulus of elasticity, rigidity, bulk modulus and Poisson's ratio with problems.	
	6.6 Multidirectional Stresses: Volumetric strains, effect of multi-directional stresses on homogeneous members.	
7	Stresses in Beams	6
	7.1 Theory of Pure Bending – Assumption, theory and derivation of equation for pure bending. Determination of bending stresses at various sections.	
	7.2 Flexural stresses – Section modulus and determination of flexural stress distribution in beams of various cross sections.	
	7.3 Equation of Shearing stress – Derivation of equation for shear stress across the cross section in a beam.	
	7.4 Shear stresses – Qualitative and Quantitative determination of shear stress distribution in beams having various cross sections.	

Sr. No.	Topic Name	Hours
8	Torsion	3
	8.1 Equation of Pure Torsion: Definition of Torsion, Assumption and derivation of equation for pure torsion in circular shafts, Torsional rigidity and its application . 8.2 Stresses due to Torsion: Torque generated due to Power transmitted in shaft. Stresses generated in members subjected to circulatory motion in circular and hollow circular shafts.	
9	Principle Stresses	4
	9.1 Introduction: Two-dimensional stress system. Evaluation of stresses in an inclined plane for members subjected to orthogonal stresses. Definition of principal plane, principal stresses, angle of obliquity, and resultant stress.	
	9.2 Principal Stress and Strain: Evaluation of Principal plane and principal stresses using analytical method.	
	9.3 Analysis of Principal stresses and principal planes for two-dimensional stress system.	
	9.4 Application of Mohr's circle and ellipse of stress.	
Total		56

List of Practicals

- Find out resultant of concurrent forces.
- Find out resultant of non concurrent forces.
- Demonstrate and prove lami's theorem.
- Find out beam reactions.
- Find out mechanical properties of material.
- Design a stable object.
- Using popsicle sticks or straw prepare model of tower to carryout highest load for given dimensions.

Suggested Theory Distribution

The suggested theory distribution as per Bloom's taxonomy is as per follows. This distribution serves as guidelines for teachers and students to achieve effective teaching-learning process

Distribution of Theory for course delivery and evaluation					
Remember	Understand	Apply	Analyze	Evaluate	Create
5%	30%	40%	15%	10%	00%

Instructional Method and Pedagogy

1. Prerequisite of the course and its pattern shall be discussed on the commencement of the course.
2. Lectures shall be conducted in class room using various teaching aids.
3. Presence in all academic sessions is mandatory which shall carry 5% marks of the total internal evaluation.
4. At the end of each unit/topic an assignment based on the course content shall be given to the students which shall carry 5% weightage for timely completion and submission of the assigned work.
5. The laboratory experiments are planned in such a way that it covers the practical aspects of the course contents. The performance of these experiments shall bring the clarity of the theoretical concepts which the students have studied during the academic sessions.

01CI0302: Building Planning and Drawing
Objective of the Course

Objectives of introducing this subject at second year level in civil branches are:

- To understand the fundamental principles and concepts of planning and architecture for buildings.
- To study about different views of layout.
- To learn the development controls covered by building bye laws and national building code for buildings.

Credits Earned: 4

Students Learning Outcomes

After studying this subject students will be able to:

- Interpret the technical terminologies related to planning and various conventional signs and symbols used in drawing the plans
- Draw plan for building (Mass Composition, Residential, Industrial and Public) by making use of various aspects of principles of planning, architecture and as per standard bye laws
- Draw perspective, isometric, orthographic, cross-sectional and elevational drawing of the building by imagination
- Draw, edit and print the plan of the building by using computer application like AutoCAD

Teaching and Examination Scheme

Subject Name	Teaching Scheme (Hours)			Credits	Theory Marks			Tutorial/ Practical Marks		Total Marks
	Theory	Tutorial	Practical		ESE (E)	Mid Sem (M)	Internal (I)	Viva (V)	Term Work (TW)	
Building Planning & Drawing	2	0	2	3	50	30	20	25	25	150

Detailed Syllabus

Sr. No.	Topic Name	Hours
PART A: BUILDING PLANNING		16
1	Introduction:	2
	1.1 Basics of Building, major components and building types.	
	1.2 Preliminary planning concepts of building planning and architectural considerations.	
2	Principles of planning:	4
	2.1 Requirements of a good building planning.	
	2.2 Factors affecting building planning.	
	2.3 Detail study on elements of building planning.	
	2.4 Sun and building relationship.	
	2.5 Types of basic services in buildings: Brief introduction	
3	Building Bye-laws:	4
	3.1 Role, need and importance of building bye-laws.	
	3.2 Structuring of bye-laws: Inclusion of National Building code and legal aspects.	
	3.3 Scope of bye-laws and	
	3.3 Case study of bye-laws of a local authority.	
4	Planning of buildings:	6
	4.1 Functions of building according to types.	
	4.2 Planning aspects of a residential building.	
	4.2.1 List of components and functions of a residential building.	
	4.2.1 Area requirements and arrangement for various components.	
	4.2.2 Minimum dimensions and standards as per bye-laws.	
	4.3 Introduction to plans and sketches of building components.	
	4.4 Case studies of planning of Commercial buildings, Hospitals and Educational buildings.	
PART B: BUILDING DRAWING		12
1	Building Drawings:	6
	1.1 Meaning, need and importance of building drawings.	
	1.2 Types of building drawings, standard sizes, scales, formats, line types and hatching.	
	1.3 Information to be included in a typical building drawing.	
	1.4 List of common types of standard symbols.	
	1.5 Case study of a typical standard residential building drawing: list of drawings, detailing requirements, importance of a particular types and interpretation of drawing on site.	
2	Developing the building drawing (Drawing exercises)	6
	2.1 Drawing exercise of a scaled residential building: Plans, Elevations and Sections in standard formats.	
	2.2 Perspective, Isometric and orthographic drawing of a building	
Total		42

Laboratory Work Contents

Sr. No.	Topic Name	Hours
1	Signs and Symbols:	6
	2.1 Symbols for Materials of Construction 2.2 Symbols for Sanitation and Water Supply Installation 2.3 Symbols for types of Shutters of Doors 2.4 Symbols for Furniture 2.5 Symbols for Electric Fitting 2.6 Miscellaneous Symbols	
2	Building Bye Laws:	2
	2.1 Objectives, Scope and Applicability as per Local (GDCR) and National authority (NBC).	
3	Application - Principles of planning:	4
	3.1 Aspect, Prospect, Privacy, Circulation, Roominess 3.2 Grouping, Elegance, Sanitation, Flexibility, Economy.	
4	Perspective Drawing:	2
	4.1 Staircase 4.2 Security Cabin	
5	Components of Building:	2
	5.1 Components of Hospital Buildings 5.2 Components of Post Office Buildings	
6	Practicing for Different drawings – Manual Drawing and Software Application	12
	6.1 Residential plan 6.2 shopping or commercial center 6.3 Educational building plan or Institutional building plan	
TOTAL		28

Suggested Theory Distribution

The suggested theory distribution as per Bloom's taxonomy is as per follows. This distribution serves as guidelines for teachers and students to achieve effective teaching-learning process

Distribution of Theory for course delivery and evaluation					
Remember	Understand	Apply	Analyze	Evaluate	Create
5%	50%	40%	5%	00%	00%

List of Experiment & Projects

- Individually students have to maintain a sketch book.
- Students have to maintain soft copy of different plans individually, and final plan needs to be submitted in hard copy group wise.
- Under the Practice plan, 2 hours will be allocated for planning and remaining time will be allocated for application of software.

Drawing Sheets (A1 Size)

1. Residential Planning: Two storied Building: Plans, elevation, section, lay-out plan, key plan, site plan, area table, schedule of opening. Scale-1:100. (Furniture plan, Drainage lay out, Toilet Detail, Wood work detail, Kitchen detail, Electrical plan etc).
2. Public Building: Ground Floor plan, typical floor plan, elevation, section, lay-out plan, key plan, site plan, area table, schedule of opening.
3. Perspective Drawing: Two point perspective drawing.

Assignments

1. Assignment -1: Principles of planning.
2. Assignment -2: National building code and local bye-laws.
3. Assignment -3: Building drawings.

Instructional Method and Pedagogy

1. Prerequisite of the course and its pattern shall be discussed on the commencement of the course.
2. Lectures shall be conducted in class room using various teaching aids.
3. Presence in all academic sessions is mandatory which shall carry 5% marks of the total internal evaluation.
4. At the end of each unit/topic an assignment based on the course content shall be given to the students which shall carry 5% weightage for timely completion and submission of the assigned work.
5. The laboratory experiments are planned in such a way that it covers the practical aspects of the course contents. The performance of these experiments shall bring the clarity of the theoretical concepts which the students have studied during the academic sessions.

Recommended Study Material

1. Planning, designing building by Y. S. Sane, Allies Book Stall
2. Building Drawing by M. G. Shah, C. M. Kale and S. Y. Patki, Tata Mc Graw Hill, New Delhi
3. Building Planning, Designing and scheduling by Gurucharan Singh, Standard Book House, New Delhi National Building Code-2005, New Delhi Ss
4. National Building Code-2005, New Delhi
5. GDCR: General Development control regulations published by RMC and RUDA.
6. General Development Control Regulations published by AUDA and GICEA

01CI0303: Surveying
Objective of the Course

Objectives of introducing this subject at second year level in civil branches are:

- To know different field method of surveying.
- To calculate internal angles of the traverse.
- To calculate latitude and departure of traverse lines.
- To study types of curves and their field setting out.
- To understand method to calculate area and volume.
- To apply concept of area and volume to field applications like quantity of cutting & filling or capacity of reservoir.

Credits Earned: 3

Students Learning Outcomes

After studying this subject students will be able to:

- Understand basic principles of various methods of surveying.
- Obtain the included angles, latitude and departure of the traverse lines on the field.
- Set the different types of curves on the field during survey work.
- Analyze, calculate and measure the area and volumes of the different capacities and topographical situations.

Teaching and Examination Scheme

Subject Name	Teaching Scheme (Hours)			Credits	Theory Marks			Tutorial/ Practical Marks		Total Marks
	Theory	Tutorial	Practical		ESE (E)	Mid Sem (M)	Internal (I)	Viva (V)	Term Work (TW)	
Surveying	2	0	2	3	50	30	20	25	25	150

Detailed Syllabus

Sr. No.	Topic Name	Hours
1	Theodolite Survey	8
	Introduction, Fundamental definitions, Theodolite and its functioning, Measurement of vertical and horizontal angles, Methods of theodolite traversing, Closing error, Calculation of latitudes and departure, checks and balancing of traverse, Gale's traverse table, Omitted measurements.	
2	Trigonometric leveling	3
	Method of indirect leveling, Methods of leveling on steep ground.	

Sr. No.	Topic Name	Hours
3	Tacheometry Definitions, Principle of techeometry, Self-reducing tacheometers and methods.	3
4	Curves Introduction, Basics and geometry, Issues in curve location, Elements and setting out of circular and transit curves, Elements of vertical curves.	8
5	Field Area & Volumes Calculation of areas having regular & irregular boundaries, Trapezoidal formula, Simpson's rule, Digital planimeter, computation of volume for Earthwork volume calculation for cutting & filling, Volume from cross sections Calculation of reservoir capacity.	6
Total		28

List of Practicals

1. Traversing by the Theodolite and traverse plotting by applying corrections in Gale's traverse table.
2. Setting out the simple circular curve using various methods.
3. Setting out the combined curve including (a) Transition (b) Circular (c) Transition.
4. Setting out the foundation for simple building.
5. Computation of area of submergence and storage volume from contour maps for reservoir projects.

Suggested Theory Distribution

The suggested theory distribution as per Bloom's taxonomy is as per follows. This distribution serves as guidelines for teachers and students to achieve effective teaching-learning process

Distribution of Theory for course delivery and evaluation					
Remember	Understand	Apply	Analyze	Evaluate	Create
5%	30%	40%	15%	10%	00%

Instructional Method and Pedagogy

1. Students shall have a brief on the expected information and knowledge of the topics related to the course before the start of the subject.
2. By appropriate teaching aids and the theory sessions, all the lectures shall be conducted in the class room.
3. The academic session's attendance shall carry 5% weightage in overall evaluation of the student.
4. Based on the theory topics and contents taught in the academic sessions, the students shall be offered an assignment /tutorial / drawing sheet for each spate topic as a part of the submission.
5. All the field exercises and experimental work shall be conforming to the relevant theory topic taught. The experiments shall be designed in a way that brings full clarity and understanding about the subject contents to the students.

01CI0304: Fluid Mechanics
Objective of the Course

Objectives of introducing this subject at second year level in civil branches are:

- To know the properties of fluid and identify their types.
- To calculate hydro static forces and the measurement techniques for pressure.
- To understand the fluid kinematics and dynamics.
- To classify various types of fluid flow.
- To develop the concepts of (a) buoyancy force on immersed and floating body and (b) drag-lift force on the object.

Credits Earned : 5

Students Learning Outcomes

After studying this subject students will be able to:

- Identify the properties of different types of fluids.
- Measure the pressure and hydrostatic force generated by fluid.
- Categorize various types of fluid flow through channels and conduits.
- Evaluate the buoyancy force and drag-lift force for the floating and immersed bodies in fluid.

Teaching and Examination Scheme

Fluid Mechanics	4	0	2	5	50	30	20	25	25	150

Detailed Syllabus

Sr. No.	Topic Name	Hours
1	Properties of Fluid	4
	1.1 Various Fluid properties	
	1.2 Newton's Law of viscosity	
	1.3 Classification of Fluid: basic concept application of fluid mechanics.	
2	Fluid Statics	12
	2.1 Fluid Pressure Measurement	
	2.2 Hydrostatic Pressure	
	2.3 Buoyancy And Floatation	

Sr. No.	Topic Name	Hours
3	Fluid Kinematics	6
	3.1 Fluid Flow analysis methods, Flow pattern	
	3.2 Types of fluid flow	
	3.3 One, two and three dimensional flow, Rotational and Irrotational flow	
	3.4 Circulation and vorticity, velocity potential and stream function,	
	3.5 Flow net, Source, Sink and Doublet	
4	Fluid Dynamics	3
	4.1 Euler's Equation	
	4.2 Bernoulli's Equation	
	4.3 Energy Correction Factor	
5	Flow Measuring Devices	8
	5.1 Measurement of Discharge	
	5.2 Measurement of Velocity	
	5.3 Flow through reservoir opening, Mouthpiece	
	5.4 Notches and Weirs	
6	Flow Immersed Past Bodies	4
	6.1 Drag, Types of drag, Drag on sphere, flat plate and airfoil, Effect of drag,	
	6.2 Development of lift	
	6.3 Magnus effect, Circulation and lift characteristics of airfoils	
7	Compressible flow	5
	7.1 Basic equations	
	7.2 Mach number	
	7.3 Area-velocity relationship for compressible flow	
	7.4 Propagation of sound wave	
	7.5 Stagnation properties	
Total		42

List of Practicals

- 1) **To Validate Bernoulli's Theorem.**
- 2) **To determine the Metacentric height of a given floating body.**
- 3) **To Study Laminar and Turbulent Flow and its visualization on Reynolds's Apparatus.**
- 4) **To calibrate and study different flow meters particularly Venturimeter, orifice meter, Nozzle meter and Rota meters.**
- 5) To obtain surface profile of free and forced vortex.
- 6) To calibrate the given Rectangular, Triangular and Trapezoidal notches.
- 7) To determine fluid friction factor for the given pipes.
- 8) To determine loss coefficient for different pipe.

01CI0305: Software Applications in Civil Engineering-I
Objective of the Course

Objectives of introducing this subject at second year level in civil branches are:

- To understand the AutoCAD Software and its application in Planning for buildings.
- To study about different Software commands.
- To apply the learning into the different projects by following building bye laws and national building code for buildings

Credits Earned : 1

Students Learning Outcomes

After studying this subject students will be able to:

- Make use of Drawing tools and command
- Construct Computer aided drawing in civil engineering project
- Examine the role of different parameter used in Software application for Civil Engineering and its benefits
- Prepare working drawings, foundation plans and other executable drawings with proper details for residential buildings, commercial and institutional buildings

Laboratory Work Contents

Sr. No.	Topic Name	Hours
1	Introduction	4
	2.1 Introduction to CAD 2.2 Different Versions of AutoCAD	
2	Working with files	2
	2.1 Startup dialog box, save drawings, open drawings 2.2 File Management	
3	Displaying Objects	2
	3.1 Zoom Command, Grid, Snap	
4	Creating Basic Shapes	4
	4.1 Circle Command, Rectangle Command, Erase Command 4.2 Undo Command, Redo Command	
5	Using Polar tracking and polar snaps	2
	5.1 Polar Tracking 5.2 Spline	
6	Creating Object Pattern and Text:	4
	6.1 Array Command 6.2 Single line Text 6.3 Multi line Text 6.4 Text Style	
7	Trimming and Extending Objects:	2
	7.1 Offset 7.2 Trim 7.3 Extend	
8	Layer Tool Palette and Creating Section line:	6
	8.1 Layer, Layer Tools 8.2 Layer State Manager, Export Import Layer 8.3 Hatch Pattern	
9	Unit and Drawing Creation:	2
	9.1 Drawing Units 9.2 Drawing Creation	

Suggested Theory Distribution

The suggested theory distribution as per Bloom's taxonomy is as per follows. This distribution serves as guidelines for teachers and students to achieve effective teaching-learning process

Distribution of Theory for course delivery and evaluation					
Remember	Understand	Apply	Analyze	Evaluate	Create
5%	50%	40%	5%	00%	00%

List of Experiment & Projects

- Individually students have to maintain their folder.
- Students will save their work and submit all the files at the end of the semester.

Drawing Sheets (A1 Size)

1. At the start of course, the course delivery pattern, prerequisite of the subject will be discussed.
2. Labs will be conducted with the aid of multi-media projector, and Computers with the software installed.
3. Attendance is compulsory in laboratory for regular evaluation.
4. Students have to save their work regularly and **submit hard copy in A1 size sheet at the end of semester.**

Instructional Method and Pedagogy

1. Importance and utilization of software in the Civil Engineering sector shall be discussed.
2. The teaching shall be conducted using various teaching aids in computer lab.
3. Attendance in the session is mandatory and shall contain 5% weightage of the internal evaluation scheme.
4. At the end of each session, an assignment based on the content shall be given to the students which shall carry 5% weightage for timely completion and submission of the assigned work.
5. The course includes a practice session, where students shall have an opportunity to carry hands on experience on the software.

Recommended Study Material**Reference Books:**

1. AutoCAD 2017 Instructor by James A. Leach, SBC Publications
2. AutoCAD 2017 for Engineers and Designers by Prof. Sham Tickoo
3. Learning AutoCAD by P.S.Gill
4. Engineering drawing and graphics using AutoCAD by T Jeyapoovan

01C0306: Project Based on Community Services - I
Objective of the Course

Objectives of introducing this subject at second year level in civil branches are:

- To encourage students for abridging the academic knowledge with real life concerns.
- To make students skillful and capable on applying acquired knowledge innovatively and independently for public.
- To make students aware and face the actual challenges and hurdles for the knowledge application into the field.
- To build the self-confidence of the students and make them awaken for their inter-personal skills.
- To inculcate the senses within the students that they note how the civil engineering is one of the primary branch capable of providing a better life to public.

Credits Earned: 1

Students Learning Outcomes

After studying this subject student will be able to:

- Identify the engineering related problems in the community
- Compare the different solutions to resolve the problems of community by case study and survey.
- Analyze and solve the issue of community by providing economical solution to the problem

Teaching and Examination Scheme

Subject Name	Teaching Scheme (Hours)			Credits	Theory Marks			Tutorial/ Practical Marks		Total Marks
	Theory	Tutorial	Practical		ESE	IA	CSE	Viva	Term Work	
Project Based on Community Services - I	0	0	2	1	-	-	-	25	25	50

Detailed Syllabus

Sr. No	Topic name	Hours
1	Introduction	2
	1.1 What is community based services?	1
	1.2 Why Civil Engineering is a synonym of the knowledge for community?	1
2	Identifying the issues within the community	4
	2.1 Preparing a questionnaire, formats and survey forms	2
	2.2 Analysis of collected data and mapping of issues with the solutions available	2
3	Varieties of survey and ground work for communal issues	4
	3.1 Different types of surveys, tools and techniques for collecting the information	2
	3.2 Identification of exact issues and most appropriate solution	2
4	Factors affecting problem identification for the community	3
	4.1 Varieties of factors: Social, economic, environmental, educational	1
	4.2 Balancing the effects of the affecting factor to carryout solution	1
	4.3 Normalization of factors and finding the path way for problem solution	1
5	Exercise -1 (Group activity)	6
	5.1 Selection of problem from the community and mapping of issues	2
	5.2 Planning for working: Aim, objective and scope, time line	1
	5.3 Application of civil engineering knowledge and tools for solutions	1
	5.4 Validation of the solution by supervising the execution of solution	1
	5.5 Measuring the attainment of the solution: Feedback from community	1
6	Exercise -2 (Group or Individual activity)	5
	6.1 Selection of problem from the community and mapping of issues	1
	6.2 Planning for working: Aim, objective and scope, time line	1
	6.3 Application of civil engineering knowledge and tools for solutions	1
	6.4 Validation of the solution by supervising the execution of solution	1
	6.5 Measuring the attainment of the solution: Feedback from community	1
	TOTAL	24

List of Practical

Sr. No.	Topic name
1	Preparing survey tools: Formats, questionnaires, interviews
2	Data analysis techniques: Statistical and informal tools
3	Presentation of the full process of identification of community issues
4	Mentioning advantages and limitations of the solutions
5	Exercise -1
6	Exercise -2

Suggested Theory Distribution

The suggested theory distribution as per Bloom's taxonomy is as per follows. This distribution serves as guidelines for teachers and students to achieve effective teaching-learning process

Distribution of Theory for course delivery and evaluation					
Remember	Understand	Apply	Analyze	Evaluate	Create
5%	10%	15%	20%	20%	30%

Instructional Method and Pedagogy

1. The course shall be taught in the mixed mode format of class room learning and field visits.
2. Major portion shall be learnt by the students at the field.
3. Presence in all sessions is mandatory which shall carry 5% marks of the total internal evaluation.
4. At the end of each unit/topic the faculty shall evaluate the work by assigning grades to the work done. This shall carry 5% weightage for timely completion and submission of the assigned work.
5. The laboratory experiments are planned in such a way that it covers the practical aspects of the course contents. The performance of these experiments shall bring the clarity of the theoretical concepts which the students have studied during the academic sessions.

Recommended Study Material

Reference Books: As suggested by the faculty during the interactions and discussion.

Entrepreneurship and Engineering Ethics

Objective of the Course

Objectives of introducing this subject at second year level in civil branches are:

- To understand the societal needs & engineer's roles
- Inspire to play the professional responsibilities ethically.
- To motivate for critical thinking
- To keep high moral values and effectively take decision for right things
- Ability to accept the other's opinion and working in team.
- To develop the positive attitude towards the work assigned.
- To impart the values of professionalism and respect the profession
- To develop the honesty and team work spirit

Credits Earned: 3 Credits

Students Learning Outcomes

After studying this subject students will be able to:

- Know the roles and responsibilities as an professional
- Know the ethics for implementing the decision
- Should be able to work in team and respect other's decision
- Complete the assigned work positively

Teaching and Examination Scheme

Teaching Scheme (Hours)			Credits	Theory Marks			Tutorial/ Practical Marks		Total Marks
Theory	Tutorial	Practical		ESE(E)	Mid Sem (M)	Internal (I)	Viva (V)	Term work (TW)	
2	1	0	3	-	-	10	30	60	100

Detailed Syllabus:

Sr. No	Topic name	Hours
1	Introduction	2
	Course introduction and overview	1
	Comparison of ethics and engineering ethics	1
	Ethics at personal and student level	
2	Ethics	3
	Overview of ethical theories and applications	1
	Basics of ethical analyses and decision-making	1
	Ethics and the environment Innovation and ethics	1
3	Human values & Moral	4
	The concept of morality	1
	The importance of core values	
	Moral/ethical dilemmas and hierarchy of moral values	1
	Factors affecting moral responsibility, and degrees of responsibility	1
4	The importance if intention Truth (personal and social)	1
	Professionalism & ethics	4
	The concept of professions	1
	Engineers in organizations Ethics in the workplace	1
	Fairness (personal and social)	1
	The importance of ethics in science and engineering Professional responsibilities of engineers Ethical leadership in engineering and society	1
5	Conflicts of interests	
	Introduction: Entrepreneur:	6
	Evolution, Characteristics, Types, Functions of Entrepreneur	1
	Distinction between an Entrepreneur and a Manager	1
	Growth of Entrepreneurship in India,	1
	Role of Entrepreneurship in Economic Development.	1
Women Entrepreneurship Small Enterprises:	1	
6	Introduction to Project Identification And Selection (PIS)	1
	Meaning of Project, Project Identification, Project Selection	1

List of Practical**Suggested Theory distribution:**

The suggested theory distribution as per Bloom's taxonomy is as per follows. This distribution serves as guidelines for teachers and students to achieve effective teaching-learning process

Distribution of Theory for course delivery and evaluation					
Remember	Understand	Apply	Analyze	Evaluate	Create
20%	20%	40%	10%	5%	5%

Instructional Method and Pedagogy:

1. At the start of course, the course delivery pattern, prerequisite of the subject will be discussed.
2. Lectures will be taken in class room with the use of multi-media presentations, black board – mix of both.
3. Attendance is compulsory in lectures and laboratory which carries a 5% component of the overall evaluation.
4. No internal or end semester exams will be conducted.
5. Assignments based on course content will be given to the students at the end of each unit/topic and will be evaluated at regular interval. It carries a weightage of 60%.
6. The course includes a tutorials, where students have an opportunity to build an appreciation for the concepts being taught in lectures.

Recommended Study Material**Reference Books:**

01CI1401 Materials, Testing & Evaluation

Objective of the Course:

Objectives of introducing this subject at second year level in civil branches are:

- To acquaint the students for exploring the materials, its properties, intrinsic nature and its application in preparing cement Concrete.
- To understand the influence of various factors effecting the strength and durability of Concrete.
- To understand the basic behavior of concrete under application of various loading conditions and surrounding environment.
- To illustrate the concrete mix design process based on properties of material as per various national and international standards.
- To demonstrate the various advanced concrete and advanced testing techniques used in field.

Credits Earned: 4

Course Outcomes

After completion of this course, student will be able to

- Students will be able to understand features of special concrete and concreting methods
- Analyze the engineering properties of Civil Engineering materials like aggregate, cement, concrete, steel, wood, plastic, paints and other materials.
- Identify, Describe and carry out lab tests relevant to use of civil engineering materials on site.
- Ensure the quality of engineering materials on site.
- Interpret the behaviour of concrete in its fresh and hardened state with respect to its strength and durability aspects.
- Students will be able to design concrete mix according to given conditions as per IS Code

Teaching and Examination Scheme

Teaching Scheme (Hours)			Credits	Theory Marks			Tutorial/ Practical Marks		Total Marks
Theory	Tutorial	Practical		ESE (E)	IA	CSE	Viva (V)	Term work (TW)	
3	0	4	5	50	30	20	25	25	150

Detailed Syllabus:

Sr. No	Topic name	Hours
1	Introduction	1
	1.1 Historical background, Ingredient of concrete, Advantages of concrete over other materials, Current practice and future trends in concrete.	1
2	Concrete Ingredients	7
	2.1 Cement: Chemical composition, Heat of hydration and Structure of hydrated cement, Physical tests of cement.	3
	2.2 Aggregates: Categorization of aggregate and its Properties, Grading, Methods of combining aggregates, Specified grading, Testing of aggregates.	2
	2.3 Water – General requirements and impurities in water	2
3	Fresh Concrete	5
	3.1 Properties of fresh concrete, Workability tests as per IS standards, factors affecting workability, Segregation & Bleeding, Slump loss, Re-tempering.	3
	3.2 Mixing, Transporting, Placing, Compaction, Finishing of concrete at site. Curing methods and its necessity.	2
4	Hardened Concrete	4
	4.1 Various tests on Hardened concrete – Destructive: Compressive, Flexure, Tensile and Bond tests. Introduction to Non-Destructive and semi-destructive testing using Rebound Hammer, Ultrasonic pulse velocity, and core cutting tests.	3
	4.2 Failure mechanism under compression & tension, Stress- strain behavior of concrete, Overview of Modulus of elasticity, Dimensional stability –Creep & Shrinkage.	1
5	Durability & Permeability of Concrete	5
	5.1 Causes of deterioration in concrete and durability problems, Factors affecting durability, Transport mechanism of gases & fluids in concrete, Cracking & causes of cracking, Carbonation induced & corrosion induced cracking.	3
	5.2 Alkali-aggregate reaction, Degradation by freeze & thaw, Sulphate attack, Durability under sea-water (marine environment).	2
6	Mix design of Concrete	4
	6.1 Principles of concrete mix design, Parameters and factors influencing mix design.	2
	6.2 Indian Standard methods of mix design, Acceptability criteria, variability of results, Various provisions of IS code for sound concrete.	2
7	Special Concrete and Concreting Methods	2
	7.1 advanced cement based composites, Fibre reinforced concrete, Polymer modified concrete, Self-compacting concrete, Light weight concrete, High strength concrete, Hot & cold weather concreting, Precast concrete.	2

8	Steel	3
	8.1 Types of Steel, Manufacturing process	1
	8.2 Application(Rolled section and Bars), Advantages of new alloy steel	1
	8.3 Properties and advantages of aluminum and its products	1
	8.4 Types of Coatings & Coatings to reinforcement.	
9	Wood and Wood Products	3
	9.1 Timber Classification, Structure of Timber, Properties of good timber.	1
	9.2 Seasoning process of timber, Diseases of timber, Defects in Timber, Timber Decay, Timber Testing and Preservation	1
	9.3 Plywood, Veneers, particle Boards, Fibre Boards, Black Boards, Chip Boards, Laminated Boards and Button Boards	1
	9.4 Wood and wood products – Applications	
10	Plastics	2
	10.1 Properties & Manufacturing process	1
	10.2 Advantages of Reinforced polymers, applications as pipes, Doors, Furniture, walls etc.	1
11	Water Proofing Compounds	4
	11.1 Types of Non-weathering Materials and its uses	2
	11.2 Types of Flooring and Facade Materials and its application.	2
12	Wall Finishes	2
	12.1 Plaster – Types, Materials, Durability, Products and its applications	1
	12.2 Painting – Types, Materials, Durability.	1

List of Practicals

Sr. No	Topic name
A	Materials Test:
1	Standard Consistency of Cement
2	Initial and Final Setting time of Cement
3	Soundness test of cement
4	Compressive Strength Test
5	Shape Test
6	Sieve Analysis
7	Specific Gravity of Aggregate
8	Aggregate Impact Value
9	Aggregate Crushing Value
10	Aggregate Abrasion Value
B	Fresh Concrete Test:
1	Slump Test

2	Compacting Factor Test
C	Hardened Concrete Test:
1	Concrete Mix Design
2	Compressive strength of concrete cube
3	Split Tensile Strength Test
D	Non-Destructive Test:
1	Rebound Hammer Test
2	Ultrasonic Pulse Velocity Test
E	Tensile Test on Steel

Suggested Theory distribution:

The suggested theory distribution as per Bloom's taxonomy is as per follows. This distribution serves as guidelines for teachers and students to achieve effective teaching-learning process

Distribution of Theory for course delivery and evaluation					
Remember	Understand	Apply	Analyze	Evaluate	Create
20%	25%	20%	15%	20%	00%

Instructional Method and Pedagogy:

At the start of course, the course delivery pattern, prerequisite of the subject will be discussed.

1. Prerequisite of the course and its pattern shall be discussed on the commencement of the course.
2. Lectures shall be conducted in class room using various teaching aids.
3. Presence in all academic sessions is mandatory which shall carry 5% marks of the total internal evaluation.
4. At the end of each unit/topic an assignment based on the course content shall be given to the students which shall carry 5% weightage for timely completion and submission of the assigned work.
5. The laboratory experiments are planned in such a way that it covers the practical aspects of the course contents. The performance of these experiments shall bring the clarity of the theoretical concepts which the students have studied during the academic sessions.

01CI0402: Structural Analysis-I
Objective of the Course

Objectives of introducing this subject at second year level in civil branches are:

- To explain the structural systems based on static and kinematic indeterminacy and its importance in analysis.
- Explanation of various methods and their application for calculating deformations in statically determinate structures.
- To make students understand of failure load and stresses generated due to combined loading for slender and short compression member.
- To calculate the stresses generated in pressurized thin cylinders and spherical vessels.
- To explain the Influence line diagram for statically determinate structure.
- To analyze statically determinate arches and suspension bridges.
- To calculate the stresses and strain energy stored in the bar due to application of various loading like axial, shear, bending, and torsion.

Credits Earned : 5

Students Learning Outcomes

After studying this subject students will be able:

- Classify structural systems and apply principles of statics to analyze statically determinate structures
- To calculate stresses on structures subjected to combined axial and bending forces
- To compute buckling load for long columns with different end conditions using Rankine's and Euler's theory
- To determine stresses in thin cylinders and spherical vessels
- To compute strain energy stored in a body due to application of axial, shear, bending and torsional forces
- To develop the influence line diagram for determinate structures

Teaching and Examination Scheme

Subject Name	Teaching Scheme (Hours)			Credits	Theory Marks			Tutorial/ Practical Marks		Total Marks
	Theory	Tutorial	Practical		ESE (E)	Mid Sem (M)	Internal (I)	Viva (V)	Term Work (TW)	
Structural Analysis-I	4	2	0	5	50	30	20	25	25	150

Detailed Syllabus

Sr. No	Topic name	Hours
1	Fundamentals of Statically Determinate Structures:	8
	1.1 Indeterminacy - Static and Kinematic	1
	1.2 Statically determinate & indeterminate structures, its merits and de-merits, stability of structures based on static indeterminacy	1
	1.3 Calculation of static and kinematic indeterminacy of beams, plane frames, plane trusses, Grid, Space truss and space frames	3
	1.4 Computation of internal forces in statically determinate plane frames	3
2	Analysis of Truss	4
	2.1 Analysis of Truss using method of joint	2
	2.2 Analysis of Truss using method of Section	1
	2.3 Analysis of Truss using Graphical Method	1
3	Displacement of Determinate Beams	10
	3.1 Principle of superposition and Maxwell's reciprocal theorem	1
	3.2 Slope & Deflection equation of the beam subjected to uniform bending	1
	3.3 Double integration method	2
	3.4 Macaulay's method	2
	3.5 Moment Area Method	2
	3.6 Conjugate Beam Method	2
4	Direct and Bending stresses	6
	4.1 Introduction, Middle third rule, kernel of a section and no-tension condition	1
	4.2 Members subjected to direct and bending stresses, its examples and calculations of stresses.	2
	4.3 Stresses in base of Chimneys subjected to uniform wind pressure	1
	4.4 Stresses in the base of retaining walls and Dams due to water and soil filled upto the top surface of the walls.	2
5	Columns and Struts	6
	5.1 Definition of Long column, point of inflexion, Euler's theory-its assumptions and Euler's Buckling load for various end conditions, effective length of a long column and radius of gyration.	2
	5.2 Rankine's theory-its assumption and its comparison with Euler's theory.	1
	5.3 Analysis of columns with Rankine's and Euler's load	2
	5.4 Columns with initial curvature and eccentrically loaded long columns	1
6	Arches,	8
	6.1 Calculation of internal forces in three hinge arches with circular and parabolic shapes subjected to various types of loading	3
	6.2 Forces and end actions in cables due to various types of loading	2
	6.3 Unstiffened three hinged parabolic and cantenary type suspension bridge	3

7	Thin Cylinder	4
	7.1 Circumferential and longitudinal stresses and strain in Thin cylinders and spherical vessels	4
8	Strain Energy	6
	8.1 Strain Energy, Resilience, proof resilience and modulus of resilience	1
	8.2 Strain Energy stored in the body subjected to axially applied i) Gradual, ii) Sudden, and, iii) Impact loading for bars of uniform cross sections.	2
	8.3 Strain Energy stored in the members subjected to torsional and shear forces.	2
	8.4 Strain Energy stored in the members subjected to bending.	1
9	Influence Line Diagram	4
	9.1 Use and importance of Influence line diagram, ILD of reaction for determinate beams	1
	9.2 ILD of bending moment and shear force at given point for determinate beams	1
	9.3 Position of loading for maximum SF and BM at a point.	2
	Total	56

Laboratory Experiments shall not be performed and Instead Tutorials are to be conducted

Sr. No	Topic name	Hours
1	Fundamentals of Statically Determinate Structures	2
2	Analysis of Truss	2
3	Displacement of Determinate Beams	4
4	Direct and Bending stresses	4
5	Columns and Struts	4
6	Arches, Cables and Suspension Bridges	4
7	Thin cylinder	2
8	Strain Energy	4
9	ILD of determinate beams	2
	Total	28

Suggested Theory Distribution

01CI1405: Software Applications in Civil Engineering-II
Objective of the Course

Objectives of introducing this subject at second year level in civil branches are:

- To understand the Revit Architecture Software and its application in Building modeling.
- To study about different Software commands.
- To apply the learning into the different projects by following building bye laws and building information modeling.

Credits Earned : 1

Students Learning Outcomes

After studying this subject students will be able to:

- Import the Project and work upon the functional aspects of a building in the software.
- To generate 3D view with the help of the software.
- Generate a design with Components like Furniture, Electric Fixtures etc in a building.
- Use various concepts of Building Information Modeling.

01CI0407 : Project Based on Community Services - II
Objective of the Course

Objectives of introducing this subject at second year level in civil branches are:

- To encourage students for abridging the academic knowledge with real life concerns.
- To make students skillful and capable on applying acquired knowledge innovatively and independently for public.
- To make students aware and face the actual challenges and hurdles for the knowledge application into the field.
- To build the self-confidence of the students and make them awaken for their inter-personal skills.
- To inculcate the senses within the students that they note how the civil engineering is one of the primary branch capable of providing a better life to public.

Credits Earned: 1

Students Learning Outcomes

After studying this subject students will be able to:

- Understand the importance of civil engineering knowledge to solve real life issues in community.
- Analyze and solve the issue of community solvable by providing economical solution to the problem
- Build strong personal skills and learn how to take key decisions about projects.

Project Based on Community Services - II	0	0	2	1	-	-	-	25	25	50

Detailed Syllabus

Sr. No	Topic name	Hours
1	Introduction	2
	1.1 What is community based services?	1
	1.2 Why Civil Engineering is a synonym of the knowledge for community?	1
2	Identifying the issues within the community	4
	2.1 Preparing a questionnaire, formats and survey forms	2
	2.2 Analysis of collected data and mapping of issues with the solutions available	2
3	Varieties of survey and ground work for communal issues	4
	3.1 Different types of surveys, tools and techniques for collecting the information	2
	3.2 Identification of exact issues and most appropriate solution	2
4	Factors affecting problem identification for the community	3
	4.1 Varieties of factors: Social, economical, environmental, educational	1
	4.2 Balancing the effects of the affecting factor to carryout solution	1
	4.3 Normalization of factors and finding the path way for problem solution	1
5	Exercise -1 (Group activity)	6
	5.1 Selection of problem from the community and mapping of issues	2
	5.2 Planning for working: Aim, objective and scope, time line	1
	5.3 Application of civil engineering knowledge and tools for solutions	1
	5.4 Validation of the solution by supervising the execution of solution	1
	5.5 Measuring the attainment of the solution: Feedback from community	1
6	Exercise -2 (Group or Individual activity)	5
	6.1 Selection of problem from the community and mapping of issues	1
	6.2 Planning for working: Aim, objective and scope, time line	1
	6.3 Application of civil engineering knowledge and tools for solutions	1
	6.4 Validation of the solution by supervising the execution of solution	1
	6.5 Measuring the attainment of the solution: Feedback from community	1
	TOTAL	24

List of Practical

Sr. No.	Topic name
1	Preparing survey tools: Formats, questionnaires, interviews
2	Data analysis techniques: Statistical and informal tools
3	Presentation of the full process of identification of community issues
4	Mentioning advantages and limitations of the solutions
5	Exercise -1
6	Exercise -2

Suggested Theory Distribution

The suggested theory distribution as per Bloom's taxonomy is as per follows. This distribution serves as guidelines for teachers and students to achieve effective teaching-learning process

Distribution of Theory for course delivery and evaluation					
Remember	Understand	Apply	Analyze	Evaluate	Create
5%	10%	15%	20%	20%	30%

Instructional Method and Pedagogy

1. The course shall be taught in the mixed mode format of class room learning and field visits.
2. Major portion shall be learnt by the students at the field.
3. Presence in all sessions is mandatory which shall carry 5% marks of the total internal evaluation.
4. At the end of each unit/topic the faculty shall evaluate the work by assigning grades to the work done. This shall carry 5% weightage for timely completion and submission of the assigned work.
5. The laboratory experiments are planned in such a way that it covers the practical aspects of the course contents. The performance of these experiments shall bring the clarity of the theoretical concepts which the students have studied during the academic sessions.

Recommended Study Material

Reference Books: As suggested by the faculty during the interactions and discussion.

01CR0401 Professional Ethics

Objective: This course will enable the budding engineers and managers to effectively resolve the ethical issues they will face in their professional lives.

Credits Earned: 1

Course Outcomes: After completion of this course, student will be able to:

- Express the basics of human values.
- Articulate human values and grow as responsible human beings in the society.
- Develop ethical conduct and deliver their professional duties.
- Analyze ethical confusions and contradictions to bring harmony at thought, behaviour and action level.

Teaching and Examination Scheme

Teaching Scheme (Hours)			Credits	Theory Marks			Tutorial/ Practical Marks		Total Marks
Theory	Tutorial	Practical		ESE (E)	Mid Sem (M)	Internal (I)	Viva (V)	Term work TW=CSE	
1	0	0	1	00	00	00	50	50	100

Contents:

Unit	Topics	Contact Hours
1	OVER VIEW AND BASIC CONCEPTS The concept of terminology of morals and morality, ethics, values, spirituality and stakeholder will enable students to have clarity about the concepts which are important for individuals and organizations.	2
2	Profession and Professionalism Introduction to Profession and Professionalism will cultivate the ability to relate to ethical concepts and ethical problems in specific professions and professionalism	2
3	Ethical Theories. Understand variety of Moral Issues and Examples of Moral Dilemmas and Resolving Moral Dilemmas Conflict to enable the students to differentiate between right and wrong. .	2
4	Responsibilities and rights of professional. Professional Rights & Responsibilities will impart clarity on Loyalty, Confidentiality, Respect for Authority, Accountability and its importance. Issues related to Pride of Profession ,Pride of Employer, Gifts and Bribes, Whistle-blowing, Discrimination,Vishakha Guidelines and Sexual Harassment of Women at Workplace (Prevention, Prohibition And Redressal) Act 2013	3

5	Ethics In Engineering Profession Ethics In Engineering Profession will bring clarity about the Roles of Engineers such as Engineers as Managers and Other Roles Played by Engineers.	1
6	Ethical Codes Need for Ethical Codes will enable students to understand the prominence of ethical codes and become benchmarks against which individual and organizational performance can be measured. Codes From Other Profession-Advertising Standards Council of India, Corporate Codes-Tata Group of Companies will give them the profound knowledge of ethical codes.	1
7	GLOBAL ISSUES Intellectual Property Rights will bring out the broader ethical issues surrounding intellectual property rights. Roles of Media, Positive Aspects of Media, Negative Aspects of Media, Accountability of Media, Regulation of Media Factors in Media Ethics, Advertising Ethics, Corporate Social Responsibility- Concept ISO and CSR, Scenario CSR Rules in India Manufacturing and Marketing of Computers Software, Cybercrimes, Data Stealing, Embezzlement, Hacking.	3
Total Hours		14

Suggested Theory distribution:

The suggested theory distribution as per Bloom's taxonomy is as per follows. This distribution serves as guidelines for teachers and students to achieve effective teaching-learning process

Distribution of Theory for course delivery and evaluation					
Remember	Understand	Apply	Analyse	Evaluate	Create
20%	20%	35%	10%	10%	5%

Instructional Method:

- The course delivery method will depend upon the requirement of content and need of students. The teacher in addition to conventional teaching method by black board, may also use any of tools such as demonstration, role play, Quiz, brainstorming, case studies etc.
- The internal evaluation will be done on the basis of continuous evaluation of students in the class-room.
- Practical examination will be conducted at the end of semester for evaluation of performance of students in classroom.
- Students will use supplementary resources such as online videos

01CR0501: Business Benchmark

Objective: This, an upper-intermediate qualification that shows students have a level of English that is adequate for practical everyday use in a business environment.

Credits Earned: 1 Credit

Course Outcomes: This an upper-intermediate level qualification, which shows students can:

- Contrast and understand short pieces of business correspondence reports or proposals.
- Read and Categorize the extracts from business publications. Ask for information required.
- Listen to, understand and contribute to discussions in meetings.
- Prepare the presentation on a familiar topic.

Pre-requisite of course: NA.

Teaching and Examination Scheme

Teaching Scheme (Hours)			Credits	Theory Marks			Tutorial/ Practical Marks		Total Marks
Theory	Tutorial	Practical		ESE (E)	Mid Sem (M)	Internal (I)	Viva (V)	Term work (TW)	
1	0	0	1	-	-	-	50	50	100

Contents:

Unit	Topics	Contact Hours
1	The working day Changing places, job swapping at work. Discussion on how to describe jobs. Understanding job titles names of company department.	1
2	Getting the right job Reading through job satisfaction at Sony Mobile and advice on job applications for how to make web entries and writing a short email. Discussion on format of emails and letters. Language work on past simple regular and irregular verbs. Using comparatives and superlatives	2
3	Making Contact A quiz on telephone with phone answering tips. Short talk on what is important when making a business telephone call. Language work on present passive and modal verbs for obligation. Present simple and continuous: time expressions and state verbs, asking questions, expressing likes and introducing reasons.	1
4	Launching a product Reading through a Drink Me Chai success story. How to launch and promote new products. How to write a marketing report. Language work on Present Continuous for	2

	future, will and am going to forms and the differences between them.	
5	Starting a business Setting up an international franchise. Writing the letter of enquiry. Language work on perfect tense and simple past tense & Past continuous and using prepositions in time phrase.	2
6	Making arrangements and transport How to make travel arrangements. Writing a letter responding to an invitation. Discussion on what factors are important while on a business trip.	1
7	Business Meetings Study on survey of meetings. Writing an email about giving instructions and business trip. Discussion on how meeting should be conducted. Language work on using collocations describing reasons for meetings and referencing. Using modals to Showcase responsibility and ability.	1
8	Social media and business Ways of using social media. Writing an email arranging a meeting and introducing a company. Discussion on how to use social media. Making recommendations and using passive to express opinions and ideas.	1
9	Job applications Writing your CV. Writing a letter inviting a candidate for interview and letter giving the result of an application. Headings for CVs and describing application procedure.	2
10	Communication with customers How to train for customer communication skills. Discussion on the best methods for communicating different things. Expressing result. Adjective & Noun collocations.	1
	Total Hours	14

Suggested Theory distribution:

The suggested theory distribution as per Bloom's taxonomy is as per follows. This distribution serves as guidelines for teachers and students to achieve effective teaching-learning process

Distribution of Theory for course delivery and evaluation					
Remember	Understand	Apply	Analyse	Evaluate	Create
20%	20%	35%	10%	10%	15%

01CI0501: Hydrology and Water Resource Management
Objective of the Course

Objectives of introducing this subject at third year level in civil branches are:

- To exemplify the students for measurement of precipitation, infiltration, Evaporation, evapotranspiration.
- To develop understanding of construction hydrograph, unit hydrograph and S-Hydrograph
- To enable the students for estimation of peak floods.
- To understand the students about flood management technique.
- To create understanding about features of various types of dam.
- To demonstrate hydrological simulation model

Credits Earned: 4

Students Learning Outcomes

After studying this subject students will be able to:

- Workout Average Rainfall from a catchment
- Calculate infiltration rate and capacity using double ring Infiltrometer
- Figure out runoff from a catchment using unit hydrograph
- Estimate highest flood flow in the river
- Compute the discharge from bore and yield of well
- Management of storm water and flood by using hydrological simulation model.

Teaching and Examination Scheme

Subject Name	Teaching Scheme (Hours)			Credits	Theory Marks			Tutorial/ Practical Marks		Total Marks
	Theory	Tutorial	Practical		ESE (E)	Mid Sem (M)	Internal (I)	Viva (V)	Term Work (TW)	
Hydrology and water resource Management	2	0	2	4	50	30	20	25	25	150

Detailed Syllabus

Sr. No	Topic name	Hours
1	Hydrology	12
	1.1 Precipitation: Forms, type & formation of precipitation, measurement of rainfall, interpretation of rainfall data, estimating missing data, double mass curve, average rainfall over area, DAD analysis, Rainfall Data In India	5
	1.2 Evaporation: Evaporation and its Measurement	2
	1.3 Evapotranspiration: Evapotranspiration and its measurement	2
	1.4 Infiltration: factors affecting infiltration and its measurement	1
	1.5 Stream flow: its measurement	1
	1.6 Data network & telemetry:	1
2	Hyetograph and Hydrograph Analysis	8
	2.1 Introduction and construction of hydrograph	1
	2.2 Water shed characteristic, factors affecting runoff	2
	2.3 Hydrograph perception, its components, Factors affecting hydrograph assumptions and limitation of unit hydrograph, Derivation of unit hydrograph and application of Unit Hydrograph, S-hydrograph. Flow duration curve	5
3	Ground Water hydrology	7
	3.1 Groundwater formation and occurrence, Types of aquifer, aquifer parameter,	3
	3.2 Ground Water movement –Darcy's Law, Well Hydraulics, Well losses, yield of well, constant level pumping test and Recuperation Test	4
4	Flood Management	4
	4.1 Historical flood in Indian Rivers , Causes of floods, Flood mitigation measure, flood damage analysis	4
5	Hydrologic Analysis	4
	5.1 Design flood, Flood Assessment method, Flood Frequency Analysis, Flood routing through reservoir and channel routing. Storm drainage design.	4
6	Hydrologic Simulation model	5
	6.1 overview, Classification, steps in digital simulation, Quality Assurance in computer simulation studies, Crops of engineering HEC simulation Models : HEC Models, HEC-HMS model, HEC –RES model, SWMM	5
	TOTAL	40

List of tutorial

Sr. No.	Name of Topic
1	Assessment of flood using unit hydrograph and S-Hydrograph
2	Determination of discharge of bore & yield of well.
3	Calculation of live and dead storage capacity of reservoir
4	Computation of capacity of reservoir using mass inflow curve
5	Computation of power of a hydro-power plant
6	Probability distribution and Flood routing
7	Application Of SWMM and HEC-REC

Key Equipment: Symons's Rain Gauge, Float Type Automatic Rain gauge, Pan Evaporimeter, Double Ring Infiltrometer, Digital Current Meter

Suggested Theory Distribution

The suggested theory distribution as per Bloom's taxonomy is as per follows. This distribution serves as guidelines for teachers and students to achieve effective teaching-learning process

Distribution of Theory for course delivery and evaluation					
Remember	Understand	Apply	Analyze	Evaluate	Create
15%	20%	20%	15%	20%	10%

Instructional Method and Pedagogy

1. Prerequisite of the course and its pattern shall be discussed on the commencement of the course.
2. Lectures shall be conducted in class room using various teaching aids.
3. Presence in all academic sessions is mandatory which shall carry 5% marks of the total internal evaluation.
4. At the end of each unit/topic an assignment based on the course content shall be given to the students which shall carry 5% weightage for timely completion and submission of the assigned work.
5. The laboratory experiments are planned in such a way that it covers the practical aspects of the course contents. The performance of these experiments shall bring the clarity of the theoretical concepts which the students have studied during the academic sessions.

01CI0502: Structural Analysis-II
Objective of the Course

Objectives of introducing this subject at second year level in civil branches are:

- To equip students with statically indeterminate structure and formation of compatibility equations.
- To make students use strain energy equations for determining various structural parameters like slope, deflection, shear force and bending moment in determinate structural systems.
- To make students identify various methods used to analyze and evaluate internal forces in indeterminate structural systems.

Credits Earned: 5

Students Learning Outcomes

After studying this subject students will be able:

- To analyze end actions of indeterminate structures by using Consistent deformation method, Moment Distribution method and Slope & deflection method.
- To examine the physical structural parameters using the strain energy concepts.
- To develop the influence lines for indeterminate beams that helps in evaluating end reactions, shear force and bending moment at particular section for moving load
- To analyze indeterminate structure using matrix method

Teaching and Examination Scheme

Subject Name	Teaching Scheme (Hours)			Credits	Theory Marks			Tutorial/ Practical Marks		Total Marks

01CL0503: Highway Engineering
Objective of the Course

Objectives of introducing this subject at second year level in civil branches are:

- To understand the design of road network which is safe, economic and time saving for passengers and goods movements
- To impart knowledge to the civil engineering students on highway planning, its design, methods of construction, traffic studies and maintenance
- To make students understand about concepts of analysis and design of pavement structure
- To make students able to perform various test related to highway materials

Credits Earned: 4

Students Learning Outcomes

After studying this subject students will be able to:

- Explain the importance of highway planning and fundamentals of traffic engineering.
- Identify the different properties of pavement materials and recommend the maintenance strategies for highway design.
- Plan a highway project considering aspects such as highway finance and road safety.
- Examine the various parameters of highway geometry and structural design of pavements

	1.1 Scope of highway engineering, Development of Highway in India	1
	1.2 , 20 years Road Planning, Vision 20-20	1
2	Geometric Design of Highway	10
	2.1 Cross sectional elements –width of carriage way, road surface, camber	1
	2.2 Sight Distance – types of sight distance: SSD, OSD, ISD, HSD	3
	2.3 Design of Horizontal and Vertical curve- alignment of curve and problem solving	3
	2.4 Super Elevation and Gradient	2
	2.5 Summit and Valley curves	1
3	Highway Material	10
	Engineering and physical properties and Basic Tests: materials used in highway construction	

	3.1 Subgrade Soil- Importance, characteristics, index properties, classification and methods, evaluation of soil structure	2
	3.2 Aggregate- function, properties, test	1
	3.3 Binders- types and characteristics, function, test	1
	3.4 Bituminous Material- grading , characteristics, emulsion, cutback, modified binder	2
	3.5 Bituminous Paving mixes- requirement of mixes, constituents, properties, Marshall method for bituminous mix design	2
	3.5 Cement and Cement Concrete- Introduction, materials for construction of rigid pavement, requirement of paving concrete	2
4	Pavement	15
	4.1 Design of flexible and rigid pavement - types of pavement, comparison of flexible and rigid pavement, components of pavement and its function, factor affecting design, stresses in flexible and rigid pavement, pavement design methods, special types of rigid pavement	8
	4.2 Highway construction methods - Steps of construction of new highway, embankment and subgrade, excavation of earth, construction of flexible pavement, construction of rigid pavement, construction of low volume roads, soil stabilization of roads- mechanical stabilization, soil cement stabilization, soil lime stabilization, soil stabilization using bituminous material, special problems in soil stabilization	3
	4.3 Failure and maintenance of roads- objectives of maintenance, classification of maintenance, highway drainage, failure in flexible pavement and rigid pavement	2
	4.4 Highway economics and road safety audit - introduction, highway user benefits, highway costs, highway finance	2
5	Traffic Engineering	5
	5.1 Basic Elements of traffic engineering 5.2 Road user characteristics, vehicular characteristics	1
	5.3 Traffic Flow characteristics- basic traffic maneuver, traffic stream flow characteristics, speed-flow-density relations, passenger car units, capacity and LOS, design service volume	2
	5.4 Traffic Engineering studies and analysis - traffic volume studies, spot speed studies, speed and delay studies, O-D studies, parking studies, accident studies	2
	TOTAL	42

List of Practical

Sr. No	Topic name
A	Materials Test:
1	Aggregate Abrasion test
2	Penetration Test
3	Softening Point test
4	Ductility Test
5	Viscosity Test
6	Marshall Stability Test
7	Benkelman Bean Test

B	Tutorials
1	Highway Planning
2	Inter relationship between traffic parameters

Suggested Theory Distribution

The suggested theory distribution as per Bloom's taxonomy is as per follows. This distribution serves as guidelines for teachers and students to achieve effective teaching-learning process

Distribution of Theory for course delivery and evaluation					
Remember	Understand	Apply	Analyze	Evaluate	Create
10%	25%	10%	35%	20%	00%

Instructional Method and Pedagogy

1. Prerequisite of the course and its pattern shall be discussed on the commencement of the course.
2. Lectures shall be conducted in class room using various teaching aids.
3. Presence in all academic sessions is mandatory which shall carry 5% marks of the total internal evaluation.
4. At the end of each unit/topic an assignment based on the course content shall be given to the students which shall carry 5% weightage for timely completion and submission of the assigned work.
5. The laboratory experiments are planned in such a way that it covers the practical aspects of the course contents. The performance of these experiments shall bring the clarity of the theoretical concepts which the students have studied during the academic sessions.

Recommended Study Material

01CI0504 : Environment Engineering

Course Objectives: To design and understand the application of treatment system

Credits Earned: 4

Course Outcomes:

After completion of this course students will be able to –

- Understand the various sources of water, standards, and criteria for designated uses.
- Design of primary, secondary, and tertiary water treatment units.
- Design of conveyance systems for water supply schemes.
- Need and design of separate and combined sewerage systems.
- Design aspects, role and functioning of various primary and secondary wastewater treatment units.

Pre-requisite of course: Basic understanding about the environment science

Teaching and Examination Scheme

Subject Name	Teaching Scheme (Hours)			Credits	Theory Marks			Tutorial/ Practical Marks		Total Marks
	Theory	Tutorial	Practical		ESE (E)	IA (M)	CSE	Viva (V)	Term work (TW)	
Environmental Engineering	3	0	2	4	50	30	20	25	25	150

Detailed Syllabus

Unit	Topics	Hours
1	Introduction Sources of water: Surface and sub-surface water sources- their quality and suitability. Quality of water: Meaning of pure water and methods of analysis of water, physical, chemical and bacteriological tests and their significance, standard of potable water as per Indian standard and International standards, Maintenance of purity of water, Impurities in water.	6
2	Water Supply: Quantity of water - Brief description of water supply system, Water requirement, rate of demand and variation in rate of demand, per capita consumption for domestic, industrial, public and fire fighting uses as per BSI standards, population forecasting. Water treatment: Sedimentation-purpose, types of sediments tanks, Coagulation, flocculation, Filtration-	9

	significance, types of filters, their suitability. Necessity of disinfection of water, chlorination- break point chlorine, residual chlorine, application of chlorine. Flow diagram of different treatment units and its functions- Aeration fountain, mixer, flocculator, slow and rapid sand filters, chlorination chamber.	
3.	Conveyance of water: Different types of pipes- their suitability and uses. System of water supply- intermittent and continuous service reservoirs- types, necessity and accessories. Wastage of water- preventive measures, maintenance of distribution system.	5
4.	Waste water engineering: Introduction: purpose of sanitation, necessity of systematic collection and disposal of waste, collection and conveyance of sewage, Quantity and quality of sewage. Collection of sewage and estimation of its discharge: Different types of sewers, sewerage systems, variation in sewage flow, sewer appurtenance, estimation of wastewater discharge in a sewer in sewerage system, estimation of storm water discharge in urban area, separate and combined sewerage systems, laying and testing of sewers.	12
5.	Sewage treatment: Meaning and principle of primary and secondary treatment, constructional detail of screens, grit chamber, detritus tank, skimming tank, plain sedimentation tank, primary clarifiers, secondary clarifiers, filters, control beds, intermittent sand filters, trickling filters, activated sludge processes, sludge treatment and disposal, oxidation ponds.	10

List of experiment

Sr. No.	Experiment	No. of turns
1	Introduction to Standards, collection and preservation of samples, sampling techniques and laboratory equipment.	1
2	Determination of pH value of given samples.	1
3	Determination of conductivity and total dissolved solids (TDS) of given water samples.	1
4	Determination of Acidity and Alkalinity of provided samples.	2
5	Determination of Turbidity.	1
6	To perform jar test for coagulation.	2
7	Determination of dissolved oxygen (DO) and Biochemical oxygen demand (BOD) for given sample.	2
8	Determination of Chemical oxygen demand (COD).	1

9	Determination of residual chlorine in water.	1
10	Treatability studies of domestic wastewater (Aeration for 24, 48, 72 hrs. Finding influent and effluent COD, SVI, MLSS conc.)	2

Suggested Theory Distribution

The suggested theory distribution as per Bloom's taxonomy is as per follows. This distribution serves as guidelines for teachers and students to achieve effective teaching-learning process

Distribution of Theory for course delivery and evaluation					
Remember	Understand	Apply	Analyze	Evaluate	Create
5%	15%	10%	60%	10%	0%

Instructional Method and Pedagogy

4. Water supply and sanitary engineering by G.S.Birdie and J.S.Birdie

01CI0505: Software Applications in Civil Engineering - III
Objective of the Course

Objectives of introducing this subject at second year level in civil branches are:

- To make students understands about simulation of traffic conditions in any urban area
- To impart knowledge to the civil engineering students on optimization of signal timing and designing
- To make students understand about concepts of traffic simulation and management
- To make students able to perform various simulation on traffic

Credits Earned: 1

Students Learning Outcomes

After studying this subject students will be able to:

- To Make use of Drawing tools and command
- To Construct Computer aided drawing for nodes and links in transportation project
- To Analyze various influencing traffic parameters and prioritize them according to their effects
- To Predict the optimized signal cycle as per traffic condition

1. Lab Manual on VISSIM by Ptv VISSIM.

01CI0506: Project Based on Community Services - III
Objective of the Course

Objectives of introducing this subject at second year level in civil branches are:

- To encourage students for abridging the academic knowledge with real life concerns.
- To make students skillful and capable on applying acquired knowledge innovatively and independently for public.
- To make students aware and face the actual challenges and hurdles for the knowledge application into the field.
- To build the self confidence of the students and make them awaken for their inter-personal skills.
- To inculcate the senses within the students that they note how the civil engineering is one of the primary branch capable of providing a better life to public.

Credits Earned: 1

Students Learning Outcomes

After studying this subject students will be able to:

- Identify the engineering related problems in the community.
- Analyze and Design different solutions to resolve the problems of community.
- Apply economical solution to those problems in the field.

Teaching and Examination Scheme

Subject Name	Teaching Scheme (Hours)			Credits	Theory Marks			Tutorial/ Practical Marks		Total Marks
	Theory	Tutorial	Practical		ESE	IA	CSE	Viva	Term Work	
Project Based on Community Services - III	0	0	2	1	-	-	-	25	25	50

Detailed Syllabus

Sr. No	Topic name	Hours
1	Introduction	2
	1.1 What is community based services?	1
	1.2 Why Civil Engineering is a synonym of the knowledge for community?	1
2	Identifying the issues within the community	4
	2.1 Preparing a questionnaire, formats and survey forms	2
	2.2 Analysis of collected data and mapping of issues with the solutions available	2
3	Varieties of survey and ground work for communal issues	4
	3.1 Different types of surveys, tools and techniques for collecting the information	2
	3.2 Identification of exact issues and most appropriate solution	2
4	Factors affecting problem identification for the community	3
	4.1 Varieties of factors: Social, economical, environmental, educational	1
	4.2 Balancing the effects of the affecting factor to carryout solution	1
	4.3 Normalization of factors and finding the path way for problem solution	1
5	Exercise -1 (Group activity)	6
	5.1 Selection of problem from the community and mapping of issues	2
	5.2 Planning for working: Aim, objective and scope, time line	1
	5.3 Application of civil engineering knowledge and tools for solutions	1
	5.4 Validation of the solution by supervising the execution of solution	1
	5.5 Measuring the attainment of the solution: Feedback from community	1
6	Exercise -2 (Group or Individual activity)	5
	6.1 Selection of problem from the community and mapping of issues	1
	6.2 Planning for working: Aim, objective and scope, time line	1
	6.3 Application of civil engineering knowledge and tools for solutions	1
	6.4 Validation of the solution by supervising the execution of solution	1
	6.5 Measuring the attainment of the solution: Feedback from community	1
	TOTAL	24

List of Practical

Sr. No.	Topic name
1	Preparing survey tools: Formats, questionnaires, interviews
2	Data analysis techniques: Statistical and informal tools
3	Presentation of the full process of identification of community issues
4	Mentioning advantages and limitations of the solutions
5	Exercise -1
6	Exercise -2

Suggested Theory Distribution

The suggested theory distribution as per Bloom's taxonomy is as per follows. This distribution serves as guidelines for teachers and students to achieve effective teaching-learning process

Distribution of Theory for course delivery and evaluation					
Remember	Understand	Apply	Analyze	Evaluate	Create
5%	10%	15%	20%	20%	30%

Instructional Method and Pedagogy

1. The course shall be taught in the mixed mode format of class room learning and field visits.
2. Major portion shall be learnt by the students at the field.
3. Presence in all sessions is mandatory which shall carry 5% marks of the total internal evaluation.
4. At the end of each unit/topic the faculty shall evaluate the work by assigning grades to the work done. This shall carry 5% weightage for timely completion and submission of the assigned work.
5. The laboratory experiments are planned in such a way that it covers the practical aspects of the course contents. The performance of these experiments shall bring the clarity of the theoretical concepts which the students have studied during the academic sessions.

Recommended Study Material

Reference Books: As suggested by the faculty during the interactions and discussion.

01CI0507 : Environmental Pollution

Course Objectives: Course will introduce about the adverse effects of toxicants on environment and human being and the approaches to carry out a risk assessment and management.

Credits Earned: 4 Credits

Course Outcomes: After completion of this course students will have an –

- (i) Idea about different types of pollution
- (ii) Able to know about sampling techniques and disposal method

Teaching and Examination Scheme

Subject Name	Teaching Scheme (Hours)			Credits	Theory Marks			Tutorial/ Practical Marks		Total Marks
	Theory	Tutorial	Practical		ESE (E)	IA (M)	CSE	Viva (V)	Term work (TW)	
Environmental Pollution	3	0	2	4	50	30	20	25	25	150

Detailed Syllabus

Unit	Topics	Hours
1	Water Pollution: Types and sources. Sampling Methods. Water Quality Parameters, Types and sources of water pollution, Various pollutants responsible for water pollution: Biological pollutants; Inorganic; Organic; Heavy metals; Pesticides; Radioactive pollutants, etc., Various sources Effluent standards, Drinking water standards, Characteristics of Domestic Waste, Characteristics of agricultural Waste, Consequences of water Pollution: Effect on health on biosphere and on economy, Sampling methods: Purpose of sampling, different types of samples, collection methods and various instruments used for it. Methods involved in estimation of parameter for pollution levels.	12
2	Marine Water Pollution: Types, sources and consequences. Specifications for disposal of sewage and industrial waste into sea. Disposal of sewage & wash water from MV cargo & ships	5

3.	Soil Pollution: Types, sources and consequences. Sampling Methods. Specifications for disposal of sewage & effluent on land for irrigation & ground water recharge. Methodology of wastewater disposal on land in India. Impact of usage of land for solid waste disposal both municipal solid waste & industrial solid wastes (fly ash from thermal power station, lime sludge from pulp & paper mills). Disposal of hazardous solid waste (heavy metals, toxic organic compounds) on land & its impact on soil pollution. Deterioration of soil due to mining activities Case study of restoration of land due to a. disposal to fly ash, b. dumping overburden & tailing in iron ore extraction.	12
4.	Solid-waste Pollution: Types, sources and consequences. Classification of wastes – (Domestic, Industrial, Municipal, Hospital, Nuclear, Agriculture), Transfer and transport, Recycle, Reuse, Recovery, Conversion of solid wastes energy / Manure, Disposal methods – Generation, Sea disposal, Land disposal, Waste disposal on farm crops for irrigation purpose.	10
5	Radioactive Pollution: Types, sources and consequences.	3

List of experiment

Sr. No.	Experiment	No. of turns
1	Introduction to Standards, collection samples,	1
2	Determination of pH and hardness of water sample	1
3	Determination of TDS, TSS of water sample	1
4	Determination of VSS of water sample	1
5	Determination of moisture content of soil sample	1
6	Determination of langmuir saturation index	1
7	MPN test	2

Suggested Theory Distribution

The suggested theory distribution as per Bloom's taxonomy is as per follows. This distribution serves as guidelines for teachers and students to achieve effective teaching-learning process

Distribution of Theory for course delivery and evaluation

4. Environmental radioactivity – M. Eisendbud, Academic press.
5. Environmental Science – A study of Inter relationships, E. D. Enger, B. E. Smith, 5th ed., W C B publication.

01CI0508: Disaster Management
Objective of the Course

Objectives of introducing this subject at third year level in civil branches are:

- The Course focuses on types of Hazards, its effects and control methodology along Disaster management law and acts.
- This course would educate students to identify and assess hazards and disaster in any stage of operation, to quantify and manage them as well.

Credits Earned: 4

Students Learning Outcomes

After studying this subject students will be able to:

- Decide emergency, vulnerability and the importance of disaster management to handle the situation.
- Prepare damage assessment of natural and manmade disasters.
- Work out financing relief expenditures and distribution program.
- Prepare emergency management program
- Implement Engineering mitigation measure to control disaster impact.

Teaching and Examination Scheme

01CI0509: Traffic Engineering
Objective of the Course

Objectives of introducing this subject at second year level in civil branches are:

- To understand the Traffic parameters
- To impart knowledge to the civil engineering students on road safety
- To make students understand about concepts of analysis and design of Traffic signal and intersection
- To make students able to perform various traffic data collection procedure

Credits Earned: 4

Students Learning Outcomes

After studying this subject student will be able to:

- To analyse the properties of the traffic parameters.
- To apply knowledge of various traffic surveys
- To design various traffic control devices.
- To analyse road safety as per IRC SP 88.

Teaching and Examination Scheme

1	Traffic Volume Count
2	Spot Speed Survey
3	Parking Survey
B	Tutorials
1	Inter relationship between traffic parameters
2	Rotary and Signal Design

Suggested Theory Distribution

The suggested theory distribution as per Bloom's taxonomy is as per follows. This distribution serves as guidelines for teachers and students to achieve effective teaching-learning process

Distribution of Theory for course delivery and evaluation					
Remember	Understand	Apply	Analyze	Evaluate	Create
10%	25%	10%	35%	20%	00%

Instructional Method and Pedagogy

- Prerequisite of the course and its pattern shall be discussed on the commencement of the course.
- Lectures shall be conducted in class room using various teaching aids.
- Presence in all academic sessions is mandatory which shall carry 5% marks of the total internal evaluation.
- At the end of each unit/topic an assignment based on the course content shall be given to the students which shall carry 5% weightage for timely completion and submission of the assigned work.
- The laboratory experiments are planned in such a way that it covers the practical aspects of the course contents. The performance of these experiments shall bring the clarity of the theoretical concepts which the students have studied during the academic sessions.

01CI0601: Transportation Engineering
Objective of the Course

Objectives of introducing this subject at second year level in civil branches are:

- To understand the various elements of Railway engineering.
- To understand fundamentals of planning and design of various airport structures.
- To carry out geometric design of railway track.
- To give knowledge about maintenance of railways.
- To make students aware of design of runway and taxiway at airports.

Credits Earned: 3

Students Learning Outcomes

After studying this subject students will be able to:

- Understand the functioning and network of air transport and rail transport.
- Identify important components of rail transport and air transport.
- Analyze geometric component of rail transport and air transport.
- Evaluate geometric design of various components of air transport and rail transport.

Teaching and Examination Scheme

Subject Name	Teaching Scheme (Hours)			Credits	Theory Marks			Tutorial/ Practical Marks		Total Marks
	Theory	Tutorial	Practical		ESE (E)	Mid Sem (M)	Internal (I)	Viva (V)	Term Work (TW)	
Transportation Engineering	2	0	2	3	50	30	20	25	25	150

Detailed Syllabus

Sr. No	Topic name	Hours
1	Introduction – Railway Engineering	1
	1.1 Modes of Transportation, Importance of Transportation, Types of Transportation systems, Salient Features of Railways, Zones of Indian Railways, Modern Trends in Railways	1
2	Permanent way and Gauges	3
	2.1 Gauges – types, selection of gauge, IR Track specifications, Uniform Gauge Policy	1
	2.2 Loading Gauge and Construction Gauge	1
	2.3 Permanent Way, Cross sections of Permanent way and Railway track components	1
3	Coning of Wheels	1
4	Rails	2
	4.1 Function of rails, Classification of Rails, Rail sections, defects in rails	1
	4.2 Creep of Rails, Rail Joints and Welding of Rails	1
5	Rails – Fitting and Fastenings	1
	5.1 Types, Rail to Rail, Rail to wooden, Rail with CI Sleepers, Rail with Steel Sleepers	1
	5.2 Elastic types – Pandrol/Elastic Clip	
6	Geometric Design of Railway Track	4
	6.1 Gradients, Grade Compensation, speed of train on curves, design of elements	1
	6.2 Super elevation, Cant deficiency, negative super elevation	2
	6.3 Widening of gauges on curves, extra clearance on curves	1
7	Crossing and Turnouts	2
	7.1 Crossings – types and importance of crossing	
	7.2 Track Junctions – types, split, double turnout, crossover, diamond crossing, slip, Gauntlet track, scissor crossover, triangle, double junction	2
8	Station and Yards	2
	8.1 Requirements at station, facilities, classification, platforms, loops, sidings.	1
	8.2 Yards – types, various equipments in yards	1
9	Signaling and Interlocking	2
	9.1 Classification of signals	1
	9.2 Purpose of interlocking	1
10	Introduction – Airport Engineering	1
	10.1 Importance of Air transport, Development of Air transport	
	10.2 Airport Classification	1
11	Aircraft Characteristics	3
	11.1 Engine type and propulsion	
	11.2 Size, weight and wheel configuration	1
	11.3 Minimum Turning and circling radius	
	11.4 Speed Capacity and Noise	
	11.5 Vertices at Tail ends, Jet blast, Fuel Spillage	2
	11.6 Aircraft Navigation Controls	
12	Airport Planning	2
	12.1 Site selection and Factor influencing size of airport	1
	12.2 Airport Obstructions, Imaginary surfaces, height of object in approach zone, turning radius	1

13	Runway and Taxiway Design	6
	13.1 Runway orientation, Wind Rose Diagram, Runway Configuration	2
	13.2 Runway Geometric Design	1
	13.3 Taxiway Requirements, geometric design, location of taxiway	2
	13.4 Exit Taxiway, Turn around taxiway, taxi – length	1
14	Apron and Aircraft Parking	2
	14.1 Holding apron : Size, operation and design	1
	14.2 Loading apron: size and number of gates, parking configuration and system of aircraft parking	1
15	Terminal Area Design	3
	15.1 Layout of airport, components of airport system	1
	15.2 Passenger terminal area, relation of terminal area with runway	1
	15.3 Terminal area planning and Hangar – types and site selection criteria	1
16	Visual Aids – Marking, Lightning and Signs	2
	16.1 Apron Marking, Landing direction indicator, wind direction indicator, runway marking, shoulder marking, taxiway marking	1
	16.2 Airport Lightning, airport beacon, protected flight zone, runway lightning and taxiway lightning	
	16.3 Airport Signage – Mandatory signs, information signs, sign position at runway and taxiway intersections	1
	TOTAL	38

Suggested Theory Distribution

The suggested theory distribution as per Bloom’s taxonomy is as per follows. This distribution serves as guidelines for teachers and students to achieve effective teaching-learning process

Distribution of Theory for course delivery and evaluation					
Remember	Understand	Apply	Analyze	Evaluate	Create
20%	25%	30%	10%	15%	00%

Instructional Method and Pedagogy

1. Prerequisite of the course and its pattern shall be discussed on the commencement of the course.
2. Lectures shall be conducted in class room using various teaching aids.
3. Presence in all academic sessions is mandatory which shall carry 5% marks of the total internal evaluation.
4. At the end of each unit/topic an assignment based on the course content shall be given to the students which shall carry 5% weightage for timely completion and submission of the assigned work.
5. The laboratory experiments are planned in such a way that it covers the practical aspects of the course contents. The performance of these experiments shall bring the clarity of the theoretical concepts which the students have studied during the academic sessions.

Recommended Study Material

01CI0602: Elementary Design of Structures
Objective of the Course

Objectives of introducing this subject at third year level in civil branches are:

- To develop an understanding for implementation of designing concept in the field of structural engineering.
- To present fundamental principles and methodologies of design of reinforced concrete and steel structures.
- To be able to Identify and interpret the appropriate Indian design codes.
- To have the ability to identify different types of loads in various structures member for design.
- To be able to perceive analysis and design of components of reinforced concrete and steel structures.

Credits Earned: 5
Students Learning Outcomes

After studying this subject students will be able to:

- To understand various philosophies for structural design
- To analyse and design various types of steel connection using bolts and weld.
- To design steel structural elements in accordance to IS 800
- To ensure limit state of collapse and serviceability for structural elements
- To design RCC flexural elements in accordance to IS 456
- To design column and footing subjected to axial loads according to IS 456.

Teaching and Examination Scheme

Subject Name	Teaching Scheme (Hours)			Credits	Theory Marks			Tutorial/ Practical Marks		Total Marks
	Theory	Tutorial	Practical		ESE (E)	IA (M)	CSE (I)	Viva (V)	Term Work (TW)	
Elementary Design of Structures	4	0	2	5	50	30	20	25	25	150

Detailed Syllabus

Sr.No	Topic name	Hours
1	Introduction to concrete and structural steel design	02
	1.1 Introduction to structural concrete and its properties, Properties of Structural Steel, I. S. Rolled Sections, I. S. Specifications Different components of the structures, Principle of stability and equilibrium	1
	1.2 introduction to structural design process – Role of structural engineer, Architecture, User and builder, Introduction to different design philosophy for concrete and steel structures – Working stress method, Ultimate load design and Limit state method, Plastic Method.	1
Detailed Syllabus SECTION – I		
2	Philosophy of Limit State Design	02

	2.1 Assumptions of limit state method, Stress-strain behavior of steel and concrete, Stress block parameter.	1
	2.2 Limit state of collapse and serviceability, Load and load combinations, partial safety factors for material and loading.	1
3	Design of Beams	10
	3.1 Flexure design of beams – Types of sections like under reinforced, over reinforced & balance section, Neutral Axis depth, Moment of Resistance for singly reinforced, doubly reinforced and flanged sections.	6
	3.2 Shear design of beams – Bond and anchorage length, Shear reinforcement	2
	3.3 Design of Simply supported, cantilever and continuous beam.	2
4	Design of Slab	06
	4.1 Design of RCC slab – Design of one way and two way slab, Effect of edge condition and torsion reinforcement at corners.	
5	Design of Column	09
	5.1 Design of RCC column – Classifications - Assumptions – Design and detailing of axially loaded Short columns.	03
	5.2 Design and detailing of uniaxial & biaxial columns.	06
6	Design of Foundations	3
	6.1 Design of isolated footing for square and rectangular shape.	
Detailed Syllabus SECTION – II		
7	Connections	8
	7.1 Type of Connections, Advantages and Disadvantages of Welded Joints, Riveted, Bolted and Welded Connections, Strength, Efficiency and Design of Joints, Modes of Failure of a Riveted Joint, Design of Fillet and Butt Welds.	
8	Design of Tension Member	5
	8.1 Types of tension member and modes of failure, Design of Axially Loaded Tension Member.	
9	Design of Compression Member	6
	9.1 Modes of Failure of a Column, Buckling Failure: Euler's Theory, Design of Compression Members, Design of Built-Up Compression Members: Laced and Battened Columns	
10	Design of Flexural Member	5
	10.1 Types of sections and classification, lateral stability and design strength of laterally restrained and unrestrained simply supported beam, shear strength and Web Crippling, Web Buckling.	

Laboratory Experiments shall not be performed and Instead Tutorials are to be conducted

Sr. No	Topic Name	Hours
1	Introduction and philosophy of limit state design	2
2	Design of Beam	10
3	Design of Slab	8
4	Design of Column	8
5	Design of Foundations	4
6	Connections	10
7	Design of Tension Member and Compression Member	10
8	Design of Beams	4
	Total	56

01CI0603: Advanced Geotechnical Engineering
Objective of the Course

Objectives of introducing this subject at third year level in civil branches are:

- Be able to perform laboratory compaction and in-place density tests for fill quality control.
- Able to determine strength of soil for geotechnical purpose.
- Able to understand stability and failure of slopes and importance of earth pressure.
- To understand the hydraulic conductivity of soil.

Credits Earned: 4

Students Learning Outcomes

After studying this subject students will be able to:

- To evaluate to predict the stresses incurred on the soil due to overlaying of foundations.
- The process of compaction and its engineering performance in the field can be clearly understood
- Predict stability of the slop and Design of slopes that are required in the construction of embankment, earth dams and canals can be successfully applied
- To able to understand the phenomena of consolidation and able to calculate the settlement of foundation
- Able to calculate strength, compressibility and permeability parameters of soil as per relevant IS code and phenomena of earth pressure.
- Able to understand various engineering properties of soil

Teaching and Examination Scheme

Subject Name	Teaching Scheme (Hours)			Credits	Theory Marks			Tutorial/ Practical Marks		Total Marks
	Theory	Tutorial	Practical		ESE (E)	Mid Sem (M)	Internal (I)	Viva (V)	Term Work (TW)	
Advanced Geotechnical Engineering	3	0	2	4	50	30	20	25	25	150

Detailed Syllabus

Sr. No	Topic name	Hours
1	Compaction	5
	1.1 Definition, theory of compaction, Laboratory compaction tests, factors affecting compaction in the field.	2
	1.2 Effect of compaction on soil properties, Placement water content, Placement layer thickness, field control of compaction.	3
2	Consolidation	7
	2.1 Compressibility of Soils. Definition and Mechanism of Soil, Consolidation, Spring Analogy	2
	2.2 Compression Index, Coefficient of Compressibility, Coefficient of volume change. Derivation of Terzaghi's One Dimensional consolidation Equation. Time factor and consolidation ratio.	2
	2.3 Calculation of consolidation settlement for uniform pressure increment in clay layer. OneDimensional consolidation test, Laboratory and theoretical time curves.	3
3	Shearing Resistance and Strength	6
	3.1 Mohr's strength theory, Mohr-Coulomb strength theory, Types of tri-axial tests-UU, CU, CD Direct shear test	3
	3.2 Unconfined compression test, Introduction to triaxial compression test, Vane shear Test, Effective Stress principle.	3
4	Stability of Slopes	6
	4.1 Idealized Condition used in the analysis, factor of safety, Infinite and finite slopes, Stability of Infinite slopes.	2
	4.2 Introduction to Swedish Circle Method of Analysis, Taylor's Stability Number.	2
	4.3 Earth pressure all general cases, slopes stability analysis using Swedish circle method, Bishop's method and use of Janbu's method.	2
5	Earth Pressure	5
	5.1 Types of lateral earth pressure, Rankine's and Coulomb's earth pressure, Theory and their application for determination of lateral earth pressure under different conditions.	2
	5.2 Rebhann's and Culmann's Graphical methods of determination of lateral earth pressures.	3
6	Stress Distribution of Soils	7
	6.1 Causes of stress in soil, geostatic stress, Boussinesque's equation, stress distribution diagrams.	3
	6.2 Newmark's influence chart Westergard's equation, contact pressure, stresses due to triangular and circular, strip and rectangular loadings.	4
7	Permeability and Seepage	6
	7.1 Darcy's Law and its validity, factors affecting permeability, Laboratory determination of permeability.	3
	7.2 Permeability of stratified soil masses, Seepage pressure Quick sand condition, Laplace equation, Flow Net and its characteristics.	3
	TOTAL	42

List of Practical's

Sr. No	Topic name
1	Proctor Compaction Test
2	Consolidation Test
3	CBR Test
4	Direct Shear Test
5	Demonstration on Triaxial Test
6	Unconfined Compression Test
7	Free Swell & Swelling Pressure Test
8	Constant and Falling Head Permeability Test

Suggested Theory Distribution

The suggested theory distribution as per Bloom's taxonomy is as per follows. This distribution serves as guidelines for teachers and students to achieve effective teaching-learning process

Distribution of Theory for course delivery and evaluation

5. Principles of Geotechnical Engineering by B. M. Das; Thomson Asia Pvt. Ltd.

01CI0604: Professional Practice & Valuation
Objective of the Course

Objectives of introducing this subject at third year level in civil branches are:

- To work out the amount of material required for various activities of the construction of infrastructural facilities
- To acquaint the students with types of contract and contracting terminologies involved in the projects, disputes and arbitration process.
- To understand the importance of specifications, its types and drafting general specifications for civil works.
- To understand the Bidding Process and Tendering Process.
- To illustrate the rate analysis and Valuation Process.

Credits Earned: 3

Students Learning Outcomes

After studying this subject students will be able to:

- To work out the amount of material required for various activities of the construction of infrastructural facilities
- To acquaint the students with types of contract and contracting terminologies involved in the projects, disputes and arbitration process.
- To drafting general specifications for civil works
- To Carry out the Bidding Process and Tendering Process.
- To illustrate the rate analysis and Valuation Process

Teaching and Examination Scheme

Subject Name	Teaching Scheme (Hours)			Credits	Theory Marks			Tutorial/ Practical Marks		Total Marks
	Theory	Tutorial	Practical		ESE (E)	Mid Sem (M)	Internal (I)	Viva (V)	Term Work (TW)	
Professional Practice & Valuation	2	0	2	3	50	30	20	25	25	150

Detailed Syllabus

Sr. No	Topic name	Hours
1	Estimation	10
	1.1 Definitions, Units of Measurements and types of estimates.	3
	1.2 Different methods to find the quantities of civil works. Estimated cost and its importance. Provisions of IS 1200, to work out quantities and deductions in civil works. Entering the measurements in quantity sheet and calculation of quantity of various items of civil works for residential, commercial and industrial buildings.	4
	1.3 Market rates of material and labor. Introduction to rate schedule, abstract sheet and calculation of estimated cost.	3
2	Specifications	4
	2.1 Definitions, Importance and Types.	2
	2.2 Generals and Detailed specifications for civil works	2
3	Rate Analysis	3
	3.1 Definition	1
	3.2 Determination of rate of item of civil work like plaster, brickwork and Plain and reinforced concrete	2
4	Contracting	4
	4.1 Definitions	1
	4.2 Legal requirements of a valid contract	1
	4.3 Types and conditions of contract	1
	4.4 Sub contracting, Disputes and Arbitration	1
5	Tendering Process	4
	5.1 Bidding process and prequalification process, tender notice and its essential features, drafting of tender notice and Bid Submission.	2
	5.2 Analysis of tenders, evaluation and acceptance, work order and agreement.	2
6	Valuation	3
	6.1 Definition, Price-cost, depreciation, sinking fund	1
	6.2 Factor affecting value, rent and standard rent, Years Purchase and valuation tables.	1
	6.3 Methods of valuation for buildings and land,	1
	TOTAL	28

List of Tutorials that shall be conducted

Sr. No	Topic name
1)	Working out Quantities of various items of civil works from working drawings of residential, industrial and commercial buildings.
2)	Working out quantities of various items of civil works from drawings of culverts.
3)	Work out rates of items of civil works
4)	Examples on Valuation of land and buildings
5)	Drafting specifications for various items of civil works
6)	Calculation of areas and volumes of different objects
7)	Rate Analysis

01CI0605: Construction Technology & Safety Engineering
Objective of the Course

Objectives of introducing this subject at third year level in civil branches are:

- To acquaint the student for new construction technologies its use and application at various stages.
- To understand the influence of various factors affecting the selection of construction equipment.
- To understand different techniques used to demolish the structure.
- To recognize advance equipment its advantages and drawbacks.
- Understand the safety level at each stage of construction

Credits Earned: 2

Students Learning Outcomes

After studying this subject students will be able to:

- To identify the use and applicability of different types of equipment
- To analyze different types of deep foundation and its construction techniques
- To apply various techniques used in the construction of tall structure
- To apply the safety measures required on the construction site
- To differentiate various techniques used in the demolition of the structure
- To analyze different design parameters of the temporary structure

Teaching and Examination Scheme

Construction Technology & Safety Engineering	2	0	0	2	50	30	20	0	0	100

Detailed Syllabus

Sr. No	Topic name	Hours
Construction Technology		
1	Introduction	2
	1.1 Features and functions of the special types of civil engineering structures: Multistoried building, Chimney, Elevated service reservoir, Dams and retaining walls, Bridges and hydraulic structures, Industrial structures, Marine and offshore structures, Tall structures.	2
2	Excavating Equipment	2
	2.1 selection, basic parts, operation, factors affecting output and selection of equipment	1
	2.3 Excavating Equipment: Power shovels, Draglines, hoes, clam shell and machines.	1
3	Pile Foundation	7
	3.1 Classifications of piles based on materials like concrete, steel, timber, composite, sand, concrete (pre-cast, Cast –in –situ, Pre-stressed) including cased and uncased with advantages and disadvantages.	2
	3.2 Selection of piles.	1
	3.3 Types of piles.	1
	3.4 Pile accessories and tools.	1
	3.5 Pile driving methods.	2
	3.6 Failure or settlement of piles.	2
	3.7 Under reamed piles including method of it' construction.	1
	3.8 Group action of piles and its efficiency.	1
4	Coffer Dams and Caissons	4
	4.1 Coffer dams: Types, requirements, Selection criteria, Design features, economic height, Leakage points and leakage prevention in coffer dams.	2
	4.2 Caissons: Definition, uses, Types of caisson, Sinking of caissons, Shifting of Caissons, Caisson Diseases	2
5	Construction of Tall Structure & Demolition	2
	5.1 Construction of Tall Structure: Materials of Tall Structure, Structural system for tall structure, Methods of Construction.	1
	5.2 Demolition: Taking down of tall structure, needs, methods, safety measures	1
6	Form work	3
	Form work for R.C.C. Wall, slab, beam and column, centering for arches of large spans and dams, design features for temporary works, slip formwork, False work for Bridges	3
Safety Engineering		
7	Introduction	1
	8.1 Introduction to Indian Construction Industry, Importance & requirement of Construction Safety Management in Indian construction industry.	1
8	Setting up the site	2
	9.1 Site requirement: site access, site boundary, site security, work's safe passage.	1

	9.2 Safety plan: emergency procedures, planning for the emergency, fire safety, first aid, on-site regulation.	1
9	Construction phase health and safety	5
	10.1 Substructure Phase: survey, site clearance, earthwork, Foundation work safety, welding and cutting work safety.	2
	10.2 Superstructure Phase: scaffolds, temporary structures, ladder safety and lift operation.	1
	10.3 Finishing Phase: roofing work, Painting and Plastering work, electrical safety, testing and commissioning.	1
	10.4 General requirement: hand power tool, traffic management, working over water, work permit.	1
Total		28

01CI0606: Software Applications in Civil Engineering-IV
Objective of the Course

Objectives of introducing this subject at second year level in civil branches are:

- To provide an overview of structural analysis and design software
- To acquaint students about various commands in STAAD Pro and its function.
- To familiarize students about its interactive interface, modelling of structure and interpretation of results obtained from software

Credits Earned: 1

Students Learning Outcomes

After studying this subject student will be able to:

- Understand the modeling of various types of structures in STAAD PRO and ETABS.
- Apply the various types of loads to structures using STAAD PRO and ETABS.
- Analyze the concrete and steel structures using STAAD PRO and ETABS.
- Design the concrete and steel structures using STAAD PRO and ETABS.

Teaching and Examination Scheme

Subject Name	Teaching Scheme (Hours)			Credits	Theory Marks			Tutorial/ Practical Marks		Total Marks
	Theory	Tutorial	Practical		ESE (E)	Mid Sem (M)	Internal (I)	Viva (V)	Term Work (TW)	
Software Applications in Civil Engineering-IV	0	0	2	1	-	-	-	25	25	50

Laboratory Work Contents

Sr. No.	Topic Name	Hours
1	Introduction	4
	1.1 Features, hardware requirements, STAAD.Pro screen organization, GUI overview, Unit systems, Structure geometry and Coordinate systems (Global and Local) 1.2 Introduction to STAAD Editor	
2	Model Generation	8
	2.1 Concept of Pre-Processor, Analysis Engine, Post Processor; Creating a new file, creating nodes, adding beam, plate, solid, enhanced grid tool (linear, radial, irregular) 2.2 Model generation using grid tool	
3	Geometry and specification operations	12
	3.1 Insert Node in existing member, adding beams, selecting members Renumbering, How to create Beam /Column & Curved	

	Beams, Add Mid points, Add Perpendicular intersection beam, Cut Section, Stretch /Split BEAMS, Different Viewing Controls for Structure Geometry 3.2 Support specifications, material and member assignment, loading page

Suggested Theory Distribution

The suggested theory distribution as per Bloom's taxonomy is as per follows. This distribution serves as guidelines for teachers and students to achieve effective teaching-learning process

Distribution of Theory for course delivery and evaluation					
Remember	Understand	Apply	Analyze	Evaluate	Create
5%	50%	40%	5%	00%	00%

List of Experiment & Projects

- Model and analyze structure such as Beam, Frame and Plane truss under gravity loading
- Preparation of structural drawing

Drawing Sheets (A1 Size)

1. At the start of course, the course delivery pattern, prerequisite of the subject will be discussed.
2. Labs will be conducted with the aid of multi-media projector, and Computers with the software installed.
3. Attendance is compulsory in laboratory for regular evaluation.
4. Students have to save their work regularly and submit hard copy in A1 size sheet at the end of semester.

Instructional Method and Pedagogy

1. Importance and utilization of software in the Civil Engineering sector shall be discussed.
2. The teaching shall be conducted using various teaching aids in computer lab.
3. Attendance in the session is mandatory and shall contain 5% weightage of the internal evaluation scheme.
4. At the end of each session, an assignment based on the content shall be given to the students which shall carry 5% weightage for timely completion and submission of the assigned work.
5. The course includes a practice session, where students shall have an opportunity to carry hands on experience on the software.

01CI0607: Project Based on Community Services - IV
Objective of the Course

Objectives of introducing this subject at second year level in civil branches are:

- To encourage students for abridging the academic knowledge with real life concerns.
- To make students skillful and capable on applying acquired knowledge innovatively and independently for public.
- To make students aware and face the actual challenges and hurdles for the knowledge application into the field.
- To build the self confidence of the students and make them awaken for their inter-personal skills.
- To inculcate the senses within the students that they note how the civil engineering is one of the primary branch capable of providing a better life to public.

Credits Earned: 1

Students Learning Outcomes

After studying this subject students will be able to:

- Identify the engineering related problems in the community.
- Analyze and Design different solutions to resolve the problems of community.
- Apply economical solution to those problems in the field.

Teaching and Examination Scheme

Subject Name	Teaching Scheme (Hours)			Credits	Theory Marks			Tutorial/ Practical Marks		Total Marks
	Theory	Tutorial	Practical		ESE	IA	CSE	Viva	Term Work	
Project Based on Community Services - IV	0	0	2	1	-	-	-	25	25	50

Detailed Syllabus

Sr. No	Topic name	Hours
1	Introduction	2
	1.1 What is community based services?	1
	1.2 Why Civil Engineering is a synonym of the knowledge for community?	1
2	Identifying the issues within the community	4
	2.1 Preparing a questionnaire, formats and survey forms	2
	2.2 Analysis of collected data and mapping of issues with the solutions available	2
3	Varieties of survey and ground work for communal issues	4
	3.1 Different types of surveys, tools and techniques for collecting the information	2
	3.2 Identification of exact issues and most appropriate solution	2
4	Factors affecting problem identification for the community	3
	4.1 Varieties of factors: Social, economical, environmental, educational	1
	4.2 Balancing the effects of the affecting factor to carryout solution	1
	4.3 Normalization of factors and finding the path way for problem solution	1
5	Exercise -1 (Group activity)	6
	5.1 Selection of problem from the community and mapping of issues	2
	5.2 Planning for working: Aim, objective and scope, time line	1
	5.3 Application of civil engineering knowledge and tools for solutions	1
	5.4 Validation of the solution by supervising the execution of solution	1
	5.5 Measuring the attainment of the solution: Feedback from community	1
6	Exercise -2 (Group or Individual activity)	5
	6.1 Selection of problem from the community and mapping of issues	1
	6.2 Planning for working: Aim, objective and scope, time line	1
	6.3 Application of civil engineering knowledge and tools for solutions	1
	6.4 Validation of the solution by supervising the execution of solution	1
	6.5 Measuring the attainment of the solution: Feedback from community	1
	TOTAL	24

List of Practical

Sr. No.	Topic name
1	Preparing survey tools: Formats, questionnaires, interviews
2	Data analysis techniques: Statistical and informal tools
3	Presentation of the full process of identification of community issues
4	Mentioning advantages and limitations of the solutions
5	Exercise -1
6	Exercise -2

Suggested Theory Distribution

The suggested theory distribution as per Bloom's taxonomy is as per follows. This distribution serves as guidelines for teachers and students to achieve effective teaching-learning process

Distribution of Theory for course delivery and evaluation					
Remember	Understand	Apply	Analyze	Evaluate	Create
5%	10%	15%	20%	20%	30%

Instructional Method and Pedagogy

1. The course shall be taught in the mixed mode format of class room learning and field visits.
2. Major portion shall be learnt by the students at the field.
3. Presence in all sessions is mandatory which shall carry 5% marks of the total internal evaluation.
4. At the end of each unit/topic the faculty shall evaluate the work by assigning grades to the work done. This shall carry 5% weightage for timely completion and submission of the assigned work.
5. The laboratory experiments are planned in such a way that it covers the practical aspects of the course contents. The performance of these experiments shall bring the clarity of the theoretical concepts which the students have studied during the academic sessions.

Recommended Study Material

Reference Books: As suggested by the faculty during the interactions and discussion.

01CI0608: Energy Science & Engineering
Objective of the Course

Objectives of introducing this subject at third year level in civil branches are:

- To provide an introduction to energy systems and renewable energy resources, with a scientific examination of the energy field and an emphasis on alternative energy sources and their technology and application
- The class will explore society's present needs and future energy demands, examine conventional energy sources and systems, including fossil fuels and nuclear energy, and then focus on alternatives, renewable energy sources such as solar, biomass (conversions), wind power, waves and tidal, geothermal, ocean thermal, hydro and nuclear.
- Energy conservation methods will be emphasized from Civil Engineering perspective.

Credits Earned: 4

Students Learning Outcomes

After studying this subject students will be able to:

- List and generally explain the main sources of energy and their primary applications nationally and internationally
- Demonstrate the challenges and problems associated with the use of various energy sources, including fossil fuels, with regard to future supply and the impact on the environment
- Understand effect of using these sources on the environment and climate
- Understand the Engineering involved in project compare energy demands and quantity of the resources.
- Collect and organize information on renewable energy technologies as a basis for further analysis and evaluation.
- To quantify energy demands and make comparisons among energy uses, resources, and technologies.

Teaching and Examination Scheme

Subject Name	Teaching Scheme (Hours)			Credits	Theory Marks			Tutorial/ Practical Marks		Total Marks
	Theory	Tutorial	Practical		ESE	IA	CSE	Viva	Term Work	
Energy Science & Engineering	3	0	2	4	50	30	20	25	25	150

Detailed Syllabus

Sr. No	Topic name	Hours
1	Introduction	3
	1.1 Interpretation of historical and scientific principle for issues related to social, environment and climate	1
	1.2 Energy resources and system	1
	1.3 Sustainable energy and environment	1
2	Sources of Energy	4
	2.1 Introduction to energy system, energy sources, transformation of energy and efficiency, its storage	1
	2.2 History and future of fossil fuels: Coal, Coal gasification, oil etc. Substitutes of Fossil fuels: Biomass energy, hydrogen, wind, solar, tidal, nuclear etc.	1
	2.3 Reviews of Sustainability and environmental impact	1
	2.4 Storage and regeneration of energy	1
3	Impact of Energy on environment	5
	3.1 Conservation of energy and its efficiency	1
	3.2 Concept of clean energy technology with sustainability: carbon footprint	2
	3.2 Energy economics related to its production and consumption, Economic impact on environment, Influence on future energy due to economic, environmental, trade and research policy	2
4	Energy Sources and Civil Engineering Projects	10
	4.1 Modern technology for Coal mining, Under water oil Pipelines, solar power, tidal energy, offshore oil platform, hydro power plant (underground and above ground) with dam, wind mill, tunnels, penstocks, underground oil extraction etc.	7
	4.2 Nuclear power system; reactor buildings and its testing procedure for containment of reactor, nuclear fuel storage, disposal system	3
5	Energy conservation	8
	5.1 Engineering related to Green Building and Green Architecture : Material, Location, Design	2
	5.2 Ratings of LEED	1
	5.3 Identification of energy related enterprises that represent the breath of the industry and prioritizing these as candidates	1
	5.4 Energy analysis and sustainability measuring tool	1
	5.5 Energy Audit for Facilities	1
	5.6 Optimization of energy consumption	2
	TOTAL	30

Suggested Theory Distribution

The suggested theory distribution as per Bloom's taxonomy is as per follows. This distribution serves as guidelines for teachers and students to achieve effective teaching-learning process

Distribution of Theory for course delivery and evaluation					
Remember	Understand	Apply	Analyze	Evaluate	Create
10%	60%	30%	-	-	-

Instructional Method and Pedagogy

1. Prerequisite of the course and its pattern shall be discussed on the commencement of the course.
2. Lectures shall be conducted in class room using various teaching aids.
3. Presence in all academic sessions is mandatory which shall carry 5% marks of the total internal evaluation.
4. At the end of each unit/topic an assignment based on the course content shall be given to the students which shall carry 5% weightage for timely completion and submission of the assigned work.
5. The laboratory experiments are planned in such a way that it covers the practical aspects of the course contents. The performance of these experiments shall bring the clarity of the theoretical concepts which the students have studied during the academic sessions.

01CI0701 Design of Concrete Structure
Objective of the Course

Objectives of introducing this subject at fourth year level in civil branches are:

- Be able to design G+3 concrete building, Retaining wall, water tank and Flat Slab.
- Incorporate the concept of earthquake resistant design in the building

Credits Earned: 5

Students Learning Outcomes

After studying this subject student will be able to:

- Calculate various types loads acting on different RCC structures as per various Indian standards.
- Design a multistorey RCC structure as per Indian standards.
- Apply the fundamentals of reinforced concrete to design structures like retaining walls, water tanks and flat slab.
- Analyze the structures considering the effects of earthquake force as per Indian standards.

Teaching and Examination Scheme

Subject Name	Teaching Scheme (Hours)			Credits	Theory Marks			Tutorial/ Practical Marks		Total Marks
	Theory	Tutorial	Practical		ESE (E)	Mid Sem (M)	Internal (I)	Viva (V)	Term Work (TW)	
Design of Concrete Structure	4	2	0	5	50	30	20	25	25	150

Detailed Syllabus

Sr. No	Topic name	Hours
1	Building layout and Design	16
	1.1 Loads as per I.S., distribution & flow of loads, lateral load due to wind and seismic as per latest IS standards, load combinations, guide lines for preparation of structural layout for building	3
	1.2 Analysis, design & detailing of G + 3 RC framed building for residential /commercial purpose including ductile detailing.	13
2	Design of Retaining Wall	10
	2.1 Types, behavior and application of retaining wall, stability criteria for Retaining wall	2
	2.2 Design & detailing of cantilever & counterfort type retaining wall for various ground conditions.	8
3	Design of Water Tank	12
	3.1 Classification of water tank and method of analysis, permissible stresses, codal provisions	2
	3.2 Design of circular and rectangular under-ground water tanks using IS code method.	5
	3.3 Design of elevated water tank with Intze type of container, frame and shaft type of staging and foundation considering effect of earthquake and wind forces.	5
4	Design of Flat Slab	8
	4.1 Direct design method – Distribution of moments in column strips and middle strip-moment and shear transfer from slabs to columns – Shear in Flat Slabs-Check for one way and two-way shears	5
	4.2 Limitations of Direct design method	1
	4.3 Introduction to Equivalent frame method.	2
5	Earthquake resistant design of building	10
	5.1 Earthquake resistant design philosophy, capacity design concept, four virtues of Earthquake Resistant design: strength, stiffness, ductility and configuration, Irregularities in structures	2
	5.2 Lateral load distribution – Torsionally coupled & uncoupled system	3
	5.3 Seismic coefficient Method	3
	5.4 Ductile detailing as per IS:13920	2
	TOTAL	42

List of Practical's

Sr. No	Topic name
1	Building layout and Design
2	Design of Retaining Wall
3	Design of Water Tank
4	Design of Flat Slab
5	Earthquake resistant design of building

Suggested Theory Distribution

01CI0702 Irrigation Engineering
Objective of the Course

Objectives of introducing this subject at third year level in civil branches are:

- Understand the irrigation methods along with their advantages and disadvantages
- Understand function of different hydraulic structure

Credits Earned: 3

Students Learning Outcomes

After studying this subject student will be able to:

- Calculate irrigation water requirement of crops
- Calculate the pressure at key points of sheet piles and floor thickness for a weir/barrage using Bligh's and khosla's theory
- Causes of failure of earthen dam and Calculate forces acting on gravity dam
- Design of the lined and unlined canal
- Understand the function of hydraulic structure of irrigation system

Teaching and Examination Scheme

Subject Name	Teaching Scheme (Hours)			Credits	Theory Marks			Tutorial/ Practical Marks		Total Marks
	Theory	Tutorial	Practical		ESE (E)	Mid Sem (M)	Internal (I)	Viva (V)	Term Work (TW)	
Irrigation Engineering	2	0	2	3	50	30	20	25	25	150

Detailed Syllabus

Sr. No	Topic name	Hours
1	Introduction	7
	1.1 Definition, Necessity, Scope, Benefits and ill effects of irrigation, Types of irrigation schemes, Social and environmental considerations, Irrigation development in India.	3
	1.2 Water Requirement of Crops- Soil-water-plant relation- field capacity, wilting point, available water, consumptive use, Irrigation requirements – Net irrigation requirement, Field irrigation requirement, Gross Irrigation requirement, Soil moisture extraction pattern, Frequency of irrigation, Principal Indian crops, Gross command area, Culturable command area, Intensity of irrigation, Duty and delta relation, Introduction to various methods of application of irrigation water, Irrigation efficiency, assessment of irrigation water	4
2	Diversion Work & Storage and outlet work	7
	2.1 Diversion Works: Different stages of a river and their flow characteristics, Weir and barrages, Various parts of a weir and their functions, Exit gradient, Principles of weir design on permeable formations -Bligh's creep theory and Khosla's theory	3
	2.2 Storage and Outlet works: Types of earthen dams, Seepage in earth dams, Gravity dams, Forces acting on a gravity dam, Rock-fill dams, Spillways, Types of spillways, Spillways gates and energy dissipation works.	4
3	Distribution works	7
	3.1 Modes of conveying irrigation water- Types of irrigation canals- contour canal, ridge canal, side sloping canals	2
	3.2 Canal sections-filling, cutting, partial cutting and partial filling, Balanced depth, Canal FSL, Capacity factor and Time factor, L-section	2
	3.3 Losses of canal water, Silting and scouring of canals	1
	3.4 Method of design of unlined section of irrigation canal, Silt theories, Lined canals, Design of lined canal, Link canals	2
4	Regulating and Cross Drainage Works	5
	Canal falls, Cross drainage works, Types of cross drainage works, Canal escapes, Head regulator and Cross regulator, Silt eject or, Flow meters - Parshall flume, Irrigation outlets and types of outlets.	5
5	Miscellaneous Topic	2
	Water logging causes, Reclamation, Drainage principles and practice	2
	TOTAL	28

List of Assignments/Tutorials

Sr. No	Topic name
1	Introduction to Irrigation Engineering
2	Diversion Work & Storage and outlet work
3	Distribution works
4	Canal regulation work and Cross Drainage Works
5	Water logging

Suggested Theory Distribution

The suggested theory distribution as per Bloom's taxonomy is as per follows. This distribution serves as guidelines for teachers and students to achieve effective teaching-learning process

01CI0703 Construction Project Management
Objective of the Course

Objectives of introducing this subject at fourth year level in civil branches are:

- Introduce to Project planning and its management
- Develop an understanding of Project scheduling

Credits Earned: 4

Students Learning Outcomes

After studying this subject student will be able to:

- To Understand the importance of quality, safety, equipments, material and account management in a Construction project.
- Create and analyze the Bar Chart, Milestone Chart and Network Diagrams by dividing project tasks into activities and events.
- Estimate the project duration, Resource allocation and Cost Optimization by CPM and PERT Methods.
- Analyze the project Organization, scheduling and Cost optimization

Teaching and Examination Scheme

Subject Name	Teaching Scheme (Hours)			Credits	Theory Marks			Tutorial/ Practical Marks		Total Marks

Construction Project Management	3	0	2	4	50	30	20	25	25	150

Detailed Syllabus

Sr. No	Topic name	Hours
1	Introduction	2
	1.1 A construction project, Phases of construction project, Importance of construction and construction industry, Indian construction industry need of construction management, Stakeholders of construction management.	2
2	Project Organization	3
	2.1 Construction company structure of construction organization, Organizing for construction project management, Management levels, Traits of project manager and co-ordinators.	2
	2.2 Ethical conduct for engineers, Factors for success of a construction organization.	1
3	Construction economics	2

	3.1 Economic decision making, Evaluating alternatives, Effect of taxation on comparison of alternatives, Effect of inflation on cash flow, Evaluation of public projects, Benefit cost ratio method.	2
4	Construction Planning	5
	4.1 Types of project plans, Work break down structure, Planning techniques	2
	4.2 Bar charts, CPM and PERT network analysis, Precedence network ladder network, Line of balance method.	3
5	Project Scheduling and resource levelling	2
	5.1 Resource allocation, Importance of project scheduling, deriving other schedules, Network crashing and cost time trade off.	2
6	Construction equipment management	2
	6.1 Advanced concepts in economical analysis.	2
7	Construction accounts management	3
	7.1 Principles of accounting, Accounting process construction contract revenue recognition, Construction contract status report, Limitation of accounting, Balance sheet, Profit and loss account, Working capital, Ratio analysis, Fund flow statement.	3
8	Construction material management	2
	8.1 Material management functions, Inventory management. Job layout	2
9	Construction project cost & cost and value management	3
	9.1 Project cost management, Collection of cost related information, Cost codes, Cost statement, Value management in construction, Steps, Value engineering application in a typical case project.	3
10	Construction Quality management	2
	10.1 Construction quality, Inspection, Quality control and Quality assurance in projects, Total quality management, Quality gurus and their teaching cost of quality ISO standards, Principles of quality management systems, (CONQUAS) construction quality assessment system.	2
11	Construction Safety management	2
	11.1 Evolution of safety, Accident causation theory, Unsafe conditions, Unsafe acts health and safety act and regulation cost of accidents, Role of safety personnel, Accident causes and principles of safety, Safety and health management system.	2
	TOTAL	28

List of Practical's

Sr. No	Topic name
1	Network Analysis.
2	Determination of Benefit Cost ratio
3	Resource Allocation and Resource Levelling.
4	CPM and PERT.

01CI0704 Project I
Course Objectives

- To generate awareness regarding relating the theory to the real life challenges pertaining to the civil engineering field.
- To provide a realistic platform to the students where, they understand the process of addressing the field issues, core knowledge application methods and ways of solutions for the problems.
- To facilitate the user oriented problem solving attitude amongst the students and make use of their inter-personal skills along with the learning from the theory for a safer and sustainable development of the infrastructural facilities for the society.
- To make the students learn how to correlate the industry, field, institution and the stake holders of each level through the project initialization and completion.

Course credits: 10
The Course Outcomes

After studying this subject student will be able to:

- Apply the theoretical knowledge to solve industrial/social problem.
- Understand, analyze and solve Medium/Large scale engineering field problems
- Demonstrate teamwork and leadership qualities.
- Design a solution with sustainability and professional ethical conduct as per field expectations

Teaching and Examination Scheme

Subject Name	Teaching Scheme (Hours)			Credits	Theory Marks			Tutorial/ Practical Marks		Total Marks
	Theory	Tutorial	Practical		ESE (E)	Mid Sem (M)	CSE	Viva (V)	Term Work (TW)	
Project I	0	0	10	10	-	-	-	50	50	100

Standard guidelines for project work

The project as a subject is offered to the students for overall development of an individual as to become capable to identify the real life challenges and ways to mitigate or solve the issues. The subject focuses on technical knowledge utilization, notion of service to the society and industry interaction of graduating students before beginning the professional career.

Following are some directives as minimum requirements of the successful completion of the subject;

Sr. No	Topic name
1	Problem identification process
	<p>The student or a group of the students identifies the topic to work based on following check list;</p> <ol style="list-style-type: none"> 1. Main thrust area of the academic subject; this may be a broad selection i.e. construction materials, construction techniques, methods and tools of analysis, data collection methods, programs and systems, design of structures, testing of material, system or elements, and many more of the similar types. 2. Identification of the industry/ field of application relevant to the area selected 3. Mapping the selection with the current availability of the skills, knowledge and facilities available at the institute/industry including the stake holders
2	Stream line the project contents
	<p>On finalizing the topic/problem to work on; the next step is to arrange the hypothesis and selection of the path or steps to be followed by a student. This will require the project contents to be arranged sequentially;</p> <ol style="list-style-type: none"> 1. Title or name of the project 2. Area of specialization as per the academic contents 3. Name of organization/industry if any 4. Existing issues or challenges identified: Exact definition, explanation and clear understanding is must on the issue being considered/addressed 5. Hypothesis for the problem solution: Available information, knowledge, implementation of resources and probable outcomes expected followed by the hypothesis. 6. Mapping of objectives and outcomes with an evaluation rubric 7. Final documentation, presentation, conclusion and demonstration of the results
3	Methods of data collection, gathering the information and streamlining the pre-processes
	<p>Irrespective of the topic/area selected following are some of the standard methods for data collection and gathering the initial information regarding the project work;</p> <ol style="list-style-type: none"> 1. Visits to the industry, sites, locations, or facilities. 2. Communication with end users, talks, real time surveys, interviews. 3. Visual data collection by video, pictures, sketches, leaflets etc. 4. Interactions with people and stake holders, scribing of ideas, suggestions. 5. Discussion with teachers, HODs, lab in-charge and group members /friends.

4	<p>Finalizing the work flow with development of a progress rubric</p> <p>On finalizing the pre-processes and narrowed or focused project topic, the work flow and progress rubric is the most important attribute for the project completion. This will need following things to be taken care;</p> <ol style="list-style-type: none"> 1. The progress rubric is actually a document to control the work pattern and pace of the work at various stages. The meaning of this rubric means it is a table containing a column of tasks with prescribed timings, title of work to be done, distribution of the roles and responsibilities to the group members, deadlines for completing the work, topics and subtopics being addressed etc. against the stipulated time frame. 2. All other relevant facts and figures are to be put on the paper with enough clarity for all. 3. The well defined tasks are allotted to all the members and date of recollection of the completed work should be finalized. This is the date must be mapped with the day of presentation against the teachers and the project guides or evaluators.
5	<p>Continuous progress, breakthrough and final conclusions</p> <p>The project work is a continuous learning. Therefore, at the regular breaks, there will be an evaluation where students shall show their progress to the evaluators and guides. The major breakthrough and important findings or solutions should be shown to the panel of experts. The students will receive valued feedback, suggestions and corrections in case by the experts to reach to the final conclusion. This stage will include following;</p> <ol style="list-style-type: none"> 1. Minimum three presentations by all students/groups to the guides and experts on the pre-defined dates and time limits. 2. The review card or review comments by the evaluating panel will be complied adequately and fulfilled by the students in their progressive presentations. 3. The final presentation will carry only the concluding points and attributes exhibiting the successful completion of the project. The final grading and marking that is in fact the summation of all the previous grading will be done at this stage and students will be awarded with final grades.

Suggested Theory Distribution

The suggested theory distribution as per Bloom's taxonomy is as per follows. This distribution serves as guidelines for teachers and students to achieve effective teaching-learning process

Distribution of Theory for course delivery and evaluation					
Remember	Understand	Apply	Analyze	Evaluate	Create
5%	20%	15%	20%	10%	30%

Instructional Method and Pedagogy

As explained in the guidelines.

01CI0705 Earthquake Engineering
Objective of the Course

Objectives of introducing this subject at fourth year level in civil branches are:

- Develop an understanding to SDOF and MDOF structural system subjected to vibration.
- Lateral forces generation and concept of earthquake resistant design features
- Understanding ductile detailing of building using IS: 13920

Credits Earned: 4

Students Learning Outcomes

After studying this subject student will be able to:

- Apply the concept of seismology and liquefaction for preparedness against earthquake.
- Calculate response of Single and Multi Degree of Freedom system.
- Design earthquake resistant building with considering lateral load according to IS: 1893-2016.
- Examine ductile detailing of structural drawings according to IS: 13920 – 2016.

Teaching and Examination Scheme

Subject Name	Teaching Scheme (Hours)			Credits	Theory Marks			Tutorial/ Practical Marks		Total Marks
	Theory	Tutorial	Practical		ESE (E)	Mid Sem (M)	Internal (I)	Viva (V)	Term Work (TW)	
Earthquake Engineering	3	0	2	4	50	30	20	25	25	150

Detailed Syllabus

Sr. No	Topic name	Hours
1	Earthquake Basics	3
	1.1 Interior of Earth, plate tectonics, faults, consequences of earthquake, Basic parameters of earthquake, magnitude & intensity, scales, Seismic zones of India, damages caused during past earthquakes (worldwide).	3
2	Fundamentals of Earthquake vibrations	8
	2.1 Static load v/s Dynamic load (force control and displacement control), simplified single degree of freedom system, mathematical modelling of buildings, natural frequency, resonance v/s increased response, responses of buildings to different types of vibrations like free and forced, damped and un-damped vibration, response of building to earthquake ground motion, Response to multi degree (maximum three) of freedom systems up to mode shapes.	8
3	Design Philosophy	6
	3.1 Philosophy of earthquake resistant design, earthquake proof v/s earthquake resistant design, four virtues of earthquake resistant structures (strength, stiffness, ductility and configuration), seismic structural	6

	configuration, Introduction to IS: 1893 (Part I), IS: 875 (Part V). Seismic load: Seismic Coefficient Method – base shear and its distribution along height. Introduction to Response spectrum, IS code provisions.	
4	Lateral loads on building	7
	4.1 Lateral Load Distribution: Rigid diaphragm effect, centers of mass and stiffness	5
	4.2 Torsionally coupled and uncoupled system.	2
5	Ductile Detailing	2
	5.1 Concepts of Detailing of various structural components as per IS: 13920 provisions.	2
6	Special Topics	2
	6.1 Introduction to Earthquake Resistant Features of un-reinforced & reinforced masonry Structure, Confined Masonry, Soil liquefaction, Structural controls, Seismic strengthening.	2
	TOTAL	28

List of Practical's

Sr. No	Topic name
1	Spring Mass Model
2	Mode shape of 3 storey building
3	Response of structure with and without shear wall and bracing system
4	Response of building with re-entrant corner
5	Behaviour of structure under pounding

Suggested Theory Distribution

The suggested theory distribution as per Bloom's taxonomy is as per follows. This distribution serves as guidelines for teachers and students to achieve effective teaching-learning process

Distribution of Theory for course delivery and evaluation					
Remember	Understand	Apply	Analyze	Evaluate	Create
05%	10%	35%	40%	10%	00%

Instructional Method and Pedagogy

1. Prerequisite of the course and its pattern shall be discussed on the commencement of the course.
2. Lectures shall be conducted in class room using various teaching aids.
3. Presence in all academic sessions is mandatory which shall carry 5% marks of the total internal evaluation.
4. At the end of each unit/topic an assignment based on the course content shall be given to the students which shall carry 5% weightage for timely completion and submission of the assigned work.
5. The laboratory experiments are planned in such a way that it covers the practical aspects of the course contents. The performance of these experiments shall bring the clarity of the theoretical concepts which the students have studied during the academic sessions.

01CI0706 Smart Cities
Objective of the Course

Objectives of introducing this subject at fourth year level in civil branches are:

- To understand the concept of smart city and associated challenges.
- To understand latest technologies used in intelligent building.
- To understand process of planning and drafting a plan for smart city.
- To understand the importance of different smart system.

Credits Earned: 4

Students Learning Outcomes

After studying this subject student will be able to:

- Acquaint knowledge on smart cities planning and development
- Develop work break down structure, scheduling and project management of smart cities
- Work out the most energy efficient technique

Students Learning Outcomes

After studying this subject student will be able to understand technologies, infrastructure, and concept of planning and latest methodology.

Teaching and Examination Scheme

Subject Name	Teaching Scheme (Hours)			Credits	Theory Marks			Tutorial/ Practical Marks		Total Marks

Smart Cities	3	2	0	4	50	30	20	25	25	150

Detailed Syllabus

Sr. No	Topic name	Hours
1	Introduction to Smart cities	04
	1. Introduction to city planning	01
	1.2 Concept, Principle stakeholders, key trends in smart cities developments	03
2	Smart Cities Planning and Development	12

	2.1 Understanding smart cities	02
	2.2 Dimension of smart cities	02
	2.3 Global Standards and performance benchmarks, Practice codes	02
	2.4 Smart city planning and development	02
	2.5 Financing smart cities development	02
	2.6 Governance of smart cities	02
3	Project management in Smart Cities	08
	3.1 Phases, Stages of project and work break down Structure	03
	3.2 Project organization structure, Planning, Scheduling and CPM	03
	3.3 Project cost analysis, resource allocation & leveling, Line of balancing technique	02
	3.4 Project monitoring and control, Project risk management	02
4	Green building in smart cities	04
	4.1 Introduction to green buildings, Rating system, Energy saving system	04
	TOTAL	28

List of Practical's/ Tutorials

Sr. No	Topic name
1	Smart material associated with smart building.
2	Technology involved in different construction of smart building.
3	Model preparation on smart city.
4	Case study on ITS.
5	Case study on smart city

01CI0707 Modern Transportation System
Objective of the Course

Objectives of introducing this subject at fourth year level in civil branches are:

- To imparts knowledge of urbanization process, urban transportation system planning, land use planning, travel demand modelling procedure, different urban mass transportation systems and urban goods movement.

Credits Earned: 4

Students Learning Outcomes

After studying this subject student will be able to:

- Implement the concept of urban transportation system planning process and land use planning for urban goods movement
- Analyze the four stage transportation planning process
- Solve the urban transport model for urban system planning
- Sketch the comprehensive plan and transportation system management planning by focusing on different urban transit problems

Teaching and Examination Scheme

Subject Name	Teaching Scheme (Hours)			Credits	Theory Marks			Tutorial/ Practical Marks		Total Marks
	Theory	Tutorial	Practical		ESE (E)	Mid Sem (M)	Internal (I)	Viva (V)	Term Work (TW)	
Modern Transportation System	3	0	2	4	50	30	20	25	25	150

Detailed Syllabus

Sr. No	Topic name	Hours
1	Urban mass transportation system	4
	1.1 urban transit problems, travel demand, types of transit systems, public, private, para-transit transport, mass and rapid transit systems, BRTS and Metro rails, capacity, merits and comparison of systems, coordination, types of coordination.	4
2	Introduction to land use planning models, land use and transportation interaction.	8
	2.1 The transportation study area definition; division into traffic zones; network identification and coding	3
	2.2 types of trips, characteristics of various surveys; home interview;	5

	roadside survey mass transit and intermediate public transport surveys; sampling and expansion factors; accuracy checks, screen line checks, consistency checks.	
3	Travel demand Modelling	8
	3.1 Trip generation -zonal regression and category analysis, Trip distribution -growth factor models, gravity model, opportunity models, Desire line diagram. Modal split analysis -trip end	3
	3.2 trip interchange models, logit models, Trip assignment techniques -route choice, diversion curves, shortest path algorithms, all-or-nothing assignment, capacity restraint models and Direct demand models.	5
4	Mass Transit System	7
	4.1 Introduction to routing and scheduling, transit system's performance parameters	2
	4.2 Corridor identification and corridor screen line analysis.	2
	4.3 Urban forms and structures: point, linear, radial, poly-nuclear developments and suitable transit systems, Urban goods movement.	2
	4.4 Preparation of comprehensive plan and transportation system management planning.	1
	TOTAL	28

List of Practical's

Sr. No	Topic name
1	Field Visit to Urban Mass Transportation System Service - Depot, Terminals, Offices
2	Home interview survey in group for the different zone/ward areas of city. From the collected data, they can develop zonal regression models, carry out category analysis, prepare base year O-D matrix and desire line diagram, mode wise and purpose wise trip distribution, trip length frequency distribution and prepare power point presentation of all this analysis.
3	Evaluate the existing mass transportation system. They can conduct the survey of boarding and alighting of passengers, find the actual demand on the routes and ascertain the optimum routing and scheduling.

01CI0708 Environmental Impact Assessment
Objective of the Course

Objectives of introducing this subject at fourth year level in civil branches are:

- To overcome the problems of environmental degradation by planning the development process in a sustainable manner.

Credits Earned: 4
Students Learning Outcomes

After studying this subject student will be able to:

- Demonstrate the understanding of concept of Sustainable Development and justify the methods of achieving SD.
- Appreciate the importance of EIA as an integral part of planning process.
- Apply the different methodologies to predict and assess the impacts of project on various aspects of environment.
- Enumerate the role of public participation in environmental decision-making process.
- Characterize the environmental attributes.

Teaching and Examination Scheme

01CI0801 Foundation Engineering
Objective of the Course

Objectives of introducing this subject at fourth year level in civil branches are:

- To study soil behavior, determination and interpretation of soil parameters, determination of stresses in soil.
- To gain basic knowledge on foundation selection, foundation forces, foundation design and its stability under seismic forces

Credits Earned: 4

Students Learning Outcomes

After studying this subject student will be able to:

- Select appropriate soil investigation/testing technique/method and get true sub soil parameters used for selection of type of foundation as per codal guidelines.
- Select and design appropriate/suitable foundation system (shallow) for different structures, that satisfy the allowable bearing capacity and settlement requirements based on soil properties
- Design deep foundation satisfying bearing capacity and settlement requirements
- Understand the engineering behavior of expansive soils and selection of suitable foundation type for such soils, Selection of alternate materials like geosynthetics and its application in foundation problems.
- Design and analysis of retaining walls and sheet piles under static loads

Teaching and Examination Scheme

Subject Name	Teaching Scheme (Hours)			Credits	Theory Marks			Tutorial/ Practical Marks		Total Marks
	Theory	Tutorial	Practical		ESE (E)	Mid Sem (M)	Internal (I)	Viva (V)	Term Work (TW)	
Foundation Engineering	3	-	2	4	50	30	20	25	25	150

Detailed Syllabus

Sr. No	Topic name	Hours
1	Selection of foundation and Sub - soil exploration/investigation:	06
	1.1 Types of foundation, Factors affecting the selection of type of foundations, steps in choosing types of foundation based on soil condition, Objectives and Planning of exploration program	2
	1.2 methods of exploration - wash boring and rotary drilling - depth of boring, soil samples and soil samplers - representative and undisturbed sampling, field penetration tests: SPT, SCPT, DCPT. Introduction to geophysical methods, Bore log and report writing, data interpretation.	4
2	Shallow Foundation:	10

	2.1 Introduction, significant depth, design criteria, modes of shear failures. Detail study of bearing capacity theories (Prandtl, Rankine, Terzaghi, Skempton), bearing capacity determination using IS Code, Presumptive bearing capacity. Settlement, components of settlement & its estimation, permissible settlement, Proportioning of footing for equal settlement, allowable bearing pressure.	5
	2.2 Bearing capacity from in-situ tests (SPT, SCPT, PLATE LOAD), Factors affecting bearing capacity including Water Table., Bearing capacity of raft/mat foundation as per codal provisions, Contact pressure under rigid and flexible footings. Floating foundation. Types of pavements & its design.	5
3	Pile Foundation	10
	3.1 Introduction, load transfer mechanism, types of piles and their function, factors influencing selection of pile, their method of installation and their load carrying characteristics for cohesive and granular soils	2
	3.2 piles subjected to vertical loads- pile load carrying capacity from static formula, dynamic formulae (ENR and Hiley), penetration test data & Pile load test (IS 2911).	4
	3.3 Pile group: carrying capacity, efficiency and settlement. Negative skin friction.	4
4	Foundations on problematic soil & Introduction to Geosynthetics	9
	4.1 Significant characteristics of expansive soil, footing on such soils, Problems and preventive measures.	2
	4.2 Under-reamed pile foundation-its concept, design & field installation. Significant characteristics of silt and loess	4
	4.3 problems & remedial measures footing on such soils, introduction to geosynthetics-types and uses.	3
5	Retaining wall	07
	5.1 Types (types of flexible and rigid earth retention systems: counter fort, gravity, diaphragm walls, sheet pile walls, soldier piles and lagging).	07
	TOTAL	42

List of Practical's

Sr. No	Topic name
1	Plate load test (PLT)
2	Standard Penetration test (SPT)
3	Static and Dynamic Cone Penetration test (SCPT-DCPT)
4	Triaxial Shear Test (CD condition)
5	Consolidation test (on soft marine clays)
6	Swell Pressure test
7	CBR Test

01CI0802 Design of Steel Structure
Objective of the Course

Objectives of introducing this subject at fourth year level in civil branches are:

- To study Limit State design philosophy, which is currently used worldwide for design of steel structures and its various components.
- To gain basic knowledge of design and detailing of steel structures as per Indian standards.

Credits Earned: 4

Students Learning Outcomes

After studying this subject student will be able to:

- Produce structural layout of Industrial steel structures, plate girder, foot-over bridge.
- Evaluate the loads acting on steel structures and identify the typical failure modes.
- Apply the principles, procedures and current Indian codal provisions to the analysis and design of Industrial structures, plate girder & foot-over bridges.
- Apply the principles of plastic design in steel beams & portal frames.

Teaching and Examination Scheme

Subject Name	Teaching Scheme (Hours)			Credits	Theory Marks			Tutorial/ Practical Marks		Total Marks
	Theory	Tutorial	Practical		ESE (E)	Mid Sem (M)	Internal (I)	Viva (V)	Term Work (TW)	
Design of Steel Structure	3	2	-	4	50	30	20	25	25	150

Detailed Syllabus

Sr. No	Topic name	Hours
1	Loads and Load Combinations	03
	1.1 Appraisal of loading standards such as I.S, I.R.C., Effect of wind and earthquake on structure	03
2	Connections	06
	2.1 Stiffened and unstiffened, moment & shear resisting structural connections	03
	2.2 design and detailing of various connection - roof truss to column, column to beam, beam to beam and truss to bed block.	03
3	Design of Industrial Building:	10
	3.1 Structural layout of industrial building, Various types of trusses and their selection.	02
	3.2 effect of wind loads on purlin and trusses, bracing systems, columns, foundations	04
	3.3 gantry girder – static and moving loads, selection & design of section.	04

4	Design of plate girders:	09
	4.1 Modes of failure : Elastic buckling, Bending in the plane of web, Local buckling, Buckling in the plane of web, Vertical buckling of the compression flange, Shear buckling	04
	4.2 Design of bolted, welded plate girder by Tension field Method & Simple Post Critical Method including design of vertical & horizontal stiffeners, Splices, Curtailment	05
5	Design of foot-over bridges:	06
	5.1 Structural system of through & deck type bridges, design of foot-over bridge & its Supporting system.	06
6	Plastic Design:	08
	6.1 Introduction to plastic method of analysis, Design of continuous beams and portal frame using plastic design approach.	08
	TOTAL	42

List of Practical's

Sr. No	Topic name
1	Prepare model of any one steel structure of the syllabus.
2	Development of spread sheets for design of various structural components of steel structure.
3	Design of any steel structure from the course using any open-source / professional software and/or self-developed spread sheet/programs
4	Site visit related to construction stages and report preparation
5	Failure study : during and/or after construction

Suggested Theory Distribution

The suggested theory distribution as per Bloom's taxonomy is as per follows. This distribution serves as guidelines for teachers and students to achieve effective teaching-learning process

Distribution of Theory for course delivery and evaluation					
Remember	Understand	Apply	Analyze	Evaluate	Create
05	15	25	25	25	05

Instructional Method and Pedagogy

1. Prerequisite of the course and its pattern shall be discussed on the commencement of the course.
2. Lectures shall be conducted in class room using various teaching aids.
3. Presence in all academic sessions is mandatory which shall carry 5% marks of the total internal evaluation.

4. At the end of each unit/topic an assignment based on the course content shall be given to the students which shall carry 5% weightage for timely completion and submission of the assigned work.
5. The laboratory experiments are planned in such a way that it covers the practical aspects of the course contents. The performance of these experiments shall bring the clarity of the theoretical concepts which the students have studied during the academic sessions.

01CI0803 Project II
Course Objectives

- To generate awareness regarding relating the theory to the real life challenges pertaining to the civil engineering field.
- To provide a realistic platform to the students where, they understand the process of addressing the field issues, core knowledge application methods and ways of solutions for the problems.
- To facilitate the user oriented problem solving attitude amongst the students and make use of their inter-personal skills along with the learning from the theory for a safer and sustainable development of the infrastructural facilities for the society.
- To make the students learn how to correlate the industry, field, institution and the stake holders of each level through the project initialization and completion.

Course credits: 10
The Course Outcomes

After studying this subject student will be able to:

- Apply the theoretical knowledge to solve industrial/social problem.
- Understand, analyze and solve Medium/Large scale engineering field problems
- Demonstrate teamwork and leadership qualities.
- Design a solution with sustainability and professional ethical conduct as per field expectations

Teaching and Examination Scheme

Subject Name	Teaching Scheme (Hours)			Credits	Theory Marks			Tutorial/ Practical Marks		Total Marks
	Theory	Tutorial	Practical		ESE (E)	Mid Sem (M)	CSE	Viva (V)	Term Work (TW)	
Project II	0	0	10	10	-	-	-	50	50	100

Standard guidelines for project work

The project as a subject is offered to the students for overall development of an individual as to become capable to identify the real life challenges and ways to mitigate or solve the issues. The subject focuses on technical knowledge utilization, notion of service to the society and industry interaction of graduating students before beginning the professional career.

Following are some directives as minimum requirements of the successful completion of the subject;

Sr. No	Topic name
1	<p>Problem identification process</p> <p>The student or a group of the students identifies the topic to work based on following check list;</p> <ol style="list-style-type: none"> 1. Main thrust area of the academic subject; this may be a broad selection i.e. construction materials, construction techniques, methods and tools of analysis, data collection methods, programs and systems, design of structures, testing of material, system or elements, and many more of the similar types. 2. Identification of the industry/ field of application relevant to the area selected 3. Mapping the selection with the current availability of the skills, knowledge and facilities available at the institute/industry including the stake holders
2	<p>Stream line the project contents</p> <p>On finalizing the topic/problem to work on; the next step is to arrange the hypothesis and selection of the path or steps to be followed by a student. This will require the project contents to be arranged sequentially;</p> <ol style="list-style-type: none"> 1. Title or name of the project 2. Area of specialization as per the academic contents 3. Name of organization/industry if any 4. Existing issues or challenges identified: Exact definition, explanation and clear understanding is must on the issue being considered/addressed 5. Hypothesis for the problem solution: Available information, knowledge, implementation of resources and probable outcomes expected followed by the hypothesis. 6. Mapping of objectives and outcomes with an evaluation rubric 7. Final documentation, presentation, conclusion and demonstration of the results
3	<p>Methods of data collection, gathering the information and streamlining the pre-processes</p> <p>Irrespective of the topic/area selected following are some of the standard methods for data collection and gathering the initial information regarding the project work;</p> <ol style="list-style-type: none"> 1. Visits to the industry, sites, locations, or facilities. 2. Communication with end users, talks, real time surveys, interviews. 3. Visual data collection by video, pictures, sketches, leaflets etc. 4. Interactions with people and stake holders, scribing of ideas, suggestions. 5. Discussion with teachers, HODs, lab in-charge and group members /friends.

4	<p>Finalizing the work flow with development of a progress rubric</p> <p>On finalizing the pre-processes and narrowed or focused project topic, the work flow and progress rubric is the most important attribute for the project completion. This will need following things to be taken care;</p> <ol style="list-style-type: none"> 1. The progress rubric is actually a document to control the work pattern and pace of the work at various stages. The meaning of this rubric means it is a table containing a column of tasks with prescribed timings, title of work to be done, distribution of the roles and responsibilities to the group members, deadlines for completing the work, topics and subtopics being addressed etc. against the stipulated time frame. 2. All other relevant facts and figures are to be put on the paper with enough clarity for all. 3. The well defined tasks are allotted to all the members and date of recollection of the completed work should be finalized. This is the date must be mapped with the day of presentation against the teachers and the project guides or evaluators.
5	<p>Continuous progress, breakthrough and final conclusions</p> <p>The project work is a continuous learning. Therefore, at the regular breaks, there will be an evaluation where students shall show their progress to the evaluators and guides. The major breakthrough and important findings or solutions should be shown to the panel of experts. The students will receive valued feedback, suggestions and corrections in case by the experts to reach to the final conclusion. This stage will include following;</p> <ol style="list-style-type: none"> 1. Minimum three presentations by all students/groups to the guides and experts on the pre-defined dates and time limits. 2. The review card or review comments by the evaluating panel will be complied adequately and fulfilled by the students in their progressive presentations. 3. The final presentation will carry only the concluding points and attributes exhibiting the successful completion of the project. The final grading and marking that is in fact the summation of all the previous grading will be done at this stage and students will be awarded with final grades.

Instructional Method and Pedagogy

As explained in the guidelines.

01CI0804: Advanced Structural Analysis
Objective of the Course

Objectives of introducing this subject at third year level in civil branches are:

- To make students understand Force method and Displacement method used for structural analysis of indeterminate beams, trusses and portal frames.
- To equip students with analysis of special structures like Domes and Beams curved in plan.

Credits Earned: 4

Students Learning Outcomes

After studying this subject students will be able:

- Determine displacement and reactions for indeterminate structures with the help of stiffness and flexibility matrix method.
- Analyze domes with and without opening for given loading condition.
- Analyze the stresses for beams curved in plan subjected to point load and uniformly distributed load.

Teaching and Examination Scheme

Subject Name	Teaching Scheme (Hours)			Credits	Theory Marks			Tutorial/ Practical Marks		Total Marks
	Theory	Tutorial	Practical		ESE (E)	Mid Sem (M)	Internal (I)	Viva (V)	Term Work (TW)	
Advanced Structural Analysis	3	2	0	4	50	30	20	25	25	150

Detailed Syllabus

Sr. No	Topic name	Hours
1	Basics of Structural Engineering	4
	1.1 Static and Kinematic indeterminacy, force-displacement relationship.	2
	1.2 Principle of virtual work and its application in deriving stiffness and flexibility matrices	2
2	Matrix Analysis of Structures	24
	2.1 Force method: Derivation of member flexibility matrix.	1
	2.2 Analysis of continuous beams, indeterminate portal frames and trusses using member flexibility matrix.	8
	2.3 Displacement method: Derivation of member stiffness matrix and analysis of beams, plane frames and plane trusses using member stiffness matrix methods.	12
	2.4 Analysis of trusses subjected to secondary stresses due to imperfections	3

	in length of members.	
3	Domes	8
	3.1 Introduction: Uses of Domes, Types of Domes	1
	3.2 Stresses induced in conical and spherical domes, Analysis of conical and spherical domes subjected to udl and concentrated loads	5
	3.3 Analysis of domes with opening	2
4	Beam curved in Plan	6
	4.1 Internal force in curved beams, Analysis of curved beams fixed at ends subjected to point and uniformly distributed load	4
	4.3 Analysis of circular beam supported Symmetrically	2
		42

Suggested Theory Distribution

The suggested theory distribution as per Bloom's taxonomy is as per follows. This distribution serves as guidelines for teachers and students to achieve effective teaching-learning process

Distribution of Theory for course delivery and evaluation					
Remember	Understand	Apply	Analyse	Evaluate	Create
10%	10%	5%	70%	5%	0%

Instructional Method and Pedagogy

1. Prerequisite of the course and its pattern shall be discussed on the commencement of the course.
2. Lectures shall be conducted in class room using various teaching aids.
3. Presence in all academic sessions is mandatory which shall carry 5% marks of the total internal evaluation.
4. At the end of each unit/topic an assignment based on the course content shall be given to the students which shall carry 5% weightage for timely completion and submission of the assigned work.
5. The laboratory experiments are planned in such a way that it covers the practical aspects of the course contents. The performance of these experiments shall bring the clarity of the theoretical concepts which the students have studied during the academic sessions.

5. Matrix Analysis of Structures by Meghre & Deshmukh, Charotar publication

01CI0805 Rehabilitation and Retrofitting of Structures
Objective of the Course

Objectives of introducing this subject at fourth year level in civil branches is:

- To give insight into the subject of concrete repair, its protection and strengthening.
- Study Concrete structures are subjected to constant deterioration due to effects of ageing, inadequate maintenance, severe environmental exposure, penetration of catalytic agencies such as moisture, gases like CO₂ & oxygen, chloride ions, industrial pollutants, abuse (over-used and misused) etc.

Credits Earned: 4

Students Learning Outcomes

After studying this subject student will be able to:

- To identify type of distress in deteriorated concrete structure.
- To estimate the extent of damage level in concrete structures using Non Destructive Tests
- To implement various rehabilitation and retrofitting techniques using various innovative materials in structures.
- To understand usefulness of various structural health monitoring methods and its applications in maintenance of structures.

Teaching and Examination Scheme

Subject Name	Teaching Scheme (Hours)			Credits	Theory Marks			Tutorial/ Practical Marks		Total Marks
	Theory	Tutorial	Practical		ESE (E)	Mid Sem (M)	Internal (I)	Viva (V)	Term Work (TW)	
Rehabilitation and Retrofitting of Structures	3	0	2	4	50	30	20	25	25	150

Detailed Syllabus

Sr. No	Topic name	Hours
1	Introduction	3
	1.1 Overview of distress, deterioration in concrete structures, Scenario of distressed structures world over, Need for repairs and upgrading of structures, General introduction to process (Road-map) to a durable concrete repair	3
2	Deterioration of Concrete Structure	6

	2.1 Types of deterioration – Signs, causes & symptoms, Mechanism of deterioration, contributing factors like permeability, inadequate durability & micro-structure of concrete.	2
	2.2 Physical deterioration due to moisture, temperature, shrinkage, freeze-thaw, abrasion, erosion, cavitation, crystallization of salts, Efflorescence, exposure to severe environment like marine exposure.	2
	2.3 Chemical deterioration due to corrosion of reinforcement (chloride induced, carbonation induced), Alkali-silica reaction, sulphate attack, Acid attack.	2
3	Conditional assessment and evaluation of structure	7
	3.1 Structural assessment: Conditional evaluation / Structural Appraisal of the structure – Importance, objective & stages, Conditional/damage assessment procedure, Preliminary & Detailed investigation – Scope, Objectives, Methodology & Rapid visual inspection of structures	4
	3.2 Damage Assessment allied Tests (Destructive, Semi-destructive, Non-destructive): Field & laboratory testing procedures for evaluating the structure for strength, corrosion activity, performance & integrity, durability. Interpretation of the findings of the tests.	3
4	Repairs, rehabilitation & Retrofitting of concrete structures:	8
	4.1 Repair materials - Criteria for durable concrete repair, Methodology, performance requirements, repair options, selection of repair materials, Preparatory stage of repairs, Different types of repair materials & their application, types of repair techniques	3
	4.2 Retrofitting/Strengthening: Need for retrofitting, Design philosophy of strengthening structures, Techniques available for strengthening including conventional and advanced techniques.	3
	4.3 Seismic retrofit of concrete structures: Deficiencies in structure requiring seismic retrofit, Design philosophy, Techniques to enhance the seismic resistance of structures, advanced techniques for making seismic resistant structures	2
5	Miscellaneous Topic	4
	5.1 Protection & maintenance of structures - Importance of protection & maintenance, Categories of maintenance, Building maintenance. Corrosion mitigation techniques to protect the structure from corrosion.	2
	5.2 Long term health monitoring / Structural health monitoring (SHM)– Definition and motivation for SHM, Basic components of SHM and its working mechanism, SHM as a tool for proactive maintenance of structures.	2
	TOTAL	28

List of Practical's

Sr. No	Topic name
1	To perform a non-destructive and semi-destructive testing on the cast specimens of the beams using set up of Rebound hammer, UPSV, Core drilling etc. and there by prepare a report on the interpretation of the strength i.e quality of concrete based on NDT test results.

2	Take up Conditional Assessment of 5 different structures including Residential, Commercial, Industrial, and Government buildings, Private structures (old & new construction both). Prepare Rapid visual inspection data sheets of the same.
3	Prepare a report on the buildings surveyed, to highlight all the defects/deterioration seen through proper resolution photographs. The report must clearly indicate the distress – its source and symptoms.
4	To perform experiment to evaluate the Compatibility between the substrate material concrete and any repair material. (For instance comparing the Bond strength of Polymer modified mortar and Conventional Mortar with Concrete).
5	Experiment investigation to carry out the efficacy of repair material/ technique in enhancing the strength of concrete beam post cracking. (For instance, Cast a RCC beam, simulate cracking and then filling the crack with repair material and check the post-repair strength results).

Suggested Theory Distribution

The suggested theory distribution as per Bloom’s taxonomy is as per follows. This distribution serves as guidelines for teachers and students to achieve effective teaching-learning process

01CI0806 Bridge Engineering
Objective of the Course

Objectives of introducing this subject at fourth year level in civil branches are:

- To acquaint student with different types of bridge along with their components
- To develop understanding about different types of load acting on bridge in accordance to codal provision.
- To gain knowledge of analysis and design of various components of bridge

Credits Earned: 4

Students Learning Outcomes

After studying this subject student will be able to:

- Know various specifications of IRC for planning, analysis & design of bridges.
- Analyse and design of reinforced concrete slab culverts, tee beam and slab bridges as per IRC specifications,
- Analyze and design substructure, foundation and adjoining elements.

Teaching and Examination Scheme

01CI0807 Solid Waste Management

Objective of the Course

Objectives of introducing this subject at fourth year level in civil branches are:

- To understand the sources, characteristics of municipal solid waste
- To learn the collection, transport and disposal of municipal solid waste
- To know the possibilities for recover of materials and energy from waste.
- To understand the management of hazardous waste.

Credits Earned : 4

Students Learning Outcomes

After studying this subject students will be able to:

- Know the possibilities of energy recovery from waste.
- Classify the sources, types, composition and quantities of solid waste
- Take measure to collection, transfer, transport, separate and process of solid and Hazardous waste
- Appraise aspects and issues related to recycling and composting of solid waste
- Understand the legislations for waste management.

Teaching and Examination Scheme

Solid Waste Management	3	2	0	04	50	30	20	25	25	150

Detailed Syllabus

Sr. No.	Topic Name	Hours
1	Municipal Solid Waste Management: An Overview	8
	1.1 Definition, sources of solid waste, types of solid waste	
	1.2 Composition of solid waste and its determination	
	1.3 Collection and Transport of Solid Waste	
	1.4 Types of materials recovered from MSW	
2	Properties of Municipal Solid Waste	6
	2.1 Physical properties of Municipal Solid Waste	
	2.2 Chemical properties of Municipal Solid Waste	
	2.3 Biological properties of Municipal Solid Waste	
	2.4 Transformation of Municipal Solid Waste	

Sr. No.	Topic Name	Hours
3	Solid Waste Generation and Collection	6
	3.1 Quantities of Solid Waste, methods to measure the quantities	
	3.2 Solid waste generation and collection process	
	3.3 Factors affecting solid waste generation rate	
4	MSW: Material & Energy recovery	6
	4.1 Materials Recovery facilities- on site/off site, Composting process	
	4.2 Anaerobic digestion, RDF and Incineration and co-generation of energy using waste	
	4.3 Pyrolysis of solid waste	
5	Disposal of municipal Solid wastes	5
	5.1 Dumping of solid waste; sanitary landfills – site selection	
	5.2 design and operation of sanitary landfills – Leachate collection & treatment	
6	Recyclable solid waste materials for civil engineering applications	3
	6.1 Construction debris, fly ash, gypsum, red mud, blast furnace slag; e- waste	
7	Principles of solid and Hazardous waste management : Treatment & Disposal	8
	7.1 Principles of solid waste management, Definition and identification of hazardous wastes	
	7.2 Prevailing laws of in hazardous waste management, Risk assessment	
	7.3 Disinfection, autoclaving, incineration, Stabilization, Solidification,	
	7.4 Air stripping, oxidation, bioremediation and any other appropriate techniques	
Total		42

List of Tutorials

1. Examples based on Generation Rate of solid waste.
2. Questions based on Sources & Characteristics of Municipal Solid Waste.
3. Questions based on Onsite Handling, storage and processing of Solid waste.
4. Questions based on Transfer and Transport of Solid Waste.
5. Questions based on processing of Municipal Solid Waste.
6. Questions based on Recovery of Resources, Conversion Products & energy from MSW.
7. Questions based on Disposal of Solid Waste.
8. Biomedical Waste management.

01CI0808 Sustainable Building Technology
Objective of the Course

Objectives of introducing this subject at fourth year level in civil branches are:

- To enable students in using engineering principles in developing innovative strategies to positively influence the human life to acquaint student with different types of bridge along with their components
- To understand the principles of design and construction of green structures.

Credits Earned: 4

Students Learning Outcomes

After studying this subject student will be able to:

- Identify major challenges facing the planet earth and human society
- Describe primary components of a sustainable engineering system
- Utilize engineering principles for design and construction of green structures
- Perform detail performance evaluation of a building based on LEED standards
- Evaluate feasibility of alternative products and solutions based on life-cycle analysis (LCA) methods

01CI0809 Prestressed Concrete Technology
Objective of the Course

Objectives of introducing this subject at fourth year level in civil branches are:

- To study various aspects related to design of prestressed concrete slab & girders.
- To gain knowledge of designing long span structures using prestressing.

Credits Earned: 4

Students Learning Outcomes

After studying this subject student will be able to:

- Apply concepts & methods for pre stressing systems for different materials.
- Compute stresses in beams due to transverse loads & prestressing.
- Determine the losses in beams due to prestress, short and long term deflection, flexural and shear strength of beam.
- Design the pre-tensioned and post-tensioned concrete beams & slab, anchorage zones.
- Know various specifications of IRC for planning, analysis & design of bridges.
- Analyze and design of simply supported RC slab & girder type superstructure as per IRC specifications,
- Analyze and design substructure, foundation and adjoining elements.

Teaching and Examination Scheme

Subject Name	Teaching Scheme (Hours)			Credits	Theory Marks			Tutorial/ Practical Marks		Total Marks
	Theory	Tutorial	Practical		ESE (E)	Mid Sem (M)	Internal (I)	Viva (V)	Term Work (TW)	
Prestressed Concrete Technology	3	-	2	4	50	30	20	25	25	150

Detailed Syllabus

Sr. No	Topic name	Hours
1	Introduction	06
	1.1 Introduction, Basic Concepts, History of development of materials and prestressing.	03
	1.2 Different methods of prestressing, Advantages and Limitations, IS provisions related to materials properties & prestressing	03
2	Analysis of prestress and bending stress	16
	2.1 Analysis of member for prestress and bending stresses at various stages; Pressure Line; Stress, strength and Load Balancing concepts; Losses in prestress;	08
	2.2 short term and long term deflections; flexural, shear and torsional strength, Estimation of crack width. Fatigue and impact strength, resistance to fire and corrosion.	08

3	Member Design	20
	3.1 Transfer of prestress in pretensioned and posttensioned members	02
	3.2 Stress distribution at end anchorages	03
	3.3 anchorages and end block design; Limit state design criteria	03
	3.4 design of pre and post tensioned girders	06
	3.5 design of post tensioned one way and two way slabs.	06
	TOTAL	42

List of Practical's

Sr. No	Topic name
1	Advance Techniques of Prestressing.
2	Site visit related to prestressing practice and report preparation
3	Application of Circular prestressing

Suggested Theory Distribution

The suggested theory distribution as per Bloom's taxonomy is as per follows. This distribution serves as guidelines for teachers and students to achieve effective teaching-learning process

Distribution of Theory for course delivery and evaluation					
Remember	Understand	Apply	Analyze	Evaluate	Create
10	25	30	20	10	5

Instructional Method and Pedagogy

1. Prerequisite of the course and its pattern shall be discussed on the commencement of the course.
2. Lectures shall be conducted in class room using various teaching aids.
3. Presence in all academic sessions is mandatory which shall carry 5% marks of the total internal evaluation.
4. At the end of each unit/topic an assignment based on the course content shall be given to the students which shall carry 5% weightage for timely completion and submission of the assigned work.
5. The laboratory experiments are planned in such a way that it covers the practical aspects of the course contents. The performance of these experiments shall bring the clarity of the theoretical concepts which the students have studied during the academic sessions.

01CI0810 Infrastructure Engineering and Management
Objective of the Course

Objectives of introducing this subject at fourth year level in civil branches is:

- To provide an overview of Infrastructure project.
- To develop an understanding of Infrastructure Master Plan, Development Plan and various project activities involved.

Credits Earned: 4

Students Learning Outcomes

After studying this subject student will be able to:

- Develop infrastructure master plan and Schedule infrastructure project activities.
- Prepare project development plan for infrastructure organizations and systems.
- Prepare tender documents for infrastructure project by understanding different engineering contracts.
- Apply the management techniques like CPM and PERT to infrastructure projects.
- Analyze the management process for infrastructure projects

Teaching and Examination Scheme

Subject Name	Teaching Scheme (Hours)			Credits	Theory Marks			Tutorial/ Practical Marks		Total Marks
	Theory	Tutorial	Practical		ESE (E)	Mid Sem (M)	Internal (I)	Viva (V)	Term Work (TW)	
Infrastructure Engineering and Management	3	0	2	4	50	30	20	25	25	150

Detailed Syllabus

Sr. No	Topic name	Hours
1	Infrastructure	7
	Definitions of infrastructure, Governing Features, Historical overview of Infrastructure development in India, Infrastructure Organizations & Systems.	7
2	Infrastructure Planning	10
	Typical infrastructure planning steps, Planning and appraisal of major infrastructure projects, Screening of project ideas, Life cycle analysis, Multi-criteria analysis for comparison of infrastructure alternatives, Procurement strategies, Scheduling and management of planning activities, Infrastructure Project Budgeting and Funding, Regulatory Framework, Sources of Funding	10

3	Project Management in Construction	16
	Introduction to project management processes - Initiating, Planning, Executing, Controlling, and Closing processes	5
	Project Integration Management - Project plan development, Project plan execution, and Overall change control	5
	Project Scope Management - Initiation, Scope planning, Scope definition, Scope verification, and Scope change control.	6
4	Contracts and management of contracts	9
	Engineering contracts and its formulation, Definition and essentials of a contract, Indian Contract Act 1872, types of contracts and clauses for contracts, Preparation of tender documents, Issues related to tendering process, Awarding contract.	9
	TOTAL	42

List of Practical's

Sr. No	Topic name
1	To prepare at least one infrastructure plan (individually) and should have to prepare project development plan and tender document for the same infrastructure plan.
2	To learn available project management tool.

Suggested Theory Distribution

The suggested theory distribution as per Bloom's taxonomy is as per follows. This distribution serves as guidelines for teachers and students to achieve effective teaching-learning process

Distribution of Theory for course delivery and evaluation					
Remember	Understand	Apply	Analyze	Evaluate	Create
15%	25%	20%	20%	10%	10%

Instructional Method and Pedagogy

1. Prerequisite of the course and its pattern shall be discussed on the commencement of the course.
2. Lectures shall be conducted in class room using various teaching aids.
3. Presence in all academic sessions is mandatory which shall carry 5% marks of the total internal evaluation.
4. At the end of each unit/topic an assignment based on the course content shall be given to the students which shall carry 5% weightage for timely completion and submission of the assigned work.
5. The laboratory experiments are planned in such a way that it covers the practical aspects of the course contents. The performance of these experiments shall bring the clarity of the theoretical concepts which the students have studied during the academic sessions.

01CI0811 Design of Formwork
Objective of the Course

Objectives of introducing this subject at fourth year level in civil branches is:

- To study the materials associated with formwork and design aspects of formwork under various requirements.
- To study the planning and erection aspects of form work with few special types of forms

Credits Earned: 4

Students Learning Outcomes

After studying this subject student will be able to:

- Select proper formwork, accessories and material
- Design the form work for Beams, Slabs, columns, Walls and Foundations
- Design the form work for Special Structures
- Understand the working of flying formwork
- Judge the formwork failures through case studies.

Teaching and Examination Scheme

Subject Name	Teaching Scheme (Hours)			Credits	Theory Marks			Tutorial/ Practical Marks		Total Marks
	Theory	Tutorial	Practical		ESE (E)	Mid Sem (M)	Internal (I)	Viva (V)	Term Work (TW)	
Design of Formwork	3	0	2	4	50	30	20	25	25	150

Detailed Syllabus

Sr. No	Topic name	Hours
1	Introduction	10
	Formwork and False work, Requirement and selection of formwork, Temporary work system, Construction planning and site constraints, Materials and construction of the common formwork and false work systems, Formwork material, Timber, Plywood, Steel, Aluminium, Plastic, Type of support.	7
	Formwork Design for Special Structures: Shells, Domes, Folded Plates, Overhead Water Tanks, Natural Draft Cooling Tower, Bridges.	3
2	Formwork Design	17
	Concepts, Design considerations, Live loads and Wind pressure, Concrete pressure on formwork, Concrete density, Height of discharge, Temperature, Rate of Placing, Consistency of concrete, Vibration, Hydrostatic pressure and pressure distribution, Basic simplification, Beam, Slab, Column, Wall forms, Allowable stresses, check for, deflection, bending and lateral stability.	10
	Design of Decks and False works: Types of beam, decking and column	7

	formwork, Design of decking, False work design, Effects of wind load, Foundation and soil on false work design.	
3	Flying Formwork	6
	Table Form, Tunnel Form, Slip Form, Formwork for Precast Concrete, Formwork Management Issues, Pre- and Post-Award.	6
4	Failure and Safety of Formwork	9
	Formwork Failures: Causes and Case studies in Formwork Failure, Formwork Issues in Multi-Story Building Construction	4
	Construction Sequence and Safety in use of Formwork: Sequence of construction, Safety use of formwork and false work.	5
	TOTAL	42

Suggested Theory Distribution

01CI0812: Masonry Structures
Objective of the Course

Objectives of introducing this subject at fourth year level in civil branches are:

- To develop an understanding for implementation of Masonry structures.
- To present fundamental principles and methodologies of design of Masonry structures.
- To categorize, classify and understand the masonry building component.
- To have the ability to analyse and design of masonry structure.

Credits Earned: 4
Students Learning Outcomes

After studying this subject students will be able:

- To understand the behavior of masonry structure
- To make use of fundamental of design methodologies for design of masonry structure.
- To identify different component of masonry structure.
- Become familiar with basic masonry materials, including clay brick, concrete block, mortar, grout, and reinforcing accessories.
- Understand the behavior of reinforced masonry structures under flexure, shear, axial forces, combined flexure and axial forces, and in-plane shear forces.
- Learn the methods of masonry construction and detailing practices.

Teaching and Examination Scheme

Subject Name	Teaching Scheme (Hours)			Credits	Theory Marks			Tutorial/ Practical Marks		Total Marks
	Theory	Tutorial	Practical		ESE (E)	IA (M)	CSE (I)	Viva (V)	Term Work (TW)	
Elementary Design of Structures	3	0	2	4	50	30	20	25	25	150

Detailed Syllabus

Sr.No	Topic name	Hours
1	Introduction, Masonry units, materials and types:	03
	History of masonry, Characteristics of Brick, stone, clay block, concrete block, stabilized mud block masonry units, Term used in masonry, Masonry materials - Classification and properties of mortars, Selection of mortars.	03
2	Types of masonry structure	12
	2.1 Stone masonry – Material, classification of stone masonry, Dressing of stone, Application for lifting stones, Joints in stone masonry, Safe permissible load on Stone masonry.	04
	2.2 Brick masonry – Types of bricks, Bond in bricks, Method of brick laying, Defects in brick masonry, Strength of brick masonry, permissible compressive stress of brick masonry, typical structures in brick work.	05

	2.3 Composite masonry – Stone composite masonry, concrete masonry, Hollow clay blocks masonry, reinforcement in brick masonry.	03
3	Types of wall, Arches and Lintels	12
	3.1 Load bearing wall – types of load bearing wall, Design consideration of wall, Effective dimension of wall, Permissible stress in wall, basic structural analysis and design of wall.	6
	3.2 Cavity wall – Advantages of cavity wall, position of cavity wall, construction of cavity wall.	2
	3.3 Partition wall – Types of partition wall, Requirement of partition wall.	1
	3.4 Lintels and Arches – Classification of lintels, loading on lintels, different terms of arch, Stability of arch, classification and construction of arches	3
4	strength of masonry	08
	4.1 strength and elastic properties of masonry, behavior of masonry under compressive force, effect of height on compressive strength of masonry, failures of masonry structure under compression, effect of bonding pattern, slenderness, material, workmanship and curing on compressive strength.	06
	4.2 Tests for determining flexural and shear bond strength, factors affecting bond strength, flexure, shear strength of masonry unit.	02
5	Earthquake resistant masonry buildings	07
	5.1 Behavior of masonry during earthquakes, concepts and design procedure for earthquake resistant masonry, BIS codal provisions, Earthquake resisting feature.	07

01CE0102	Computer Workshop	B.Tech.Year-I
-----------------	--------------------------	----------------------

Objective: Students of Computer Engineering have to work with various hardware and software not only during academia but also in company. Thus, students should get familiar with various hardware, software, operating systems and networking.

This course will provide student a much needed knowledge of computer hardware and networking, enabling them to identify and rectify the onboard computer hardware, software and network related problems. With the help of this course the student will be able to understand the hardware specifications that are required to run operating system and various application programs.

Credits Earned: 1 Credits

Course Outcomes: After completion of this course, student will be able to

- Understand the basic concept and structure of computer hardware and networking.
- Identify the existing configuration of the computers and peripherals.
- Upgrading the system as and when required.
- Apply their knowledge about computer peripherals to identify / rectify problems onboard.
- Integrate the PCs into local area network and re-install operating system and various application programs.
- Manage data backup and restore operations on computer and update application software.

Prerequisite of course: NA

1. Hardware Bible by Winn L. Rosch
2. Hardware and Software of Personal Computers by Sanjay K. Bose
3. Fundamentals of Computers by V. Rajaraman
4. Computer Studies - A first course by John Shelley and Roger Hunt
5. Computer Fundamentals, MS Office and Internet & Web Technology by Dinesh

D. P. Singh

Maidasani

6. Modern Computer Hardware Course by M Lotia, P Nair, P Lotia

List of Experiments:

The practical/exercises should be properly designed and implemented with an attempt to develop different types of skills so that students are able to acquire the competency. Following is the list of experiments for guidance.

As it is laboratory course list is as per content given above

Suggested List of Student Activities:

1. Collect various types of computer hardware and prepare summary report
2. Collect various types of computer software and prepare requirement report
3. Collect specifications of similar types of hardware and software and prepare report comparing them.
4. Assemble one computer and install operating system and several software (mini – project given by faculty member)

Open Ended Problems: Apart from above experiments a group of students has undertake open ended problem/design problem. Few examples of the same are given below.

1. Identify the hardware and software list of the given system.
2. Install and uninstall given software step-by-step.
3. Explain step-by-step installation process for given operating system.
4. Prepare the report of need of programming language in 21st century.

Major Equipment:

Components:

Various types of hardware including RAM, motherboards, Processor, hard disk, etc. along with various operating system like linux and windows based with software like open office, players etc.

Tools:

Screw driver, crimping, soldering iron, multi-meter, cable tester, UTP cable, Connecters, keyboard, mouse, and other USB devices.

01EE0101	Elements of Electrical Engineering	B.Tech. Year - I
-----------------	---	-------------------------

Objective: Students are expected to learn basics of Electrical Engineering which will help them to apply these concepts in day to day life. The course is divided into two parts: DC circuits and AC circuits. The course also discusses three phase supply which is used in many commercial, industrial as well as agricultural applications. Keeping in view wide applications of batteries, a special unit of battery is introduced.

Credits Earned: 4 Credits

Course Outcomes: After completion of this course, student will be able to

- Recognize importance of electrical energy and its day to day applications.
- Interpret the role of resistor, capacitor and inductor and their behavior under various system conditions.
- Describe qualitative comparison between AC and DC system, single phase and three phase systems.
- Analyze and solve DC Circuits, AC Single phase and Three Phase Circuits.
- Analyze and solve magnetic circuits.
- Explain the need of batteries, its characteristics and charging methods.

Prerequisite of course: NA.

Suggested Theory distribution:

The suggested theory distribution as per Bloom's taxonomy is as per follows. This distribution serves as guidelines for teachers and students to achieve effective teaching-learning process

Distribution of Theory for course delivery and evaluation

K. P. Singh

Remember	Understand	Apply	Analyze	Evaluate	Create
20%	20%	30%	15%	10%	5%

Suggested List of Experiments:

1. To verify star-delta transformation in electric network
2. To verify ohm's law in an electric circuit
3. To observe the variation of temperature on resistance
4. Determination of equivalent capacitance of series and parallel connection of capacitors
5. Determination of B-H curve of magnetic material
6. To study function of basic instruments
7. To determine basic terminology of alternating waveform
8. To determine power in a single phase circuit using wattmeter
9. Determination of parameters in series RL circuit
10. Determination of parameters in series RLC circuit
11. Study series resonance in RLC circuit
12. Phase and Line quantity relationship in star and delta connection in a three phase systems
13. Determination of power in a three phase balanced circuit using two wattmeter method

Instructional Method:

- A. The course delivery method will depend upon the requirement of content and need of students. The teacher in addition to conventional teaching method by black board, may also use any of tools such as demonstration, role play, Quiz, brainstorming, MOOCs etc.
- B. The internal evaluation will be done on the basis of continuous evaluation of students in the laboratory and class-room.
- C. Practical examination will be conducted at the end of semester for evaluation of performance of students in laboratory.
- D. Students will use supplementary resources such as online videos, NPTEL videos, e-courses, Virtual Laboratory

01GS0101	Physics	B.Tech. Year - I
-----------------	----------------	-------------------------

Objective: Students are expected to learn basics of physics which will help them to apply physical concepts in various engineering branches whichever is applicable for them. The course is divided into ten modules. The course also discusses various aspects of physics which are used in many commercial, as well as industrial applications. Keeping wide view of applications of Non Destructive Testing, a special unit of the same is introduced.

Credits Earned: 4 Credits

Course Outcomes: After completion of this course, student will be able to

- Recognize importance of physical concepts and its day to day applications.
- Interpret the role of dielectric, magnetic and advanced engineering materials and their behaviors under various system conditions.
- Describe qualitative comparison between various diodes.
- Explain the need of NDT and its methodologies.

Prerequisite of course: NA.

Teaching and Examination Scheme

Teaching Scheme (Hours)			Credits	Theory Marks			Tutorial/ Practical Marks		Total Marks
Theory	Tutorial	Practical		ESE (E)	IA	(CSE)	Viva (V)	Term work (TW)	
3	0	2	4	50	30	20	25	25	150

Contents:

Unit	Topics	ContactHours
1	Acoustics: Introduction of musical sound and noise, Audible sound, Characteristics of audible sound, Loudness and Weber-Fechner law, Introduction of sound absorption co-efficient, Sabine's formula for reverberation(Without Derivations), Factors affecting the acoustics of building and their remedies, Sound absorbing materials, Sound Insulation, Noise Pollution, Noise Control in machineries.	5

r. P. Singh

2	Ultrasonics: Ultrasonic sound, Piezo-electric effect and Piezo-electric generator, Magneto-striction effect and Magneto-striction generator, Measurement of ultrasonic sound by Debye-Sear method, Applications of ultrasound in various disciplines.	4
3	Non Destructive Testing: <i>Visual inspection:</i> Scope and advantages of NDT, comparison of NDT with DT, Classification of NDT, equipments used for visual inspection, magnifying glass and mirror, microscope, borescope, endoscope, video imagescope. <i>Eddy current testing:</i> principle, advantages and disadvantages, factors affecting eddy current response, limitations and types of probes. <i>Liquid penetrant testing:</i> introduction, principle, equipments, procedures, principle, equipments and methodology, radiographic exposure factors, image quality, limitations and radiation hazards.	5
4	Optical Fiber: Introduction of Optical Fiber, Structure and advantages of Optical Fiber, Total Internal Reflection, Derivation of Numerical Aperture and Acceptance angle, Modes of Propagation, Classification of Optical Fiber, Fiber loss, Fiber optic communication system, Applications of optical fiber.	4
5	LASER: Properties of LASER, Spontaneous and stimulated emission, LASER with basic idea about Population Inversion, Pumping mechanism, Optical Resonators, Nd:YAG LASER, principle, construction and working, Applications of LASER in various disciplines, Principle of holography and its applications.	4
6	Superconductivity: General Properties of superconductors, Types of Superconductors, High Temperature superconductors, Applications: Magnets, Josephson effect, SQUID, Maglev, other	4
7	Magnetic Materials: Definitions : Magnetic induction, Auxiliary Magnetic field, Magnetic dipole, Dipole moment, Magnetization, Magnetic parameters, Bohr magnetron, Classification of Magnetic Materials based on magnetic moment, Soft and Hard Magnetic Materials, Anti-ferromagnetic	5

v. p. sh

	materials, Ferrites, Magnetic recording and readout, Magnetic storage devices.	
8	Nano-Physics: Introduction of Nano scale, Surface to volume ratio, Synthesis of Nano materials: Top-down; Ball milling, lithography, erosion, Bottom-up; PVD, CVD, PECVD, and sol-gel methods, Structure and types of Carbon Nano tube, Synthesis of CNT; Electrical arc method, CVD, Laser ablation, Properties and applications of CNT, Properties and applications of Nano materials.	5
9	Advanced Engineering Materials: Metallic glass: Introduction, Synthesis; splat cooling and Melt spinning methods, Properties and Applications Shape Memory Alloy: Introduction, Properties and Applications Energy materials: Hydrogen fuel cell	4
	Total Hours	40

Suggested Theory distribution:

The suggested theory distribution as per Bloom's taxonomy is as per follows. This distribution serves as guidelines for teachers and students to achieve effective teaching-learning process

Distribution of Theory for course delivery and evaluation					
Remember	Understand	Apply	Analyze	Evaluate	Create
20%	20%	30%	15%	10%	5%

Suggested List of Experiments:

1. To verify I-V characteristics of PN diode
2. To verify I-V characteristics of Zener diode
3. To verify I-V characteristics of Light Emitting diode
4. To determine efficiency of solar cell
5. Study of solar cell in series and parallel combinations

J. Prasad

6. To determine Numerical Aperture of Optical Fiber
7. To determine propagation and bending losses of Optical Fiber
8. To determine velocity of ultrasonic sound in water by ultrasonic interferometer
9. To determine energy band gap of semiconductor by four probe method
10. To determine energy band gap of semiconductor by resistivity- temperature method
11. To determine carrier concentration of a given semiconductor by Hall effect
12. To determine divergence of LASER beam

Instructional Method:

- A. The course delivery method will depend upon the requirement of content and need of students. The teacher in addition to conventional teaching method by black board, may also use any of tools such as demonstration, role play, etc.
- B. The internal evaluation will be done on the basis of continuous evaluation of students in the laboratory and class-room.
- C. Practical examination will be conducted at the end of semester for evaluation of performance of students in laboratory.
- D. Students will use supplementary resources such as online videos, NPTEL videos, e-courses, Virtual Laboratory

Supplementary Resources:

01MA0101	Engineering Mathematics – I	B.Tech. Year - I (Sem I)
-----------------	------------------------------------	---------------------------------

Objective: A good Engineer has to have an excellent background of Mathematics. Engineering Mathematics is one of the essential tools for learning Technology, Engineering and Sciences. This course lays the foundation for engineering mathematics in subsequent semesters, so that students get a sound knowledge and important aspects of the course.

Credits Earned: 5 Credits

Course Outcomes: After finishing of this course, understudy will have the capacity to

- Understand the fundamental ideas of vector theory and its applications.
- Apply knowledge of matrices in graph theory, cryptography, solving linear problems in various branches of engineering.
- Apply the concept of Eigen values and vectors in various field of engineering like control theory, vibration analysis, quantum mechanics etc.
- Apply concept of partial differential equation in solving various core engineering problems.
- Understand the importance of partial derivative and its application to solve Problems involving conservation of mass, conservation of momentum, etc.

Teaching and Examination Scheme

Teaching Scheme (Hours)			Credits	Theory Marks			Tutorial/ Practical Marks		Total Marks
Theory	Tutorial	Practical		ESE (E)	Mid Sem (M)	Internal (I)	Viva (V)	Term work (TW)	
4	2	-	5	50	30	20	25	25	150

Contents:

Unit	Topics	Contact Hours
1	Vector space: Vector space, Linear independence of vectors, Basis and dimension of vector space, Inner product spaces and their properties.	7
2	Matrix Algebra - I: Rank and nullity of a matrix, Determination of rank by row operation, Triangularization of matrices by Gauss-elimination process, Computing	7

r. p. sh

	inverse of a matrix by Row operations, Consistency of system of linear equations.	
3	Matrix Algebra-II: Determinant and their properties, Cofactors of $n \times n$ determinant, Eigen values and eigen vector of matrix, Cayley - Hamilton theorem, Quadratic and Canonical forms, special matrices and their properties.	7
4	Expansion of functions: Concept of Expansion of functions, Taylor's series expansion, Maclaurin's series expansion	7
5	Partial differentiation: Partial derivatives, Euler's theorem, Modified Euler's theorem and their applications, Implicit functions, Chain rule, Total differentials.	7
6	Applications of Partial differentiation: Errors and approximations, Tangent plane and normal line to a surface, Constrained optimization using Lagrange's multiplier, Jacobian.	7
	Total Hours	42

01ME0101	Elements of Mechanical Engineering	B. Tech. Year - I
-----------------	---	--------------------------

Type of course: Engineering Science

Prerequisite: Zeal to learn the subject

Rationale: Understanding of basic principles of Mechanical Engineering is required in various field of engineering.

Teaching and Examination Scheme

Teaching Scheme (Hours)			Credits	Theory Marks			Tutorial/ Practical Marks		Total Marks
Theory	Tutorial	Practical		ESE (E)	IA	(CSE)	Viva (V)	Term work (TW)	
3	0	2	4	50	30	20	25	25	150

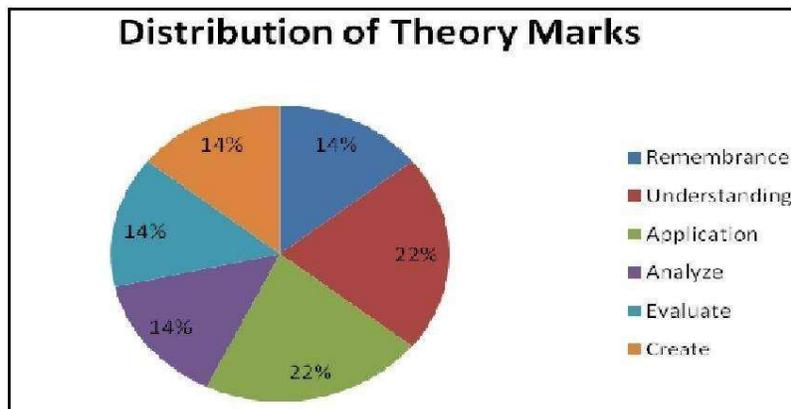

Content:

Sr. No.	Content	Total Hrs	%Weightage
1	Introduction: Prime movers and its types, Concept of Force, Pressure, Energy, Work, Power, System, Heat, Temperature, Specific heat capacity, Change of state, Path, Process, Cycle, Internal energy, Enthalpy, Statements of Zeroth Law and First law	4	25%
2	Properties of gases: Gas laws, Boyle's law, Charles law, Combined gas law, Gas constant, Relation between Cp and Cv, Various non-flow processes like constant volume process, constant pressure process, Isothermal process, Adiabatic process, Polytropic process	6	
3	Properties of Steam: Steam formation, Types of Steam, Enthalpy, Specific volume, Internal energy and dryness fraction of steam, use of Steam tables, steam calorimeters	6	
4	Heat Engines:		

K. P. Singh

	Heat Engine cycle and Heat Engine, working substances, Classification of heat engines, Description and thermal efficiency of Carnot; Rankine;	6	30%
5	Steam Boilers: Introduction, Classification, Cochran, Lancashire and Babcock and Wilcox boiler, Functioning of different mountings and accessories	4	
6	Internal Combustion Engines: Introduction, Classification, Engine details, four-stroke/ two-stroke cycle Petrol/Diesel engines, Indicated power, Brake Power, Efficiencies	4	
7	Turbo machines: Types and operation of Reciprocating, Rotary and Centrifugal pumps, Priming and air compressors	4	20%
8	Refrigeration & Air Conditioning: Refrigerant, Vapor compression refrigeration system, vapor absorption refrigeration system, Domestic Refrigerator, Window and split air	4	
9	Couplings, Clutches and Brakes: Construction and applications of Couplings (Box; Flange; Pin type flexible; Universal and Oldham), Clutches (Disc and Centrifugal), and Brakes (Block; Shoe; Band and Disc)	4	25%
10	Transmission of Motion and Power: Shaft and axle, Belt drive, Chain drive, Friction drive, Gear drive	4

Marwadi University **Syllabus for Bachelor of Technology**
Department of Information Technology

1. Basic Mechanical Engineering by Pravin Kumar, Pearson
2. Thermal Science and Engineering by Dr. D.S. Kumar, S.K. Kataria & sons, Publication New Delhi
3. Fundamental of Mechanical Engineering by G.S. Sawhney, PHI Publication New Delhi
4. Elements of Mechanical Engineering by Sadhu Singh S. Chand Publication

Course Outcome: After learning the course the students should be able to:

1. To understand the fundamentals of mechanical systems
2. To understand and appreciate significance of mechanical engineering in different fields of engineering

List of Experiments:

1. To understand and appreciate significance of mechanical engineering in different fields of engineering
2. To understand construction and working of different boiler mountings and accessories.
3. To determine brake thermal efficiency of an I. C. Engine.
4. To understand construction and working of different types of air compressors.
5. To demonstrate vapor compression refrigeration cycle of domestic refrigerator OR window air conditioner OR split air conditioner.

Design based Problems(DP)/ Open Ended Problem:

1. Develop a prototype of gear train/drive for certain velocity ratios.
2. Develop a small boiler with different mountings.
3. Develop a hot air engine

01SL0101	Communication Skills	B.Tech. Year - I
-----------------	-----------------------------	-------------------------

Objective: As students would make a transition to higher education, it is required that they develop an ability to comprehend written texts focusing on science and technology as well as the skill to compose different forms of academic writing. The course aims at equipping the students with basic competence in reading and writing for the purposes of their academic requirements.

Credits Earned: 3 Credits

Course Outcomes: After completion of this course, student will be able to

- Comprehend texts based on science and technology
- Develop the ability to interpret informative and analytical texts
- Evolve an understanding of components of academic writing
- Explain technical concepts in written form
- Compose written texts for the purposes of academic writing

Prerequisite of course: NA.

01CE0101	Computer Programming	B.Tech. Year - I
-----------------	-----------------------------	-------------------------

Objective: Students are expected to learn basics of Computer Programming which will help them to apply these concepts in day to day life. The course discusses various notations that required for developing algorithm and for C language, which is used in many commercial, industrial as well as industrial applications. Keeping in view wide applications of files, a special unit of files is introduced.

Credits Earned: 4 Credits

Course Outcomes: After completion of this course, student will be able to

- Recognize importance of C language and its day to day applications.
- Analyze the various control structures that requires to use in real time applications
- How to convert real time applications into algorithms and device the program using C language notations
- Identify various basic programming principles using C language.
- Illustrate various programming syntax.
- Express and distinguish various loops in C language.
- Express programming problems logically through flow charts and algorithms.
- Prepare effective team-oriented problem solver as well as communicator with non-technical stakeholders in computer and software systems development.
- Apply fundamental principles of problem solving in software engineering.

Prerequisite of course: NA.

Teaching and Examination Scheme

3. Programming in C Ansi standard, by Yashwant Kanetkar

K. P. Singh

4. Programming with C, Gottfried, McGraw-Hill.

Suggested Theory distribution:

The suggested theory distribution as per Bloom's taxonomy is as per follows. This distribution serves as guidelines for teachers and students to achieve effective teaching-learning process

Distribution of Theory for course delivery and evaluation					
Remember	Understand	Apply	Analyze	Evaluate	Create
20%	20%	30%	15%	10%	5%

Suggested List of Experiments:

1. Write a program to print student detail.
2. Write a program to calculate simple interest.
3. Write a program that accepts centigrade and convert it into Fahrenheit.
4. Write a program that accepts two numbers in A and B interchange value of A and B variable.
5. Write a program to demonstrate the use of the basic data types int, char and float.
6. Write a program to demonstrate the use of Arithmetic operators by getting two numbers from the user.
7. Write a program that accepts a number from keyboard and find whether the number is ODD or EVEN using Conditional operators.
8. Write a program to demonstrate the use of increment and decrement operator.
9. Write a program to demonstrate the use of shorthand operators.
10. Write a program to demonstrate the use of sizeof() of operator.
11. Write a program to demonstrate the use of bitwise operators.
12. Write a program that accepts three numbers from the user and print maximum of them.
13. Demonstrate the use of GOTO statement.
14. Write a program to input the Name and the Salary of an Employee. Calculate and print the Name, Salary and Bonus of the Employee, where bonus= 5.3% if salary is at least Rs. 10,000 and 6.5% otherwise.
15. Admission to professional course is subject to the following conditions. Marks in Mathematics \geq 60 Marks in Physics \geq 50 Marks in Chemistry \geq 40 Total in all three subjects \geq 200 or total in mathematics and physics \geq 150 Given the marks in the three subjects, Write a program to process the application to list the eligible candidates.

K. P. Singh

16. Write a program that accepts two numbers and one code (1,2,3,4) from the user. According to the code, the operations to be performed, using switch case statements as follows: (Code : 1→ Addition, 2→ Subtraction, 3→ Multiplication, 4→ Division).
17. Write a program that reads the marks for five subjects of a student. Calculate and print the grade for the student [i.e. Grade A,B,C,D and F] using Else-If ladder.
18. Write a program that do sum=1+3+5+.....N terms Print value of Sum.
19. Write a program to print the Fibonacci Series[i.e 1,1,2,3,5,8,13...N terms].
20. Write a program to accept one number from the user. i) Display reverse of that number. ii) Find if it is Armstrong or not.
21. Write a program that accepts a number from the user and print prime numbers from 0 to that number.
22. Write a C program to display following different Patterns.

1	1
1 2	1 0
1 2 3	1 0 1
1 2 3 4	1 0 1 0
1 2 3 4 5	1 0 1 0 1

1	a
2 1	b c
1 2 3 2 1	d e f
2 3 4 3 2 1	g h i j
1 2 3 4 5 4 3 2 1	k l m n o
1	1
A B	A B
1 2 3	2 3 4
A B C D	C D E F
1 2 3 4 5	5 6 7 8 9

23. Write a program to accept 5 numbers in an array and display it.
24. Write a program to accept 9 numbers in form of matrix and display in matrix form.

K. P. Singh

25. Write a program to accept 5 numbers in array and find maximum and minimum value of it.
26. Write a program to accept 5 numbers in array and find maximum and minimum value of it.
27. Write a program to sort all elements of 1-D array in ascending and descending order.
28. Write a program to calculate and display addition of two matrix.
29. Write a program to count number of vowels in a given string.
30. Write a program to check whether entered string is palindrome or not.
31. Write a program for string concatenation without using library function.
32. Write a program to demonstrate the Library function for string.
33. Write a function which receives number as argument and return sum of digit.
34. Write a program for calculating Fibonacci series using UDF and call by value
35. Write a program to calculate Factorial using recursion in UDF.
36. Write a program to find Average, maximum and minimum of Array elements using UDF.
37. Write a program to calculate total number of positive, negative and zero value in array using UDF.
38. Write a program to swap two numbers using UDF and pointer.
39. Write a program using pointer to read in an array of integers and print its elements in reverse order.
40. Write a C program to create a structure of employees with Full Name, Last Name, City and Salary. Display it for n employees.
41. Write a program to demonstrate nested structure.(make structures for circle and rectangle)
42. Write a program to create array of structure. Make a structure for student having student_no, student_name, student_marks.
43. Write a program to create union cricketer having player_name, batting_avg, player_age. P for swapping of two values with help of UDF and call by reference.
44. Write a program to Display contents of a file on screen. Use functions (fopen, fclose, getc, putchar, eof)
45. Write a program to count number of characters in a file.

Instructional Method:

1. The course delivery method will depend upon the requirement of content and need of students. The teacher in addition to conventional teaching method by black board, may also use any of tools such as demonstration, role play, Quiz, brainstorming,

K. P. Singh

MOOCs etc.

2. The internal evaluation will be done on the basis of continuous evaluation of students in the laboratory and class-room.
3. Practical examination will be conducted at the end of semester for evaluation of performance of students in laboratory.
4. Students will use supplementary resources such as online videos, NPTEL videos, e-courses, Virtual Laboratory

01EC0101	Basics of Electronics Engineering	B.Tech. Year – I
-----------------	--	-------------------------

Objective: The subject aims to prepare the students:

- To understand the basic Electronic Engineering concepts required in analysis and design of electronic circuits and systems.
- To understand the construction and operation of various components and circuits such as Diodes, BJT, JFET, MOSFET, OpAmp, Oscillators and Voltage Regulator and also the capability to analyze and design the simple electronic circuits.

Credits Earned: 4 Credits

Course Outcomes: After completion of this course, student will be able to:

- Identify the difference between electronics and electrical engineering.
- Perceive the detail understanding of construction, operation and applications of various components like Diode, BJT, JFET and MOSFET.
- Recognize basic electronic devices used in various circuits.
- Apply basic knowledge and techniques of electronics engineering for designing and analyzing various electronic circuits like Rectifier, Amplifier, Integrator, Differentiator, Oscillator and Voltage Regulator.
- Understand the role of electronics in solving various engineering problems.

Prerequisite of course: Basic knowledge of physics and fundamental concept of electrical engineering.

Suggested Theory Distribution:

The suggested theory distribution as per Bloom's Taxonomy is as per follows. This distribution serves as guidelines for teachers and students to achieve effective teaching-learning process.

Distribution of Theory for course delivery and evaluation					
Remember	Understand	Apply	Analyze	Evaluate	Create
20%	20%	30%	15%	10%	5%

Suggested List of Experiments:

1. To study and perform the V-I characteristic of Silicon Diode and Zener Diode.
2. To use the Zener Diode as voltage regulator.
3. To use silicon Diode as a Clipper and Clamper.
4. To analyze the Half Wave, Full Wave and Bridge Rectifiers.
5. To study and perform the Input and Output characteristic of BJT.
6. To use Transistor as a Switch.
7. To Analyze CE, CB and CC Amplifier Circuit.
8. To measure the variation of current gain with variation in temperature for different biasing of a transistor.
9. To study and perform the Input and Output characteristic of FET.
10. To study and perform the Input and Output characteristic of MOSFET.
11. To Study and Perform the Common mode and Differential mode of operation for OpAmp.
12. To use OpAmp as summer, Integrator and Differentiator.
13. To test the performance of negative feedback amplifier and compare gain, BW with and without feedback.
14. To Study and Perform Wien Bridge Oscillator.
15. To Analyze Voltage Regulator by using Integrated Circuit.

K. P. Singh

Open ended problems:

1. Design a full wave bridge rectifier for input 50 Hz 10Vp-p AC signal and expected output of 5 V DC signal.
2. Design a regulated power supply using zener diode for input variation of 10 to 20 Vp-p.
3. A silicon diode has a reverse current of 5 μ A at 25°C and 100 μ A at 100°C. What are the values of the saturation current and the surface-leakage current at 25°C?
4. Demonstrate Automatic street light control system using LED.
5. Design a +5 to +25 V variable power supply.

Instructional Methods:

1. The course delivery method will depend upon the requirement of content and need of students. The teacher in addition to conventional teaching method by black board, may also use any of tools such as demonstration, role play, Quiz, brainstorming, MOOCs etc.
2. The internal evaluation will be done on the basis of continuous evaluation of students in the laboratory and class-room.
3. Practical examination will be conducted at the end of semester for evaluation of performance of students in laboratory.
4. Students will use supplementary resources such as online videos, NPTEL videos, e-courses, Virtual Laboratory.

Supplementary Resources:

List of simulation software:

1. TINA
2. NI Multisim
3. OrCAD
4. Circuit Wizard

K. P. Singh

5. Ngspice (free ware)
6. Logisim (free ware)
7. 123d circuits (online free ware)

Major equipment:

CRO/DSO, Function generator, Power supply, Multi meter, Bread board, Components, Experimental trainer Kits, Bread board, General purpose PCB, Connectors, Soldering iron

Special skill development (Self-study / Communication):

Each student group (2-3 members) has to present a latest devices / technology based on electronic principles using PPT/functional models as part of laboratory term work submission.

K. P. Singh

01EC0102	Digital Electronics	B.Tech. Year – I
-----------------	----------------------------	-------------------------

Objective: The subject aims to prepare the students,

- To understand the basic of Digital Electronic concepts required in analysis and design of digital electronic circuits and systems.
- To understand the number system, logic gates, Boolean algebra, etc.
- To understand Construction and operation of various digital circuits such as Adder, Subtractor, Multiplexer, Demultiplexer, Decoder, Encoder, Flip-flops, Counters, Registers and memory devices.
- To devolve the capability to Simplify, Analyze and Design the Various Digital Electronic Circuits.

Credits Earned: 4 Credits

Course Outcomes: After completion of this course, student will be able to

- Perform conversion between various number systems.
- Apply knowledge of Boolean algebra and other minimization techniques for digital circuit design.
- Identify, formulate and solve a problem based on combinational and sequential circuits
- Select the appropriate hardware and software tools for combinational and sequential circuit design.
- Design various counters.
- Verify the functions of various digital integrated circuits.
- Evaluate the specifications of logic families.
- Create a course project using digital integrated circuits.

Prerequisite of the course: Elementary knowledge of science and mathematics

Teaching and Examination Scheme

Teaching Scheme (Hours)			Credits	Theory Marks			Tutorial/ Practical Marks		Total Marks
Theory	Tutorial	Practical		ESE (E)	IA	(CSE)	Viva (V)	Term work (TW)	
3	0	2	4	50	30	20	25	25	150

K. P. Singh

Contents:

Unit	Topics	Contact Hours
1	Number Systems and Codes : Analogue versus Digital, Various Number Systems and Conversion between them, Accuracy of Conversion, Floating-Point Numbers, Various Binary Codes.	6
2	Digital Arithmetic : Basic Rules of Binary Addition and Subtraction, Binary Addition and Subtraction using Complements, BCD Addition and Subtraction, Binary Multiplication and Division, Floating-Point Arithmetic.	4
3	Logic Gates and Related Devices : Positive and Negative Logic, Various Logics Gates with IEEE/ANSI symbols, Boolean equations, truth table and IC Details. Universal Gates, Gates with Open Collector/Drain output, Tristate Gates, AND-OR-INVERT Gates, Schmitt Gates, Special Output Gates, Fan-Out of Logic Gates, Buffers and Transceivers	4
4	Logic Families : Significance of Families, Characteristic Parameters, Types of Logic Families: TTL, ECL, CMOS, Bi-CMOS, NMOS and PMOS, Comparison between various logic families. Interfacing between CMOS and TTL logic families	3
5	Boolean Algebra and Simplification Techniques : Introduction, Simplification Techniques - Karnaugh Map Method and Tabulation Method	4
6	Combinational Logic Circuits : Combinational Circuits and its implementations, Arithmetic Circuits - Adders and Magnitude comparator. Multiplexer, Encoders, Demultiplexers and Decoders, Parity Generation and Checking.	8
7	Sequential Logic Circuits : R-S and D Flip-flop, Level Triggered and Edge-Triggered Flip-flops, J-K and T Flip-flop, Synchronous and Asynchronous Input, Flip-flop Timing Parameters, Binary Ripple Counter, Synchronous Counters, UP/Down Counters, Decade and BCD Counters, Presettable Counters, Decoding	10

K. P. Singh

	Counter, Cascading Counter, Designing Counter with Arbitrary Sequences, Shift Register, Shift Register, Counters, IEEE/ANSI Symbols for counters and Registers.	
8	Memory Devices : Anatomy of Computer, A computer Systems, Computer Memory, RAM and ROM, Expanding Memory Capacity	3
Total Hours :		42

Suggested Theory Distribution:

The suggested theory distribution as per Bloom's Taxonomy is as per follows. This distribution serves as guidelines to teachers and students for effective teaching-learning process.

Distribution of Theory for course delivery and evaluation					
Remember	Understand	Apply	Analyze	Evaluate	Create
15%	20%	30%	20%	10%	5%

Suggested List of Experiments:

1. Study data sheet of various digital logic circuits and see how to test these circuits using Digital IC Tester.
2. Study of Digital IC Testers, Logic State Analyzer and Digital Pattern Generators.
3. Verify the truth tables of various Digital Logic Gates.
4. Verify the application of NAND and NOR logic gates as universal gates.
5. Implementation of Boolean Logic Functions using logic gate ICs.
6. Design and implement digital logic for given case study.
7. Measure digital logic gate specifications such as propagation delay, noise margin, fan in and fan out.

L. P. Singh

8. Implement various combinational logic circuits such as adder, subtractor, decoder, encoder, multiplexers, demultiplexer, etc.
9. Design any one code converter and implement using discrete ICs on the bread board.
10. Verify operation of various flip-flops, registers and counters using digital ICs.

Open ended problems:

1. Design and Implementation of combinational lock circuit with varying number of bits (For example 4, 8)
2. Design and Implementation of visitor counter for Shopping Mall.
3. Design and Implementation of 4 bit Arithmetic and Logic Unit with minimum 4 functions using digital integrated circuits.
4. Design and Implementation of a scrolling display.
5. Design and Implement a digital dice which will generate any random number from 1 to

Note: A student and faculty may choose any other such problem which includes the concept used in the course.

Instructional Methods:

1. The course delivery method will depend upon the requirement of content and need of the students. The teacher in addition to conventional teaching method (Chalk and Talk) may use any of the tools such as demonstration, role play, Quiz, brainstorming, MOOCs etc. for effective teaching.
2. The internal evaluation will be done on the basis of continuous evaluation of students in the laboratory and class-room.
3. Practical examination will be conducted at the end of the semester for evaluation of performance of students in laboratory.
4. Students may use supplementary resources such as online videos, NPTEL videos, e-courses, Virtual Laboratory, etc.

Supplementary Learning Resources / Open Source Software:

1. PSpices and NGSpice
2. Xcircuit
3. NPTEL website and IITs virtual laboratory

Major equipment:

1. Pattern Generators
2. Logic State Analyzers
3. Digital Storage Oscilloscopes
4. Digital Integrated Circuits Tester.

Special skill development (Self-study / Communication):

K. P. Singh

Marwadi Syllabus for Bachelor of Technology
University Department of Information Technology

Each student group (2-3 members) has to prepare any one of the syllabus topic allotted by the faculty using PPT/functional model and submit the video of presentation as part of the laboratory term work submission.

K. P. Singh

01EN0101	Basics of Environmental Studies	B.Tech. Year – I
-----------------	--	-------------------------

Objective: Students should gain basic understanding of Environmental Engineering.

Credits Earned: 3 Credits

Course Outcomes: After completion of this course, student will be able to

- Understand and realize the multidisciplinary nature of Environment & its components.
- Know the importance of natural resources for the sustainable development of life.
- Understand the effect of growing population on the Environment.
- Classify the different types of pollution and measure to control pollution
- Learn about the Environmental issues faced globally and various steps taken globally to solve such Environmental issues.

Teaching and Examination Scheme

K. P. Singh

01MA0151	Engineering Mathematics - II	B.Tech. Year – I (Sem-II)
-----------------	-------------------------------------	----------------------------------

Objective: To study the central ideas of Engineering Mathematics to get a sound learning of vital parts of the subject.

Credits Earned: 5 Credits

Course Outcomes: After completion of this course, understudy will have the capacity to

- Understand role of mathematical modeling in taking care of different issues related to heat transfer, mechanics, momentum, etc.
- Understand the role of multiple integral in finding volume of three dimensional objects, finding area between two curves, finding moment of inertia etc.
- Check the convergence and divergence of various functions which are expandable in infinite terms.
- Understand the key role of vector integral calculus in finding flux in vector field, finding potential function, etc.
- Gain the fundamental knowledge about special function like Beta and Gamma and its applications.

Teaching and Examination Scheme

Unit	Topics	Hours
1	Introduction to Engineering Graphics: Drawing instruments and accessories, BIS – SP 46. Use of plane scales, Diagonal Scales and Representative Fraction	4
2	Engineering Curves: Classification and application of Engineering Curves, Construction of Conics, Cycloidal Curves, Involute and Spirals along with normal and tangent to each curve	8
3	Projections of Points and Lines: Introduction to principal planes of projections, Projections of the points located in same quadrant and different quadrants, Projections of line with its inclination to one reference plane and with two reference planes. True length and inclination with the reference planes	
4	Projections of Planes: Projections of planes (polygons, circle and ellipse) with its inclination to one reference plane and with two reference planes, Concept of	10

L. P. Singh

	auxiliary plane, method for projections of the plane	
5	Orthographic Projections: (To be cover in Laboratory) Fundamental of projection along with classification, Projections from the pictorial view of the object on the principal planes for view from front, top and sides using first angle projection method and third angle projection method, full sectional view	10
6	Isometric Projections and Isometric View or Drawing: (To be cover in Laboratory) Isometric Scale, Conversion of orthographic views into isometric projection, isometric view or drawing	10
Total Hours		42

References Book:

1. Engineering Graphics by Ramdevsinh Jhala, Tata McGraw Hill, New Delhi
2. A TextBook of Engineering Graphics by P.J.Shah S.Chand & Company Ltd., New Delhi
3. Elementary Engineering Drawing by N.D.Bhatt Charotar Publishing House, Anand
4. A text book of Engineering Drawing by R.K.Dhawan, S.Chand & Company Ltd., New Delhi
5. A text book of Engineering Drawing by P.S.Gill, S.K. Kataria & sons, Delhi

Course Outcomes: After completion of this course, student will be able to

- To know and understand the conventions and the methods of engineering drawing.
- Interpret engineering drawings using fundamental technical mathematics.
- Construct basic and intermediate geometry.
- To improve their visualization skills so that they can apply these skills in developing new products.
- To improve their technical communication skill in the form of communicative drawings.
Comprehend the theory of projection

Suggested Theory distribution:

The suggested theory distribution as per Bloom's taxonomy is as per follows. This distribution serves as guidelines for teachers and students to achieve effective teaching-learning process.

Distribution of Theory for course delivery and evaluation					
Remember	Understand	Apply	Analyze	Evaluate	Create
14%	22%	22%	14%	14%	14%

K. P. Singh

Suggested List of Experiments:

Students are required to prepare drawing sheets on the following topics.

Minimum three problems must be given for sheet number 3 to 8.

1. Practice sheet (which includes dimensioning methods, different types of line, construction of different polygon, divide the line and angle in parts, use of stencil,)
2. Plane scale and diagonal scale
3. Engineering curves
4. Projection of line and Projection of plane (minimum two problems on each)
5. Orthographic projection
6. Isometric projection

Instructional Method:

- a. The course delivery method will depend upon the requirement of content and need of students. The teacher in addition to conventional teaching method by black board, may also use any of tools such as demonstration, role play, Quiz, brainstorming
- b. The internal evaluation will be done on the basis of continuous evaluation of students in the laboratory and class-room.
- c. Practical examination will be conducted at the end of semester for evaluation of performance of students in laboratory.
- d. Students will use supplementary resources such as online videos, NPTEL videos, e-courses

L. P. Singh

Semester – III

K. P. Singh

01CE0301	Data Structure	B.Tech. Year - II
-----------------	-----------------------	--------------------------

Objective: To implement efficient algorithms and programs it is necessary to organize or structure the data. Understanding of data structures and their related applications are highly needed to build sustainable program.

Credits Earned: 5 Credits

Course Outcomes: After completion of this course, students will be able to

- Recognize the need of data structures in real time applications. (Knowledge)
- Analyse various data structures and their applications. (Analysis)
- Design and implement various techniques for searching and sorting algorithms to the small and large data sets. (Create)
- Identify appropriate data structures for the requested requirement for a given application. (Knowledge)

Prerequisite of course: Computer Programming in C

Teaching and Examination Scheme

Distribution of Theory for course delivery and evaluation					
Remember	Understand	Apply	Analyse	Evaluate	Create
20%	20%	20%	15%	10%	15%

Suggested List of Experiments:

1. Introduction to pointers. Call by Value and Call by reference.
2. Introduction to Dynamic Memory Allocation. DMA functions malloc(), calloc(), free() etc.
3. Implement a program using array for stack that performs operations (a) PUSH (b) POP (c) PEEP (d) CHANGE (e) DISPLAY
4. Implement a program to convert infix notation to postfix notation using stack.
5. Write a program to implement QUEUE using arrays that performs following operations (a) INSERT (b) DELETE (c) DISPLAY
6. Write a program to implement Circular Queue using arrays that performs following operations. (a) INSERT (b) DELETE (c) DISPLAY
7. Write a menu driven program to implement following operations on the singly linked list.
 - a. Insert a node at the front of the linked list.
 - b. Insert a node at the end of the linked list.
 - c. Insert a node such that linked list is in ascending order.(according to info. Field)
 - d. Delete a first node of the linked list.
 - e. Delete a node before specified position.
 - f. Delete a node after specified position.
8. Write a program to implement stack using linked list.
9. Write a program to implement queue using linked list.

K. P. Singh

10. Write a program to implement following operations on the doubly linked list.
 - a. Insert a node at the front of the linked list.
 - b. Insert a node at the end of the linked list.
 - c. Delete a last node of the linked list.
 - d. Delete a node before specified position.
11. Write a program which create binary search tree and traversal methods.
12. Write a program to implement Quick Sort.
13. Write a program to implement Merge Sort.
14. Write a program to implement Bubble Sort.
15. Write a program to implement Linear and Binary Search.

Instructional Method:

- a. The course delivery method will depend upon the requirement of content and need of students. The teacher in addition to conventional teaching method by black board, may also use any of tools such as demonstration, role play, Quiz, brainstorming, MOOCs etc.
- b. The internal evaluation will be done on the basis of continuous evaluation of students in the laboratory and class-room.

01CE0302	Database Management System	B.Tech. Year - II
-----------------	-----------------------------------	--------------------------

Objective: A major purpose of a database system is to provide users with an abstract view of the data. The lowest level of abstraction, the physical level, describes how the data are actually stored. The next-higher level of abstraction, the logical level, describes what data are stored, and what relationships exist among those data. The highest level of abstraction, the view level, describes parts of the database that are relevant to each user; application programs used to access a database form part of the view level. The SQL will help the user to retrieve the data from the database as per the requirement.

Credits Earned: 4 Credits

Course Outcomes: After learning the course, the students should be able:

- Use Relational Database and different models of Database. (Apply)
- Design ER Model for an Application. (Create)
- Apply Concepts of normalization with functional dependency to construct Data dictionary. (Apply)
- Implement Structured Query Language (SQL) and evaluate query expression. (Evaluate)
- Differentiate and Execute transactional Concepts and locking mechanism (Analyze)
- Use concepts of Database Security on Database. (Apply)

Prerequisite of course: NA.

Suggested Theory distribution:

The suggested theory distribution as per Bloom’s taxonomy is as per follows. This distribution serves as guidelines for teachers and students to achieve effective teaching-learning process

Distribution of Theory for course delivery and evaluation					
Remember	Understand	Apply	Analyze	Evaluate	Create
10%	30%	40%	10%	5%	5%

Suggested List of Experiments:

Practical -1

Create a table ACCOUNT

Column name	Data Type	Size
acc_no	varchar2	5
Name	varchar2	30
City	varchar2	20
Balance	Number	10,2
loan_taken	varchar2	5

Insert the following records.

acc_no	Name	City	Balance	loan_taken
A001	Patel Jigar	Mehsana	50000	YES
A002	Patel Ramesh	Mehsana	50000	YES

K. P. Singh

A003	Dave Hardik	Ahmedabad	75000	NO
A004	Soni Hetal	Ahmedabad	100000	NO
A005	Sony Atul	Vadodara	100000	YES

Create a Table LOAN

Column Name	Data Type	Size
loan_no	varchar2	5
acc_no	varchar2	5
loan_amt	number	10,2
interest_rate	number	5,2
loan_date	date	
remaining_loan	number	10,2

Insert the following Records.

Loan_no	Acc_no	Loan_amt	Interest_rate	Loan_date	Remaining_loan
L001	A001	100000	7	1-jan-04	75000
L002	A002	300000	9	18-may-04	150000
L003	A005	500000	11	15-june-04	300000

Create a table INSTALLMENT

Column Name	Data Type	Size
loan_no	varchar2	5
inst_no	varchar2	5
inst_Date	Date	
Amount	Number	10,2

Insert following Records

Loan_no	Inst_no	Date	Amount
L001	I001	2-Feb-04	15000
L002	I002	18-June-04	20000
L003	I003	15-July-04	20000

Create a Table TRANSACTION

Column Name	Data Type	Size
acc_no	Varchar2	5

K. P. Singh

tr_Date	Date	
Amt	Number	10,2
type_of_tr	Char	1
mode_of_pay	Varchar2	10

Insert a Following Records

Acc_no	Date	Amt	Type_of_tr	Mode_of_pay
A001	3-may-04	10000	D	Cash
A002	5-july-04	5000	W	Cheque
A003	12-Aug-04	25000	D	Cheque
A004	15-may-04	30000	D	Cheque
A005	22-oct-04	15000	W	Cash

List of queries

1. Display all rows and all columns of table Transaction.
2. Display all rows and selected columns of table Installment.
3. Display selected rows and selected columns of table Account.
4. Display selected rows and all columns of table loan.
5. Show the structure of the table loan, account and transaction.

PRACTICAL-2

Table: **ACCOUNT.**

1. Insert the following records if you have not inserted in PRACTICAL - 1

Acc_no	Name	City	Balance	Loan_taken
A001	Patel Jigar	Mehsana	50000	YES
A002	Patel Ramesh	Mehsana	50000	Yes
A003	Dave Hardik	Ahmedabad	75000	NO
A004	Soni Hetal	Ahmedabad	100000	NO
A005	Soni Atul	Vadodara	100000	YES

2. Change the name 'patel jigar' to 'patel hiren'.
3. Change the name and city where account number is A005. (new name = 'kothari nehal' and new city = 'patan').
4. Display only those records where loan taken status is 'YES'.
5. Add the new column (address varchar2 (20)) into table ACCOUNT.
6. Create another table ACCOUNT_TEMP (acc_no, name, balance) from table ACCOUNT.

K. Patel

7. Rename the table ACCOUNT to ACCOUNT_MASTER.
8. Update the column balance for all the account holders. (Multiply the balance by 2 for each account holders)
9. Describe the structure of table ACCOUNT.
10. Delete the records whose account no is A004.

Table: **LOAN**.

1. Insert the following Records if you have not inserted in PRACTICAL-1

Loan_no	Acc_no	Loan_amt	Interest_rate	Loan_date	Remaining_loan
L001	A001	100000	7	1-jan-04	75000
L002	A002	300000	9	18-may-04	150000
L003	A005	500000	11	15-june-04	300000

2. for each loan holders Add 100000 Rs. Amount into the column loan_amt.
3. for each loan holders Increase the interest rate 2%.
4. Create another table LOAN_TEMP (loan_no, Acc_no, loan_amt, loan_date) from the table LOAN
5. Display only those records where loan holder taken a loan in month of January.
6. Modify the structure of table LOAN by adding one column credit_no varchar2 (4).
7. Display the Loan amount*2 of table LOAN.
8. Display the records of table LOAN by date wise in ascending order.
9. Display the records of table LOAN by account number wise in descending Order.
10. Increase the size 5 to 7 of column acc_no.

Table: **INSTALLMENT**.

1. Insert following Records if you have not inserted in PRACTICAL-1.

Loan_no	Inst_no	Inst_Date	Amount
L001	I001	2-Feb-04	15000
L002	I002	18-June-04	20000
L003	I003	15-July-04	20000

2. Change the Inst_Date '2-Feb-04' to '3-Mar-04'.
3. Reduce 5000 amount from all Installment holders.
4. Add the amount 5000 where loan no is 'L003' and 'L002'.
5. Change the column size of 5 to 7 where column name is Loan_no.
6. Decrease the column size 5 to 4 where column name Inst_no.
7. Show the structure of the Table.
8. Change the amount 15000 to 5000 where loan number is L001

K. P. Singh

9. Perform delete operation. (Delete only particular one record)
10. Only create a structure of table installment1 from table installment.

Table: **TRANSACTION.**

1. Insert a Following Records if you have not inserted in PRACTICAL-1.

Acc_no	Trans_Date	Amt	Type_of_tr	Mode_of_pay
A001	3-may-04	10000	D	Cash
A002	5-july-04	5000	W	Check
A003	12-Aug-04	25000	D	Check
A004	15-may-04	30000	D	Check
A005	22-oct-04	15000	W	Cash

2. Insert any duplicate value and display all the records without any duplicate rows.
3. Select all the records in descending order(account number wise).
4. Display amt, date, and type of transaction by date wise.
5. Create another table TRANSACTION_TEMP from this table.
6. Create a another table TRANS_TEMP by change the column name acc_no to account_no.
7. Delete a table TRANSACTION_TEMP.
8. Rename the table TRANSACTION to TRANS.
9. Only create a structure of table transaction1 from table transaction.
10. Display account number where type of transaction is 'D'.

PRACTICAL-3

Note: Bold and Underline column name indicates a primary key

Create a table **ACCOUNT.**

Column name	Data Type	Size	Attributes
<u>Acc no</u>	Varchar2	5	Primary key/first letter must start with 'A'
Name	Varchar2	30	NOT NULL
City	Varchar2	20	NOT NULL
Balance	Number	10,2	Balance >=500
Loan_taken	Varchar2	3	Values('NO','YES')

1. Insert the records using Practical list-1.

Create a Table **LOAN.**

Column Name	Data Type	Size	Attributes
<u>Loan no</u>	Varchar2	5	Primary Key / first letter must start with 'L'

K. P. Singh

Acc_no	Varchar2	5	Foreign key References Acc_no of account table
Loan_amt	Number	10,2	NOT NULL
Interest_rate	Number	5,2	NOT NULL
Loan_date	Date		
Remaining_loan	Number	10,2	Remaining loan<loan amount

2. Insert the records using Practical list-1.

Create a table **INSTALLMENT**.

Column Name	Data Type	Size	Attributes
<u>Loan_no</u>	Varchar2	5	Foreign key References Loan_no of Loan table
Inst_no	Varchar2	5	first letter must start with 'I'
IDate	Date		NOT NULL
Amount	Number	10,2	NOT NULL

3. Insert the records using Practical list-1.

Create a Table **TRANSACTION**.

Column Name	Data Type	Size	Attributes
<u>Acc_no</u>	Varchar2	5	Foreign key References Acc_no of account table
Trans_Date	Date		NOT NULL
Amt	Number	10,2	NOT NULL
Type_of_tr	Char	1	Values in ('D','W')
Mode_of_pay	Varchar2	10	Values in ('cash','check')

4. Insert the records using Practical list-1.

Using Operator: NOT,BETWEEN,NOT BETWEEN,IN,NOT IN

1. Retrieve specified information for the account holder who are not in 'Ahmedabad'.
2. Retrieve specified information for the account holder who are not in 'Ahmedabad' or 'Vadodara'.
3. Retrieve those records of Account holder whose balance between is 50000 and 100000.
4. Retrieve those records of Account holder whose balance not between is 50000 and 100000.
5. Display only those records whose amount is 5000, 25000, 30000.
6. Display only those records whose amount not in 5000, 25000, 30000.
7. Display System date.
8. Find the date,15 days after today's date.
9. Perform following operation using DUAL table.

5*5,34+34,1000/300,length of 'uvpce',display only month of systemdate

K. P. Shah

10. Find the date, 20 days before today's date.

Function Based Queries.

1. Find the total transaction amount of account holder from transaction table.
2. Find minimum amount of transaction.
3. Find maximum amount of transaction.
4. Count the total account holders.
5. Count only those records whose made of payment is 'cash'.
6. Count only those records whose transaction made in the month of 'MAY'.
7. Find the average value of transaction.
8. Display the result of 4 rest to 4.
9. Find the square root of 25.
10. Write the query for the following Function.

LOWER,INITCAP,UPPER,SUBSTR,LENGTH,LTRIM,RTRIM,LPAD,RPAD

CONSTRAINTS Based queries.

Create a table:**STUDENT**

Name of column	Type and Size
Rollno	Varchar2(6)
Name	Varchar2(20)
Branch	Varchar2(6)
Address	Varchar2(20)

1. Add PRIMARY KEY (roll no) and provide constraint name PRIM_rollno.
2. Add NOT NULL constraint to name,branch for student table.
3. Add check constraint and check name is in capital letter.
4. Drop the primary key.
5. Drop the constraint.

Create a Table **REGISTER.**

Name of column	Type and Size
Rollno	Varchar2(6)
Name	Varchar2(20)

1. Provide foreign key references rollno of student table.
2. Add check constraint to check name's first letter is always capital.
3. Add NOT NULL constraint to name of register table.
4. Drop foreign key of REGISTER table.

K. P. Singh

5. Drop NOT NULL constraint.

PRACTICAL-4

NOTE: for following queries use TABLES of PRACTICAL-1

1. Display the sum of balance of account holders who's live in same city 'Mehsana' using group by clause.
2. Display the information about account where balance is less than total balance of all account holders.
3. Displays the information of account holders whose loan amount and balance both are same.
4. Display the name of city, remaining loan amount, account, date of loan and loan number of account holders.
5. Display name of account holder, installment number and installment amount Whose loan number is 'L001'.
6. Display name of account holder, city, loan amount and installment amount.
7. Display the balance of account holders whose balance and remaining loan both are same.
8. List of all account holders' information whose balance is same as loan amount.
9. Display the amount of transaction, name of account holders, account number and mode of payment whose mode of payment is 'CHEQUE'.
10. Display account no, loan amount, amount of transaction.
11. List of installment information whose amount is less than average amount of transaction.
12. Display the sum of installment amount and transaction amount.
13. Display the balance and amount of transaction group by amount and balance.
14. List of installment number and account number of account holders.
15. Display loan amount, transaction amount and mode of payment where transaction date and loan taken date both are done in month of 'MAY'.
16. Display all the information of installment and transaction where installment date and transaction date both are done in month of 'JULY'.
17. Display the last three row of account table.
18. Display the balance, mode of payment, loan taken status whose mode of payment is 'CHEQUE' and loan taken is 'YES'.
19. Retrieve only rows 2 to 5 from account table.

PRACTICAL-5

TABLE: SALESMEN

Column Name	Data Type	Size	Attributes
-------------	-----------	------	------------

V. P. Singh

SNUM	Varchar2	6	Primary key/first letter must start with 'S'
SNAME	Varchar2	20	Not null
CITY	Varchar2	15	
COMM	Number	5,2	

Insert the following records:

SNUM	SNAME	CITY	COMM
S1001	Piyush	London	0.12
S1002	Niraj	San jose	0.13
S1003	Miti	London	0.11
S1004	Rajesh	Barcelona	0.15
S1005	Haresh	New york	0.10
S1006	Ram	Bombay	0.10
S1007	Nehal	Delhi	0.09

TABLE: CUSTOMER

Column Name	Data Type	Size	Attributes
CNUM	Varchar2	6	Primary key/first letter must start with 'C'
CNAME	Varchar2	20	Not null
CITY	Varchar2	15	
RATING	Number	5	
SNUM	Varchar2	6	

Insert the following records

CNUM	CNAME	CITY	RATING	SNUM
C2001	Hardik	London	100	S1001
C2002	Geeta	Rome	200	S1003
C2003	Kavish	San jose	200	S1002
C2004	Dhruv	Berlin	300	S1002
C2005	Pratham	London	100	S1001
C2006	Vyomesh	San jose	300	S1007
C2007	Kirit	Rome	100	S1004

TABLE: ORDER

Column Name	Data Type	Size	Attributes
ONUM	Varchar2	6	Primary key/first letter must start with 'O'

K. P. Singh

AMT	Number	10,2	Not null
ODATE	Date		
CNUM	Varchar2	6	
SNUM	Varchar2	6	

Insert the following records

ONUM	AMT	ODATE	CNUM	SNUM
O3001	18.69	10-Mar-90	C2008	S1007
O3003	767.19	10-Mar-90	C2001	S1001
O3002	1900.10	03-Oct-90	C2007	S1004
O3005	5160.45	04-Oct-90	C2003	S1002
O3006	1098.16	10-Mar_90	C2008	S1007
O3009	1713.23	10-April-90	C2002	S1003
O3007	75.75	10-April-90	C2004	S1002
O3008	4723.00	10-May-90	C2006	S1001
O3010	1309.95	10-May-90	C2004	S1002
O3011	9891.88	10-June-90	C2006	S1001

Perform following queries.

SELECT

1. Display all the information of salesmen.
2. Display snum,sname,city from salesmen table.
3. Display odate,snum,onum and amt from orders.
4. Display the information of orders without duplication.
5. List of sname, city from salesmen where city is 'LONDON'.
6. List all records of customers where rating is equal to 100.
7. Write a select command that produces the order number,amount and date for all rows in the order table.
8. Produces all rows from the customer table for which the salesperson's number is S1001.
9. Display the salesperson table with the column in the following order: city,sname,snum,comm.
10. Write a select command that produces the rating followed by the name of each customer in SAN JOSE.
11. Display SNUM values of all salesmen without any repeat.

K. P. Singh

OPERATORS

12. List all customers with a rating above 200.
13. List all customers in SAN JOSE who have a rating above 200.
14. List all customers who were either located in SAN JOSE or had a rating above 200.
15. List of all customers who were either located in SAN JOSE or not rating above 200.
16. List of all customers who were not located in SAN JOSE or rating is not above 200.
17. Write a query that will give you all orders for more than \$1000.
18. Write a query that will give you the names and cities of all salesmen in LONDON with a commission above 0.10.
19. Write a query on the customers table whose output will exclude all customers with a rating ≤ 100 and they are located in ROME.

SPECIAL OPERATORS

20. Display all salesmen that were located in either BARCELONA or LONDON (use IN keyword).
21. Find all customers matched with salesmen S1001, S1007 and S1004.
22. Display all salesmen with commission between 0.10 and 0.12.
23. Select all customers whose names fall in a 'A' and 'G' alphabetical.

LIKE OPERATORS.

24. List all the customers whose names begin with 'G'.
25. List all salesmen whose name start with letter 'P' and end letter is 'H'.

NULL OPERATORS.

26. Find all records in customer table with NULL values in the city column.
27. Write a two queries that will produce all orders taken on October 3rd or 4th, 1990 (use IN operator and Use BETWEEN operator)
28. Write a query that selects all of the customers matched with S1001 and S1002.
29. Write a query that will produce all of the customers whose names begin with a letter from A to H.
30. Write a query that selects all customers whose names begin with 'C'.
31. Write a query that selects all orders without ZEROS or NULLS in amt field..

FUNCTIONS

32. Display sum of amt, average of orders.
33. To count the numbers of salesmen without duplication in the orders tables.
34. Count the rating of customers (with NULL and without NULL).
35. Find the largest order taken by each salesperson. (hint: use group by)
36. Find the largest order taken by each salesperson on each date.
37. Find out which day had the higher total amount ordered.

r. P. Singh

38. Write a query that counts all orders for October 3rd.
39. Write a query that counts the number of different non-NULL city in the customer table.
40. Write a query that selects the first customer in alphabetical order whose name begin with 'G'.
41. write a query that selects each customers smallest order.
42. Write a query that selects the highest rating in each city.
43. Write a query that counts the number of salesmen registering orders for each day(if a salesperson has more than one order on a given day , he or she should be counted only once)
44. Display all the information in descending orders(use column CNUM).
45. Display all the information in descending orders(use column CNUM,AMT).
46. Display sname and comm. From salesmen in descending order(in place of column name use column number).
47. Assume each salesperson has a 0.12 commission. Write a query on the orders table that will produce the order number,the salesperson number and the amount of the salesperson's commission for that order.
48. Write a query on the customers table that will find the highest rating in each city. Put the output in this form.
For the city (city) , the highest rating is: (rating).
49. Write a query that lists customers in descending order of rating. Output the rating field first, followed by the customer's name and number.
50. Write a query that totals the orders for each day and places the results in descending order.

JOIN

51. Show the names of all customers matched with the salesmen serving them.
52. Write a query that lists each order number followed by the name of the customer who made the order.
53. Write a query that gives the names of both the salesperson and the customer for each order after the order number.
54. Write a query that produces all customers serviced by salesmen with a commission above 0.12. Output the customer's name, the salesperson's name and the salesperson's rate of commission.
55. Write a query that calculates the amount of the salesperson's commission on each order by a customer with a rating above 100.

OTHERS

56. List all customer located in cities where salesperson 'PIYUSH' has customer.

K. Prash

57. List all salesmen who are living in same city without duplicate rows.
58. Extract all orders of 'PIYUSH'.
59. Extract all orders of LONDON'S salesmen.
60. Find all customers whose cnum is 1000 above than the snum of 'PIYUSH'.
61. Count the no. of customers with the rating above than average Rating of 'LONDON'.
62. Produce the name and rating of all customers who have above average Rating.
63. List all salesmen with customers located in their cities.
64. Select all customers whose rating doesn't match with any rating customer of 'SAN JOSE'.
65. Create a union of two queries that shows the names,cities and ratings of all customers. Those with rating of ≥ 200 should display 'HIGH RATING' and those with < 200 should display 'LOW RATING'.
66. Find all customers with orders on 3rd october 1990 using correlate sub query.
67. Find all customers having rating greater than any customer in 'ROME'.
68. Insert a row into salesmen table with the values snum is s1008,salesmen name is 'RAKESH', city is unknown and commission is 14%.
69. Create another table London_staff having same structure as salesmen table.
70. Delete all orders from customer 'PIYUSH' from the order table.
71. Set the ratings of all the customers of PIYUSH to 400.
72. Increase the rating of all the customers in ROME by 100.
73. Double the commission of all salesmen of LONDON.
74. Set ratings for all customers in LONDON to NULL.
75. Delete all salesmen who have at least one customer with a rating of 100 from salesmen table.

Instructional Method:

- a. The course delivery method will depend upon the requirement of content and need of students. The teacher in addition to conventional teaching method by black board, may also use any of tools such as demonstration, role play, Quiz, brainstorming, MOOCs etc.
- b. The internal evaluation will be done on the basis of continuous evaluation of students in the laboratory and class-room.
- c. Practical examination will be conducted at the end of semester for evaluation of performance of students in laboratory.
- d. Students will use supplementary resources such as online videos, NPTEL videos, e-courses, Virtual Laboratory

K. P. Singh

Supplementary Resources:

2. <https://ilearning.oracle.com/>
3. <https://lagunita.stanford.edu/courses/DB/2014/SelfPaced/about>

01CE0303	Object Oriented Design and Programming	B.Tech. Year - II
-----------------	---	--------------------------

Objective: The objectives of the course are to have students identify and practice the object-oriented programming concepts and techniques, practice the use of C++ classes and class libraries, modify existing C++ classes, develop C++ classes for simple applications.

Credits Earned: 5 Credits

Course Outcomes: After completion of this course, student will be capable to

- Identify potential benefits of object oriented programming features and compare structure oriented programming and object oriented programming features. (knowledge, comprehension)
- Able to make use of classes and objects for designing programs and concept of reusability.(application)
- Able to apply various object oriented features to solve various computing problems using C++ language. (application)
- Able to analyze programs based on exception handling and using advanced features like STL for faster development. (application, analysis)
- Develop real world applications using concepts of object oriented programming. (synthesis)

Prerequisite of course: Programming Fundamentals

Contents:

Unit	Topics	Contact
------	--------	---------

K. P. Singh

		Hours
1	Introduction : Introduction to Object Oriented Programming, Procedural Vs. Object Oriented Programming, Principles of OOP, Access Modifiers, Basics of a Typical C++ Environment, Pre-processors Directives, C++ Program structure. Header Files and Namespaces, library files.	8
2	Programming Basics : Output using cout. Directives. Input with cin. Type bool. The setw manipulator. Type conversions.	7
3	Functions : Call and Return by reference. Overloaded function. Macro Vs. Inline functions. Default arguments, friend functions.	6
4	Object and Classes : Introduction, Structure Definitions, Accessing Members of Structures, Class Scope and Accessing Class Members. Initializing Class Objects: constructors and their types, destructors.	8
5	Operator overloading : Overloading unary operations. Overloading binary operators, data conversion, pitfalls of operators overloading and Type conversion.	8
6	Inheritance : Concept of inheritance. Derived class and based class. Derived class constructors, member function, class hierarchies, public and private inheritance.	4
7	Polymorphism : Pointers in C++, Objects and Pointers, virtual and pure virtual functions, this pointer, Implementing run time polymorphism.	5
9	Streams and Files : Concept of streams, C++ stream classes, formatted and Unformatted I/O , File stream, manipulators, C++ File stream classes, File modes, File management functions, Binary Files, random Files.	3
10	Templates & Exception Handling : What is template? Function templates and class templates, Overloading Template Functions, Inheritance and Templates, Templates and Friend Function, Overview and use of Standard Template Library, try-catch-throw, multiple catch, catch all, Re-throwing Exception.	5

Suggested Theory distribution:

The suggested theory distribution as per Bloom’s taxonomy is as per follows. This distribution serves as guidelines for teachers and students to achieve effective teaching-learning process

Distribution of Theory for course delivery and evaluation					
Remember	Understand	Apply	Analyze	Evaluate	Create
20%	20%	30%	15%	10%	5%

Suggested List of Experiments:

Experiment # 1 (Basic OOPC)

1. Write a Program to display WELCOME TO MEFGI and elaborate all the Statements.
2. Write a program to perform the following:
 - a. Accept three numbers
 - b. Calculate average
 - c. Find smallest and largest numbers
 - d. Display the results such as average, maximum, and minimum.
3. Write a program to make a calculator which performs following operations:
 - a. Addition
 - b. Subtraction
 - c. Multiplication
 - d. Division
 - e. Modulo
4. Write a Write program in C ++ that tells the form of Water whether it is Ice, Water or Steam. Display the menu also as under
 - Temperature Less than 0 = ICE
 - Temperature Greater than 0 & Less than 100 = Water

K. P. Singh

Temperature Greater than 100 = STEAM

5. Write a program to reverse a string.

Experiment # 2 (Basic OOPC)

6. Write a program to perform matrix addition.
7. Write a program which takes string as an input and counts numbers of occurrences of each vowel and total vowels.
8. Write a program to find area of circle, rectangle and triangle using enum datatype.

Experiment # 3 (Function)

9. Write a CPP Program to swap two values (using call by value and call by reference).
10. Write a Function called zeroSmaller() that is passed two int argument by reference and then set the smaller of the two numbers to 0. Write a main () to call this function.
11. Write a program to evaluate following investment equation $V = P(1+r)^n$ and print the tables which would give the value of V for various combination of the following values of P, r, and n:

P: 1000, 2000, 3000,....., 10000

r: 0.10, 0.12, 0.13,....., 0.20

n: 1, 2, 3,....., 10

12. Write a function power () to raise a number m to a power n without using Math.h header file for following scenario.
 - a. The Function takes double value for m and int value for n, and returns the result correctly.
 - b. Use a default value of 2 for n to make function to calculate squares when this argument is omitted.
 - c. Take an int value for m.

In above all cases function name must be same. Write a main() that calls above 3 cases.

13. Write a program to obtain the largest of three numbers using inline function.

Experiment # 4 (Class)

14. Create a class that imitates part of the functionality of the base data type int. Call the class Int. The only data in this class is an int variable. Include member functions to initialize an int to 0, to initialize it to an int value, to display it, and to add two Int values. Write a program that exercises this class by creating two initialized Int values, adding these two initialized values, adding these two initialized value and placing the respond in the un-initialized value, and then display this result.

K. P. Singh

15. Define a Class “**bank_account**” having following data members and member functions:

➤ **Data members :**

1. Name of the depositor
2. Account number
3. Type of account
4. Balance amount in the account

➤ **Member functions :**

1. To assign the initial values
2. To deposit an amount
3. To withdraw an amount after checking the balance
4. To display name and balance

Write a main program to test the program for 10 customers.

16. Create two classes **DM** and **DB** which store the value of distances. DM stores distance in meters and centimeters and DB in feet and inches. Write a program that can read values for the class objects and add one object of DM with another object of DB by keeping following in mind.

- a. Use friendly function to carry out the addition.
- b. The object that stores the results may be a DM or DB object, Depending on the unit in which the results are required.

17. Write a program to calculate number of object created for particular class.

Experiment # 5 (Class)

18. Define a Class “**complex**” having data members as **real** and **imag** and member functions as **add_comp()** & **show_comp()**. Write a C++ program to get information of **2 complex numbers** and **add** these **2 complex numbers** and display this result using **Overloaded Constructor** Concept.

19. Create a class **FLOAT** that contains one float data member. Overload all the four arithmetic operators(+, -, *, /) so that they operate on the objects of **FLOAT**.

20. Define a class **String**. Use overloaded ‘==’ operator to compare two strings.

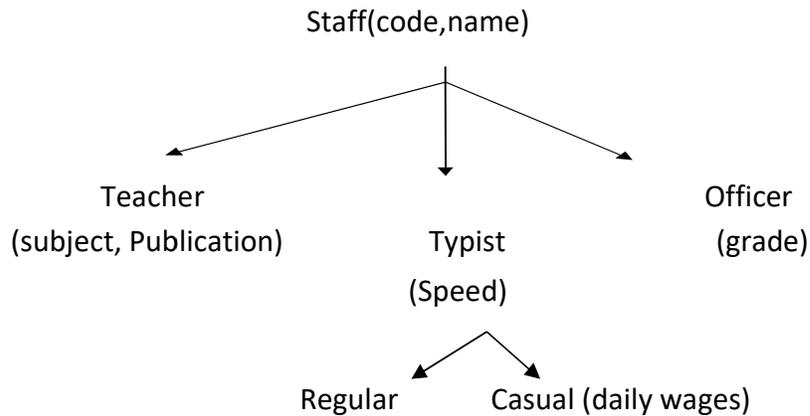

21. Write a program which overload cin and cout of iostream.

22. Define a circle class with radius as data member, necessary constructors and member function to compute area of circle. Class should overload the == operator to compare two circle objects whether they are equal in radius. Demonstrate its use in main().

Experiment # 6 (Inheritance)

23. Implement following class relationship and test with main class.

K. P. Singh

24. Add education details for above classes except for typist. This class will include two information namely, highest education in general studies and highest professional qualification.

25. Implement the following class using abstract class.

a. Shape

i. TwoDimensional

1. Triangle
2. Rectangle
3. Circle

ii. ThreeDimensional

1. Box
2. Cone
3. Cylinder
4. Sphere

Experiment # 7 (Polymorphism)

26. Define two Classes “Time-12” and “Time-24” to represent time format. Write a C++ program to convert one time format to another time format using **Type Conversion** Concept.

27. Demonstrate Runtime Polymorphism by defining media class as Base class and Book and Tape as Sub Class. Keep display () function such that, It provides run time polymorphism.

Experiment # 8 (File)

28. Write a program that reads a text file and create another file that is identical except that every sequence of consecutive blank spaces is replaced by a single space.

29. Write a program that reads data from one file and copy it to other file.

30. Write a Program which stores name and mobile number in phonebook and performs

K. P. Singh

following tasks:

- a. Determine the mobile number of the specified person.
- b. Determine the name of if a mobile number is known.
- c. Update the mobile number, whenever there is a change.

Experiment # 9 (Standard Template Library)

31. Write a function templates for finding the minimum value contained in an array.
32. Write a class template to represent a generic vector. Include the member functions to perform the following tasks:
 - a. To create a vector
 - b. To modify the value of given element
 - c. To multiply by a scalar value.
33. A table gives a list of car models and the number of units sold in each type in a specified period. Write a program to store this table in suitable container and to display interactively the total value of a particular model sold, given the unit-cost of that model.
34. Write a program that accepts a shopping list of five items from the keyboard and stores them in a vector. Extend the program to accomplish the following tasks:
 - a. To delete a specified item in the list.
 - b. To add an item at a specified location.
 - c. To add an item at the end.
 - d. To print the contents of the vector.
35. Write a program with the following:
 - a. A function to read two double type numbers from keyboard
 - b. A function to calculate the division of these two numbers
 - c. A try block to throw an exception when wrong type of data is keyed in
 - d. A try block to detect and throw an exception if the condition "divide-by-zero" occurs
 - e. Appropriate catch block to handle the exception thrown.

Instructional Method:

1. The course delivery method will depend upon the requirement of content and need of students. The teacher in addition to conventional teaching method by black board, may also use any of tools such as demonstration, role play, Quiz, brainstorming, MOOCs etc.
2. The internal evaluation will be done on the basis of continuous evaluation of students in the laboratory and class-room.
3. Practical examination will be conducted at the end of semester for evaluation of performance of students in laboratory.

K. Prash

4. Students will use supplementary resources such as online videos, NPTEL videos, e-courses, Virtual Laboratory

Supplementary Resources:

1. Open source software dev C++
2. www.nptel.ac.in
3. www.learncpp.com

01GS0301	Engineering Management	B.Tech. Year – II
-----------------	-------------------------------	--------------------------

Objective: A major purpose of Engineering Management is to enhance the knowledge of individual for management and finance and overall to understand market movement and factors influencing them.

Credits Earned: 2 Credits

Course Outcomes: After learning the course the students should be able:

1. To understand the globe trade and market
2. Importance of Quality
3. People management
4. Support of Technology for Industries development
5. Review the financial market
6. Understanding the marketing and concepts

Prerequisite of course: NA

Teaching and Examination Scheme

Teaching Scheme (Hours)			Credits	Theory Marks			Tutorial/ Practical Marks		Total Marks
Theory	Tutorial	Practical		ESE (E)	IA	(CSE)	Viva (V)	Term work (TW)

01IT0301	Data Communication and Networking	B.Tech. Year – II
-----------------	--	--------------------------

Objective: Students are expected to learn basics of Communication Technologies and data communication which will help them to build fundamentals for learning Computer Networks in higher semester. The course is designed to let students demonstrate an understanding of the fundamentals of data communication, types of transmission mediums and interfacing standards along with current edge of the data compression techniques.

Credits Earned: 4 Credits

Course Outcomes: After completion of this course, student will be able to

- Understand importance of data communication systems and fundamentals. (Understand)
- Distinguish and relate various physical Medias, interfacing standards and adapters. (Analyze)
- Evaluate various flow control techniques. (Evaluate)
- Apply various modulation technique in analog and digital career system (Apply)
- Understand Physical layer of LAN, MAN and WAN. (Understand)
- Analyse short range and long range wireless technologies. (Analyze)

Prerequisite of course: Digital Electronics

Distribution of Theory for course delivery and evaluation					
Create	Evaluate	Analyze	Apply	Understand	Remember
0%	10%	25%	20%	35%	10%

Suggested List of Experiments:

1. Perform pulse coded modulation for analog to digital conversion. Analyze bandwidth requirement, data rate generation, synchronous and asynchronous mode of transmission.
2. Perform bandwidth utilization technique time division multiplexing.
3. Perform various line coding formats and compare transmission characteristic of each formats.
4. Perform digital carrier modulation techniques used in wireless communication.

K. P. Singh

5. Perform amplitude modulation and demodulation.
6. Perform serial data communication between two data terminal equipment using optical link.
7. Perform digital data transfer through RF transmitter and receiver.
8. Demonstration of different types of cables used in data communication.
9. Perform Installation of LAN and troubleshooting of frequently occurred problems.
10. Create and test wireless sensor networks using zigbee.
11. To study various aspects of data communication by field visit at data centre.
12. Perform data communication using IR.

01MA0231	Discrete Mathematics & Graph Theory	B.Tech. Year - II
-----------------	--	--------------------------

Objective: Engineering Mathematics is one of the essential tools for learning Technology, Engineering and Sciences. In this course students will come across several theorems and proofs. This course is aimed to cover a variety of different problems in Graph Theory. Theorems will be stated and proved formally using various techniques. Various graphs algorithms will also be taught along with its analysis.

Credits Earned: 5 Credits

Course Outcomes: After completion of this course, students will be able to

- Apply concept of Predicate Calculus in computer science like design of computing machines, artificial intelligence, definition of data structures for programming languages etc. (Application)
- Understand the concepts of graph theory, Lattices, and Boolean Algebra in analysis of various computer science applications. (Knowledge, Comprehension)
- Apply the knowledge of Boolean algebra in computer science for its wide applicability in switching theory, building basic electronic circuits and design of digital computers. (Knowledge, Application)
- Understand the application of various type of graphs in real life problem. (Knowledge, Comprehension)
- Apply abstract concepts of graph theory in modeling and solving non-trivial problems in different field of study. (Application, Analysis)

Semester – IV

K. P. Singh

01CE0401	Operating System	B.Tech. Year – II
-----------------	-------------------------	--------------------------

Objective: Student will understand Modern Operating System and their principles. The course will cover theory as well as practice aspects of a subject through scheduled lectures and labs, course will cover details of processes, CPU scheduling, memory management, file system, storage subsystem, and input/output management.

Credits Earned: 5 Credits

Course Outcomes: After completion of this course, student will be able to

- Understanding the role of operating system with its function and services. (Understanding)
- Compare Various Algorithm used for CPU Scheduling, Memory management and Disk Scheduling Algorithm. (Evaluate)
- Apply various concepts related with Deadlock to solve Problems. (Apply)
- Analyse Protection and Security Mechanism in Operating System. (Analyse)

Prerequisite: Data structures like stack, queue, linked list, tree, graph, hashing, file structures, any structured programming language (like C or python).

01CE0402	Computer Organization and Architecture	B.Tech. Year – II
-----------------	---	--------------------------

Objective: To conceptualize the basics of organizational and architectural issues of a digital computer. Further, analyze performance issues in processor and memory design of a digital computer. Also, understanding various data transfer techniques in digital computer and to analyse processor performance improvement using instruction level parallelism.

Credits Earned: 4 Credits

Course Outcomes: After completion of this course, student will be able to

- Understand and describe the basics of various architectural units of the Computer System[Knowledge]
- Apply the knowledge of combinational and sequential logical circuits to mimic a simple computer architecture[Application]
- Apply logic to create assembly language programs for different micro-operations.[Application]
- Demonstrate ALU operations and instruction level parallelism. [Application].
- Identify and differentiate various methods for I/O mechanisms [Analyze].

Prerequisite of course: Fundamentals of Computer, Digital Logic Circuits.

2	Basic Computer Organization and Design: Instruction codes, Computer registers, Computer instructions, Timing and Control, Instruction cycle, Memory-Reference Instructions, Input-output and interrupt, Complete computer description.	6
3	Micro programmed Control: Control Memory, Address sequencing, Micro program Example, design of control Unit	4
4	Central Processing Unit: Introduction, General Register Organization, Stack Organization, Instruction format, Addressing Modes, data transfer and manipulation, Program Control, Reduced Instruction Set Computer (RISC)	8
5	Pipeline: Flynn's taxonomy, Parallel Processing, Pipelining, Arithmetic Pipeline, Instruction, Pipeline, RISC Pipeline,	4
6	Computer Arithmetic: Introduction, Addition and subtraction, Multiplication Algorithms (Booth Multiplication Algorithm), Division Algorithms, Floating Point Arithmetic operations, Decimal Arithmetic Unit.	6
7	Input-Output Organization: Input-Output Interface, Asynchronous Data Transfer, Modes Of Transfer, Priority Interrupt, DMA, Input-Output Processor (IOP), CPU IOP Communication, Serial communication.	4
8	Memory Organization: Memory Hierarchy, Main Memory, Auxiliary Memory, Associative Memory, Cache Memory, Virtual Memory.	4
	Total Hours	42

Suggested Theory distribution:

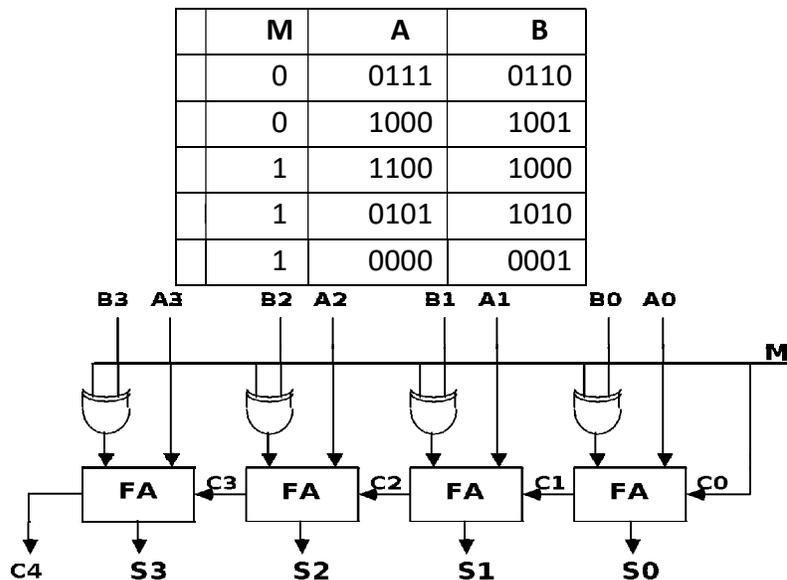

The suggested theory distribution as per Bloom’s taxonomy is as per follows. This distribution serves as guidelines for teachers and students to achieve effective teaching-learning process

Distribution of Theory for course delivery and evaluation					
Remember	Understand	Apply	Analyze	Evaluate	Create
20%	20%	30%	15%	10%	5%

Suggested List of Tutorials:

- A digital computer has a common bus system for 16 registers of 32 bits each. The bus is constructed with multiplexers.
 - How many selection inputs are there in each multiplexer?
 - What size of multiplexers is needed?
 - How many multiplexers are there in the bus?
- The following transfer statements specify a memory. Explain the memory operation in each case.

R2 <-M[AR]
M[AR] <-R3
R5<-M[R5]
- The adder-subtractor circuit in following Fig has the following values for input mode M and data inputs A and B. In each case, determine the values of the outputs : S3, S2, S1, S0 and C4.

K. P. Singh

4. Design a 4-bit combinational circuit decrementer using four full-adder circuits.
5. Design a digital circuit that performs the four logic operations of exclusive-OR, exclusive-NOR, NOR, and NAND. Use two selection variables. Show the logic diagram of one typical stage.
6. Register **A** holds the 8-bit binary 11011001. Determine the B operand and the logic microoperation to be performed in order to change the value in A to :
 - I. 01101101
 - II. 11111101
7. The 8bit registers AR, BR, CR and DR initially have the following values :
AR = 11110010 BR = 11111111
CR = 10111001 DR = 11101010
Determine the 8bit values in each register after the execution of the following sequence of micro-operations.
AR <- AR + BR
CR <- CR \wedge DR, BR <- BR + 1
AR <- AR – CR
8. An output program resides in memory starting from address 2300. It is executed after the computer recognizes an interrupt when FGO becomes a 1 (while IEN = 1).
 - I. What instruction must be placed at address 1 ?
 - II. What must be the last two instruction of the output program?
9. Explain the difference between hardwired control and microprogrammed control. Is it possible to have a hardwired control associated with a control memory?
10. Define the following: (a) microoperation; (b) microinstruction; (c) micro-program; (d) microcode.
11. Explain how the mapping from an instruction code to a microinstruction address can be done by means of a read-only memory. What is the advantage of this method?
12. Show how a 9-bit microoperation field in a microinstruction can be divided into subfields to specify 46 microoperations. How many microoperations can be specified in one microinstruction?
13. A computer has 16 registers, an ALU (Arithmetic Logic Unit) with 32 operations, and a shifter with eight operations, all connected to a common bus system.
 - a. Formulate a control word for a microoperation.
 - b. Specify the number of bits in each field of the control word and give a general encoding scheme.
 - c. Show the bits of the control word that specify the microoperation: $R_4 \rightarrow R_5 + R_6$.

Handwritten signature

14. Convert the following arithmetic expressions from infix to reverse Polish notation.

1. $A * B + C * D + E * F$

2. $A * B + A * (B * D + C * E)$

c. $A + B * [C * D + E * (F + G)]$

$A * [B + C * (D + E)]$

d. $F * (G + H)$

15. Formulate a six-segment instruction pipeline for a computer. Specify the operations to be performed in each segment.

16. Explain four possible hardware schemes that can be used in an instruction pipeline in order to minimize the performance degradation caused by instruction branching.

17. Perform the arithmetic operations below with binary numbers and with negative numbers in signed-2's complement representation. Use seven bits to accommodate each number together with its sign. In each case, determine if there is an overflow by checking the carries into and out of the sign bit position.

(a) $(+35) + (+40)$ (b) $(-35) + (-40)$ (c) $(-35) - (+40)$

18. Prove that the multiplication of two n-digit numbers in base r gives a product no more than $2n$ digits in length. Show that this statement implies that no overflow can occur in the multiplication operations.

19. Design an array multiplier that multiplies two 4-bit numbers. Use AND gates and binary adders.

20. Show the hardware to be used for the addition and subtraction of two decimal numbers with negative numbers in signed-10's complement representation. Indicate how an overflow is detected. Derive the flowchart algorithm and try a few numbers to convince yourself that the algorithm produces correct results.

Instructional Method:

- a. The course delivery method will depend upon the requirement of content and need of students. The teacher in addition to conventional teaching method by black board, may also use any of tools such as demonstration, role play, Quiz, brainstorming, MOOCs etc.
- b. The internal evaluation will be done on the basis of continuous evaluation of students in the laboratory and class-room.
- c. Students will use supplementary resources such as online videos, NPTEL videos, e-courses, Virtual Laboratory

Supplementary Resources:

- 1. NPTEL Lecture Series
- 2. <http://www.intel.com/pressroom/kits/quickreffam.htm>

L. P. Singh

3. web.stanford.edu/class/ee282/

K. P. Singh

01CE0403	Object Oriented Programming with Java	B.Tech. Year - II
-----------------	--	--------------------------

Objective: Java is a computer programming language having feature like object-oriented, polymorphism, inheritance and multithreading. It comprises of large third-party library using which we can develop software.

Credits Earned: 5 Credits

Course Outcomes: After completion of this course, student will be able to

- To understand object-oriented programming concepts and implement in java. (Understand)
- To comprehend building blocks of OOPs language, inheritance, package and interfaces. (Understand)
- To identify exception handling methods. (Apply)
- To implement multithreading in object-oriented programs. (Apply)
- To develop GUI based desktop application in project-based learning. (Create)

Prerequisite of course: NA.

Teaching and Examination Scheme

Teaching Scheme (Hours)			Credits	Theory Marks			Tutorial/ Practical Marks		Total Marks
Theory	Tutorial	Practical		ESE (E)	IA	(CSE)	Viva (V)	Term work (TW)	
4	0	2	5	50	30	20	25	25	150

Contents:

Unit	Topics	Contact Hours
1	Java Overview: Java Introduction, Platform Independence, JVM & JDK, Data types, Operators, If, else statement, Switch condition, while, do-while, for loop, break and continue statement.	4
2	Array and String: Single Array & Multidimensional Array, Library Classes-String, String Buffer & Wrapper Class, Command line arguments and Various String Operations.	6
3	Classes, Objects and Methods:	8

K. P. Singh

	Class and Object, Object reference, Constructor: Constructor Overloading, Method: Method Overloading, Recursion, Passing and Returning object form Method, new operator, this and static keyword, finalize() method, Import statement, Static import, Access control, Nested class, Inner class, Anonymous inner class.	
4	Inheritance and Interfaces in Java: Overview of Inheritance, inheritance in constructor, Inheriting Data members and Methods, Multilevel Inheritance – method overriding Handle multilevel constructors Explain super keyword, Stop Inheritance ,Explain Final keywords, Creation and Implementation of an interface, Interface reference, instance of operator, Interface inheritance, Dynamic method dispatch, Abstract class, Comparison between Abstract Class and interface, inside of System.out.println – statements.	8
5	Exception Handling in Java: Exception and Error, Use of try, catch, throw, throws and finally, Built in Exception, Custom exception, Throwable Class.	4
6	Multithreaded in Java: Introduction of Multithread programming, Thread classes and Runnable interface, Thread priority and synchronization, Thread communication and Deadlock.	6
7	JAVA File Handling: Overview of Different Stream (Byte Stream, Character stream), Readers and Writers class, File Class, File Input Stream, File Output Stream, Input Stream Reader and Output Stream Writer class, File reader and writer class, File Writer, Buffered Reader class.	6
8	Collection Classes: List Class (Abstract List), Array List class, LinkedList class, Enumeration Iterative Statement, Vector class.	4
9	Applet, AWT and Swing: MVC Architecture, Applet: Applet Fundamental, Applet Architecture, Applet Skeleton, Requesting Repainting, , Event Handling: various event handling mechanisms, Delegation Event Model, Events, Event Sources, Event Listeners, various classes related to event sources and event listeners, AWT: window fundamentals, creating frames, Adding removing various controls, Layout managers, Introduction To Swing, Applications and	10

K. P. Singh

	Pluggable look and feel, Basic swing components : Text Fields, Buttons, Toggle Buttons, Checkboxes, and Radio Buttons.	
	Total Hours	56

6. Head First Java by Kathy Sierra, Bert Bates, O'Reilly publications

Suggested Theory distribution:

The suggested theory distribution as per Bloom's taxonomy is as per follows. This distribution serves as guidelines for teachers and students to achieve effective teaching-learning process

Distribution of Theory for course delivery and evaluation					
Remember	Understand	Apply	Analyse	Evaluate	Create
10%	20%	40%	10%	10%	10%

Suggested List of Experiments:

1. Demonstrate HelloWorld Application with Single and Multiple Main in a java program.
2. Write a console program to define and initialize a variable of type byte to 1, and then successively multiply it by 2 and display its value 8 times. Explain the reason for the last result.
3. Write a program that defines a floating-point variable initialized with a dollar value for your income and a second floating-point variable initialized with a value corresponding to a tax rate of 35 percent. Calculate and output the amount of tax you must pay with the Rs. and paisa stored as separate integer values (use two variables of type int to hold the tax, perhaps taxRs and taxPaisa).
4. Write a program that calculate percentage marks of the student if marks of 6 subjects are given.
5. Write a program to display a random choice from a set of six choices for breakfast (you could use any set; for example, scrambled eggs, waffles, fruit, cereal, toast, or yogurt).
6. When testing whether an integer is a prime, it is sufficient to try to divide by integers up to

L. P. Singh

the square root of the number being tested. Write a program to use this approach.

7. A lottery requires that you select six different numbers from the integers 1 to 49. Write a program to do this for you and generate five sets of entries.
8. Write a program to generate a random sequence of capital letters that does not include vowels.
9. Write an interactive program to print a string entered in a pyramid form. For instance, the string "stream" has to be displayed as follows:

```
S
St
S t r
S t r e
S t r e a
S t r e a m
```

10. Write an interactive program to print a diamond shape. For example, if user enters the number 3, the diamond will be as follows:

```
*
* *
* * *
* *
*
```

11. Create an array of String variables and initialize the array with the names of the months from January to December. Create an array containing 12 random decimal values between 0.0 and 100.0. Display the names of each month along with the corresponding decimal value. Calculate and display the average of the 12 decimal values.
12. Write a program to accept a line and check how many consonants and vowels are there in line.
13. Write a program to find length of string and print second half of the string.
14. Write a program to find that given number or string is palindrome or not.
15. Write a program that sets up a String variable containing a paragraph of text of your choice. Extract the words from the text and sort them into alphabetical order. Display the sorted list of words. Also count the number of words that start with capital letters. You could use a simple sorting method called the bubble sort. To sort an array into ascending order the process is as follows:
 - a. Starting with the first element in the array, compare successive elements (0 and 1, 1 and 2, 2 and 3, and so on).
 - b. If the first element of any pair is greater than the second, interchange the two elements.

K. P. Singh

- c. Repeat the process for the whole array until no interchanges are necessary. The array elements will now be in ascending order.
16. Create a class which ask the user to enter a sentence, and it should display count of each vowel type in the sentence. The program should continue till user enters a word "quit". Display the total count of each vowel for all sentences
17. Define a class, mcmLength, to represent a length measured in meters, centimeters, and millimeters, each stored as integers. Include methods to add and subtract objects, to multiply and divide an object by an integer value, to calculate an area resulting from the product of two objects, and to compare objects. Include constructors that accept three arguments—meters, centimeters, and millimeters; one integer argument in millimeters; one double argument in centimeters; and no arguments, which creates an object with the length set to zero. Check the class by creating some objects and testing the class operations.
18. Define a class, tkgWeight, to represent a weight in tons, kilograms, and grams, and include a similar range of methods and constructors as the previous example. Demonstrate this class by creating and combining some class objects.
19. Put both the previous classes in a package called Measures. Import this package into a program that will calculate and display the total weight of the following: 200 carpets—size: 4 meters by 2 meters 9 centimeters, that weigh 1.25 kilograms per square meter; and 60 carpets—size: 3 meters 57 centimeters by 5 meters, that weigh 1.05 kilograms per square meter.
20. Define an abstract base class Shape that includes protected data members for the (x, y) position of a shape, a public method to move a shape, and a public abstract method show() to output a shape. Derive subclasses for lines, circles, and rectangles. You can represent a line as two points, a circle as a center and a radius, and a rectangle as two points on diagonally opposite corners. Implement the toString() method for each class. Test the classes by selecting ten random objects of the derived classes, and then invoking the show() method for each. Use the toString() methods in the derived classes.
21. Define a class, ShapeList, which can store an arbitrary collection of any objects of subclasses of the Shape class.
22. Implement the classes for shapes using an interface for the common methods, rather than inheritance from the superclass, while still keeping Shape as a base class.
23. Write a program that will generate exceptions of type NullPointerException, NegativeArraySizeException, and IndexOutOfBoundsException. Record the catching of each exception by displaying the message stored in the exception object and the stack trace record.
24. Add an exception class to the last example that will differentiate between the index-out-

L. P. Singh

of bounds error possibilities, rethrow an appropriate object of this exception class in `divide()`, and handle the exception in `main()`.

25. Write a program that calls a method that throws an exception of type `ArithmeticException` at a random iteration in a `for` loop. Catch the exception in the method and pass the iteration count when the exception occurred to the calling method by using an object of an exception class you define.
26. Add a `finally` block to the method in the previous example to output the iteration count when the method exits.
27. Write a `Main` method that takes the name of a text file as a command line argument and prints every line in lower case.
28. Write a `main()` method that counts the number of words in a text file whose name is accepted from standard input. Also print the size of a file.
29. Write a program using `BufferedInputStream`, `FileInputStream`, `BufferedOutputStream`, `FileOutputStream` to copy content of one file `File1.txt` into another file `File2.txt`.
30. Create a class called `Student`. Write a student manager program to manipulate the student information from files by using `FileInputStream` and `FileOutputStream`.
31. Refine the student manager program to manipulate the student information from files by using the `BufferedReader` and `BufferedWriter`.
32. Refine the student manager program to manipulate the student information from files by using the `DataInputStream` and `DataOutputStream`. Assume suitable data.
33. Write a complete multi-threaded program to meet following requirements:
 - a. Two threads of same type are to be instantiated in the method `main`.
 - b. Each thread acts as a producer as well as a consumer.
 - c. A shared buffer can store only one integer information along with the source & destination of the information at a time.
 - d. The information produced is to be consumed by appropriate consumer.
 - e. Both producers produce information for both consumers.
 - f. Each thread produces 5 information.
 - g. Demonstrate `kill` and `suspended` scenario for `Thread`.
34. Develop an applet that draws a circle. The dimension of the applet should be 500 x 300 pixels. The circle should be centered in the applet and have a radius of 100 pixels. Display your name centered in a circle. (using `drawOval()` method)
35. Draw ten red circles in a vertical column in the center of the applet.
36. Build an applet that displays a horizontal rectangle in its center. Let the rectangle fill with color from left to right.
37. Develop an applet that displays the position of the mouse at the upper left corner of the

L. P. Singh

- applet when it is dragged or moved. Draw a 10x10 pixel rectangle filed with black at the current mouse position.
38. Develop an applet that contains one button. Initialize the label on the button to “start”, when the user presses the button, which changes the label between these two values each time the button is pressed.
 39. Develop an applet that uses the mouse listener, which overrides only two methods which are mousePressed and mouseReleased.
 40. Develop a Demo swing application with different component
 - a. Using JLabel and Icon – using JApplet
 - b. Using JTextField and JTextArea – using JApplet
 - c. Using JButton – using JApplet
 - d. Using JToggleButton – Application (JFrame)
 - e. Using JRadioButton and JCheckBox – Application (JFrame)
 41. Write a java application to create a Calculator using JButton and JTextField. Use Grid layout manager.

Instructional Method:

- a. The course delivery method will depend upon the requirement of content and need of students. The teacher in addition to conventional teaching method by black board, may also use any of tools such as demonstration, role play, Quiz, brainstorming, MOOCs etc.
- b. The internal evaluation will be done on the basis of continuous evaluation of students in the laboratory and class-room.
- c. Practical examination will be conducted at the end of semester for evaluation of performance of students in laboratory.
- d. Students will use supplementary resources such as online videos, NPTEL videos, e-courses, Virtual Laboratory

01CE0404	Mini Project	B.Tech. Year – II
-----------------	---------------------	--------------------------

Objective: The objective is to analyze real world problems and solve it using acquired engineering knowledge which will help students in transition from traditional practical work to open ended projects. This is a laboratory oriented course which will provide a platform to students to enhance their practical knowledge and skills by development of small scale projects/systems.

Credits Earned: 1 Credit

Course Outcomes: After completion of this course, student will be able to

- Apply the acquired engineering knowledge to practical situations.
- Formulate a real world problem and develop its requirements
- Develop a design solution for a set of requirements.
- Test and validate the conformance of the developed prototype against the original requirements of the problem
- Work as a responsible member and possibly a leader of a team in developing software/hardware solutions
- Express technical ideas, strategies and methodologies in written form and oral presentations
- Self learn new tools, algorithms, and/or techniques that contribute to the software/hardware solution of the project

Prerequisite of course: Basic Knowledge of Hardware / Software Programming.

01IT0401	Computer Network	B. Tech. Year – II
----------	------------------	--------------------

Objective: Students are expected to learn basics of Computer Network which will help them to build LAN, MAN and WAN. The course is designed to let students demonstrate an understanding of the protocols, network metrics and applications of the Internet. Additionally, to demonstrate a basic understanding of various internetworking devices.

Credits Earned: 5 Credits

Course Outcomes: After completion of this course, student will be able to

- Describe the Importance of computer networks and analyze various performance metrics. (Analyze)
- Distinguish and relate various protocols in layered architecture of computer networks. (Analyze)
- Implement various topological and routing strategies for IP based networks. (Apply)
- Design & implement client server application using socket programming. (Create)
- Compare various devices and protocols that builds computer network. (Apply)

Prerequisite of course: NA.

01MA0281	Statistical and Numerical Methods (CE/IT/ES/CHEMICAL)	B.Tech. Year – II
-----------------	--	--------------------------

Objective: A good Engineer has to have an excellent background of Mathematics. Numerical and statistical methods are one of the essential tools for learning Technology, Engineering and Sciences. This course lays the foundation for Numerical and statistical methods in subsequent semesters, so that students get a sound knowledge and important aspects of the course.

Credits Earned: 5 Credits

Course Outcomes: After completion of this course, student will be able to

- Understand the basic concepts of probability and distribution.
- Apply the knowledge of Numerical methods in C++, solving linear equations problems in various branch of engineering.
- Apply the concept of and Data representation and analysis in various field of engineering like image processing etc.
- Apply concept of Correlation and Regression in result analysis and Business forecasting using EXCEL.
- Understand the importance of Interpolation and curve fitting and its application to solve problems.

Teaching and Examination Scheme

Teaching Scheme (Hours)			Credits	Theory Marks			Tutorial/ Practical Marks		Total Marks
Theory	Tutorial	Practical		ESE (E)	IA	(CSE)	Viva (V)	Term work (TW)	
4	2	-	5	50	30	20	25	25	150

Contents:

Unit	Topics	Contact Hours
1	Data representation and Analysis Revision of basic concept of statistics, Measure of central tendency and dispersion, Statistical diagram: scattered diagram, histogram, ogie curve, pai chart...etc, Use of EXCEL software to compute statistical measures and diagrammatic representation, Use of this concept in image processing	10

L. P. Singh

2	Regression and Correlation Measure of association between two variables. Types of correlation, Karl Pearson's Coefficient of correlation and its mathematical properties., Spearman's Rank correlation and its interpretations, Spearman's Rank correlation and its interpretations, Regression Analysis: Concept and difference between correlation and regression, linear regression equations, properties of regression coefficients, Use in forecasting and estimation computational through EXCEL.	10
3	Random variable and Probability distribution Revision of elementary concept of Probability, Discrete and continuous random variable, Mass, Density and cumulative distribution functions, expected values and variance of random variable, Standard probability distributions: Uniform, Binomial, Poisson, Exponential and Normal distribution.	10
4	Errors in Digital computations and solutions of nonlinear equations Concepts and definitions, Representation of numbers in computers, types of errors, Basic sources of errors, significant digits, Computer arithmetic, errors in computations with digital computer ,Least squares curve fitting methods ,linear and nonlinear curve fitting.	7
5	Interpolation, Curve fitting Finite difference, Forward and backward differences, Interpolation and Extrapolation, Newton's forward interpolation formula, Newton's backward interpolation formula, Lagrange's interpolation formula and Newton's divided difference formula, Least squares curve fitting methods, linear and nonlinear curve fitting.	11
6	Numerical Integration and solution of differential equations Numerical Integration: Gaussian integration, Newton – cotes quadrature formula Composite rules: Trapezoidal rule and Simpson's rules Newton-Raphson, False position (Regula falsi) and Bisection method Solution of ODE by Euler's, Taylor's series, Picard's, Runge kutta (2 nd and 4 th order) methods.	12
Total Hours		60

Recommended Textbooks:

University

Syllabus for Bachelor of Technology
Department of Information Technology

Semester – V

K. P. Singh

01CE0502	Advanced Java Programming	B.Tech. Year – III
-----------------	----------------------------------	---------------------------

Objective: This course develops programming ability of students to create dynamic web applications using server side technology with Java Database Connectivity. Students can learn networking and remote method invocation using Java API. Different Java frameworks like Spring, Java Server Faces and Hibernate will increase ability of students in web application development.

Credits Earned: 5 Credits

Course Outcomes: After completion of this course, student will be able to

- Describe the components of J2EE Architecture, MVC Framework and Multi-tier Application and Various Network Protocol. (Understand)
- To make use of Servlet and JSP API in the process of enterprise application deployment. (Apply)
- Implement components such as Session, Filters, JSTL, Beans. (Apply)
- Distinguish Application Server, Web Container, JDBC and ORM tools.(Analyze)
- Design and Development of web application having collaboration of Servlets, JSPs, JSF, Spring and Hibernate based upon the requirement. (Create)

Prerequisite of course: Core Java

Teaching and Examination Scheme

Teaching Scheme (Hours)			Credits	Theory Marks			Tutorial/ Practical Marks		Total Marks
Theory	Tutorial	Practical		ESE (E)	IA	(CSE)	Viva (V)	Term work (TW)	
4	0	2	5	50	30	20	25	25	150

Contents:

Sr. No.	Content	Contact Hours
1	Advance Networking Networking Basics, Introduction of Socket, Types of Socket, Socket API, TCP-IP: Client/Server Sockets, URL,UDP: Datagrams, java.net package classes: Socket, ServerSocket, InetAddress, URL, URLConnection, RMI	6

K. P. Singh

	Architecture, Client Server Application using RMI.	
2	JDBC Programming JDBC Architecture, Types of JDBC Drivers, Introduction to major JDBC Classes and Interface, Creating simple JDBC Application, Types of Statement (Statement Interface, PreparedStatement, CallableStatement), Exploring ResultSet Operations, Batch Updates in JDBC, Creating CRUD Application, Using Rowsets Objects, Managing Database Transaction.	8
3	J2EE and Web Development J2EE Architecture Types, J2EE Containers, Types of Servers in J2EE Application, HTTP Protocols and API, Request Processing in Web Application, Web Application Structure, Web Containers and Web Architecture Models.	2
4	Servlet API and Overview Servlet Introduction, Servlet Life Cycle(SLC), Types of Servlet, Servlet Configuration with Deployment Descriptor, Working with ServletContext and ServletConfig Object, Attributes in Servlet,, Response and Redirection using Request Dispatcher and using sendRedirect Method, Filter API, Manipulating Responses using Filter API, Session Tracking: using Cookies, HttpSession, Hidden Form Fields and URL Rewriting,Types of Servlet Event: ContextLevel and SessionLevel.	8
5	Java Server Pages Introduction to JSP , Comparison with Servlet, JSP Architecture, JSP: Life Cycle, Scripting Elements, Directives, Action Tags, Implicit Objects, Expression Language(EL), JSP Standard Tag Libraries(JSTL), Custom Tag, Session Management, Exception Handling, CRUD Application.	10
6	Hibernate Introduction to Hibernate, Exploring Architecture of Hibernate, Object Relation Mapping(ORM) with Hibernate, Hibernate Annotation, Hibernate Query Language (HQL), CRUD Operation using Hibernate API.	6
7	Java Web Frameworks: Spring MVC Spring: Introduction, Architecture, Spring MVC Module, Life Cycle of Bean Factory, Explore: Constructor Injection, Dependency Injection, Inner Beans, Aliases in Bean, Bean Scopes, Spring Annotations, Spring AOP Module, Spring DAO, Database Transaction Management, CRUD	10

K. P. Singh

	Operation using DAO and Spring API.	
8	Java Server Faces Features of JSF, JSF: Architecture, Request processing Life cycle, Elements, Expression Language (EL), Standard Component, Facelets Tag, Converter Tag, Validation Tag, Database Access, PrimeFaces.	6
	Total Hours	56 hrs

Suggested Theory distribution:

The suggested theory distribution as per Bloom's taxonomy is as per follows. This distribution serves as guidelines for teachers and students to achieve effective teaching-learning process.

Distribution of Theory for course delivery and evaluation					
Remember	Understand	Apply	Analyze	Evaluate	Create
10%	20%	50%	10%	0%	10%

Suggested List of Experiments:

Experiment# 1 Java Networking

K. Prash

Sr. No.	Practical Name
1	Write an application which will retrieve IP address for given website.
2	Write an application which will retrieve the content of the given URL with different web-page related information.
3	Write a two – way network based chat application. It will use TCP/IP protocol and it will do communication in serial manner.
4	Write an application which will retrieve file from server machine and save that file on client machine. File name will be provided by client.
5	Write a client program to send any string from its standard input to the server program. The server program reads the string, finds number of characters and digits and sends it back to client program. Use connection-oriented communication.
6	Write a client program to send any string from its standard input to the server program. The server program reads the string, finds number of characters and digits and sends it back to client program. Use connection-less communication.

Experiment# 2 JDBC Programming

Sr. No.	Practical Name
1	Write down Five Basic steps to establish JDBC connection from Java Application. Also mention sample code for each step.
2	Write a JDBC application which will interact with Database and perform the following task. 1. Create Student Table with RollNo, Name, and Address field and insert few records. 2. Using Statement Object display the content of Record. 3. Using Statement Object Insert Two Record. 4. Using Statement Object Update One Record. 5. Using Statement Object Delete One Record. 6. Using Statement Object display the content of Record.
3	Write a JDBC application which will interact with Database and perform the following task. 1. Create Student Table with RollNo, Name, and Address field and insert few records. 2. Using PreparedStatement Object display the content of Record. 3. Using PreparedStatement Object Insert Two Record. 4. Using PreparedStatement Object Update One Record. 5. Using PreparedStatement Object Delete One Record. 6. Using PreparedStatement Object display the content of Record.
4	Write a JDBC application which will interact with Database and perform the following task. 1. Create a store procedure which will insert one record into employee table. 2. Create a store procedure which will retrieve salary for given employee id.

K. P. Singh

	3. Write a java application which will call the above procedure and display appropriate information on screen.
5	Design a JDBC application which will demonstrate Scrollable ResultSet functionality.
6	Design a JDBC application which will demonstrate Updatable ResultSet functionality.
7	Design a JDBC application which will demonstrate Transaction management functionality.

Experiment# 3 Servlet

Sr. No.	Practical Name
1	Write down the Program for testing the Servlet and study deployment descriptor.
2	Write down the program for testing the include action for servlet collaboration.
3	Write down the program for testing the forward action for servlet collaboration.
4	Create login form and perform state management using Cookies, HttpSession and URL Rewriting.
5	Create Servlet file which contains following functions: 1. Connect 2. Create Database 3. Create Table 4. Insert Records into respective table 5. Update records of particular table of database 6. Delete Records from table. 7. Delete table and also database.
6	Write down the Program in which error is handled by the deployment descriptor file (web.xml).
7	Implement Authentication filter using filter API.
8	Write down the Program for testing the servlet context interface.

Experiment# 4 JSP

Sr. No.	Practical Name
1	Write down the Program which displays the simple JSP file.
2	Write down the program in which input the two numbers in an html file and then display the addition in JSP file.
3	Write down the program in which display the error by common file for all general pages.
4	Perform Database Access through JSP.
5	Write down the Program for testing the include action tag in jsp.
6	Write down the Program for testing the forward action tag.
7	Write down a program which demonstrates the core tag of JSTL.
8	Write down a program which demonstrates the Format tag of JSTL.
9	Write down a program which demonstrates the Function tag of JSTL.

K. P. Singh

10	Write down a program which demonstrates the SQL tag of JSTL.
11	Write down a program which demonstrates the XML tag of JSTL.
12	Write down a program which demonstrates the Tag Handler with appropriate output.
13	Create database of student subject-wise data and retrieve all data using JSP and generate xml structure along with DTD and XML Schema definition.

Experiment# 5 Hibernate Framework

Sr. No.	Practical Name
1	Study and implement Hibernate.
2	Study and Implement Hibernate Annotations.
3	Use Hibernate Query Language to insert, update and delete records in database.

Experiment# 6 Spring Framework

Sr. No.	Practical Name
1	Study and Implement MVC using Spring Framework
2	Inject Service using Aspect Oriented Programming.
3	Using Spring Template manages Database and Transaction.

Experiment# 7 JSF

Sr. No.	Practical Name
1	Use JSF Standard Components and Facelets Tags.
2	Implement JSF Converter Tag and Validation Tags.

Instructional Method:

1. The course delivery method will depend upon the requirement of content and need of students. The teacher in addition to conventional teaching method by black board, may also use any of tools such as demonstration, role play, Quiz, brainstorming, MOOCs etc.
2. The internal evaluation will be done on the basis of continuous evaluation of students in the laboratory and class-room.
3. Practical examination will be conducted at the end of semester for evaluation of performance of students in laboratory.
4. Students will use supplementary resources such as online videos, NPTEL videos, e-courses, Virtual Laboratory

01CE0503	Design and Analysis of Algorithm	B.Tech. Year – III
-----------------	---	---------------------------

Objective: Obtaining efficient algorithm is very important in modern computer engineering as the world wants applications to be time and space and energy efficient. This course enables to understand and analyse efficient algorithms for various applications.

Credits Earned: 5 Credits

Course Outcomes:

- Learn and understand asymptotic notations for performance of different algorithms. (Understand)
- Derive and solve recurrences describing the performance of divide-and-conquer algo (Evaluate)
- Design optimal solution by applying various methods like Dynamic Programming and G Method. (Application)
- Summarize the certain graph algorithms and their analysis.(Application)
- Apply pattern matching algorithms (Application)
- Differentiate polynomial and non-polynomial problems. (Analysis)

Prerequisite of course: Data Structure and proficiency in programming language, knowledge of Mathematical functions like logarithms, graphs etc.

Teaching and Examination Scheme

Teaching Scheme (Hours)			Credits	Theory Marks			Tutorial/ Practical Marks		Total Marks
Theory	Tutorial	Practical		ESE (E)	IA	(CSE)	Viva (V)	Term work (TW)	
4	0	2	5	50	30	20	25	25	150

Contents:

K. P. Singh

Sr No	Course content	Total Hrs
1	Introduction to Design and Analysis of Algorithms: What is an algorithm, Mathematics for Algorithmic Sets, Functions and Relations, Vectors and Matrices, Linear Inequalities and Linear Equations.	02
2	Analysis of Algorithm: The efficient algorithm, Average, Best and worst case analysis, Amortized analysis, Asymptotic Notations (Big Oh, Big Theta, Big Omega), Master Method, Sorting Algorithms and analysis: Bubble sort, Selection sort, Insertion sort, Shell sort, Heap sort, Sorting in linear time : Bucket sort, Radix sort and Counting sort	08
3	Divide and Conquer: Introduction, Recurrence and different methods to solve recurrence, Multiplying large Integers Problem, Problem Solving using divide and conquer algorithm - Binary Search, Max-Min problem, Sorting (Merge Sort, Quick Sort), Matrix Multiplication, Exponential.	08
4	Dynamic Programming: Introduction, Elements of Dynamic Programming, The Principle of Optimality, Problem Solving using Dynamic Programming – Calculating the Binomial Coefficient, Making Change Problem, Assembly Line-Scheduling, Knapsack problem, Matrix chain multiplication, Longest Common Subsequence.	08
5	Greedy Algorithm General Characteristics of greedy algorithms, Elements of greedy strategy, Problem solving using - Activity selection problem, Fractional Knapsack Problem, Job Scheduling Problem.	06
6	Graph Algorithms Representation of Undirected & Directed Graph, Traversing Graphs, Depth First Search, Breath First Search, Topological sort, Strongly Connected components. Single pair shortest path and Minimum Spanning trees (Kruskal's algorithm, Prim's algorithm) using greedy approach, All Points Shortest path using Dynamic Programming,	08
7	Backtracking and Branch and Bound: Introduction, The Eight queens problem, Knapsack problem, Travelling Salesman problem, Minimax principle.	05
8	String Matching:	05

K. Prashant

	Introduction, The naive string matching algorithm, The Rabin-Karp algorithm, String Matching with finite automata, The Knuth-Morris-Pratt algorithm.	
9	Introduction to NP-Completeness: The class P and NP, Polynomial reduction, 2-CNF Satisfiability, 3- CNF Satisfiability, NP- Completeness Problem, NP-Hard Problems. Travelling Salesman problem, Hamiltonian problem.	06
	Total Hours	56 hrs

References:

1. Introduction to Algorithms, Thomas H. Cormen, Charles E. Leiserson, Ronald L. Rivest and Clifford Stein, PHI.
2. Fundamental of Algorithms by Gills Brassard, Paul Bratley, PHI.
3. Introduction to Design and Analysis of Algorithms, Anany Levitin, Pearson.
4. Foundations of Algorithms, Shailesh R Sathe, Penram
5. Design and Analysis of Algorithms, Dave and Dave, Pearson.

Suggested Theory distribution:

The suggested theory distribution as per Bloom’s taxonomy is as per follows. This distribution serves as guidelines for teachers and students to achieve effective teaching-learning process

Distribution of Theory for course delivery and evaluation					
Remember	Understand	Apply	Analyse	Evaluate	Create
0%	20%	40%	20%	20%	0%

Suggested List of Experiments:

1. Implementation and Time analysis of sorting algorithms.
Bubble sort, Selection sort, Insertion sort, Merge sort and Quicksort
2. Implementation and Time analysis of linear and binary search algorithm.
3. Implementation of max-heap sort algorithm
4. Implementation and Time analysis of factorial program using iterative and recursive method
5. Implementation of a knapsack problem using dynamic programming.
6. Implementation of chain matrix multiplication using dynamic programming.
7. Implementation of making a change problem using dynamic programming
8. Implementation of a knapsack problem using greedy algorithm
9. Implementation of Graph and Searching (DFS and BFS).

K. P. Singh

10. Implement prim's algorithm.
11. Implement Kruskal's algorithm.
12. Implement LCS problem.
13. To implement following string matching algorithms and analyze time complexities:
 - a. Naïve
 - b. Rabin Karp
 - c. Knuth Morris Pratt
14. Write a program for Floyd-Warshal algorithm.
15. Write a program for travelling salesman problem.
16. Write a program for Hamiltonian cycle problem.
17. To implement Huffman coding and analyze its time complexity.
18. Write a program for Strassen's Matrix Multiplication.

Instructional Method:

- a. The course delivery method will depend upon the requirement of content and need of students. The teacher in addition to conventional teaching method by black board, may also use any of tools such as demonstration, role play, Quiz, brainstorming, MOOCs etc.
- b. The internal evaluation will be done on the basis of continuous evaluation of students in the laboratory and class-room.
- c. Practical examination will be conducted at the end of semester for evaluation of performance of students in laboratory.

Supplementary Resources:

Students will use supplementary resources such as online videos, NPTEL videos, e-courses, Virtual Laboratory.

01CE0504	Theory of Automata and Formal Languages	B.Tech. Year – III
----------	---	--------------------

Objective: This subject will introduce students to the algorithms, formal languages and grammars, automata theory, decidability, complexity, and computability. It helps students to understand and conduct mathematical proofs for computation and algorithms.

Credits Earned: 3 Credits

Course Outcomes: After completion of this course, students will be able to

- Gain the knowledge of basic kinds of finite automata and their capabilities. (Knowledge)
- To understanding of regular and context-free languages (Comprehension)
- To understand the time and space complexity for p and np problems. (Comprehension)
- To apply proved results using proof by induction, proof by contradiction, proof by construction, proof by case exhaustion. (Application)
- Gain the knowledge of describe and change language to regular expressions and grammars. (Application)
- Constructing the Turing machine for Recursive languages. (Analysis)

Teaching and Examination Scheme

Teaching Scheme (Hours)			Credits	Theory Marks			Tutorial/ Practical Marks		Total Marks
Theory	Tutorial	Practical		ESE (E)	IA	(CSE)	Viva (V)	Term work (TW)	
3	0	0	3	50	30	20	0	0	100

Contents:

Unit	Topics	Contact Hours
1	Preliminaries: Set theory, propositions, predicate logic, relation, one-to-one function, onto function, bijection function, Direct proof, proof by contradiction, proof by contrapositive, Principle of mathematical induction, Recursive Definition	4
2	Regular Languages: Symbol, Alphabet, String, Language, Regular expression and Language, Pumping Lemna.	3

K. P. Singh

3	Finite State Machine: Basics of Automata theory, Finite automata, Deterministic and Non-Deterministic Automata, λ - Transition Finite automata, Conversion NFA - λ to NFA, Conversion NFA to DFA, Conversion RE (Regular Expression) to Non-Deterministic Finite Automata, Subset Algorithm to convert Non DFA to DFA, Finite automata minimization, Moore and Mealey machine and their Conversion.	9
4	Context Free Grammar (CFG): Context free language, Chomsky normal forms, Greibach normal forms, derivation - derivation tree with their relation, Ambiguous and unambiguous CFG, Algebraic expression, Closure properties of Context Free Language.	8
5	Push Down Automata (PDA): Introduction about PDA, equivalence between CFG and PDA, Deterministic PDA, Pumping Lemna for Context Free Language, Acceptance of Empty and Final state.	6
6	Turing machine and REL: Basics of Turing machine, Language acceptor, Turing machine variations, Church Turing thesis, Universal Turing machine, Looping vs Halting, Recursively and Enumerable Languages.	6
7	Computability: Partial function, Primitive recursive functions, undecidable problem, Class P and NP, Np Completeness.	6

01IT0503	Advanced Computer Network	B.Tech. Year – III
----------	---------------------------	--------------------

Objective: Introduction of primary networking concepts and technologies is prime objective of this course. This course specifically make student able to develop the skills required to plan and implement small networks across a variety of networking applications.

Credits Earned: 5 Credits

Course Outcomes: After completion of this course, student will be able to

- Describe concepts of scaling networks and wireless LAN (Analyze)
- Implement OSPF operations, configuration and troubleshoot (Apply)
- Implement EIGRP operations, configuration and troubleshoot (Apply)
- Implement PPP operations, configuration and troubleshoot (Apply)
- Design ACL for IPv4 and IPv6 with advance configuration (Create)

Prerequisite of course: Basics of Computer Networks.

Teaching and Examination Scheme

Teaching Scheme (Hours)			Credits	Theory Marks			Tutorial/ Practical Marks		Total Marks
Theory	Tutorial	Practical		ESE (E)	IA	(CSE)	Viva (V)	Term work (TW)	
4	0	2	5	50	30	20	25	25	150

Contents:

Unit	Topics	Contact Hours
1	Introduction to Scaling Networks Introduction to Scaling Networks, Implementing a network design, selecting network devices, LAN redundancy, spanning tree concepts, variety of spanning tree protocols, spanning tree configuration, first hop redundancy protocol (FHRP), Link aggregation concepts and configuration	6
2	Wireless LAN Wireless concepts, Wireless LAN operations, Wireless LAN security,	6

d. p. sh

	Wireless LAN configurations	
3	OSPF Advanced Single-Area OSPF concepts and configuration, Advanced Single-Area OSPF implementation and troubleshooting, Multiarea OSPF operations, Multiarea OSPF configuration	6
4	EIGRP Characteristics of EIGRP, EIGRP configuration for IPv4, EIGRP operations, EIGRP configuration for IPv6, Advanced EIGRP configurations, EIGRP troubleshooting	8
5	Connecting Networks WAN concepts, Overview and selection of WAN technologies, Concepts of point-to-point connections, Serial Point-to-Point Overview, PPP Operation and Implementation, PPP troubleshooting	6
6	Branch Connections Remote Access Connections, PPPoE, VPNs, GRE, eBGP	5
7	ACL Standard ACL Operation and Configuration, Extended IPv4 ACLs, IPv6 ACLs, Troubleshoot ACLs	5
8	Network Security and Monitoring LAN Security, SNMP, Switch Port Analyzer (SPAN), QoS Overview, QoS Mechanisms	7
9	Network Evolution Internet of Things, Cloud and Virtualization, Network Programming	7

01CE0506	Distributed Operating System	B. Tech. Year – III
-----------------	-------------------------------------	----------------------------

Objective: Emphasis would be to provide the knowledge of communication, synchronization, resource management and security as distributed operating system.

Credits Earned: 5 Credits

Course Outcomes: After completion of this course, students will be able to

- Gain knowledge of distributed operating system architecture(Knowledge)
- Illustrate principles and importance of distributed operating system(Understand)
- Implement distributed client server applications using remote method invocation(Apply)
- Distinguish between centralized systems and distributed systems(Analyze)
- Create stateful and state-less applications(Create)

Prerequisite of course: Operating System, Computer Network

Teaching and Examination Scheme

Teaching Scheme (Hours)			Credits	Theory Marks			Tutorial/ Practical Marks		Total Marks
Theory	Tutorial	Practical		ES (E)	IA	(CE)	Viva (V)	Term work (TW)	
4	0	2	5	50	30	20	25	25	150

Contents:

Unit	Topics	Hours
1	Introduction: Introduction of Distributed Operating System (DOS), Functions of DOS, Basic concepts, goals & challenges of distributed systems, architectures of DOS. Revisit the inter process communication.	6
2	Communication in DOS : Study of case studies for distributed environment,	9

r. P. Singh

	Issues in communication, message-oriented communication, remote procedure call, remote method invocation, stream-oriented communication, communication between processes, unstructured Vs structured communication, blocking Vs non-blocking communication	
3	Synchronization: Introduction of synchronization, Clocks, events, Time in distributed systems 1. Cristian's algorithm 2. The Berkeley Algorithm, 3. Network Time Protocol (NTP) 4. Logical time and logical clocks 5. Lamport logical clock 6. vector clock	7
4	Transaction and Concurrency Control: Basic concurrency control mechanism in DOS mutual exclusion in distributed environment, Transactions and Concurrency Control in distributed environment, distributed deadlocks in distributed environment.	8
5	Distributed and Shared Memory Management(DSM): Basic fundamentals of shared memory in DOS, Architecture and algorithm of distributed shared memory, advantages & challenges of DSM, Memory coherence, consistency model, consistency with uni- processor system, consistency with multiprocessing environment.	6
6	Resource Management in DOS: Types of resources, issues of resource sharing, Task assignment, Types of distributed load balancing algorithms, load estimation policy, process transfer, location policy, state information exchange policy, priority assignment policy, process migration and case studies.	8
7	Security in DOS: Importance of security, Types of external attacks, Basic elements of Information System security and policy, Trust Management, Access control models, cryptography.	8
8	Case study: Andrew Network file system, SUN Network File system.	4
	Total Hours	56

Suggested Theory distribution:

The suggested theory distribution as per Bloom's taxonomy is as per follows. This distribution serves as guidelines for teachers and students to achieve effective teaching-learning process

Remember	Understand	Application	Analyse	Evaluation	Create
25%	25%	15%	15%	10%	10%

List of experiments:

1. Concurrent client server application demo program to implement.
2. Remote procedure call program needs to implement.
3. Remote Method Invocation implementation.
4. Thread Programming in any application using JAVA.
5. Program counter management in shared memory.
6. Learning of RPCGEN interface.
7. Basic calculator program to understand RPCGEN.
8. Find a length of given string as an input of a RPCGEN utility.
9. Temperature conversation using RPCGEN.
10. Basic calculator program using RMI.
11. Implementation of state-full and stateless server

Open Ended Problem :

- Linux kernel compilation
- Study of process scheduling in Linux OS

01CE0507	Image Processing	B. Tech. Year – III
-----------------	-------------------------	----------------------------

Objective: To study fundamental concepts of digital image processing. To understand and learn image processing operations and algorithms. To expose students to current trends in field of digital image processing.

Credits Earned: 5 Credits

Course Outcomes: After completion of this course, students will be able to

- To understand the formation of digital image and its various formats.[Understand]
- Implement various filtering techniques in spatial domain and frequency domain.[Apply]
- Implement the colour and gray level image enhancement techniques[Apply]
- Create Matlab program to apply morphological operators and Image Segmentation.[Apply]

Prerequisite of course: Knowledge of Mathematics

Teaching and Examination Scheme

Teaching Scheme (Hours)			Credits	Theory Marks			Tutorial/ Practical Marks		Total Marks
Theory	Tutorial	Practical		ESE (E)	IA	(CSE)	Viva (V)	Term work (TW)

Contents:

Unit	Topics	Hours
1	Introduction To Digital Image Processing: Fundamentals Of Elements Of Digital Image, Image As Data, Pixels, Components Of Digital Image, Types Of Image Representation, Measures Of Image, Application Of Digital Image Processing	08
2	Image Enhancement: Point processing, Image Negation, Contrast Stretching, Gamma Correction, Bit plane slicing, Histogram Processing, Histogram Matching, Histogram Equalization.	10

K. P. Singh

3	Image Filtering Techniques: Low Pass Filters – Smoothing, High Pass Filters - Edge Detection, Sharpening	08
4	Image Degradation/Restoration: Noise Models, Model Of Image Degradation/Restoration Process, Noise Reduction, Inverse Filtering, M Minimum Mean Square Error (Weiner) Filtering.	08
5	Color Image Fundamentals: Color Models, Representation of Color in Images, Color Image Processing., Basics Of Color Image Processing Smoothing And Sharpening	06
6	Image Morphology: Different Morphological Algorithm, Morphological Measures	06
7	Image Segmentation: Thresholding, Histogram Based Segmentation, Clustering, Region Growing Method, Point, Line and Edge Detection	10
Total Hours		56

Text Book:

1. Pearson Education - Rafael C. Gonzalez and Richard E. Woods - Digital Image Processing

References Books:

1. PHI - Anil K Jain - Fundamentals of Digital Image Processing
2. Gonzalez & Woods - Digital Image Processing Using Matlab
3. Bhabatosh Chanda and Dwijesh Majumder - Digital Image Processing

Suggested Theory distribution:

The suggested theory distribution as per Bloom's taxonomy is as per follows. This distribution serves as guidelines for teachers and students to achieve effective teaching-learning process

Remember	Understand	Application	Analyse	Evaluation	Create
10 %	25%	30%	25%	0%	10%

List of experiments:

1. Study of matlab image processing toolkit and various commands on matlab.
2. Point processing in spatial domain
 - a. Negation of an image
 - b. Thresholding of an image
 - c. Contrast Stretching of an image

K. P. Singh

3. Write a program for histogram equalization.
4. Write a program to apply various filtering techniques in matlab.
 - a. Low pass filtering
 - b. High pass filtering
 - c. Median filtering
5. Write a program for image segmentation
 - a. Local thresholding
 - b. Global thresholding
6. Write a program for color image processing
 - a. Color approximation
 - b. Quantization
7. Write a program, for Image restoration
 - a. Facial Images
 - b. Texture Images
8. Write a program for edge detection.
9. Write a program for smoothing and sharpening for 8-bit color image.
10. Write a program to implement morphological operations.

Instructional Method:

- a. The course delivery method will depend upon the requirement of content and need of students. The teacher in addition to conventional teaching method by black board, also need to use ICT tools and facilities.
- b. The internal evaluation will be done on the basis of continuous evaluation of students in the laboratory and class-room.
- c. Practical examination will be conducted at the end of semester for evaluation of performance of students in laboratory.

01CE0508	Reverse Engineering	B.Tech. Year - III
-----------------	----------------------------	---------------------------

Objective: The objective of the module is to go through the Reverse Engineering process as it is a self-learning tool used to summarize the process of reconstructing/ reformation of an already existing object.

Credits Earned: 1 Credit

Course Outcomes: After completion of this course, student will be able to

1. Understand the problem in the existing process.
2. Collect the large number of data/ information for the product
3. Depth analyze of the products and extraction of real time data
4. Understand the principles behind the design of the product, ways to redesign and improve the performance of the system.

Prerequisite of course: Not Required

Teaching and Examination Scheme

Teaching Scheme (Hours)			Credits	Theory Marks			Tutorial/ Practical Marks		Total Marks
Theory	Tutorial	Practical		ESE (E)	IA	(CSE)	Viva (V)	Term work (TW)	
0	0	2	1	0	0	0	25	25	50

Contents:

Units	Topics	Contact Hours
Module-1 Reverse Engineering Basics	Need of reverse engineering, Methodologies for Reverse Engineering, understanding of Reverse Engineering through example, reasons for reverse engineering, process for Reverse Engineering, Phases of Reverse Engineering, conceptual System Reasons for Reverse Engineering, Difficulties in Reverse Engineering, Levels of abstraction: Application level, Functional level, Structural level	6
Module-2	Detailed study of Reverse Engineering for Branch	6

K. P. Singh

Reverse Engineering Methodology	Specific learning Disassemble the existing selected artefact/ product/ component/ process/ system to study technical aspects and design detail, Reverse engineering in various computer software/ application, CASE STUDY EIS Client Application, Implementation level	
Module-3 Software Reverse Engineering	Reverse engineering of software, Binary reverse engineering, Binary software techniques, Software classification, Source code, number of UML tools, Reverse engineering of Protocols	10
Module-4 Capstone Project	Mini project exercise based on understanding of modules contents	6
Total Hours		28

Note: Mentors are advised to take suitable project/activity to explore the above topics and make students understand the various concepts.

01IT0502	Seminar	B.Tech. Year – III
-----------------	----------------	---------------------------

Objective: The oral dissemination and defense of engineering concepts is an elementary communication tool that learners will employ throughout their professional career. In this course, learners will have to go through five activities that will inculcate oral presentation skills: observation, question, critique, research, and presentation.

Credits Earned: 1 Credit

Course Outcomes: After completion of this course, student will be able to

1. Analyzing, Construct/creat, and evaluate information presented in technical and/or scientific journals.
2. Examine best methods and implement them for developing and presenting a quality scientific presentation on recent trends using various presentation software like PowerPoint, Prezi (<http://prezi.com>), etc.
3. Create 5-10 minute video presentation to be delivered via YouTube based upon the analysis and learning f one journal article or recent technology for a second seminar presentation.
4. Practice critical evaluation of peer students' work.

Prerequisite of course: Internet Surfing

Teaching and Examination Scheme

Teaching Scheme (Hours)			Credits	Theory Marks			Tutorial/ Practical Marks		Total Marks
Theory	Tutorial	Practical		ESE (E)	IA	(CSE)	Viva (V)	Term work (TW)	
0	0	2	1	0	0	0	25	25	50

COURSE REQUIREMENT

Seminar activity and Assessment:

During this course only two assignments are there –

Assignment 1: Each student has to refer, Scientific Journals, magazines, Newspapers, from library and also from electronic media Internet, to identify their recent topic in the field of computer engineering or relevant fields. **(8 hours)**

For first assignment, each student will have to deliver a 15-20 minute presentation with 5

L. P. Singh

minutes for questions and discussion session.

Criteria of first Presentation

1. Well Structured Presentation with any advanced tool is expected, proper referencing in IEEE Format. Minimum of five refereed journal articles cited throughout the presentation with proper format with at least four published after 2015.
2. Your presentation should follows best practices of design. Please review: <https://designshack.net/articles/graphics/10-tips-for-designing-presentations-that-dont-suck/> for more information.

Assignment 2: For second assignment, individual student have to make a 5-10 minute presentation via YouTube after analyzing over the one any topic of latest trend or anyjournal article. Your presentation should include following **(8 hours)**

1. A brief introduction to the article,
2. The methodology used,
3. Findings and a conclusion.
4. More information will be provided during lab hours

Evaluation Criteria

Marks will be determined via a grading rubric –

1. Each Presentation will be assessed by the audience members and me and an average will be taken.
2. Points will be deducted for presentations if student did not attended presentation.
3. The grading rubric for the presentation is below.
 - 4 YouTube presentation will be assessed by your peers members and by faculty in charge online and an average will be taken.
4. The rubric will be made available to audience electronically or in hardcopy every members are expected to watch the videos and provide comments in rubric. More information will be provided during lab hours.
5. Both presentations are worth 100 points each.

01CE0601	Compiler Design	B.Tech. Year – III
-----------------	------------------------	---------------------------

Objective: The purposive of this course is intended to teach the students about the basic techniques, theory and tools underlie the practice and act of Compiler Construction.

Prerequisite: Programming fundamentals, Data Structure and Theory of Computation

Credits Earned: 4

Course Outcomes: After completion of this course, students will be able to

- Construct syntax tree, three address code and assembly code. (Create)
- Apply first and follow to generate LL(1) Parser. (Apply)
- Differentiate top-down and bottom-up parsing, validate SLR, CLR, LALR parsers. (Analyze)
- Construct DAG from three address code. (Create)
- Apply Code optimization techniques on three address code.(Apply)

Teaching and Examination Scheme

Teaching Scheme (Hours)			Credits	Theory Marks			Tutorial/ Practical Marks		Total Marks
Theory	Tutorial	Practical		ESE (E)	IA	(CSE)	Viva (V)	Term work (TW)	
3	0	2	4	50	30	20	25	25	150

Contents:

Unit	Topics	Content Hours
1	Introduction to Compiler Translators-Compilation and Compiler, Interpreter and Assembler, overview of linker and loader -The Phases of Compiler-Errors Encountered in Different Phases -Compiler Construction Tools - Programming Language basics, pass structure.	5
2	Scanner Role of Lexical Analyzer-Lexical Errors-Tokens-Regular Expressions-A Language for Specifying Lexical Analyzer-Defining relations and conversion process between Finite Automata and Regular Expression-Minimization of	7

K. P. Singh

	DFA-Introduction to LEX- Design of Lexical Analyzer for a sample Language.	
3	Parsing Top-down Parsing, Predictive parsing, non-recursive predictive parsing, First and Follow set, LL(1) grammar, error handling for LL(1), Bottom-up parsing, handle pruning, shift reduce parsing, operator precedence parser, LR(0) parser, SLR(1) Parser, Canonical LR(1) Parser, LALR(1) Parser, error detection and recovery in LR Parser, Parser generators (Yacc & Lex)	10
4	Intermediate Code Generation Introduction, Intermediate Languages, Types of intermediate forms, Three Address Statements, Syntax Directed Translation Attributes and Mechanism, Directed Acyclic Graph, Static Single Assignment	5
5	Memory Management Introduction, Importance of Memory Management, organization for storage purpose, static allocation, stack allocation, dynamic allocation, different methods of parameter passing, activation record, symbol table	5
6	Code Optimization Introduction of Code Optimization, Advantage of code optimization, Types of Code Optimization, Block and Loop Optimization, Global Data Flow Analysis	5
7	Code Generation Issues, flow graph, basic block, basic block optimization, register allocation, simple code generator, directed acyclic graph representation, code generation from directed acyclic graph, peephole optimization, generators of code generator, dynamic code generation algorithm.	5
	Total Hours	42

Suggested Theory distribution:

The suggested theory distribution as per Bloom's taxonomy is as per follows. This distribution serves as guidelines for teachers and students to achieve effective teaching-learning process

Distribution of Theory for course delivery and evaluation					
Remember	Understand	Apply	Analyze	Evaluate	Create
5%	17%	33%	19%	16%	10%

Suggested List of Experiments:

1. WAP to remove Left Recursion from the grammar.
2. WAP to remove Left Factoring from the grammar.
3. WAP to verify that the given input is valid identifier or keyword.
4. WAP to compute FIRST and FOLLOW Set of the given grammar.
5. WAP to implement Operator precedence parser.
6. Prepare report for Lex, Flex and Yet Another Compiler Compiler Tool.
7. WAP with the help of Lex and Yacc file to implement Calculator which performs basic operations like addition, subtraction, multiplication and division.
8. WALEXP to count words, characters, lines, Vowels and consonants from given input.
9. WALEXP to generate string which is ending with zeros.
10. WALEXP to check given string is simple or compound string.
11. WALEXP to count the total number of printf and scanf statement in given C file. Also convert it into readf and writeout respectively to another file.
12. WALEXP to check given number is positive negative or zero.
13. WALEXP Program to print HTML tags of given file.
14. WA YACC Program to generate Calculator.

01CE0602	. Net Technology	B.Tech. Year – III
-----------------	-------------------------	---------------------------

Objective: .Net Technologies are blend of technologies supported by Microsoft .Net Framework, that allows user to create various applications. Students will be able to work with various technologies provided by Microsoft .NET platform.

Credits Earned: 5 Credits

Course Outcomes: After completion of this course, student will be able to

- To Review the components of .Net Framework[Understand]
- To practice Console based C# application. [Apply]
- To practice desktop application using C# Win-form application[Apply]
- To practice basic database application using ADO.net technology[Apply]
- To Design and develop basic applications using WPF.[Create]

Prerequisite of course: Object oriented concepts, Programming fundamentals

Teaching and Examination Scheme

Teaching Scheme (Hours)			Credits	Theory Marks			Tutorial/ Practical Marks		Total Marks

- 3. <http://www.codeproject.com>
- 4. <http://telerikacademy.com>
- 5. <https://msdn.microsoft.com>

Tutorial List:

- 1. Write a C# console program to know whether a number is even or odd.
- 2. Write a C# console program that implements basic calculation functions (Addition, Subtraction, Multiplication, Division) using switch case.
- 3. Write a C# console program to implement following pattern
*
* *
* * *
* * * *
- 4. Create a console application based on the assigned definition to implement basic OOP concepts like abstract class, inheritance, interface ,constructors ,properties ,method

K. P. Singh

overloading and method overriding.

5. Create a console application to implement advance concept like Reflection, Delegates, Attributes, Indexer.
6. Create a console application to demonstrate multithreaded application.
7. Create a console application that implements all Collection classes.
8. Create a console application that reads a content from user and store it in file using FILEIO.
9. Create a console application that list all the files in given folder which are having read only permission.
10. Create a windows application to implement fully functional notepad.
11. Create a windows application that implements MDI form and dialog boxes.
12. Implement the tutorial4 definition in windows form using ADO.net, Grid view control, and Crystal report
13. Create a WPF project to implement multiform desktop application.
14. Create a WPF project to implement a Calculator

K. P. Singh

01CE0603	Computer Security	B. Tech. Year – III
-----------------	--------------------------	----------------------------

Objective: This course is to provide students with acknowledge of the Computer Security with different models and practical aspects of securing information on computer through various cryptography approach.

Credits Earned: 05 Credits

Course Outcomes

- Apply the ideas of classical crypto systems and public key crypto systems techniques.(Apply)
- Analyze different crypto graphic protocols.(Analyze).
- Test Different Digital Signature Schemes and Digital Certificates mechanisms and its requirement.(analyze)
- Analyze different security models.(Analyze)
- Apply methods for authentication, access control, intrusion detection and prevention.(Apply)

Prerequisite of course: NA.

Teaching and Examination Scheme

Suggested Theory distribution:

The suggested theory distribution as per Bloom's taxonomy is as per follows. This distribution serves as guidelines for teachers and students to achieve effective teaching-learning process

Distribution of Theory for course delivery and evaluation					
Rememb er	Understand	Apply	Analyse	Evaluate	Create
10%	20%	30%	30%	5%	5%

Suggested List of Experiments:

1. Study and write a program for any Classical Ciphers technique
2. Implement polyalphabetic Cipher
3. W.A.P. to implement Rail fence technique
4. Implement AES Algorithm
5. Implement DES Algorithm
6. Implement RSA Algorithm
7. Implement any one of the variant of SHA.
8. Design Digital signature for Any given document.

Note: Any Programming language can be used to implement above cryptographic algorithm. Also Perform above experiment using Virtual labs (<http://cse29-iiith.virtual-labs.ac.in/exp8/index.php>)

K. Prash

01CE0604	Cyber Security	B. Tech. Year – III
-----------------	-----------------------	----------------------------

Objective: Objective of this course that provides students basic knowledge and skills in the fundamental theory and practical of Cyber Security.

Credits Earned: 05 Credits

Course Outcomes

- Understanding the basic technical, social and law suits aspect of Cyber Security (Remember)
- Integrate the ethical hacking process and scripting. (Create)
- The students can use basic security tools to enhance cyber security. (Analyse)
- Understand the security management methods and auditing. (Evaluation)
- Apply the security principles to system design. (Apply)

Prerequisite of course: NA.

The suggested theory distribution as per Bloom’s taxonomy is as per follows. This distribution serves as guidelines for teachers and students to achieve effective teaching-learning process

Distribution of Theory for course delivery and evaluation				
Remember	Apply	Analyse	Evaluate	Create
20%	25%	20%	15%	20%

Suggested List of Experiments:

K. P. Singh

1. Install VM Workstation in Ubuntu and set up windows and kali.
2. Set up nginx and provide password credentials with Secure Socket Layer.
3. Write a program to sniff packet sent over the local network.
4. To perform DNS pharming attack using any method on computers in a LAN Environment.
5. Implement system hacking using tools.
6. Create virus with python script and implement attack and analyse the effect of various viruses.
7. Sniffing Website Credentials using Social Engineering Toolkit.
8. Study and Audit Marwadi University IT Infrastructure.

K. P. Singh

01CE0605	Network Security	B.Tech. Year – III
-----------------	-------------------------	---------------------------

Objective: Objective of this course is to provide necessary study of Network Security issues and methods in networking systems. Topics to be covered include review of networking, advanced cryptography, access control, distributed authentication, IP Sec, Virtual Private Networks, intrusion detection systems, and advanced topics such as wireless security, identity management, etc.

Credits Earned: 05 Credits

Course Outcomes

- Designing of relatively stronger access control mechanism for secure identification and authentication.(Apply)
- Analysis of various identity management protocols.(Analyze)
- Design and deployment of firewalls to secure a private network.(Analyze)
- Implementation of security techniques for developing end-to-end communication systems.(Apply)
- Designing and performance analysis of security monitoring system to defend intrusion and impersonation(Evaluate)
- Integration and synthesis of modern security concepts in contemporary new technologies.(Evaluate)

Prerequisite of course: NA.

Teaching and Examination Scheme

serves as guidelines for teachers and students to achieve effective teaching-learning process

Distribution of Theory for course delivery and evaluation					
Remember	Understand	Apply	Analyse	Evaluate	Create
5%	10%	30%	25%	25%	5%

Suggested List of Experiments:

- Scan Network ports Traffic using NMAP port scanner.
- Use Netcat and analyse TCP / UDP connectivity
- Use OpenVAS to check Network vulnerability
- Use DVWA for Web application testing
- Vulnerabilities and Threats - How can networks be compromised.
- Use trace Route for Scanning and Enumerating the Network for Targets and Address Spoofing.
- Exploring Wireshark's packet analysis capabilities
- Exploring Dsniff – a password sniffing and network traffic analysis tool
- Exploring Ettercap - a free and open source network security tool for man-in-the-middle attacks on LAN
- Detection and Response – How do we detect and respond to attacks Preparing for and Detecting Attacks
- Identify and Mitigate Network Attacks

01CE0606	Design Engineering and Project Management	B. Tech. Year – III
-----------------	--	----------------------------

Objective: The main objective of this course is to put on the engineering problem solving procedure to solve basic engineering design and analysis problems using various techniques. This course is also designed with aim to demonstrate planning, execution and testing of various Projects.

Credits Earned: 1 Credit

Course Outcomes: After completion of this course, student will be able to

1. Understand the importance of Design Engineering.
2. Identify Various Design Engineering approaches.
3. Apply various methodologies to design the product and in testing the product.
4. Understand various Project Management Processes.
5. Demonstrate effective project execution and control techniques that result in successful projects.

Prerequisite of course: Not Required.

Teaching and Examination Scheme

Teaching Scheme (Hours)			Credits	Theory Marks			Tutorial/ Practical Marks		Total Marks
Theory	Tutorial	Practical		ESE (E)	IA	(CSE)	Viva (V)	Term work (TW)	
0	0	2	1	0	0	0	25	25	50

Contents:

Units	Topics	Contact Hours
Module-1 Design Engineering Introduction	Design and its objectives, Design Constraints, Design functions, Role of Science Engineering and Technology in design Engineering as Business Proposition: How to Initiate Creative design? Initiating the thinking process for designing a product of daily use. Need Identification, problem Statement, Market survey-customer requirement, Design Attributes and objectives: Ideation: Brainstorming approach arriving at solution, closing on to Design Need.	6

K. P. Singh

Module-2 Design Engineering Methodology	System level Design, Detailed Design, Design for performance, safety and reliability, (2) Design for Ergonomics and Aesthetics, (3) Design for Manufacturing & Assembly (DFMA), (4) Design for cost & Environment, (5) Modeling and Analysis of their design (6) Prototyping (7) Engineering Economics of Design, (8) Design for Use, Reuse and Sustainability and (9) Test the prototype. And additionally, students will also learn topic like (10) Ethics in Design.	6
Module-3 Project Management	PM Foundations, Project management processes, Project execution, Project closing, Global issues in PM, Product-based planning, PM documents	14
Total Hours		28

Note: Mentors are advised to take suitable project/activity to explore the above topics and make students understand the various concepts.

01CR0501	Business Benchmark
-----------------	---------------------------

Objective: This, an upper-intermediate qualification that shows students have a level of English that is adequate for practical everyday use in a business environment.

Credits Earned: 1 Credit

Course Outcomes: This an upper-intermediate level qualification, which shows students can:

- ✓ Write short pieces of business correspondence reports or proposals.
- ✓ Read extracts from business publications. Ask for the information required.
- ✓ Listen to, understand and contribute to discussions in meetings.
- ✓ Give a prepared presentation on a familiar topic.

Prerequisite of course: NA.

Contents:

Unit	Topics	Contact Hours
1	The working day Changing places, job swapping at work. Discussion on how to describe jobs. Understanding job titles names of company department.	1

V. P. Singh

2	Getting the right job Reading through job satisfaction at Sony Mobile and advice on job applications for how to make web entries and writing a short email. Discussion on format of emails and letters. Language work on past simple regular and irregular verbs. Using comparatives and superlatives	2
3	Making Contact A quiz on telephone with phone answering tips. Short talk on what is important when making a business telephone call. Language work on present passive and modal verbs for obligation. Present simple and continuous: time expressions and state verbs, asking questions, expressing likes and introducing reasons.	1
4	Launching a product Reading through a Drink Me Chai success story. How to launch and promote new products. How to write a marketing report. Language work on Present Continuous for future, will and am going to forms and the differences between them.	2
5	Starting a business Setting up an international franchise. Writing the letter of enquiry. Language work on perfect tense and simple past tense & Past continuous and using prepositions in time phrase.	2
6	Making arrangements and transport How to make travel arrangements. Writing a letter responding to an invitation. Discussion on what factors are important while on a business trip.	1
7	Business Meetings Study on survey of meetings. Writing an email about giving instructions and business trip. Discussion on how meeting should be conducted. Language work on using collocations describing reasons for meetings and referencing. Using modals to Showcase responsibility and ability.	1
8	Social media and business Ways of using social media. Writing an email arranging a meeting and introducing a company. Discussion on how to use social media. Making recommendations and using passive to express opinions and ideas.	1
9	Job applications Writing your CV. Writing a letter inviting a candidate for interview and	2

L. P. Singh

	letter giving the result of an application. Headings for CVs and describing application procedure.	
10	Communication with customers How to train for customer communication skills. Discussion on the best methods for communicating different things. Expressing result. Adjective & Noun collocations.	1
Total Hours		14

01IT0601	Software Engineering	B. Tech. Year – III
-----------------	-----------------------------	----------------------------

Objective: To understand and apply various software project management techniques based on Software Engineering guidelines and Principles.

Credits Earned: 4 Credits

Course Outcomes: After completion of this course, student will be able to

- Understand various software engineering principles and their application (Understand)
- Demonstrate use of various Agile methodologies for software development (Apply)
- Apply various modeling techniques for designing system requirement (Apply)
- Identify different types of risk and evaluate its impact on software system(Evaluate)
- Distinguish different testing strategies and Create test cases. (Create)

Prerequisite: Object Oriented Programming fundamental.

01IT0602	Web Technology	B. Tech. Year - III
----------	----------------	---------------------

Objective: The increasing use of Internet and WWW encourages everyone to use web-based solutions for their requirements. Web technology refers to the methods by which End-user devices like computers/mobiles communicate with each other. This communication involves the use of web publishing languages like HTML, CSS, JavaScript and PHP. This subject will attempt to give you a basic understanding of various aspects of web technologies.

Credits Earned: 4 Credits

Course Outcomes: End of this course will help to understand following aspects.

- To understand and compare the fundamentals of Web hosting and domain name services. (Analysis)
- To understand various non-browser specific web design principles. (Knowledge)
- To understand the need and be able to develop HTML/XHTML and CSS pages with valid structure as well as content. (Synthesis)
- To understand and be able to develop JavaScript / jQuery code to access the DOM structure of web document and object properties. (Synthesis)
- To develop dynamic web pages with usage of server-side scripting PHP and MySQL. (Synthesis)

Prerequisite of course: Programming Fundamentals

Teaching and Examination Scheme

Teaching Scheme (Hours)			Credits	Theory Marks			Tutorial/ Practical Marks		Total Marks
Theory	Tutorial	Practical		ESE (E)	IA	(CSE)	Viva (V)	Term work (TW)	
3	0	2	4	50	30	20	25	25	150

Contents:

Unit	Topics	Contact Hours
1	Introduction and Web Design: Introduction to Internet, WWW and Web 2.0, Web protocols and Web servers, Web Design Principles and Web site structure	4

r. P. Singh

2	HTML and CSS: Basics of HTML, HTML Tags and attributes, Meta tags, Character entities, hyperlink, lists, tables, images, forms, divs, XHTML Basics of CSS, CSS properties for manipulating texts, background, colors, Gradients, Shadow Effects, borders, margins, paddings, transformations, transitions and animations, etc., CSS box modal and CSS Flex, Positioning systems of CSS, CSS media queries.	10
3	JavaScript and jQuery: Basics of JavaScript and Client-side scripting language, JavaScript syntaxes for variables, functions, branches and repetitions. JavaScript alert, prompt and confirm. Objects in JavaScript, Access/Manipulate web browser elements using DOM Structure, forms and validations, JavaScript events, Basics of jQuery, jQuery syntaxes, jQuery selectors, events, effects, Access/Manipulate web browser elements using jQuery	13
4	PHP and MySQL: Introduction to PHP and its syntax, combining PHP and HTML, understanding PHP code blocks like Arrays, Strings, Functions, looping and branching, file handling, processing forms on server side, cookies and sessions. Introduction to PHP MyAdmin, connection to MySQL server from PHP, execution of MySQL queries from PHP, receiving data from database server and processing it on web server using PHP.	17

4. Cody Lindley, jQuery Cookbook, O'Reilly Media
5. Ryan Benedetti, Ronan Cranley, Head First jQuery - A Brain-Friendly Guide, O'Reilly Media

Suggested Theory distribution:

The suggested theory distribution as per Bloom's taxonomy is as per follows. This distribution serves as guidelines for teachers and students to achieve effective teaching-learning process.

K. P. Singh

Distribution of Theory for course delivery and evaluation					
Remember	Understand	Apply	Analyze	Evaluate	Create
10%	10%	30%	10%	10%	30%

List of Experiments:

Practical List should be designed in such a way that it covers entire syllabus and results in a semester mini project.

Suggested Practical List:

1. Design Wireframes for your semester project based on Web Design Principles (Tools like, www.cacoo.com www.glify.com)
2. Formatting web pages with CSS (Inline CSS, Document level CSS and External CSS) [Create semester project website's home page]
3. Formatting web pages with CSS [Create semester project website's inner pages]
4. Browser interaction and form validations (Web browser environments, forms and validations, image sliders) [Image slider plugins of jQuery, Client-side validation of Registration & Login page to be created in semester project website]
5. Introduction to PHP (Starting to script on server side, Arrays, function, validations) [Server-side validations for Registration and Login page of semester project website]
6. Advanced PHP (Management of sessions and cookies) [Implement Admin login/logout functionality and cookie wherever required]
7. PHP with MySQL connectivity (Forms, Advance PHP and database handling) [Semester Project]

Instructional Method:

1. The course delivery method will depend upon the requirement of content and need of students. The teacher in addition to conventional teaching method by black board, also need to use ICT tools and facilities.
2. The internal evaluation will be done on the basis of continuous evaluation of students in the laboratory and class-room.
3. Practical examination will be conducted at the end of semester for evaluation of performance of students in laboratory.

Supplementary Resources:

L. P. Singh

Students will use supplementary resources such as online videos, NPTEL videos, e-courses, Virtual Laboratory.

01CE0701	Mobile Computing	B.Tech. Year – IV
-----------------	-------------------------	--------------------------

Objective: Students taking this course will develop an understanding of the ways that mobile technologies can be used for teaching and learning. They will also consider the impact of mobile computing on the field of education.

Credits Earned: 4 Credits

Course Outcomes: After completion of this course, student will be able

- To understand concepts of Mobile Communication. (Understand)
- To analyze next generation Mobile Communication System. (Analyze)
- To understand network and transport layers of Mobile Communication. (Understand)
- Analyze various protocols of all layers for mobile and ad hoc wireless communication networks. (Analyze)
- To understand IP and TCP layers of Mobile Communication. (Understand)

Prerequisite of course: Fundamental of Networking.

Teaching and Examination Scheme

01IT0702	Software Testing	B. Tech. Year – IV
-----------------	-------------------------	---------------------------

Objective: Study fundamental concepts of software testing and its application in various scenarios with the help different testing strategies, methods and tools.

Credits Earned: 5 Credits

Course Outcomes: After completion of this course, students will be able to

- Understand importance of testing techniques in software quality management and assurance (Understand)
- Identify various types of software risks and its impact on different software application. (Analyze)
- Create test case scenarios for different application softwares using various testing techniques. (Create)
- Apply different testing methodologies used in industries for software testing. (Apply)

Prerequisite of course:

Software Engineering and UML

Suggested List of Experiments:

1. Implement all techniques of Black Box-Testing, White Box Testing taking your Mini Project as the Context System.
2. Write a program to find the roots of a quadratic equation and perform boundary value analysis.
3. Write a program to find area of circle, square, triangle and rectangle and perform equivalence class testing.
4. Write a program to perform a raise to power b and perform decision table testing.
5. Write a program to compute previous date, given present date as input and perform decision table testing.
6. Write a program to read three sides of a triangle and determine whether they form scalene, isosceles or equivalent triangle and test it using cause – effect testing techniques.
7. Write a program to calculate total salary of an employee, given his salary. The slab is as follows HRA=30% of basic salary, DA=80% of basic salary, MA=100, TA=800, Income tax=700, Pf=780. Draw its path graph and find its V(G) by all three methods.
8. Draw a DD path graph for the program written for experiment 6.
9. Write a program to read the marks of 10 students in 5 subjects calculate the average and assign grades. Now draw its graph matrix and find its V(G).
10. Perform Data Flow Testing on the program for quadratic equation program.
11. Case study on Testing Tool-QTP.

K. Prashant

Instructional Method:

1. The course delivery method will depend upon the requirement of content and need of students. The teacher in may be using following teaching approaches: black board, or use of any of tools such as demonstration, role play, Quiz, brainstorming, MOOCs etc.
2. The internal evaluation will be done on the basis of continuous evaluation of students in the laboratory and class-room.
3. Practical examination/Viva will be conducted at the end of semester for evaluation of performance of students in laboratory.
4. Students will use supplementary resources such as online videos, NPTEL videos, e-courses, Virtual Laboratory.

Supplementary Resources:

1. https://onlinecourses.nptel.ac.in/noc18_cs42/
2. <http://www.softwaretestinghelp.com>
3. <https://www.atlassian.com/software-testing>

V. Prash

01IT0701	Advance Web Technology	B.Tech. Year – IV
-----------------	-------------------------------	--------------------------

Objective: The increasing practice of MVC architecture in Web based applications, this course focuses on Advanced PHP concepts and Laravel Framework along with Node.js. This subject will attempt to give basic understanding of cURL methods, MVC Framework, Unit Testing, Web Services, API, Node Servers and routing.

Credits Earned: 4 Credits

Course Outcomes: After completion of this course, students will be able to

- Apply Object Oriented concepts in developing PHP applications (Apply)
- Use various third party APIs and advance concepts of PHP to develop Applications (Apply)
- Create and deploy scalable web based system using Laravel (Create)
- Develop server side web applications using Node.js (Create)

Prerequisite of course: Programming Fundamentals, Web Technology

Teaching and Examination Scheme

Teaching Scheme (Hours)			Credits	Theory Marks			Tutorial/ Practical Marks		Total Marks
Theory	Tutorial	Practical		ESE (E)	IA	(CSE)	Viva (V)	Term work (TW)	
3	0	2	4	50	30	20	25	25	150

Contents:

Unit	Topics	Contact Hours
1	Object Oriented PHP: Object Oriented Programming with PHP – Classes, Properties, Methods, Magic Methods: Constructor, Destructor, Getter and Setter, Encapsulation, Inheritance, Data Abstraction, Polymorphism.	6
2	Advance PHP: Web Scraping using cURL, Regular Expression, Mail function, Web Services & APIs	6
3	PHP MVC Framework - Laravel: Introduction to Laravel and MVC, Environment Setup, Routes, Namespaces,	20

K. P. Singh

	Controllers, Views, Request Response, Redirections, Forms, Session, Cookie, Database Connectivity and CRUD operations	
4	Node.js Introduction to Node.js, Node Package Manager, REPL Terminal, Node.js Web server – Server and Clients, Creating a simple server, Rendering HTML, Rendering JSON Data, Routing	10
Total Hours		42

References:

1. PHP: The Complete Reference, By Steven Holzner. Publisher: Tata McGraw Hill
2. Laravel: Up and Running, By Matt Stauffer. Publisher: O'Reilly Media
3. Node.js in Action, By Mike Cantelon, Marc Harter, T.J. Holowaychuk, and Nathan Rajlich. Publisher: Manning publications

Suggested Theory distribution:

The suggested theory distribution as per Bloom’s taxonomy is as per follows. This distribution serves as guidelines for teachers and students to achieve effective teaching-learning process

Distribution of Theory for course delivery and evaluation					
Remember	Understand	Apply	Analyse	Evaluate	Create
10%	10%	30%	10%	10%	30%

List of Experiments:

1. Develop a web application in PHP using various concepts of object oriented programming like Class, Object, Inheritance, Function, Overloading, Constructor and Destructor.
2. Develop a web scraper to mine structured data from any website according to given application.
3. Develop a web application in PHP to demonstrate the use of third party APIs like weather, sports, stock market, etc.
4. Develop a small project using Laravel framework.
5. Develop a small project in Node.js.

K. P. Singh

Instructional Method:

Marwadi University **Syllabus for Bachelor of Technology**
Department of Information Technology

- a. The course delivery method will depend upon the requirement of content and need of students. The teacher in addition to conventional teaching method by black board, also need to use ICT tools and facilities.
- b. The internal evaluation will be done on the basis of continuous evaluation of students in the laboratory and class-room.
- c. Practical examination will be conducted at the end of semester for evaluation of performance of students in laboratory.

Supplementary Resources:

Students will use supplementary resources such as online videos, NPTEL videos, e-courses, Virtual Laboratory.

01CE0703	iOS Programming	B.Tech. Year – IV
-----------------	------------------------	--------------------------

Objective: Apple Inc. has developed an operating system to power its iPhone, iPad and iPod Touch which is called iPhone OS (iOS). It is one of the most popular mobile OS. iOS is being maintained by Apple Inc and versions of iOS are released annually and made available for all iOS devices. iOS Programming makes use of Swift programming language and XCode IDE. Swift is a programming language developed by Apple for mac OS, iOS, watch OS and tvOS. XCode is the IDE used to design and develop applications for the apple devices.

Credits Earned: 5 Credits

Course Outcomes: After completion of this course, student will be able to

1. To be able to design iOS application.(Apply)
2. To be able to develop an application using Swift Programming language(Create)
3. To be able to develop multi-screen application using XCode(Create)
4. To understand the need and be able to use Different UI Controllers.(Understand)
5. To be able to debug an application using XCode debugger.(Analyze)

Prerequisite of course: Basics of programming language, Concepts of OOP and Database

Teaching and Examination Scheme

Teaching Scheme (Hours)			Credits	Theory Marks			Tutorial/ Practical Marks		Total Marks
Theory	Tutorial	Practical		ESE (E)	IA	(CSE)	Viva (V)	Term work (TW)	
4	0	2	5	50	30	20	25	25	150

Contents:

Unit	Topics	Contact Hours
1	Fundamentals: Overview of iOS and X-CODE: Installation, Create and manage project using XCode, Introduction to iPhone Architecture, Introduction to SWIFT, Developer Technology Overview: The Apple Developer Tool, Swift, Cocoa Touch, Model-View-Controller, Interface Builder, Overview of latest iOS	8

K. Prashant

	features.	
2	Swift Basics: Object oriented programming with swift, File structure in Swift, Swift Programming Basics: Data types, Constants, Variables, Operators, Decision making and Branching, Arrays, Functions, Enumerations. Introduction to iOS Playground.	10
3	iPhone Application Development: Exploring the iOS Framework with XCode, Cocoa Fundamentals, Tracking the iOS Application Life cycle, Understanding Interface Builder, Creating User Interface, Customizing the Interface Appearance using Layout, Views, Outlets and Actions, View Controllers and UI Controllers like Labels, Buttons, Sliders, Different Views, Gestures, etc. Connecting the code with Accelerometer, Location service, 3D touch, Push notifications Understand the MVC Design pattern, MVC in XCode, Using Application Templates, User Input and Output: Handling Keyboard Input, Implementing Alert, Sounds and Vibrations, Using XCode debugger.	20
4	Database Management and Web Services: Parsing JSON data, Parsing XML data, SQLite databases, Web Service APIs calls.	12
5	Submit App to Apple Store: Create Apple developer account, Submit App to Apple Store.	3
Total Hours		53

References:

6. iOS 10 Programming Fundamentals with Swift by Matt Neuburg - O'Reilly Media Pub
7. Building iPhone and iPad Electronic Projects - MikeWesterfield - O'Reilly Media Pub.
8. Head First iPhone and iPad Development, 2nd Edition - Dan Pilone, Tracey Pilone - O'Reilly Media
9. Beginning iPhone and iPad Web Apps - ChrisApers, Daniel Paterson - Apress Pub

Suggested Theory distribution:

The suggested theory distribution as per Bloom's taxonomy is as per follows. This distribution serves as guidelines for teachers and students to achieve effective teaching-learning process

Distribution of Theory for course delivery and evaluation					
Remember	Understand	Apply	Analyse	Evaluate	Create
15%	23%	15%	15%	13%	19%

K. P. Singh

List of Experiments:

Practical List should be designed in such a way that it covers entire syllabus and results in a semester mini project.

Suggested Practical List:

1. Installation of x-code on MAC.
2. Write a swift program to check the palindrome string.
3. Write a swift program for basic calculator.
4. Create an application to demonstrate different UI controllers.
5. Create an application which can play audio and video files.
6. Develop an application in which user can insert, update and delete the record in database.
7. Develop an application for signing-up user with details like: Username, Password, Gender, Birth-date, Country, Image etc. fields.
8. Develop an application to fetch user data using API service and display on the screen.

Instructional Method:

- a) The course delivery method will depend upon the requirement of content and need of students. The teacher in addition to conventional teaching method by blackboard also need to use ICT tools and facilities.
- b) The internal evaluation will be done on the basis of continuous evaluation of students in the laboratory and class-room.
- c) Practical examination will be conducted at the end of semester for evaluation of performance of students in laboratory

Supplementary Resources:

Students can use supplementary resources such as online videos, e-courses, etc.

- a) <https://developer.apple.com>
- b) <https://developer.apple.com/xcode/>
- c) <http://www.tutorialspoint.com/swift/>

01CE0704	Android Programming	B. Tech. Year – IV
-----------------	----------------------------	---------------------------

Objective: This course facilitates classroom and laboratory learning, letting students develop competence and confidence in android programming and understand the entire Android Apps Development Cycle, as well as it would also enable the students to independently create Android Applications

Credits Earned: 5 Credits

Course Outcomes: After completion of this course, student will be able to

- Demonstrate the Understanding of fundamental of Android Programming. (Understand)
- Build their ability to develop software with reasonable complexity on mobile platform. (Apply)
- Discover the life cycles of Activities, Applications, intents and fragments. (Evaluate)
- Design the Android apps by using Java Concepts. (Create)

Prerequisite of course: Java or object-oriented programming experience.

Teaching and Examination Scheme

Teaching Scheme (Hours)			Credits	Theory Marks			Tutorial/ Practical Marks		Total Marks
Theory	Tutorial	Practical		ESE (E)	IA	(CSE)	Viva (V)	Term work (TW)	
4	0	2	5	50	30	20	25	25	150

Contents:

Unit	Topics	Contact Hours
1	Basic of Android Programming: Introduction to Android OS, Setting up the Android Application Development Environment, Creating, Testing and Debugging Applications, Android Stack, Android applications structure, Activity life cycle, Understanding implicit and explicit intents.	8
2	User Interface in Android: Adaptive and responsive user interfaces, User Input Controls, Menus,	12

K. P. Singh

	Screen Navigation, RecyclerView, Drawables, Themes and Styles, Fragments, Fragment Life Cycle, Introduction to Material Design, Testing the user interface.	
3	Background tasks: AsyncTask, AsyncTaskLoader, Connecting App to Internet, Broadcast receivers, Services, Notifications, Alarm managers.	8
4	Sensor, Location and Maps: Sensor Basic, Motion and Position Sensors, Location services, Google maps API, Google Places API	8
5	Working with data in Android: Shared Preferences, App Setting, SQLite primer, Store data using SQLite database, Content Providers, Content Resolver, Loader	8
6	Performance Improvement of App: Performance Parameters, Profiling Tools, Rendering and Layout, Garbage Collection and Memory Leaks, Best Practices.	7
7	Publishing Your App: Preparing for publishing, Signing and preparing the graphics, Publishing to the Android Market	5
	Total Hours	56

References:

1. Android: A Programming Guide by J.F. DiMarzio
2. Hello, Android: Introducing Google's Mobile Development Platform by Ed Burnett
3. Programming android by Zigurd Mednieks
4. Android User Interface Design: Turning Ideas and Sketches into Beautifully Designed Apps by Ian G. Clifton
5. Android Developer Fundamental Course by Google.
6. Advance Android Developer Course by Google.

Suggested Theory distribution:

The suggested theory distribution as per Bloom's taxonomy is as per follows. This distribution serves as guidelines for teachers and students to achieve effective teaching-learning process

Distribution of Theory for course delivery and evaluation					
Remember	Understand	Apply	Analyse	Evaluate	Create
20%	20%	20%	15%	10%	15%

L. P. Singh

Suggested List of Experiments:

1. Install Android Studio with Specific Latest SDK in your System.
2. Develop an android app which displays “Hello World” message.
3. Develop an android app which displays a form to get following information from user.
1) Username 2) Password 3) Email Address 4) Phone Number 5) Country
Form should be followed by a Button with label “Submit”.
When user clicks the button, a message should be displayed to user describing the information entered.
Utilize suitable UI controls (i.e. widgets). [When user enters country in Auto Complete TextView, list of states should be displayed in Spinner automatically.]
4. Create sample application that demonstrates activity life cycle’s all methods.
5. Using Android, Create a login Activity. It asks “username” and “password” from user. If username and password are valid, it displays Welcome message using new activity
6. “Happy Birth Day” App using TextView and ImageView
7. Create “Hello Toast” App by implementing a click handler method for the button to display a message on the screen when the user clicks. Use Linear Layout for creating view.
8. Create the MP3 player like application with service
9. The Simple Calculator app has two edit texts and four buttons. When you enter two numbers and click a button, the app performs the calculation for that button and displays the result.
10. Develop one App. Which Contains Specific User Interface and design Interface.

Instructional Method:

- d) The course delivery method will depend upon the requirement of content and need of students. The teacher in addition to conventional teaching method by black board, may also use any of tools such as demonstration, role play, Quiz, brainstorming, MOOCs etc.
- e) The internal evaluation will be done on the basis of continuous evaluation of students in the laboratory and class-room.
- f) Practical examination will be conducted at the end of semester for evaluation of performance of students in laboratory.
- g) Students will use supplementary resources such as online videos, NPTEL videos, e-courses, Virtual Laboratory

01CE0705	Programming with Python	B.Tech. Year – IV
-----------------	--------------------------------	--------------------------

Objective: Python is next generation multi-purpose programming language that allows different users to create applications of various domains. Students will be able to learn primary fundamentals of python programming and potential of python is to achieve modern computing requirements.

Credits Earned: 05

Course Outcomes: After completion of this course, student will be able to

- Apply various fundamentals for problem solving using python. (Application)
- Implement modular programming and differentiate mutability of various datatypes. (Analyze)
- Create object-oriented solution by applying various concept like polymorphism, inheritance and package with python programming. (Create)
- Implement multithreading and manage security in Linux operating system. (Create)

Prerequisite of course: Object oriented concepts, Programming fundamentals

Teaching and Examination Scheme

Teaching Scheme (Hours)			Credits	Theory Marks			Tutorial/ Practical Marks		Total Marks
Theory	Tutorial	Practical		ESE (E)	IA	(CSE)	Viva (V)	Term work (TW)	
4	0	2	5	50	30	20	25	25	150

Contents:

Unit	Topics	Contact Hours
1	Basics of Python: Python Installation and Working of it, get familiar with python variables and data types, Operator understanding and its usage, detail study of python blocks,	8
2	Structure Types and mutability: Hands on with conditional blocks using if, else and elif, Hands on	10

K. P. Singh

	examples and study of looping with range, list and dictionaries. Hands on to organize python code with function, modular approach in python.	
3	Exception, Testing and Debugging: Handling if exceptions to handle the code cracks, handling and helping file operations, coding with the exceptional handling and testing Anonymous method, Properties, Indexers, Exception Handling	10
4	Classes and OOP Concepts: Procedural and Object-Oriented Programming, Classes and working with instances, Method overloading, Polymorphism, importing internal module as well as external modules in the code Packages understanding and their usage, hands on with Lambda function in python coding with the use of functions, modules and external packages	14
5	Algorithm and Data Structure: Stack, Queue, Tree, ordered list, Introduction to Recursion, Divide and Conquer Strategy, Greedy Strategy, Graph Algorithms.	10
6	Advance Topics: Regular Expression, Multi thread Programming, Security	4
	Total Hours	56

References:

1. Starting Out with Python (2009) Pearson , Tonny Gaddis
2. Beginning Python Wrox Publication Peter Norton, Alex Samuel
3. Python Algorithms Apress, Magnus Liet Hetland
4. Python Object Oriented Programming PACKT Press, Dusty Phillips
5. Python for Unix and Linux System Administration O'Reilly, Noad Gift

Suggested Theory distribution:

The suggested theory distribution as per Bloom's taxonomy is as per follows. This distribution serves as guidelines for teachers and students to achieve effective teaching-learning process

Distribution of Theory for course delivery and evaluation					
Remember	Understand	Apply	Analyze	Evaluate	Create
10%	10%	40%	15%	15%	10%

K. P. Singh

List of Experiments:

1. Implement a Python program to Calculate GCD of two numbers.
2. Implement a Python Program to Calculate the square root of a number by Newton's Method.
3. Implement a Python Program to find the largest number from a list of numbers.
4.
 - a. Implement a Python Program to perform Search
 - b. Implement a Python Program to perform Linear search
 - c. Implement a Python Program to perform Binary search
5. Implement a Python Program to perform insertion sort.
6. Implement a Python Program to perform selection sort.
7. Implement a Python program to multiply matrices.
8. Implement a Python program to Calculate the most frequent words in a text from a file.
9. Implement function overloading with different function signatures.
10. Implement concept of class, instances and inheritance.
11. Implement internal and external library.
12. Solve algorithmic problems by program using different problem-solving strategies.
13. Search content using regular expression library in python.
14. Implement Matrix multiplication using multi-threading in python.
15. Perform Linux administration task using python.

Instructional Method:

1. The course delivery method will depend upon the requirement of content and need of students. The teacher in addition to conventional teaching method by black board, may also use any of tools such as demonstration, role play, Quiz, brainstorming, MOOCs etc.
2. The internal evaluation will be done on the basis of continuous evaluation of students in the laboratory and class-room.
3. Practical examination will be conducted at the end of semester for evaluation of performance of students in laboratory.
4. Students will use supplementary resources such as online videos, NPTEL videos, e-courses, Virtual Laboratory

01CE0706	Advanced .NET Technologies	B.Tech. Year – IV
----------	----------------------------	-------------------

Objective: The objective is to study web development technology and tools provided by Microsoft .NET platform. Students are expected to learn how to design and develop web applications along with database connectivity using Microsoft .NET Technology.

Credits Earned: 05

Course Outcomes: After completion of this course, student will be able to

6. Understand web concepts and features of ASP.NET (Understand)
7. Create applications with strong object oriented principles (Create)
8. Implement web applications using various ASP.NET controls (Apply)
9. Create enhanced backend/data layer quickly using LINQ (Create)
10. Implement web applications using ASP.NET MVC (Apply)
11. Develop cross platform mobile applications using Xamarin (Apply)

Prerequisite of **course:**
C#.NET, Object oriented concepts, .NET Technologies, Programming fundamentals

Teaching and Examination Scheme

Teaching Scheme (Hours)			Credits	Theory Marks			Tutorial/ Practical Marks		Total Marks
Theory	Tutorial	Practical		ESE (E)	IA	(CSE)	Viva (V)	Term work (TW)

6. <https://university.xamarin.com/>

Suggested Practical List:

1. Implement Login and Registration Form using various ASP.NET Server Controls

D. P. Singh

2. Implement validation in Registration Form using ASP.NET Validation controls.
3. Implement various State Management techniques in Login System
4. Implement an ASP.NET website using Master and Theme.
5. Create / Write LINQ Queries for following operations Using the sample db (e.g. Northwind db) LINQ: Operations – Order By, Order by descending, Select One, Select Many, Group By, Distinct, Except, Intersect.
6. Create / Write LINQ Queries for following operations Using the sample db (e.g. Northwind db) LINQ: Operations – all Join Operations
7. Create ASP.NET MVC App that does basic CRUD (create / read / update / delete operations)
8. Create XAMRIN App to use various XAMRIN controls to demonstrate Mobile app frontend interaction.

v. p. sh

01CE0702	Artificial Intelligence	B.Tech. Year – IV
-----------------	--------------------------------	--------------------------

Objective: With the approach of the World Wide Web expanding, the field of AI and its strategies are being utilized in numerous territories which influence human life specifically. Different practices for encoding data in PC frameworks, for example, Predicate Logic, Production rules, Semantic systems discover use in true issues. The fields of AI, for example, Game Playing, Natural Language Processing, and Connectionist Models are likewise basic. Graduates should realize some programming language just as the nuts and bolts for AI and its procedures.

Credits Earned: 5 Credits

Course Outcomes: After completion of this course, students will be able to

- Assess critically the techniques presented and to apply them to real world problems(Analyze)
- Mindful of the significant difficulties confronting AI and the multifaceted nature of run of the mill issues inside the field(remember)
- Comprehend the significant zones and difficulties of AI(Understanding)
- Apply fundamental AI calculations to take care of issues(Apply)
- Get a learning of utilizations in various zones of registering including the web and human communication(Evaluate)

Prerequisite of course:

- Knowledge of Programming Techniques
- Data structures, such as balanced binary trees
- Mathematics

Suggested Theory distribution:

The suggested theory distribution as per Bloom’s taxonomy is as per follows. This distribution serves as guidelines for teachers and students to achieve effective teaching-learning process

Distribution of Theory for course delivery and evaluation					
Remember	Understand	Apply	Analyze	Evaluate	Create
30%	30%	10%	20%	10%	0%

Suggested List of Experiments:

1. Write a program to implement Tic-Tac-Toe game problem
2. Write a program to implement BFS (for 8 puzzle problem or Water Jug problem or any AI search problem)
3. Write a program to implement DFS (for 8 puzzle problem or Water Jug problem or any AI search problem)
4. Write a program to implement Single Player Game (Using Heuristic Function)
5. Write a program to Implement A* Algorithm
6. Write a program to Implement AO* Algorithm
7. Write a program to solve N-Queens problem using Prolog.
8. Write a program for the following task:

L. P. Singh

Create a suitable database and then find the following

- Students who are living in Rajkot
- Age Greater Than 15
- Students who has more than 60%

9. Write a program to solve 8 puzzle problem using Prolog.
10. Write a program to check whether given value is character or digit
11. Write a program to generate random number with respect to entered digit.
12. Write a program to implement login system.
13. Write a program to implement login system recursively
14. Write a program to solve travelling salesman problem using Prolog.
15. Write a program to display the element of give list.
16. Write a program for the family tree
17. Write a program to check given element is in the list or not.
18. Convert following Prolog predicates into Semantic Net

```
cat(tom).
cat(cat1).
mat(mat1).

01CE0707	Data Mining & Information Retrieval	B.Tech. Year - IV
-----------------	--	--------------------------

Objective: The course is designed for a section level investigation of data mining and information retrieval methods. It is about how to discover significant data and therefore separate important patterns from it. The fundamental speculations and scientific models of data mining and information retrieval are covered in the syllabus.

Credits Earned: 5 Credits

Course Outcomes: After completion of this course, student will be able to

- Understand different indexing techniques on real data set. (Understand)
- Demonstrate different classification methods on real and synthetic data set. (Apply)
- Discover knowledge using various Data Mining methods for given system/application. (Apply)
- Analyze various data warehousing techniques used in industry. (Analysis)

Prerequisite of course: Database management systems, data structures.

Teaching and Examination Scheme

Teaching Scheme (Hours)			Credits	Theory Marks			Tutorial/ Practical Marks		Total Marks
Theory	Tutorial	Practical		ESE (E)	IA	(CSE)	Viva (V)	Term work (TW)	
4	0	2	5	50	30	20	25	25	150

Contents:

Unit	Topics	Contact Hours
1	Introduction to Data Mining What is data mining, Why data mining ,Data Mining: On what kind of data, what kind of patterns can be mined, data mining functionalities- Classification, Clustering, Regression and Association, Classifications of data mining systems , Process of Knowledge Discovery from Databases and current trends.	08
2	Introduction to Information Retrieval and Indexing concepts	08

K. Prashant

	Introduction to information retrieval, conceptual model of IR, Basic concepts of Indexing, Principles theory of Indexing, Content Analysis: Meaning, Purpose, Applications in real life, Types of Indexing, and Criteria for evaluation of Information Retrieval Systems.	
3	Retrieval methods Types of Information retrieval, Search processes, Strategies of Search methods, Boolean Logic, Query Preparation.	06
4	Overview of Data warehousing Tools and Techniques What is data warehousing and its key features, Overview of the fields: Data Marts and types of Data Marts, Metadata in Data warehouse, what is OLAP (online analytical processing), introduction to data cubes (facts and dimensions) , OLAP operations- slicing, dicing, roll-up, pivot, difference between OLAP and OLTP, Differentiate OLAP models- ROLAP and MOLAP, defining star and snowflake schema, fact constellations.	08
5	Data Preprocessing and Data Mining tasks Need for data preprocessing: An overview, Introduction to major tasks of data preprocessing – data cleaning, data integration, data reduction, data transformation and data discretization. Data cleaning- how to handle missing values, Data smoothing using Binning method, Data Normalization: min-max, z-score, decimal scaling.	08
6	Concepts of Classification and Prediction Introduction to classification, Classification techniques- Decision Tree, Naïve bayes and Rule based classifier, Model evaluation and selection, Bagging, Boosting. What is Prediction?, Prediction techniques- Linear and non-linear regression, logistic regression.	08
7	Concepts of Association and Clustering Introduction to frequent pattern analysis and its applications- Basket data Analysis, measures of frequent patterns and association rule: support and confidence, how to find Frequent item sets and association rules by using Apriori, FP growth tree methods, Introduction to Cluster Analysis, clustering techniques - k-means, DBSCAN, CLIQUE.	08
	Total Hours	54

Suggested Theory distribution:

The suggested theory distribution as per Bloom’s taxonomy is as per follows. This distribution serves as guidelines for teachers and students to achieve effective teaching-learning process

Distribution of Theory for course delivery and evaluation					
Remember	Understand	Apply	Analyze	Evaluate	Create
0%	20%	50%	30%	0%	0%

Suggested List of Experiments:

1. Explore and compare various data mining tools.
2. Weka Installation.
3. Preprocessing on real and synthetic datasets.
4. Apply classification technique to find association rules.
5. Demonstration of various classification algorithms.
6. Performance measurement of various classification algorithms.
7. Apply K-mean method of clustering to discover similar objects of real time datasets.
8. Demonstration of various IR techniques.
9. Performance evaluation of various IR techniques.
10. Mini Project based on learning of this subject.

Instructional Method:

- The course delivery method will depend upon the requirement of content and need of students. The teacher in addition to conventional teaching method by black board, may also use any of tools such as demonstration, role play, Quiz, brainstorming, MOOCs etc.
- The internal evaluation will be done on the basis of continuous evaluation of students in the laboratory and class-room.
- Practical examination will be conducted at the end of semester for evaluation of performance of students in laboratory.
- Students will use supplementary resources such as online videos, NPTEL videos, e-courses, Virtual Laboratory.

K. P. Singh

01CE0709	Computational Intelligence	B.Tech. Year - IV
-----------------	-----------------------------------	--------------------------

Objective: The purpose of this course is to teach the students about the basic techniques, theory and computational models of Fuzzy and Soft computing. This subject focuses on how to apply several neural network algorithms over real-time problems to get optimized outcome.

Credits Earned: 5

Course Outcomes:

- Recognize and depict soft computing methods and their roles to build intelligent systems. (Knowledge)
- Apply fuzzy principles and thinking to deal with vulnerability and tackle realtime issues. (Apply)
- Apply genetic algorithms to generate optimized results for a particular problem. (Apply)
- Apply neural networks to design classification problems. (Apply)
- Evaluate and compare solutions by various soft computing approaches for a given problem. (Evaluate)

Prerequisite: Data Structure, Algorithms

Teaching and Examination Scheme

01IT0703	Major Project – I	B.Tech. Year - IV
-----------------	--------------------------	--------------------------

Objective: The objective is to enhance practical skills of students which will help them to analyze and solve real world problems by using latest software / hardware / tools and by applying theoretical knowledge

Credits Earned: 1 Credit

Course Outcomes: After completion of this course, student will be able to

- To analyze real world problems and design solutions for those problems (Analyze)
- To identify practical aspect of studied technologies (Evaluate)
- To use latest software / hardware as per requirement (Apply)
- To develop complete solutions for read world problems (Create)
- To use different testing methodologies for implemented work (Apply)
- To present and document implemented work effectively (Create)

Prerequisite of course: Hardware/Software Knowledge, Software Engineering, Mini Project

01CE0801	Natural Language Processing	B. Tech. Year – IV
-----------------	------------------------------------	---------------------------

Objective: Natural language processing deals with written text. Students will learn how to process written text from basic of fundamental knowledge starts with Finite automata, Regular expression and probabilistic model with n-grams. Recognizing Speech and parsing with grammar. This course also covers basis of semantic analysis and discourse analysis and drives it to machine translation. This NLP course will boost student knowledge to research level where they can conduct new level of research. It really helpful for under graduate students

Credits Earned: 5 Credits

Course Outcomes: After completion of this course, student will be able to

- Understand Natural Language Processing (Understanding).
- Probabilistic model of defining language and techniques.(Application)
- Applying Hidden Markov model and Speech Recognition.(Application)
- Application of context free grammar and language parsing.(Application)
- Implement probabilistic and language parsing.(Application)
- Differentiation of semantic and discourse in terms of NLP.(Analyse)

Prerequisite of course: Data Structure, Theory of Computation, Compiler Design.

Teaching and Examination Scheme

Contents:

Unit	Topics	Contact Hours
1	Introduction of NLP: Knowledge in Speech and Language processing, ambiguity and models and algorithm, language and understanding, brief history.	1

K. P. Singh

2	Regular Expressions, Automata, Similarity Computation: Regular Expressions, patterns, FA, Formal Language, NFSA, Regular Language and FSAs, Raw Text Extraction and Tokenization, Extracting Terms from Tokens, Vector Space Representation and Normalization, Similarity Computation in Text	3
3	Morphology and Finite-State Transducers: Inflection, Derivational Morphology, Finite-State Morphological Parsing, The Lexicon and Morph tactics, Morphological Parsing with Finite- State Transducers, Combining FST Lexicon and Rules, Lexicon-free FSTs: The Porter Stemmer, Human Morphological Processing	3
4	Matrix Factorization and Topic Modeling: Introduction, Singular Value Decomposition, Nonnegative Matrix Factorization, Probabilistic Latent Semantic Analysis, Latent Dirichlet Allocation	3
5	Computational Phonology and Text-to-Speech: Speech Sounds and Phonetic Transcription, The Phoneme and Phonological Rules, Phonological Rules and Transducers, Advanced Issues in Computational Phonology, Machine Learning of Phonological Rules, Mapping Text to Phones for TTS, Prosody in TTS	3
6	Probabilistic Models of Pronunciation and Spelling: Dealing with Spelling Errors, Spelling Error Patterns, Detecting Non- Word Errors, Probabilistic Models, Applying the Bayesian method to spelling, Minimum Edit Distance, English Pronunciation Variation, The Bayesian method for pronunciation and Weighted Automata, Pronunciation in Humans	5
7	N-grams: Counting Words in Corpora, Simple (Unsmoothed) N-grams, Smoothing, Back off, Deleted Interpolation, N-grams for Spelling and Pronunciation, Entropy	3
8	HMMs and Speech Recognition: Speech Recognition Architecture, Overview of Hidden Markov Models, The Viterbi Algorithm Revisited, Advanced Methods for Decoding, Acoustic Processing of Speech, Computing Acoustic Probabilities, Training a Speech Recognizer, Wave form Generation for Speech Synthesis, Human Speech Recognition	4
9	Word Classes and Part-of-Speech Tagging:	3

K. P. Singh

	Tag sets for English, Part of Speech Tagging, Rule-based Part-of-speech Tagging, Stochastic Part-of-speech Tagging, Transformation-Based Tagging	
10	Context-Free Grammars for English: Context-Free Rules and Trees, Sentence-Level Constructions, The Noun Phrase, Coordination, Agreement and The Verb Phrase and Sub-categorization, Auxiliaries, Spoken Language Syntax, Grammar Equivalence & Normal Form, Finite State & Context-Free Grammars, Grammars & Human Processing	4
11	Parsing with Context-Free Grammars and Features and Unification: Parsing as Search, A Basic Top-down Parser, The Earley Algorithm, Finite-State Parsing Methods, Feature Structures, Unification of Feature Structures, Features Structures in the Grammar, Implementing Unification, Parsing with Unification Constraints, Types and Inheritance	3
12	Lexicalized and Probabilistic Parsing: Probabilistic Context-Free Grammars, Problems with PCFGs, Probabilistic Lexicalized CFGs, Dependency Grammars, Human Parsing, The Chomsky Hierarchy, How to tell if a language isn't regular, Natural Language Context-Free or not, Complexity and Human Processing	3
13	Representing Meaning and Semantic Analysis: Computational Desiderata for Representations, Meaning Structure of Language, First Order Predicate Calculus, Some Linguistically Relevant Concepts, Alternative Approaches to Meaning, Syntax-Driven Semantic Analysis, Attachments for a Fragment of English, Integrating Semantic Analysis into the Early Parser, Idioms and Compositionality, Robust Semantic Analysis	6
14	Lexical Semantics and Information Retrieval: Relations Among Lexemes and Their Senses, Word Net: A Database of Lexical Relations, The Internal Structure of Words, Creativity and the Lexicon, Selection Restriction-Based Disambiguation, Robust Word Sense Disambiguation, Information Retrieval, Other Information Retrieval Tasks, Named Entity Recognition	6
15	Discourse and Machine Translation: Reference Resolution, Text Coherence, Discourse Structure, Psycholinguistic Studies of Reference and Coherence, Language Similarities and Differences, Direct Translation, Using Statistical Techniques	3
16	Text Sequence Modeling and Deep Learning:	4

K. P. Singh

Statistical Language Models, Kernel Methods, Word-Context Matrix Factorization Models, Neural Language Models, Recurrent Neural Networks

01CE0802	Big Data and Analytics	B.Tech. Year – IV
-----------------	-------------------------------	--------------------------

Objective: Big data is an extremely useful area in the era of computing techniques as it aids in finding useful pattern from large datasets. Large datasets are so huge that they cannot be processed with traditional technologies. We require special computing system which can handle large data and tandem it with other important aspects like parallel processing, data failure and data pre-processing.

Credits Earned: 5 Credits

Course Outcomes: After completion of this course, student will be able to

- Gain Understanding about Big Data Technology and its Tools. (Understand)
- Understand and apply extracting useful pattern from large datasets. (Apply)
- Implementation of Big data mining techniques using different software. (Create)
- Understand how data analytics and data science maps to current industry.(Analyze)
- Understanding and implementing Algorithms in an optimized way using various Big Data Tools. (Apply)

Prerequisite of course: Basic Programming Knowledge, Data Mining.

Teaching and Examination Scheme

01CE0803	Cloud Computing	B. Tech. Year: IV
-----------------	------------------------	--------------------------

Objective: This course is intended to analyze the basics of cloud computing, and make aware students with diversified technologies working for cloud architecture. Course will be focusing on architecture, service models, privacy & security in cloud.

Credits Earned: 5 credits

Course Outcomes: After the completion of this course, student will be able to

- Understand and analyze the architecture of Cloud (Analyze).
- Identify and apply deployment and management options of AWS Cloud Architecture (Apply).
- Design architectures to decouple infrastructure and reduce interdependencies (Create).
- Formulate policy based scenarios in Cloud simulators (Create).

Prerequisite of course: Operating System , Computer Networks

Suggested Theory distribution:

The suggested theory distribution as per Bloom's taxonomy is as per follows. This distribution serves as guidelines for teachers and students to achieve effective teaching-learning process

Distribution of Theory for course delivery and evaluation					
Remember	Understand	Apply	Analyse	Evaluate	Create
0%	40%	40%	20%	0%	0%

Suggested List of Experiments:

1. Develop a cost function of linear regression using sample data.
2. Develop a Gradient descent of linear regression using sample data.
3. Implement linear regression algorithm using sample data.
4. Implement logistic regression algorithm using sample data.
5. Develop regularization in already developed logistic regression algorithm.
6. Calculate bias and variance from already computed algorithm.
7. Calculate Error Matrix for already implemented algorithm.
8. Implement k-means algorithm using sample data.
9. Develop PCA based on sample data.
10. Develop and implement Neural-network based any algorithm using sample data.

Instructional Method:

- a. The course delivery method will depend upon the requirement of content and need of students. The teacher in addition to conventional teaching method by black board, may also use any of tools such as demonstration, role play, Quiz, brainstorming, MOOCs etc.
- b. The internal evaluation will be done on the basis of continuous evaluation of students in the laboratory and class-room.
- c. Practical examination will be conducted at the end of semester for evaluation of performance of students in laboratory.
- d. Students will use supplementary resources such as online videos, NPTEL videos, e-courses, Virtual Laboratory

Supplementary Resources:

1. Machine Learning by Andrew NG on Coursera

K. P. Singh

01CE0805	Business Intelligence	B. Tech. Year – IV
-----------------	------------------------------	---------------------------

Objective: Exponential increase in size and availability of data makes Business Intelligence (BI) an extremely valuable subject. BI as a methodology and technique for gathering, storing, analyzing, sharing and providing access to data, to help University, Enterprise or any other organization to make a better decision. Now a days as internet users are increasing, so there is a requirement of techniques through which raw data can be converted into Information. This course will cover data science, data visualization dashboard design, performance dashboard and future of BI.

Credits Earned: 5 Credits

Course Outcomes: After completion of this course, student will be able to

- Graduates will learn concept, process, and practice of the data science and how methodologies are applied to visualize information from raw data. (Apply)
- Encourage and motivate students for learning BI involving predictive and statistical approach. (Understand)
- Understand and analyze BI concepts and techniques. (Analyze)
- Understand and apply BI Techniques for various situations. (Apply)
- Implement BI techniques by using various tools and Create data visualization. (Create)

Prerequisite of course: Data Mining

Teaching and Examination Scheme

Teaching Scheme (Hours)			Credits	Theory Marks			Tutorial/ Practical Marks		Total Marks
Theory	Tutorial	Practical		ESE (E)	IA	(CSE)	Viva (V)	Term work (TW)	
4	0	2	5	50	30	20	25	25	150

Contents:

Unit	Topics	Contact Hours
1	Introduction to Business Intelligence BI concept, BI architecture, BI in today's perspective, BI Process, Applications of BI like Financial analysis, statistical analysis, sales analysis,	08

K. P. Singh

	CRM, result pattern and ranking analysis, Balanced Scorecard, BI in Decision Modelling: Optimization, Decision making under uncertainty. Ethics and business intelligence.	
2	Data Science The concept, process and typical tools in data science. Example of different algorithms i.e segmentation, classification, validation, regressions, recommendations. Exercises using Excel and R to work on histograms, regression, clustering and text analysis. Co-relation between Algorithm and Code in data science	12
3	Data Visualization and Dashboard Design Responsibilities of BI analysts by focusing on creating data visualizations and dashboards. Importance of data visualization, types of basic and composite charts.	10
4	Performance Dashboard Measuring, Monitoring and management of Business, KPIs and dashboard, the types of dashboards, the common characteristics of Enterprise dashboard, design of enterprise dashboards, and the common pitfalls of dashboard design.	08
5	Modelling and Analysis Exploring Excel Modeling capabilities to solve business problems, summarize and present selected data, introduction to business metrics and KPIs, creating cubes using Microsoft Excel	10
6	Future of Business Intelligence Emerging Technologies, Machine Learning, Predicting the Future with the help of Data Analysis, BI Search & Text Analytics – Advanced Visualization – Rich Report, Future beyond Technology.	08

Suggested Theory distribution:

The suggested theory distribution as per Bloom’s taxonomy is as per follows. This distribution serves as guidelines for teachers and students to achieve effective teaching-learning process

Distribution of Theory for course delivery and evaluation					
Remember	Understand	Apply	Analyze	Evaluate	Create
0%	20%	40%	20%	0%	20%

Suggested List of Experiments:

1. Introduction to BI tools, their pros and cons and limitations.
2. Demonstration of BI techniques ETL on Application Financial Analysis.
3. Demonstration of BI techniques ETL on Application Student result pattern and ranking analysis.
4. Demonstration of Classification process using J48 algorithm on arff data set.
5. Demonstration of Clustering techniques process using k-means algorithm on Mobile phone Static Data set.
6. Demonstration of decision tree
7. Demonstration of Exploring Excel Modelling capabilities to solve business problems.
8. Business Intelligence Mini Project:
Each group of 4 Students (max) assigned one case study for this; A BI report must be prepared outlining the following steps:
 - a. Problem definition, identifying which data mining task is needed.
 - b. Identify and use a standard data mining dataset available for the problem.
 - c. Implement the Knowledge discovery algorithm of choice.
 - d. Interpret and visualize the results.
 - e. Provide clearly the BI decision that is to be taken as a result of mining.
9. Demonstration of Performance Dashboard: Measuring, Monitoring and management of Business
10. Demonstration of KPIs and Enterprise dashboard, design of enterprise dashboards using Pentaho tool.

K. P. Singh

Instructional Method:

1. The course delivery method will depend upon the requirement of content and need of students. The teacher in addition to conventional teaching method by black board, may also use any of tools such as demonstration, role play, Quiz, brainstorming, MOOCs etc.

01CE0806	Internet of Things	B.Tech. Year – IV
-----------------	---------------------------	--------------------------

Objective: In this course, student will explore various components of Internet of things such as Sensors, internetworking and cyber space. In the end they will also be able to design and implement IoT circuits and solutions.

Credits Earned: 05

Course Outcomes: After successful completion of this course, student will be able to

- Understand general concepts of Internet of Things (IoT) (Understand)
- Recognize various devices, sensors and applications (Knowledge)
- Apply design concept to IoT solutions (Apply)
- Analyze various M2M and IoT architectures (Analyze)
- Evaluate design issues in IoT applications (Evaluate)
- Create IoT solutions using sensors, actuators and Devices (Create)

Prerequisite of course: Fundamentals of computer network, Network Security, internet technology.

List of Experiments – Internet of Things

K. P. Singh

1. Introduction to various sensors and various actuators & its Application (Students have to prepare Report for the same). Perform Experiment using Arduino Uno to measure the distance of any object using Ultrasonic Sensor.
 - a. PIR Motion Sensor.
 - b. Rain Drop Sensor.
 - c. Moisture Sensor.
 - d. Temperature Sensor.
 - e. Touch Sensor.
 - f. Infrared Sensor.
 - g. Servo Moto.
 - h. RFID Sensor.
 - i. Bluetooth Module.
 - j. Wi-Fi Module.
2. Demonstrate NodeMCU and its working
3. Getting Started with ESP8266 Wi-Fi SoC
4. Hands-on with on-board peripherals of ESP8266
5. Demonstrate Arduino and its pins.
6. Perform Experiment using Arduino Uno to measure the distance of any object using Ultrasonic Sensor.
7. Create a circuit using Arduino and sensors. Perform experiment using Arduino Uno to Learn Working of Servo Motor
8. Creating a webpage and display the values available through Arduino.
9. Demonstration of Setup & Working of Raspberry Pi. (Students have to prepare the Report for the same.)
10. OPEN Ended problem: Students are required to submit an IOT based project using the Microcontroller or a Raspberry Pi and connecting various sensors and actuators. The data for the same should be displayed via a webpage or a web app.

Instructional Method:

- a. The course delivery method will depend upon the requirement of content and need of students. The teacher in addition to conventional teaching method by black board, may also use any of tools such as demonstration, role play, Quiz, brainstorming, MOOCs etc.
- b. The internal evaluation will be done on the basis of continuous evaluation of students in the laboratory and class-room.
- c. Practical examination will be conducted at the end of semester for evaluation of performance of students in laboratory.

01IT0801	Major Project – II	B.Tech. Year – IV
-----------------	---------------------------	--------------------------

Objective: Students will find out about the need of industry, explore latest technologies, work on industry / social problems with team members.

Credits Earned: 9 Credits

Course Outcomes: After completion of this course, student will be able to

- Understand, analyze and solve Medium / Large scale industrial / social problems (Analyse)
- Demonstrate the application of various engineering subjects to solve industrial / social problems (Apply)
- Communicate in the way industry demands in oral and documented way. (Create)
- Demonstrate teamwork and leadership qualities. (Apply)
- Demonstrate professional and ethical conduct as per industrial expectations. (Evaluate)

Prerequisite of course: Mini Project, Major Project I, Software Engineering

01SL0102	Reading and Writing for Technology	B. Tech. Year - I
-----------------	---	--------------------------

Objective:

- To introduce students to fundamentals of reading and writing skills
- To enable them to comprehend texts of technical and analytical nature
- To enable them to carryout different writing tasks in the context of technology

Credits Earned: 2 Credits

Course Outcomes: After completion of this course, student will be able to

- comprehend diverse texts related to technology;
- organize ideas and arguments in the written form;
- write assignments, reports, letters etc. in the technical contexts.

Prerequisite of course: NA.

Marwadi University Syllabus for Bachelor of Technology
Department of Information Technology

Subject Code: 01CE1304

Subject Name: Creativity, Problem Solving and Innovation

B.Tech.2nd Year Semester: IV

Prerequisite: Zeal to learn the subject.

Course Objective: To develop creative thinking skill in the students using cone of learning components leading to understanding of various strategies for creativity, problem solving and innovation.

Course Outcome:

After learning the course, the students will be competent

1. Importance of creativity, problem solving and innovation while addressing science, engineering and social issues.
2. Demonstrate the ability to contextualize knowledge related to professional engineering practices.
3. Demonstrate the functioning effectively as an individual and team member.
4. Ability to engage in life-long learning in the context of technological change.

Content:

Sr. No.	Content	Total Hrs
1	Phase 1: To introduce the subject of the course: this course as a needed skill for your future. Psychology of problem solving; Vertical versus Lateral thinking	02
2	Phase 2: Strategy of Questioning; Method of questioning; Importance of asking the right question. Who, what, when, where, why, how?	02
3	Phase 3: Learning and its importance; Sources of learning; Methods of learning. Purpose and value of education in future creativity in real life.	02
4	Phase 4: Strategy of Knowing how to see; Making your thought visible; Visualizing thinking; Mapping of mind, Fishbone diagram.	02
5	Phase 5: Strategy of Thinking Fluency; Generating all possibilities; more the better; Quantity without screening is helpful; SCAMPER technique; Creative or divergent idea generating thinking versus Critical or convergent idea selection thinking.	02
6	Phase 6: Strategy of Fusing of ideas; Making novel combinations; Connecting the unconnected.	02
7	Phase 7: Strategy of Looking at the other side, looking in other world, finding what you are not looking for and following it up.	02
8	Phase 8: Strategy of Play, Importance of play; Diversion; Unstructured activities for sheer joy, Activities for joy, Let subconscious figure it out, Various puzzles as play or fun.	02
9	Phase 9: Strategy of Awakening the collaborative spirit, Collaborative thinking, brain storming, Innovation requires collaboration to make it happen.	02
10	Phase 10: Review Strategies for Creative problem solving methods, Five building blocks as per Fogler & LeBlanc, Stanford D school approach.	02
11	Phase 11: Strategy for critical thinking for Choosing, Creative or divergent thinking needs follow up by Critical thinking or Convergent thinking in order to choose the solution for implementation, Kepner-Tregoe (K.T.) method with an example, Edward De Bono CoRT thinking process including PMI (Plus, Minus and Interesting), Also	02

K. P. Singh

	Edward de Bono method of decision making called Six thinking hats.	
12	Phase 12: Edward de Bono explaining and teaching his ideas having evolved many years ago consisting as CoRT thinking tool, Lateral thinking and the decision making by Six thinking hats method.	02
13	Phase 13: Strategy for Making; From idea to innovation.	02
14	Phase 14: Individual presentation for 75 minutes by 15 students (5 minutes per student).	04

K. P. Singh

01CR0302	Professional Ethics	B.Tech. Year – II
-----------------	----------------------------	--------------------------

Objective: This course will enable the budding engineers and managers to effectively resolve the ethical issues they will face in their professional lives.

Credits Earned: 1 Credit

Course Outcomes: After learning the course the students should be able:

1. Understand the basics of human values

K. P. Singh

2. Inculcate human values to grow as responsible human beings with proper personality
3. Maintain ethical conduct and discharge their professional duties
4. Resolve ethical confusions and contradictions and bring harmony at thought, behavior and action level

Prerequisite of course: NA

01CE0405	Human Centric Design Approach	B.Tech. Year - II
-----------------	--------------------------------------	--------------------------

Objective: This course focuses to build the empathy for the people for designing to solve the societal problem as Human-centered design. It is a creative repeatable approach for problem solving by understanding the real need of the users..

Credits Earned: 1 Credit

Course Outcomes: After completion of this course, student will be able to

- Understand the Human Centric approach for design. (Understand)
- Understand significance of the empathy and solution based on empathy. (Understand)
- Understand importance of design thinking when addressing social change. (Understand)
- Generate the innovative ideas and will convert in new solutions. (Create)
- Build a possible prototype solutions. (Create)

Prerequisite of course: Basic Knowledge of Hardware / Software Programming.

01CR0103	Value Education	B.Tech. Year - I
----------	-----------------	------------------

Objective: This course shall enrich students' value system, creativity, competence and confidence. It will enhance the softer aspects of life skills of students through the games, activities, group interactions and videos.

D. P. Singh

Credits Earned: 2 Credits

Course Outcomes: After successful completion of this course, student will be able to

- Understand importance of role of Values in developing self
- Inculcate right values, ethics, attitudes, manners and behaviors for life
- Respond and relate with expectations, competitions and power of networking.

Prerequisite of course: NA.

Teaching and Examination Scheme

Teaching Scheme (Hours)			Credits	Theory Marks			Tutorial/ Practical Marks		Total Marks
Theory	Tutorial	Practical		ESE (E)	IA	(CSE)	Viva (V)	Term work (TW)	
2	0	0	2	0	0	0	50	50	100

Contents:

Unit	Topics	Contact Hours
1	Experiencing worth of important personality attributes i.e Taking Initiatives, Thinking on the feet etc through Games	2
2	Values of Honesty and Integrity as corner stone in one's career and Life. Experiencing incidence and case studies related to Honesty, Integrity and Human Values in work set up.	2
3	Value of Creativity in one's career and Life Building an attitude of creativity, thinking out of the box and inculcate virtue of exploration and innovation in various aspects of life.	2

K. P. Singh

4	Values to self-sustenance in difficult times and failures To Understand failure as stepping stone towards success, its inevitability and earning life lessons which makes an individual well equipped to deal with uncertainties of life.	2
5	Role of emotions in one's professional life Importance of building sound EQ with IQ, Understanding the causes and effects of emotions in life.	2
6	Workplace values 1 – Manners Understanding workplace as a second home and source of livelihood, inculcate spirit of belongingness towards work and exhibit sound manners that projects work place with dignity	2
7	Workplace values 2 – People, Policy and organization Understanding the importance of policies and people, ideal code of conduct at Workplace, building rapport with colleagues, sound behaviours with various stakeholders within the organization	2
8	Value for students' life 1 - Power of Positivity Importance of optimism in life, developing right kind of attitude towards self career and others. Power of generating right kind of thoughts that translates in right actions and behaviours.	2
9	Value for students' life 2 - Healthy Lifestyle Importance of fitness in life and career. Importance of regular exercising and taking up a sport. Focusing upon eating and sleeping habits that result in physical performance as body is considered to be the temple of soul.	2
10	Value for students' life 3 – Create First Impression Understanding the importance of making right impressions while in public, how to speak/introduce self, basic understanding of dress code, voice tone and body language	2
11	Understanding hazards of Social Networking sites Developing sound habits, breaking bad habits, understanding hazards of bad habits and excess of social media in life.	2

K. P. Singh

12	Creating Value through Social Networking sites (Linked-In and Quora) To ensure that technology is used to build bridges and not the barriers, focusing upon the career and importance of associating with right content in the virtual world. (Linkedin, Quora, GD communities, India Bix, Bodhi Booster)	2
13	Performance Values 1- How to avoid Procrastination Value and Importance of Time, Cause and effect of procrastination, How to maximize the day, Importance of setting up to -do lists and task lists	2
14	Performance Values 2- How to manage Pressure Situations (Exams and Evaluations) Handling anxiety, Value of planning and smart work, ensuring right state of mind and tips for a successful show.	2

Suggested Theory distribution:

The suggested theory distribution as per Bloom’s taxonomy is as per follows. This distribution serves as guidelines for teachers and students to achieve effective teaching-learning process

Distribution of Theory for course delivery and evaluation					
Remember	Understand	Apply	Analyze	Evaluate	Create
20%	20%	30%	15%	10%	5%

K. P. Sharma

Instructional Method:

- A. The course delivery method will depend upon the requirement of content and need of students. The trainer shall train students through interactions, demonstration, role play, games, brainstorming, group tasks etc.
- B. Practical examination (VIVA) will be conducted at the end of semester for evaluation of performance of students.
- C. Students will use supplementary resources such as online videos and books.

K. P. Singh

01IT1703	Major Project – I	B.Tech. Year - IV
-----------------	--------------------------	--------------------------

Objective: The objective is to enhance practical skills of students which will help them to analyze and solve real world problems by using latest software / hardware / tools and by applying theoretical knowledge

Credits Earned: 4 Credit

Course Outcomes: After completion of this course, student will be able to

- To analyze real world problems and design solutions for those problems (Analyze)
- To identify practical aspect of studied technologies (Evaluate)
- To use latest software / hardware as per requirement (Apply)
- To develop complete solutions for read world problems (Create)
- To use different testing methodologies for implemented work (Apply)
- To present and document implemented work effectively (Create)

Prerequisite of course: Hardware/Software Knowledge, Software Engineering, Mini Project

Indian Constitution
01GS0103
Objective of the Course:

- To Enhance human values, create awareness about law enactment and importance of Constitution
- To create awareness of their Surroundings, Society, Social problems and their suitable solutions while keeping rights and duties of the citizen keeping in mind.

Students learning outcomes:

After successful completion of the course it is expected that student will be able to,

1. Understand the Fundamental Rights and Fundamental Duties of the Indian Citizen to instill morality, social values, honesty, dignity of life and their social Responsibilities.
2. Understand the National Emergency, Financial Emergency and their impact on Economy of the country.
3. Understand the distribution of powers and functions of judiciary system.
4. Understand the distribution of powers and functions of major functionaries systems of constitution in India.

4. V.N.Shukla's Constitution of India, Mahendra Pal Singh, Eastern Book Company
5. Constitutional Law – I Structure, Udai Raj Rai, Eastern Book Company

Subject Code: 01MA0104
Subject Name: Linear Algebra
B. Tech. Year: I, Semester: II

Objective: This subject aims to provide fundamentals of Linear Algebra using matrix operations and applications of Linear Algebra through Python . The topics delivered in this course are essential for the learners of Computer Engineering, Information Technology and Artificial Intelligence.

Credits Earned: 05 Credits

Course Outcome: After completion of this course, learner will be able to

- Understand concepts of Basis and Dimensions of Vector Space
- Identify the conversion of real life problems into system of linear equations and solve them through several matrix methods
- Apply the concepts of Eigen value and Eigen Vectors to Diagonalization and Quadratic form
- Apply Linear Algebra in Image Processing and Cryptography through Python

Pre-requisite of course: Basic Matrix Operations and Determinant.

COURSE	FACULTY OF TECHNOLOGY
PROGRAM	MASTER OF TECHNOLOGY (ELECTRICAL ENGINEERING)
SEMESTER	1
COURSE TITLE	FUNDAMENTALS OF ELECTRIC AND HYBRID VEHICLES
COURSE CODE	01EV1102
COURSE CREDITS	4

Objective:

- 1 : The course is intended to impart skills related to development of embedded system for application specific to Electrical Engineering and related domains.

Course Outcomes: After completion of this course, student will be able to:

- 1 Differentiate among different types of Electric and Hybrid Vehicles and their configurations.
- 2 Decide suitable electric propulsion system for EV and HEV.
- 3 Determine the rating of energy source requirement of EV and HEV.
- 4 Analyse the role of auxiliaries in Electric and Hybrid Vehicles.

Pre-requisite of course:None

Teaching and Examination Scheme

Theory Hours	Tutorial Hours	Practical Hours	ESE	IA	CSE	Viva	Term Work
3	0	2	50	30	20	25	25

Contents : Unit	Topics	Contact Hours
1	Introduction to Electric Vehicles: Evolution of Electric Vehicles, EV configurations - Fixed and variable gearing, Single- and multiple-motor drives,, In-wheel drives, Parameters of EV systems - Weight and size parameters,, Force parameters, Energy parameters, Performance parameters	6
2	Hybrid EV systems: HEV configurations - Series hybrid system, , Parallel hybrid system, Series-parallel hybrid system,, Complex hybrid system, , Power flow control in Series hybrid system, Parallel hybrid system, , Power flow control in Series-parallel hybrid system,, Complex hybrid system, Case Study	6

Contents : Unit	Topics	Contact Hours
3	Electric Propulsion Systems: DC motor drives, , Induction motor drives,, Permanent-magnet motor drives, , Switched reluctance motor drives and their role in EV and HEV systems, Performance study of electrical propulsion system with respect to application.	10
4	Energy Sources in EV and HEV systems: Electrochemical Batteries – Terminology, Specific Energy, Specific Power, Energy Efficiency in Lead-Acid Batteries, Nickel based batteries, Lithium based batteries, , Requirement of Ultracapacitors – Features, Principle of operation and Performance of UC, , High Speed Flywheels – Operating Principles, Power capacity, Flywheel technologies, , , Hybrid Energy Storage Systems,, Fuel Cell – Principle of Operation and Performance	12
5	EV Auxiliary Systems: Battery characteristics and chargers, Battery indication, Temperature control unit, Power Steering Unit, Auxiliary Power Supply, Navigation system	8
Total Hours		42

Suggested List of Experiments:

Contents : Unit	Topics	Contact Hours
1	Experiment List modelling a lead-acid battery cell using the Simscape, Observe the charging and discharging process, and plot graph of charging/load current, SOC, temperature, DOC, and terminal voltage of Li-ion battery in MATLAB Simscape, Analysing the effect of temperature on the performance of a Lithium-Ion battery model.	6
2	Experiment No. 05 modelling of the acceleration and performance simulation of EV using MATLAB script file	2
3	Experiment No. 06 Importing and Creating Driving Cycles using MATLAB script file used for range modelling of vehicle.	2
4	Experiment No. 07 Parallel hybrid transmission	2
5	Experiment No. 08 Series hybrid transmission	2
6	Experiment No. 09 EV battery cooling system	2
7	Experiment No. 10 Supercapacitor Charging and Discharging Behavior	2
8	Experiment No. 11 6 kW 45 Vdc Fuel Cell Stack	2

COURSE	FACULTY OF TECHNOLOGY
PROGRAM	MASTER OF TECHNOLOGY (ELECTRICAL ENGINEERING)
SEMESTER	2
COURSE TITLE	ADVANCED ELECTRICAL DRIVES
COURSE CODE	01PE1202
COURSE CREDITS	4

Objective:

- 1 To introduce basic concepts of modelling of machine in reference frame, vector control of induction motor, DTC of induction motor and advance motor drives for electric vehicle application.

Course Outcomes: After completion of this course, student will be able to:

- 1 Model the induction motor in different reference frames
- 2 Develop the vector control of induction motor drive for high performance application
- 3 Select the method for estimating the speed for sensor less vector control
- 4 Compare the Performance of Vector Control and Direct Torque Controlled Drives
- 5 Identify the role of open end winding and multiphase machine in heavy electric vehicle.

Pre-requisite of course: Basic Electrical Engineering, Electrical Machine, Power Electronics, Circuit and Network, Control System

Marwadi University

Subject Code: 01PE1105

Subject Name: Artificial Intelligence Application in Power Electronics

MTech. Year – 1 (Semester – 1)

Objective: Artificial intelligence is gaining popularity every passing year because of its diverse applications in almost every engineering and social fields. Classical problems of detection, identification and creation can be tackled with the tools and techniques of artificial intelligence. Therefore, the objective of the subject to introduce learner to different AI techniques applied in power electronics application and their implementation.

Credits Earned: 4 Credits**Course Outcomes:** After completion of this course, student will be able to

- Solve the problems of power electronics and motor drives with the help of AI techniques.
- Design of ANN based systems for function approximation in signal estimation for vector drives.
- Design of Fuzzy based systems for control of power electronic converter-based system.
- Develop and evaluate control systems required in operations of power electronics equipment.

Pre-requisite of course: None**Teaching and Examination Scheme**

COURSE	FACULTY OF TECHNOLOGY
PROGRAM	MASTER OF TECHNOLOGY (ELECTRICAL ENGINEERING)
SEMESTER	2
COURSE TITLE	CONTROL OF GRID CONNECTED CONVERTERS FOR PV AND WIND SYSTEMS
COURSE CODE	01PE1205
COURSE CREDITS	4

Objective:

- 1 Students will be able to design and implement control techniques for grid connected System matching with standards.

Course Outcomes: After completion of this course, student will be able to:

- 1 Design control technique for grid connected PV & WT converter.
- 2 Implement Grid synchronization technique for renewable energy system
- 3 Design filters for Grid connected converters.
- 4 Design Energy Harvesting system for renewable energy sources.
- 5 To Evaluate grid codes for grid connected system.

Pre-requisite of course:NA

Teaching and Examination Scheme

Theory Hours	Tutorial Hours	Practical Hours	ESE	IA	CSE	Viva	Term Work
3	0	2	50	30	20	25	25

Contents : Unit	Topics	Contact Hours
1	Grid requirement for PV and WT system Introduction, International Regulations, Response to Abnormal Grid Conditions,, Power Quality. Grid Code Evolution for WT system,, Frequency and Voltage Deviation under Normal Operation,, Active Power Control in Normal Operation,, Reactive Power Control in Normal Operation	6

Head of the Department

SEMESTER	2
COURSE TITLE	DIGITAL CONTROL OF POWER ELECTRONIC SYSTEMS
COURSE CODE	01PE1201
COURSE CREDITS	4

Objective:

- 1 To give a basic knowledge of the digital control techniques applied to power converters, and to raise the interest for discrete time control, stimulating new developments in its application to switching power converters

Course Outcomes: After completion of this course, student will be able to:

- 1 Compare the discrete control and continuous control of converters.
- 2 Analyze and compare various digital control techniques.
- 3 Apply various design approach for digital controller design.
- 4 Implement the basic digital current control of Power electronic converter.

Pre-requisite of course:NA

COURSE	FACULTY OF TECHNOLOGY
PROGRAM	MASTER OF TECHNOLOGY (ELECTRICAL ENGINEERING)
SEMESTER	2
COURSE TITLE	DIGITAL CONTROL SYSTEM
COURSE CODE	01PEED0202
COURSE CREDITS	4

Objective:

- 1 • This course explores the fundamentals of digital control systems. Student are able to:
 - (1) Understanding and predicting system behaviour.
 - (2) Design and analysis of optimal control systems.

Course Outcomes: After completion of this course, student will be able to:

- 1 Develop mathematical models for controlling system behavior of a discrete-time control system.
- 2 Evaluate discrete-time control systems on the account of stability.
- 3 Analyze discrete time system/control systems using Z-transform.
- 4 Apply digital control systems using stat-space concept to linear systems as well as nonlinear systems.
- 5 Learn fundamentals and applications of digital control for multidisciplinary engineering problems.
- 6 Understand the fundamentals of intelligent/smart control systems used for industrial automation.

Pre-requisite of course: This course explores the fundamentals of digital control systems. Student are able to: (1) Understanding and predicting system behaviour. (2) Design and analysis of optimal control systems.

Teaching and Examination Scheme

Theory Hours	Tutorial Hours	Practical Hours	ESE	IA	CSE	Viva	Term Work

3	Chapter - 3 Chopper fed drives, input filter design, Braking and speed reversal of DC motor drives using choppers, Multiphase choppers.	6

Contents : Unit	Topics	Contact Hours
4	Chapter - 4 Conventional methods of induction motor speed control., Solid state controllers for Stator voltage control., soft starting of induction motors., Rotor side speed control of wound rotor induction motors., Voltage source and Current source inverter fed induction motor drives, Principle of Vector Control.	12
5	Chapter - 5 Speed control of synchronous motors, load commutated inverter drives., switched reluctance motors and permanent magnet motor drives, Field Oriented Control of PMSM.	10
Total Hours		42

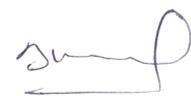

Suggested List of Experiments:

Contents : Unit	Topics	Contact Hours
1	Experiment List Operation of separately excited DC motor under varying load torque condition, Simulation of single phase fully controlled converter fed DC drive, Simulation of three phase fully controlled converter fed DC drive, Simulation of Chopper fed separately excited DC drive, Simulation of stator voltage control of induction motor using AC voltage controller, Simulation of rotor resistance control of wound rotor induction motor., Verification of V/f profile of induction motor using variable frequency drive., Verification of torque speed characteristics of variable frequency drive.	16
Total Hours		16

Suggested Theory Distribution:

The suggested theory distribution as per Bloom's taxonomy is as follows. This distribution serves as guidelines for teachers and students to achieve effective teaching-learning process

Distribution of Theory for course delivery and evaluation					
Remember / Knowledge	Understand	Apply	Analyze	Evaluate	Higher order Thinking
5.00	10.00	15.00	30.00	20.00	30.00

Head of the Department
 Electrical Engineering
 Marwadi University

COURSE	FACULTY OF TECHNOLOGY
PROGRAM	MASTER OF TECHNOLOGY (ELECTRICAL ENGINEERING)
SEMESTER	1
COURSE TITLE	POWER ELECTRONIC CONVERTERS IN EV
COURSE CODE	01EV1108
COURSE CREDITS	4

Objective:

- 1 The objective of this course is to equip students with essential knowledge in the field of power electronics and advancements in the power electronic converters for electric and hybrid vehicles.

Course Outcomes: After completion of this course, student will be able to:

- 1 Differentiate between operational behaviour of IGBT and MOSFET and applications of devices. (Analyze)
- 2 Analyze performance parameters of rectifiers. (Analyze)
- 3 Evaluate different PWM schemes of Voltage Source Inverters. (Evaluate)
- 4 Design different switched mode power supplies. (Create)
- 5 Develop a typical driver for power electronic switch. (Apply)

Pre-requisite of course:Power Electronics

Teaching and Examination Scheme

Theory Hours	Tutorial Hours	Practical Hours	ESE	IA	CSE	Viva	Term Work
3	0	2	50	30	20	25	25

Contents : Unit	Topics	Contact Hours
1	Power Semiconductor Switches: Desired Characteristics in Controllable Switches, Comparison of Controllable Switches, , Power MOSFET – Structure, Characteristics, Operation, Switching characteristics, Operation Limitation and Safe Operating Area, , IGBT – Structure, Characteristics, Latchup in IGBT, Operation, Switching characteristics, Operation Limitation and Safe Operating Area, , Comparison of Power MOSFET and IGBT, SiC MOSFET	4
2	Gate Drive Circuit and Snubbers: Electrically Isolated Drive Circuits , Optocoupler Isolated Drive Circuits, Transformer-Isolated Drive Circuits, , Blanking Times for Bridge Circuits, Circuit Layout Considerations for Power Converter,, Reduction of Stray Inductance in Bus Bars	6

Contents : Unit	Topics	Contact Hours
3	AC/DC Rectifiers: Operation of Single-Phase Uncontrolled Rectifier, , Performance Parameters of controlled converters – Input Displacement Factor, Distortion Factor, Power Factor and Total Harmonic Distortion, Power Factor Improvement Techniques, , Multipulse Converters	8
4	Pulse Width Modulated Inverters: Concept of Switched Mode Inverters, Pulse-Width-Modulated Switching Scheme, , Square-Wave Switching Scheme, PWM Of Single-Phase Inverters, PWM of Three Phase Inverter,, Effect of Blanking Time on Voltage in PWM Inverters, , Concept of Zero Vector in PWM, Space Vector PWM, , Hysteresis Current Control, Rectifier Mode of Operation of PWM Inverter, Matrix Converter – Principle, Operation, Modulation Schemes of Matrix Converter	10
5	Switched Mode Power Supply Step-Down (Buck) Converter, , Step-up (Boost) Converter,, Buck-Boost Converter, , Cuk dc-dc Converter, , Full Bridge dc-dc Converter, Isolated Converters - Forward Converter, Flyback Converter	8
6	Modelling and Control of Power Electronic Converters Types of models – Switched model, average model, large signal and small signal model,, Switched model of power electronic converter, , Classical average model of converter,, generalized average model,, Control Principles of Power Electronic Converters, , Linear Control Approaches for Power Converters – A case study	6
Total Hours		42

Suggested List of Experiments:

Contents : Unit	Topics	Contact Hours
1	Experiment List Obtain dynamic characteristics of IGBT under different loading conditions., Design an opto-coupler based driver circuit for IGBT/MOSFET, Analyze the effect of snubber in the operation of IGBT based converter, Evaluate performance parameters of three phase converter with RL load., Simulate a 12-pulse converter and compare the performance with 6-pulse converter., Compare the performance of unipolar PWM and bipolar PWM scheme in single phase VSI., Develop sine PWM scheme for Three Phase VSI., Analyze the operation of Buck Converter under CCM and DCM., Analyze the operation of Boost Converter under CCM and DCM., Design an inductor/transformer for switch mode power supply.	20
Total Hours		20

COURSE	FACULTY OF TECHNOLOGY
PROGRAM	MASTER OF TECHNOLOGY (ELECTRICAL ENGINEERING)
SEMESTER	2
COURSE TITLE	POWER QUALITY ISSUES AND MITIGATION TECHNIQUES
COURSE CODE	01PE1206
COURSE CREDITS	4

Objective:

- 1 The objective of this course is to study various power quality issues encountered in power system and different active compensators to mitigate issues.

Course Outcomes: After completion of this course, student will be able to:

- 1 Identify, measure, detect various power quality issues in electrical system
- 2 Analyse the effect of harmonics and non-linearity on electrical equipment
- 3 Design and simulate shunt, series and hybrid active filters
- 4 Apply UPQC and DVR for mitigation of power quality issues

Pre-requisite of course:Power Electronics, Electrical Power System, Electrical Machine

Teaching and Examination Scheme

Theory Hours	Tutorial Hours	Practical Hours	ESE	IA	CSE	Viva	Term Work
3	0	2	50	30	20	25	25

Contents : Unit	Topics	Contact Hours
1	Introduction Definitions, standards, linear load, non-linear load,, harmonics, power factor, voltage sag, voltage swell,, voltage fluctuation, unbalanced load, transient, EMI, EMC,	5
2	Loads that Cause Power Quality Problems Introduction, Classification of Nonlinear Loads,, Power Quality Problems Caused by Nonlinear Load,, Analysis of Nonlinear Loads,, Modelling, Simulation, and Performance of Nonlinear Loads	5
3	Active Shunt Compensation and Active Series Compensation Classification of DSTATCOMs, Principle of Operation and Control of DSTATCOMs,, Analysis and design of DSTATCOM	8

Contents : Unit	Topics	Contact Hours
4	Shunt Active filter Three phase three wire shunt active filter,, three phase four wire shunt active filter	8
5	Hybrid and Series Active Filter Combined series active and shunt passive filter,, Comparison between hybrid and Pure active filter	8
6	Unified Power Quality Compensators an DVR Classification of Unified Power Quality Compensators,, Principle of Operation and Control of Unified Power Quality Compensators,, Introduction of DVR, Operating principle of DVR, Application of DVR.	8
Total Hours		42

Suggested List of Experiments:

Contents : Unit	Topics	Contact Hours
1	Experiment No - 01 To study about IEEE 1159 and IEEE 519 standards for various guidelines and practices related to power quality	2
2	Experiment No - 02 To analyze the input current waveform of single phase and three-phase rectifier with different types of loads.	2
3	Experiment No - 03 To simulate converter topology and derive various components of power using instantaneous power theory.	2
4	Experiment No - 04 To design and simulate passive single tuned filter for harmonic compensation	2
5	Experiment No - 05 To simulate and observe the effect of firing angle on input current of AC voltage controller	2
6	Experiment No - 06 To study control strategies of Shunt Active Power Filter based on instantaneous power theory	2
7	Experiment No - 07 To study control strategies of Shunt Active Power Filter based Synchronous Reference Frame Theory	2
8	Experiment No - 08 To study the Dynamic Voltage Restorer for voltage sag and swell	2
9	Experiment No - 09 To simulate hybrid filter for harmonic mitigation	2
Total Hours		18

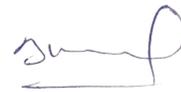

Textbook :

- 1 Power Quality: Problems and Mitigation Techniques, Bhim Singh, Ambrish Chandra, Kamal Al-Haddad, Wiley publication, NA
- 2 Instantaneous Power Theory and Applications to Power Conditioning, Hirofumi Akagi, NA, NA
- 3 Power Quality, C.Sankaran,, CRC publication, NA

Suggested Theory Distribution:

COURSE	FACULTY OF TECHNOLOGY
PROGRAM	MASTER OF TECHNOLOGY (ELECTRICAL ENGINEERING)
SEMESTER	2
COURSE TITLE	RESEARCH METHODOLOGY AND IPR
COURSE CODE	01SL1210
COURSE CREDITS	2

Objective:

- 1 To understand the fundamental of research and its types
- 2 To impart the knowledge of various techniques of research.
- 3 To impart the knowledge for writing various statements and research paper .
- 4 To understand how to conduct literature review and organize references.
- 5 To impart the knowledge about copyright, IPR patent and plagiarism.

Course Outcomes: After completion of this course, student will be able to:

- 1 To understand the research and its types
- 2 To differentiate between journal/proceeding and books and its authenticity
- 3 To identify the quality indices for Journal & Authors
- 4 To differentiate the forms of IPR and its application to the mechanical engineering.

Pre-requisite of course:NA

COURSE	FACULTY OF TECHNOLOGY
PROGRAM	MASTER OF TECHNOLOGY (ELECTRICAL ENGINEERING)
SEMESTER	1
COURSE TITLE	SWITCHING POWER SUPPLIES
COURSE CODE	01EV1105
COURSE CREDITS	4

Objective:

- 1 The student is expected with both the design and control of dc-dc converters at the end of the course.

Course Outcomes: After completion of this course, student will be able to:

- 1 Analyse an equivalent circuit model of switched mode power supply for steady-state analysis.
- 2 Design of magnetic components (i.e., inductor and transformer) for converters used in power supply
- 3 Compare the operation of resonance switching power converters with traditional converters
- 4 Develop feedback controller to regulate DC output of power supply and obtain its frequency response
- 5 Analyse the performance of SMPS with various input filters

Pre-requisite of course: Basic Power electronics devices and its working. Different applications of power semiconductor devices. Power electronics circuit operations.

Teaching and Examination Scheme

Theory Hours	Tutorial Hours	Practical Hours	ESE	IA	CSE	Viva	Term Work
3	0	2	50	30	20	25	25

Contents : Unit	Topics	Contact Hours
1	Introduction to Non-isolated dc-dc converter: Buck Converter, Boost Converter, Buck-Boost Converter, Cuk Converter, SEPIC converters., Non-idealities in the SMPS	6
2	Isolated dc-dc converters: Flyback Converter,, Forward Converter, , Push-Pull Converter,, Half bridge Converter , Full bridge Converter topologies.	7

Head of the Department
Electrical Engineering

COURSE	FACULTY OF TECHNOLOGY
PROGRAM	MASTER OF TECHNOLOGY (ELECTRICAL ENGINEERING)
SEMESTER	2
COURSE TITLE	BATTERY MANAGEMENT SYSTEMS
COURSE CODE	01EV1201
COURSE CREDITS	4

Objective:

- 1 The objective of this course is to introduce learner to batteries, its parameters, modelling and charging requirements. The course will help learner to develop battery management algorithms for batteries

Course Outcomes: After completion of this course, student will be able to:

- 1 Interpret the role of battery management system
- 2 Identify the requirements of Battery Management System
- 3 Interpret the concept associated with battery charging / discharging process
- 4 Calculate the various parameters of battery and battery pack
- 5 Design the model of battery pack

Pre-requisite of course:Basics of Electrical Engineering (or equivalent subject), Circuit Network, Physics

Teaching and Examination Scheme

Marwadi University

Course Objectives

The main objective of this course is to prepare computer based design of motors to be used for electrical machines.

The main objective of this course is to prepare computer based design of motors to be used for electrical machines.

Prerequisites

After completion of this course, student will be able to

- To introduce the importance of computer aided design method.
- Implement equations in software program.
- Create software based design of Induction Motor, Synchronous Motor, Special Electric Motor
- Analysis of machine part with MATLAB
- Prepare software for design of electrical machines

Prerequisites Design of Electrical Machines or equivalent subject

Course Structure

Teaching Scheme Hours			Credits	Theory Marks			Tutorial/Practical Marks		Total Marks
Theory	Tutorial	Practical		Quiz	Mid Term Exam	Internal	Quiza	Term work	
3	0	2	4	50	30	20	25	25	150

Course Content

Sl. No.	Topic	Hours
1	Introduction to Computer Aided Design, explanation of details of flow chart, input data to be fed into the program, Applicable constraints, Maximum or Minimum permissible limits, output data to be printed after execution of program, various objective parameters for optimization in an electrical machine, selection of optimal design, explanation of lowest cost and significance of "genetic algorithm" flowcharts.	4
2	Introduction, specification, output coefficient, importance of specific loadings, Electrical Materials, Conducting Materials, Insulating Materials and Magnetic Materials, Magnetic circuit calculations, general procedure for calculation of Ampere turns, heating and cooling, Modes of heat dissipation, standard ratings of electrical machines, ventilation in rotating machines, quantity of cooling	4

 Electrical Engineering
 Marwadi University

COURSE	FACULTY OF TECHNOLOGY
PROGRAM	MASTER OF TECHNOLOGY (ELECTRICAL ENGINEERING)
SEMESTER	3
COURSE TITLE	ENVIRONMENT ISSUES
COURSE CODE	01ES0305
COURSE CREDITS	0

Course Outcomes: After completion of this course, student will be able to:

- 1 Understand and realize the multi-disciplinary nature of the environment and global environmental issues.
- 2 To compare the human population growth and its trend to the environmental degradation.
- 3 Develop the awareness about his/her role towards environmental protection and prevention.
- 4 Identify different types of environmental pollution and control measures.
- 5 To correlate the exploitation and utilization of conventional and non-conventional resources.

Pre-requisite of course:To know about the environment Issues.

Teaching and Examination Scheme

Subject Code: 01EV1206

Subject Name: Smart Grid Interface of EV

M.Tech. Year – 1 (Semester – 2)

Objective: The objective of the course is to study the possible methods of integration of Electric Vehicle (EV) in smart grid networks and its effect on the system.

Credits Earned: 4 Credits

Course Outcomes: After completion of this course, student will be able to

- Determine the role of Plug-in Electrical Vehicle(PEV) as source in smart grid
- Analyze Impact of EV on smart grid
- Assess the performance of EV parking lot on smart distribution system
- Evaluate the role of EV as ancillary service

Pre-requisite of course: None

Teaching and Examination Scheme

COURSE	FACULTY OF TECHNOLOGY
PROGRAM	MASTER OF TECHNOLOGY (ELECTRICAL ENGINEERING)
SEMESTER	2
COURSE TITLE	VALUE EDUCATION
COURSE CODE	01AU9002
COURSE CREDITS	0

Objective:

- 1 This course shall develop intelligence of students on role of value education and self-development in shaping a sound character. Students shall be able to imbibe good values to lead a successful personal and professional life.

Course Outcomes: After completion of this course, student will be able to:

- 1 Understand importance values in achieving self-development.
- 2 Inculcate right values, ethics, attitudes, manners and behaviors for life.
- 3 Overall develop a sound personality.
- 4 Imbibe values that translate in character building

Pre-requisite of course:NA.

List of Courses having Focus on Employability, Entrepreneurship and Skill Development

Course Relevance Presented in this Document by Highlighting with the Following Color Code:

Employability
Entrepreneurship
Skill Development

PROGRAM	Master of Business Administration
SEMESTER	1
COURSE TITLE	Accounting for Managers
COURSE CODE	04MB0101
COURSE CREDITS	3
COURSE DURATION	42 Hrs (42 sessions of 60 minutes each)

COURSE OUTCOMES:

- ❖ Impart the basics of Financial Accounting and process for preparing Financial Statement of an entity.
- ❖ Equip students with theoretical and practical aspects of financial accounting statements
- ❖ Make students aware about various financial statement analysis methods.
- ❖ Appraise the students about recent developments in accounting from a managerial perspective.
- ❖ Understand and implement the fundamentals of Financial Accounting for Business.

COURSE CONTENTS:

Unit No	Unit / Sub Unit	Sessions
I	Introduction to Financial Accounting –I: Meaning, Definition; Accounting Principles: Concepts and Conventions, Classification of Accounts, Double Entry Book, Keeping rules; Accounting cycle. Overview of Accounting Standards, IFRS & Indian Standards: Meaning, Applicability, Difference between AS, IFRS & IND AS.	8
II	Introduction to Financial Accounting –II: Journal Entries, Ledger-posting Preparation of Trial Balance.	8
III	Understanding & Preparation Corporate Financial Statements: Corporate Profit & Loss Account, Corporate Balance Sheet (Only Vertical Balance Sheet), Basic Examples of Corporate Balance Sheet	8
IV	Preparation of Financial statements: Income Statement and Balance Sheet (with adjustments), Cash Flow statement, Cash from Operating, investing & financial statements, Preparation of Cash Flow Statement as per AS-3, Uses and Limitations, Depreciation Methods: Overview of Depreciation as per Straight Line Method and Written Down Value Method.	8

V	Financial Statement Analysis: Meaning, Definition and Purpose – Understanding of Financial Statements and their Components, Tools, Common Size, Comparative and Trend Analysis, Cross Section and Inter Firm Analysis, Ratio Analysis: Meaning, purpose and classification A Case study on Financial Statement Analysis of Select Company.	10
---	---	----

EVALUATION:

The students will be evaluated on a continuous basis and broadly follow the scheme given below:

	Component	Weightage
A	Continuous Evaluation Component (Assignments / Quizzes / Class Participation etc.)	20% (C.E.C.)
B	Internal Assessment	30% (I.A.)
C	End-Semester Examination	50%(External Assessment)

Faculty of Management Studies: Master of Business Administration

PROGRAM	Master of Business Administration
SEMESTER	1
COURSE TITLE	Economics for Managers
COURSE CODE	04MB0102
COURSE CREDITS	3
COURSE DURATION	42 Hrs (42 sessions of 60 minutes each)

COURSE OUTCOMES:

- ❖ To impart knowledge, with respect to principles and applications of Managerial economics in the market conditions.
- ❖ To address business problems in a globalized economic environment.
- ❖ To enhance the understanding capabilities of students about micro and macro-economic principles for decision making with the help of economic aspects
- ❖ To apply economic analysis for decision making process
- ❖ To use economic reasoning to solve the problems of business.

COURSE CONTENTS:

Unit No	Unit / Sub Unit	Sessions
I	Demand and The Firm: Demand: Demand function and its Demand distinctions, Supply - Market equilibrium Consumers' Equilibrium using cardinal and ordinal utility (Indifference curves). Demand forecasting, Demand forecasting of new products. Firm and its Organization: Nature of the Firm and types of organizations. The Corporation: Ownership and Control.	08
II	Production, Cost Analysis and Market Structure: Theory of Production – Production function – Laws of Returns to a factor & returns to scale – Economies of scale and Economies of scope – Isoquants & Iso Cost Analysis: Cost Analysis – Cost concepts, Classification of costs; Short run and long run cost functions. Market structure and price - output decisions: pricing under perfect competition - competitive equilibrium and economic efficiency - market failures and role of government. Pricing under monopoly - Deadweight loss.	10
III	Pricing, Fiscal-Monetary Policy and Macroeconomic Market: Fiscal and Monetary Policy: Instruments of Fiscal Policy - Monetary Policy Instruments of Monetary Policy, Measuring the cost of living: Consumer Price Index - Inflation Rate using CPI Product market: Saving and Investment function, Consumption function, Aggregate supply and Aggregate demand, Investment multiplier, foreign trade and budget multiplier. Money market: Motive for holding money; Liquidity preference, Money demand, Money market equilibrium.	8
IV	Open Economy and Trade Cycles: Open economy: Determination of Exchange Rate. Effects of changes in trade on exchange rate. Purchasing Power Parity and Exchange Rates: Fixed and Flexible. Net Export and Output in an open economy. Impact of trade on GDP. Open economy multiplier. Trade Cycles: Theories of trade cycles and Aggregate demand	8

V	Price Discriminations and Market Imperfections: Price Discriminations -pricing under discriminating monopoly. Pricing under monopolistic competition, Shapes of AR, MR curve and their relationship in different market forms. Market Imperfections–Monopolistic, Collusive oligopoly, Monopsony and Oligopsony and price discrimination in different stages of market structure.	8
----------	--	----------

EVALUATION:

The students will be evaluated on a continuous basis and broadly follow the scheme given below:

	Component	Weightage
A	Continuous Evaluation Component (Assignments / Presentations/ Quizzes / Class Participation/ etc.)	20% (C.E.C.)
B	Internal Assessment	30% (IA)
C	End-Semester Examination	50% (External Assessment)

SUGGESTED READINGS:
Textbooks:

Sr. No	Author/s	Name of the Book	Publisher	Edition & Year
T-01	N Gregory Mankiw	Principles of Economics	Cengage Publication	6th Edition
T-02	Dominic Salvatore and Siddhartha K. Rastogi	Managerial Economics	Oxford	8 th Edition
T-03	Geetika Piyali Ghosh and Purba Roy Choudhury	Managerial Economics	McGraw Hill Education	3 rd Edition
T-04	Robert J. Gordon	Macroeconomics	Pearson	12 th Edition

Reference Books:

Sr. No	Author/s	Name of the Book	Publisher	Edition & Year
R-01	Fredrick S. Mishkin	Macroeconomics	Person	Second Edition
R-02	Rudiger Dornbusch, Stanley Fischer and Richard Startz	Macroeconomics	McGraw Hill Education	11 th Edition – Indian Edition
R-03	Lipsey & Chrystal	Economics	Oxford	13 th Edition – International Edition

PROGRAM	Master of Business Administration
SEMESTER	I
COURSE TITLE	Statistics for Management
COURSE CODE	04MB0103
COURSE CREDITS	3
COURSE DURATION	42 Hrs (42 sessions of 60 minutes each)

COURSE OUTCOMES:

- ❖ Apply various Probability Distributions in analyzing Data and solving Decision Making Problems.
- ❖ Apply appropriate Sampling Technique in Choosing a Representative Sample from a Population and Examine the Population Parameters using Estimation Techniques.
- ❖ Interpret about the Population under study by applying various Hypothesis Testing Tools and arrive at conclusions about the Business Problem in hand.
- ❖ Analyze business data using correlation and regression analysis techniques.
- ❖ Apply forecasting techniques using time-series analysis.

COURSE CONTENTS:

Unit No	Unit / Sub Unit	Sessions
I	Probability: Introduction to probability, different approaches to probability- Classical, Relative frequency and Subjective, Laws of probability – addition, multiplication; conditional probability, Bayes' theorem. Probability distributions: The concept of a random variable, Discrete Vs Continuous random variable, Probability Distribution of a Single Random Variable, Binomial, Poisson, Exponential and Normal probability distributions. Practical using MS-Excel: Application of BINOMDIST, POISSON, EXPONDIST, NORMDIST, NORMINV, NORMSDIST, NORMSINV in calculation of probability in MS-Excel.	12
II	Sampling Theory: Concepts of Population, Sample, Parameter, Statistic, Sampling distribution of Mean from Finite and Infinite Populations, Central Limit Theorem Hypothesis Testing: Introduction to Hypothesis Testing, Null and Alternative Hypotheses, One-Tailed Versus Two-Tailed Tests, Types of Errors, Significance Level and Rejection Region, Concept of P-value Single Sample Tests (Parametric): Z test for Population Proportion, Z-test for Population Mean, t-test for single mean Practical using MS-Excel: t-test for single sample	7

III	Two-sample Tests (Parametric): Z-test for means, t-test for means for independent samples, t-test for means for paired samples, Multiple Comparison: One-Way ANOVA Practical using MS-Excel: <ul style="list-style-type: none"> ➤ t-test for two means of independent samples ➤ paired t-test ➤ One-Way ANOVA 	7
IV	Correlation and Regression: The concept of correlation, Scatter plot, Pearson's correlation coefficient. Introduction to simple linear regression, Y on X line and X on Y line, prediction using regression line, Standard Error and Coefficient of Determination, Multiple Regression Analysis using MS Excel/spreadsheets only. Practical using MS-Excel: Illustration of simple linear regression and multiple linear regression in MS-Excel	8
V	Time Series Analysis: Introduction to time series, Components of time series, additive and multiplicative model of time-series (concepts). Trend Analysis: Introduction, Method of least square-Straight Line Trend, Second-Degree Polynomial Trend, Exponential Trend (numerical in software only). Seasonal Variations: Introduction, Calculation of seasonal index using Method Of Simple Averages, Ratio To Moving Average Method, depersonalization of additive and multiplicative time-series data. Practical using MS-Excel: fitting of linear trend, 2nd degree polynomial, exponential trend	8
NOTE: -	Instructors are advised to teach numerical using MS Excel in each module.	

EVALUATION:

The students will be evaluated on a continuous basis and broadly follow the scheme given below:

	Component	Weightage
A	Continuous Evaluation Component (10% using Software, 10% Assignments / Quizzes / Class Participation)	20% (C.E.C.)
B	Internal Assessment	30% (I.A.)
C	End-Semester Examination	50% (External Assessment)

SUGGESTED READINGS:

Text Books:

Sr. No	Author/s	Name of the Book	Publisher	Edition & Year
T-01	Richard I. Levin and David S. Rubin	Statistics for Management	Pearson	Latest Edition
T-02	Naval Bajpai	Business Statistics	Pearson	Latest Edition

Reference Books:

Sr. No	Author(s)	Title	Publisher	Edition & Year
R-01	J K Sharma	Business Statistics	Vikas Publishing House	Latest Edition
R-02	T N Srivastava and Shailaja Rego	Statistics for Management	TMH	Latest Edition
R-03	Joseph Francis	Business Statistics	CENGAGE	Latest Edition
R-04	D P Apte	M.S. Excel Tools for Managers	Excel	Latest Edition
R-05	K. B. Akhilesh & S. B. Balasubrahmanyam	Mathematics and Statistics for Management	Vikas	Latest Edition
R-06	Sanjiv Jaggia, Alison Kelly	Business Statistics	McGraw Hill	Latest Edition

PROGRAM	Master of Business Administration
SEMESTER	1
COURSE TITLE	Organisational Behaviour
COURSE CODE	04MB0104
COURSE CREDITS	3
COURSE DURATION	42 Hrs (42 sessions of 60 minutes each)

Course Outcomes:

- ❖ To demonstrate the applicability of the concept of organizational behavior in order to understand the behavior of people in the organization.
- ❖ To describe how individual personality and behavior impact the typical contemporary work experience.
- ❖ To identify different motivational theories and evaluate motivational strategies used in the variety of organizational settings.
- ❖ To explain and explore the tension between individual versus groups and group dynamics in organizational life.
- ❖ To assess the impact of culture on organizational behavior.
- ❖ To evaluate the appropriateness of various leadership styles and conflict management strategies used in organizations.

COURSE CONTENTS:

Unit No	Unit / Sub Unit	Sessions
I	Introduction to Concept of Management Concept of Management, Management: Art and Science, Management Vs Administration, Levels of Management, Functions of management, Evolution of Management thought: Early contributions: Taylor and Scientific Management, Fayol's Administrative Management, Bureaucracy, Human Relations, and Modern Approach. Types of organisation structures. Case Study	8
II	Concept of OB and Understanding Dynamics of Individual Behaviour Models of OB, Disciplines contributing to the field of OB. Personality: Foundations of individual behaviour, Personality, Meaning and Importance, Development of personality, Determinants of personality, Theories of	9

	personality. Perception: Nature, Importance and Definition of Perception, Factors involved in perception, The Perceptual Process, Perceptual Selectivity and Organization, Applications in Organizations. Learning: Definition and Importance, Theories of learning, Principles of learning, Shaping as managerial tool. Case Study	
III	Attitude, Values and Motivation Attitudes: Sources and types of attitudes, Attitude formation and change, Cognitive Dissonance Theory. Effects of employee attitude, Job related attitudes Values: meaning, importance, source and types, and applications in organizations. Motivation: Meaning, process and significance of motivation, Early Theories of motivation: Hierarchy of Needs, Theory X Theory Y, Two Factor theory, McClelland Theory of Needs, Contemporary Theories of Motivation: Goal Setting theory, Self-Efficacy theory, Equity theory/Organizational justice, Expectancy theories. Case Study	9
IV	Understanding dynamics of Group behavior: Groups – Meaning, classification and nature of groups, Stages of group development, an alternative model for Temporary Groups with punctuated equilibrium model, Group properties: Roles, Norms, Status, Size and Cohesiveness, Group decision making. Teams -Meaning of teams, Types of teams, Creating Effective teams, what makes individuals into effective team players, Team development, Team decision making., Transactional Analysis and Communication. Case Study	8
V	Understanding Organizational dynamics of Behaviour: Conflict and Negotiation, Understanding Power and Organizational Politics, Organizational Culture, Basic Theories of Leadership, Behavioral theories, Fiedler model, LMX theory, Path-goal theory, Contemporary Issues in Leadership Practice. Case Study	8

EVALUATION:

The students will be evaluated on a continuous basis and broadly the scheme given below will be followed:

	Component	Weightage
A	Continuous Evaluation Component (Assignments / Presentations/ Quizzes / Class Participation etc.)	20% (C.E.C)
B	Internal Assessment	30% (I. A.)
C	End-Semester Examination	50% (External Assessment)

SUGGESTED READINGS:

Text Books:

Sr. No	Author/s	Name of the Book	Publisher	Edition & Year
T-01	Stephen Robbins	Organizational Behavior	Pearson Education	13th or Latest Edition

T-02	Fred Luthans, Brett C. Luthans, Kyle W. Luthans	Organizational Behavior: An Evidence Based Approach	McGraw-Hill	13 th Edition
T-03	Udai Pareek, Sushama Khanna	Understanding Organizational Behaviour	Oxford University Press	2016

Reference Books:

Sr. No	Author/s	Name of the Book	Publisher	Edition & Year
R-01	P. Subba Rao	Organisational Behaviour Text, Cases and Games	Himalaya Publishing House	2015
R-02	Gregory Moorhead, Ricky W. Griffin	Managing Organizational Behavior	South-Western Cengage Learning	2012

PROGRAM	Master of Business Administration
SEMESTER	1
COURSE TITLE	Business Analytics
COURSE CODE	04MB0105
COURSE CREDITS	3
COURSE DURATION	42 Hrs (42 sessions of 60 minutes each)

COURSE OUTCOMES:

- ❖ Judging business analytics and its role to support business decisions.
- ❖ Integrate ethical decision-making in structured or unstructured situations.
- ❖ Formulate appropriate analytical methods to find solutions to business problems.
- ❖ Evaluate basic framework for business intelligence systems and applications of business analytics.
- ❖ Integrate and Apply knowledge on Multidimensional Data Modeling and Data Warehousing to find solutions to business problems.

COURSE CONTENTS:

Unit No	Unit / Sub Unit	Sessions
I	Business View of Information Technology Applications Business Enterprise Organization, Its Functions and Core Business Processes, Key Purpose of using IT in Business, Characteristics of Internet-Ready IT Applications, Enterprise Applications and Bespoke IT Applications, Information Users and their requirements. Case Study: Good Life HealthCare Group, Good Food Restaurants Inc, Ten to Ten Retail Stores	10
II	Digital Data Structured Data, Semi Structured Data, Unstructured Data, On-line Transaction Processing, On-line Analytical Processing, Different OLAP Architectures, Data Models for OLTP and OLAP, OLAP Operations in Multidimensional Data	8
III	Business Intelligence: BI Component Framework, BI Users, BI Applications, BI Roles and Responsibilities, Best Practices in BI, Evolution of BI, Need for BI at Virtually all Levels, BI for Past, Present and Future, BI Value Chain.	8
IV	Multidimensional Data Modeling Basics of Data Modeling, Types of Data Model, Data Modeling Techniques, Fact Table, Dimension Table, Typical Dimensional Models, Dimensional Modeling Life Cycle, Designing the Dimensional Model.	8
V	Data Warehousing: Objectives, Defining Features; Subject-Oriented, Integrated and, Time-variant and Nonvolatile Data; Data Granularity; Data Marts: How are They Different, 1 Top-Down Versus Bottom-Up Approach;- Overview of the Components Source Data, Data Staging, Data Storage, Information Delivery Component and Metadata component;, Management and Control Component ;Metadata in the Data Warehousing ,Types of Metadata.	8

EVALUATION:

The students will be evaluated on a continuous basis and broadly follow the scheme given below:

	Component	Weightage
A	Continuous Evaluation Component (Assignments / Presentations/ Quizzes / Class Participation/ etc.)	20% (C.E.C.)
B	Internal Assessment	30% (I.A.)
C	End-Semester Examination	50% (External Assessment)

SUGGESTED READINGS:
Text Books:

Sr. No	Author/s	Name of the Book	Publisher	Edition & Year
T-01	U Dinesh Kumar	Business Analytics- The Science of Data-Driven Decision Making	Wiley	1 st Edition, 2017
T-02	R.N.Prasad & Seema Acharya	Fundamentals of Business Analytics	Wiley	2 nd Edition, 2016

Reference Books:

Sr. No	Author/s	Name of the Book	Publisher	Edition & Year
R-01	Anil Maheshwari	Data Analytics	McGraw Hill Education	First edition, 2017)
R-02	Sahil Raj	Business Analytics	Cengage Learning	Latest Edition
R-03	James Evans	Business Analytics	Pearson	2 nd Edition, 2018

PROGRAM	Master of Business Administration
SEMESTER	1
COURSE TITLE	Business Communication
COURSE CODE	04MB0106
COURSE CREDITS	3
COURSE DURATION	42 Hrs (42 sessions of 60 minutes each)

COURSE OUTCOMES:

- ❖ To explain the importance of business communication
- ❖ To develop formal communication instincts among students and help them implement the same
- ❖ To understand different dimensions of business communication
- ❖ To apply the concepts of communication in day-to-day life
- ❖ To understand the barriers to communication and the ways to overcome those in order to make communication effective

COURSE CONTENTS:

Unit No	Unit / Sub-Unit	Sessions
I	FUNDAMENTALS OF BUSINESS COMMUNICATION Meaning and importance of communication in business, Process of Communication, Principles of Verbal and Nonverbal Communication, Barriers to communication, Ways to overcome barriers, Approaches to effective communication, Communication in crisis	8
II	INTERPERSONAL COMMUNICATION Formal communication networks – (Downward, Upward, Horizontal, Informal communication networks, social media platforms as mode of communication and their etiquettes, 7 Cs of communication, English for Business (Building vocabulary through reading and Listening activities), How to convey an unpleasant communication, Organizational communication Prior-During-Post any emergency situation	8
III	INTRODUCTION TO READING AND LISTENING Types of reading; Skimming, Scanning, Intensive and Extensive, what is comprehension and how to comprehend, Effective listening skills, Barriers to effective listening, Ways to overcome barriers	8
IV	INTRODUCTION TO MANAGERIAL WRITING Principles of Effective Written Communication, Parts of business letters, Types of Business letters, Formal communication pertaining to employment, Memos, Curriculum Vitae, Writing Emails, 3X3 writing process for Business communication: Pre-writing, writing and revising. Preparing Reports and Proposals, Formal speeches, Presentation techniques	9
V	MANAGERIAL SPEAKING Arts of giving speech effectively, Handling Negotiations, Presentations on different topics, Mastering the art of interviews, Group discussion, Case study discussion, Role plays, Extempore	9

EVALUATION:

The students will be evaluated on a continuous basis and broadly follow the scheme given below:

	Component	Weightage
A	Continuous Evaluation Component (Assignments / Presentations/ Quizzes / Class Participation/ etc.)	20% (C.E.C.)
B	Internal Assessment	30% (I.A.)
C	End-Semester Examination	50% (External Assessment)

SUGGESTED READINGS:
Textbooks:

R-01	Urmila Rai, S.M. Rai	Business Communication	Himalaya	Sixth Edition
R-02	Lehman	Business Communication	Cengage	Eleventh Edition
R-03	P.D.Chaturvedi, Mukesh Chaturvedi	Business Communication	Pearson	Second Edition

PROGRAM	Master of Business Administration
SEMESTER	1
COURSE TITLE	Entrepreneurship
COURSE CODE	04MB0107
COURSE CREDITS	3
COURSE DURATION	42 hours

COURSE OUTCOMES:

- ❖ Understand the concept of Entrepreneurship, family business and corporate entrepreneurship
- ❖ Apply the concepts and models of Entrepreneurship and analyze different entrepreneurial situations
- ❖ Explain the entrepreneurial Mindset and Personality
- ❖ Evaluate different opportunities of entrepreneurship and develop an entrepreneurial venture
- ❖ Demonstrate an understanding of different Government schemes for start ups

COURSE CONTENTS:

Unit No	Unit / Sub Unit	Sessions
I	Introduction to Entrepreneurship: Importance of Entrepreneurship- Concepts of Entrepreneurship- Characteristics of successful Entrepreneurs-Classifications of Entrepreneurs- Myths of Entrepreneurship-Entrepreneurial Development Models- Problems faced by entrepreneurs and Capacity building for Entrepreneurship- Profiles of Successful Entrepreneurs- Women Entrepreneurs- Social Entrepreneurship	9
II	The individual entrepreneurial mind-set and Personality: The entrepreneurial journey- Stress and the entrepreneur - the entrepreneurial ego - Entrepreneurial motivations- Motivational cycle – Entrepreneurial motivational behavior – Entrepreneurial competencies. Corporate Entrepreneurial Mindset, the nature of corporate entrepreneur- conceptualization of corporate entrepreneurship Strategy- Sustaining corporate entrepreneurship.	9
III	Launching Entrepreneurial Ventures: Creativity and Business Idea, opportunities identification- Finding gaps in the marketplace – techniques for generating ideas-entrepreneurial Imagination and Creativity- the nature of the creativity process - Innovation and entrepreneurship. Methods to initiate Ventures- Creating new ventures-Acquiring an Established entrepreneurial venture- Franchising- advantage and disadvantages of Franchising.	9
IV	Government Support for Entrepreneurship Development: Initiatives for Start-up India-Stand up India and Skill India- Government of Gujarat schemes for Startup- Start up and ecosystem- Stand-up India: Women and Minority Entrepreneurship- Ease of Doing Business (EoDB): Overview, Ranking, Determinants of EoDB	8
V	Family Business: The distinction between family and non-family business - Importance of family business - Types - History - Responsibilities and rights of shareholders of a family business - Succession in family business - Pitfalls of the family business - strategies for improving the capability of family business - improving family business performance.	7

EVALUATION

The students will be evaluated on a continuous basis and broadly follow the scheme given below:

	Component	Weightage
A	Continuous Evaluation Component (Assignments / Quizzes / Class Participation etc.)	20% (C.E.C.)
B	Internal Assessment	30% (I.A.)
C	End-Semester Examination	50% (External assessment)

SUGGESTED READINGS:
Text Books:

PROGRAM	Master of Business Administration
SEMESTER	1
COURSE TITLE	IT Application in Management
COURSE CODE	04MB0108
COURSE CREDITS	2
COURSE DURATION	28 Hrs (28 sessions of 60 minutes each)

COURSE OUTCOMES:

- ❖ Understand the major components of Computer Architectures.
- ❖ Learn effective ways of Memory Management.
- ❖ Study of different types of Operating Systems.
- ❖ Realize the Networking Concepts

COURSE CONTENTS:

Unit No	Unit / Sub Unit	Sessions
I	Introduction: Characteristics of Computers, Computer Generations, Types of Computers, Digital Block Diagram and different units, Input, Output, Storage and process Devices	08
II	Memory Managements: Primary Storages, Storage Capacity: Bit, Byte, MB, KB, GB, TB RAM, ROM, PROM, EPROM, Cache Memory, function of Cache Memory Secondary Storages: Punch Card, Magnetic Tape, Magnetic Disk, Floppy Disc, CD, DVD, Hard Disk, Pen Drive	08
III	Operating System: Definition and Functions, Evolution of Operating System Types of Operating System, Difference between Windows and Opensource Operating System, Batch Processing, Spooling, Multiprocessing, Multiprogramming, Time-Sharing, On-Line Processing, Real-Time Processing, High Level Language, Low Level Language, Language Converter: Compiler, Interpreter, Assembler. Networking: Introduction, LAN, WAN, MAN, Intranet, Internet, Internet Topologies OSI Model (Seven layers), Communication Media	12

EVALUATION:

The students will be evaluated on a continuous basis and broadly follow the scheme given below:

	Component	Weightage
A	Continuous Evaluation Component (Assignments / Quizzes / Class Participation etc.)	0% (C.E.C.)
B	Internal Assessment	50% (I.A.)
C	End-Semester Examination	50% (External assessment)

SUGGESTED READINGS:

Text Books:

Sr. No	Author/s	Name of the Book	Publisher	Edition & Year
T1	Rajaraman	Fundamentals of Computers	PHI	4th Edition
T2	Leonard Jessup, Joseph Valacich	Information Systems	PHI	2015

Reference Books:

Sr. No	Author/s	Name of the Book	Publisher	Edition & Year
R-01	E. Turban	Information Technology for Management	Wiley N.Y.	1999

R-03	Oka Milind M	Computer Fundamental	Everest Publishing House	2010

PROGRAM	Master of Business Administration
SEMESTER	1
COURSE TITLE	Advanced Excel
COURSE CODE	04MB0109
COURSE CREDITS	2
COURSE DURATION	28 Hrs (28 sessions of 60 minutes each)

COURSE OUTCOMES:

- ❖ To apply advanced formatting tools, logical functions, and visualizations in excel to analyze the datasets.
- ❖ To summarize and interpret data by using pivot tables, Pivot charts by creating dynamic dashboards.
- ❖ To use data analysis tools in domain specific datasets

COURSE CONTENTS:

Unit No	Unit / Sub Unit	Sessions
I	Basic arithmetic operations; Cell formatting; Paste Special; Conditional Formatting; Insert Charts - advanced Charts; Conditional functions- If; If-And; If-Or; Nested If Function; Sorting-Filtering; Data Validation	09
II	Hyperlinking; Concatenate; Text to columns and Remove Duplicates; Sum if; Count if; Average if; Sum ifs; count ifs and average ifs; Vlookup & Hlookup; Index & Match Function; Working with PivotTables; Building PivotTable Formulas; Working with PivotCharts and Customizing PivotCharts.	09
III	Goal Seek; Scenario Manager & Data Table; Basic Statistics Functions; Macros (Basic); Solver & Get-Transform data; Basic Finance Functions; Building a simple Dashboard; Security Features & Printing Excel document	10

EVALUATION:

The students will be evaluated on a continuous basis and broadly follow the scheme given below:

	Component	Weightage
A	Continuous Evaluation Component (Assignments / Quizzes / Class Participation etc.)	0% (C.E.C.)
B	Internal Assessment	50% (I.A.)
C	End-Semester Examination (Practical/Viva)	50% (External assessment)

SUGGESTED READINGS:
Textbooks:

Sr. No	Author/s	Name of the Book	Publisher	Edition & Year

PROGRAM	Master of Business Administration
SEMESTER	1
COURSE TITLE	Cyber Security
COURSE CODE	04MB0110
COURSE CREDITS	2
COURSE DURATION	28 Hrs (28 sessions of 60 minutes each)

COURSE OUTCOMES:

- ❖ Understand the major concepts of Cyber Security.
- ❖ Evaluate impact of attacks.
- ❖ Implement different tools-based solutions for cyber-attacks.
- ❖ Analyze cyber law with aspect to cybercrime and security

COURSE CONTENTS:

Unit No	Unit / Sub Unit	Sessions
